ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications.

Lecture Hours: 48.000

Prerequisite: MAT0022C OR MAT0028 OR MAT0057 or by placement score, or eligible exemption.

Course User Fee: \$18.00

MAT1033L Intermediate Algebra Recitation Hall 0.000 credits

The student will receive individualized, small group or whole group instruction to deepen their conceptual understanding of mathematics. The student will reinforce and apply content knowledge with effective problem-solving techniques and non-cognitive activities to make mathematics meaningful and relevant to their fields of study while strengthening the concepts needed to achieve the objectives of MAT1033. This lab session is associated and funded by the First in the World Grant, CCAT Math Project.

Lab Hours: 1.000

Corequisite: MAT1033

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

CHM1025L Introductory Chemistry Lab 1.000 credits

This course is an optional beginning chemistry laboratory course, which has been designed for those students who have little or no background in chemistry and are enrolled in CHM1025. The students will reinforce what they learn in CHM1025. Students will learn about basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1025

Course User Fee: \$30.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds.

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting. Prerequisites: CHM1046, CHM1046L; Corequisite: CHM2210.

Lab Hours: 64.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

Program Description

Pre-Pharmacy

Associate in Arts | Code: 11206 | 60 credits

The Pre-Pharmacy program provides the math and science education needed to transfer to a baccalaureate program. Career opportunities in pharmacy include positions in a hospital or institutional pharmacy, in industry or manufacturing, in a retail or clinical pharmacy, in government service, in pharmacy administration, in laboratories and in pharmaceutical journals.

Program Modality: Both [In-Person (IP) and On-line]

The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy.

Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics.

Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds.

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting. Prerequisites: CHM1046, CHM1046L; Corequisite: CHM2210.

Lab Hours: 64.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

Program Description

Pre-Physical Therapy

Associate in Arts | Code: 11207 | 60 credits

The A.A. degree does not prepare students to be eligible to take certification/licensure exams or to practice in the Physical Therapy profession. This program prepares students for transfer by providing intensive coursework in mathematics and science. Most upper-division programs have selective admissions and transfer requirements vary, so students should work with an advisor in planning a program of study. Physical therapists help rehabilitate individuals who have been disabled by injury or disease. They usually work in healthcare settings such as hospitals or nursing homes.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 10.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
<i>Social Science</i>		3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.
Lecture Hours: 48.000

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.
Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence. Lecture Hours: 48.000

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee. Lecture Hours: 48.000
Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee. Lab Hours: 64.000
Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010
Course User Fee: \$40.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)
Lecture Hours: 48.000
Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.
Lecture Hours: 48.000
Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."
Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.
Lecture Hours: 48.000

Program Description

Pre-Veterinary Medicine

Associate in Arts | Code: 11208 | 60 credits

Veterinary medicine is the study of the diagnosis, treatment and control of disease and injuries among animals. Veterinarians may specialize in the health and breeding of certain animals, performing surgery, prescribing and administering drugs and vaccines, and research. Veterinarians may also concentrate on the inspection of meat, poultry and other foods as part of federal and state public health programs. The University of Florida is the only state school that offers a veterinary program.

Program Modality: Both [In-Person (IP) and On-line]

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

CHM1025L Introductory Chemistry Lab 1.000 credits

This course is an optional beginning chemistry laboratory course, which has been designed for those students who have little or no background in chemistry and are enrolled in CHM1025. The students will reinforce what they learn in CHM1025. Students will learn about basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1025

Course User Fee: \$30.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry & Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students.

Lab Hours: 64.000

Prerequisite: CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds.

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting.

Prerequisites: CHM1046, CHM1046L; Corequisite: CHM2210.

Lab Hours: 64.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

Program Description

Psychology

Associate in Arts | Code: 12001 | 60 credits

Psychology is the science of human behavior and mental processes that affect mental and physical health. A.A. coursework covers the science and mathematics subjects needed to transfer to a four-year institution. While the Bachelor's degree in psychology could be useful in a number of careers, professional psychologists must continue to graduate study. Employment opportunities with a Doctorate or a Masters' degree include teaching or counseling in a wide variety of settings.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

ISS1301 Intro. to Social Research 3.000 credits

This course is a general introduction to research methodology in the Social Sciences, paying particular attention to research design, data collection and data analysis. This is a course in Applied Social Sciences that will provide students with a survey understanding of social scientific research. This course will include examination of empirical research, including literature reviews, theory, methodology, data collection, data analysis and presentation of results. (3 hr. lecture)

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan. Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

SOP2002 Social Psychology 3.000 credits

Combines a knowledge of psychology and sociology, in an interdisciplinary approach to the study of human interaction. Main themes deal with the nature of attitudes, how attitudes may be changed, the processes of interaction and the nature of group structures.

Lecture Hours: 48.000

SOP2772 Human Sexuality 3.000 credits

This course examines the biological, theoretical, social, psychological, and cultural aspects of human sexuality. Students will learn about sexual anatomy, sexual response cycle, sex and gender development, sexual attraction and relationships, reproductive health issues, and social issues in sexuality.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CLP2140 Psychopathology 3.000 credits

This course examines the major categories of mental disorders. Diagnostic criteria, treatment methods, cultural factors, public attitudes, community resources, ethical issues and legislation applicable to individuals with mental disorders are studied. The impact of mental disorders on individuals, families and society are discussed.

Lecture Hours: 48.000

Prerequisite: PSY2012

INP2390 Psychology of Work 3.000 credits

Applies the understanding of effective human relations to work situations. Personal dynamics for success are also considered. Students will be taught how to influence behavior on the job as they apply their knowledge and interpersonal skills to specific experiences in the workplace.

Lecture Hours: 48.000

PSY2050 Introduction to Forensic Psychology 3.000 credits

This course explores the interaction between psychology and the legal system. Students will learn the foundations, history, and terminology of forensic psychology and the influence of media and cultural issues. Students will also learn about the forensic psychologists role in criminal and civil proceedings, public policy, law enforcement, and victimization.

Lecture Hours: 48.000

Prerequisite: PSY2012

PSY2800 Psychology of Genocide 3.000 credits

Students will learn the psychological, social, and cultural roots of genocide, human cruelty, and mass violence. Students will examine the various factors influencing such acts, and the emotional and psychological impact upon victims, perpetrators, rescuers, and society.

Lecture Hours: 48.000

Prerequisite: ENC1101

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CLP2000 Dynamics of Behavior 3.000 credits

Analysis of mechanisms of adjustment, motivation, frustration and conflict, learning personality and psychotherapy. Emphasis is on the psychological processes of the normal individual functioning in society rather than on behavior disorders.

Lecture Hours: 48.000

CLP2470 Introduction to Childhood Psychopathology 3.000 credits

This course will satisfy a requirement for the Specialized Registered Behavior Technician Associate in Science program. This course is an introduction to the various forms of abnormal behavior in infancy, childhood, and adolescence within the context of traditional and contemporary psychological theory. Diagnostic criteria, treatment methods, cultural factors, public attitudes, community resources, ethical issues and legislation applicable to childhood mental disorders are studied. The impacts of mental disorders on individuals, families and society are discussed. Prerequisite: PSY 2012. (3 hr. lecture)
Lecture Hours: 48.000
Prerequisite: PSY2012

DEP2100 Child Growth And Development 3.000 credits

This course in Child Growth and Development is designed especially for the student interested in the human life span from birth through the first eight years. The course is intended to acquaint the student with basic theoretical models of development and such specific topics as heredity teratogenic agents, learning, intelligence, socialization, personality, sex role identification, language acquisition and moral development.
Lecture Hours: 48.000

DEP2402 Psychology of Adulthood and Aging 3.000 credits

This course will examine adulthood and aging from a multidisciplinary and diversity perspective. This course will explore the biological, physical, psychological, cognitive, and cultural changes during adulthood and aging including contemporary aspects of work-family life, and retirement. Aspects of death and dying will also be discussed from a multidisciplinary perspective. (3 hr. lecture)
Lecture Hours: 48.000

ISS2270 Multicultural Communications and Relations 3.000 credits

This course uses an interdisciplinary approach to examine the complex interactions among ethnicity, race, gender, age, and class, as well as other ways in which we differ as they pertain to shaping personal awareness, understanding, and skills that will allow them to interact more effectively with diverse populations, age, groups, and lifestyles and to think through and value human diversity. This course has an overriding principle based on the concept of human rights. (3 hr. lecture)
Lecture Hours: 48.000

PSY2050 Introduction to Forensic Psychology 3.000 credits

This course explores the interaction between psychology and the legal system. Students will learn the foundations, history, and terminology of forensic psychology and the influence of media and cultural issues. Students will also learn about the forensic psychologists role in criminal and civil proceedings, public policy, law enforcement, and victimization.
Lecture Hours: 48.000
Prerequisite: PSY2012

PSY2800 Psychology of Genocide 3.000 credits

Students will learn the psychological, social, and cultural roots of genocide, human cruelty, and mass violence. Students will examine the various factors influencing such acts, and the emotional and psychological impact upon victims, perpetrators, rescuers, and society.
Lecture Hours: 48.000
Prerequisite: ENC1101

PSB2041 Behavioral Neuroscience 3.000 credits

This course presents an approach to the study of the biology of human behavior and aims to introduce the field of Biopsychology. It is designed to provide each student with comprehensive exposure to the nervous system and how it governs various behaviors. This is an introduction course that explores how our brains develop, how they work, and how they are changed by life experiences. Topics include neural communication, localization of brain function, neural systems, and control of behavior. Upon completion of the course, the student will have a solid foundation regarding the biological basis of behavior upon which to build on in more advanced courses of study.
Lecture Hours: 48.000

PSB2442 Psychology of Addiction 3.000 credits

This course will examine psychological, medical, pharmacological, legal, economic and sociological aspects of addiction to and use of various chemicals. The course will take an in-depth look at narcotic sedatives, and stimulants including alcohol, cocaine, heroin, cannabis, caffeine and tobacco.
Lecture Hours: 48.000

Program Description

Public Administration

Associate in Arts | Code: 12100 | 60 credits

This is an interdisciplinary program gearing the combined study of business, government and economics toward a career in the public sector. Although some students pursue graduate degrees, those with Bachelor's degrees may obtain work managing budgets, or developing programs and policies in government, education and non-profit settings.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 14.0
ENC 1101	English Composition 1	3.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
POS 2041	American Federal Government	3.0
SPC 2608	Introduction to Public Speaking	3.0
SLS 1106	First Year Experience Seminar	1.0
Semester 2		Units: 12.0

PUR 2003	Public Relations	3.0
STA 2023	Statistical Methods	3.0
		Total: 63.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

POS2112 State and Local Government In America 3.000 credits

The typical state and local government organization, together with political practices in America, with special emphasis on governmental organizations and the major contemporary political problems of the State of Florida and of Florida communities.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

INR2002 International Relations 3.000 credits

The nature of international relations, the causes of leading international problems, foreign policies of world powers, international political organizations, and the origins of war and peace in the international arena.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

MAN2021 Principles of Management 3.000 credits

The student will learn to analyze the major functions of management. Emphasis is placed on learning how to manage organizations for excellence in both performance and employee satisfaction. Major topics include but are not limited to business ethics and social responsibility, strategic and operational planning, decision making, organization structure and behavior, managing groups and teams, communication and information technology.

Lecture Hours: 48.000

Course User Fee: \$15.00

MAR1011 Principles of Marketing 3.000 credits

This introductory course emphasizes key concepts and issues underlying the modern practice of marketing. The course provides the student with a clear understanding of marketing's role in the 21st Century and introduces the student to both traditional and contemporary ways of marketing. The student will learn how marketers deliver value by satisfying customer needs and wants, determine which target markets to serve, and decide which goods and services are needed to serve these markets.

Lecture Hours: 48.000

Course User Fee: \$10.00

PUR2003 Public Relations 3.000 credits

This course provides students with a broad spectrum of topics related to the Public Relations profession. Current practices or organized programs used in business to earn public acceptance and good will for products, services, personnel, and policies are explored, studied and experienced. The course employs a hands-on approach to applying public relations techniques in hypothetical business situations. Students prepare press releases, brochures, and other collateral materials.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

To prepare for upper-division work in recreation, students take courses in accounting, economics, human anatomy and physiology, and health sciences. This curriculum meets the pre-professional and general education course requirements for transfer, but due to variations in upper-division requirements, students should confer with an advisor. Recreation professionals often work in youth agencies, but may also develop careers in industries such as healthcare, fitness, and travel and tourism.

Program Modality: Both [In-Person (IP) and On-line]

Course User Fee: \$19.10

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

BSC1084 Functional Human Anatomy 3.000 credits

This course covers basic human anatomy for students in allied health and mortuary science programs. It includes the dynamics of gross and functional anatomy, terminology, body orientation, and systematic relationships.

Lecture Hours: 48.000

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

HLP1080 Wellness 2.000 credits

This course enables students to assess their present aerobic fitness level, lung capacity, percentage of body fat, flexibility and strength. From data collected, the student will be able to set personal wellness goals. Lectures, demonstrations, and multi-media materials will be used to provide the scientific basis for meeting ones personal wellness goals. (2 hr. lecture/lab)

Lecture Hours: 32.000

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

HLP1081 Fitness & Wellness for Life 3.000 credits

In this course students will learn the roles of exercise, physical activity, diet, and stress management in achieving optimal wellness. Students will explore current developments in health and complete lab assignments, which will assist in the determination of their current health status. Individualized exercise and dietary protocols based on these assessments will be developed. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics.

Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

HUS1001 Introduction to Human Services 3.000 credits

An introduction to an overview of the field of Human Services, including the role of the human services worker as it relates to various agencies, counseling, interviewing and managing.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

Program Description

Social Work

Associate in Arts | Code: 12102 | 60 credits

This program prepares students for upper-division education in social work by offering courses in science and sociology. Social workers provide the link between organized social services and individuals and families unable to provide for themselves or needing assistance in problem solving. Potential employers include hospitals, mental health centers, rehabilitation centers, government agencies, schools and correctional institutions.

Program Modality: Both [In-Person (IP) and On-line]

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ISS1301 Intro. to Social Research 3.000 credits

This course is a general introduction to research methodology in the Social Sciences, paying particular attention to research design, data collection and data analysis. This is a course in Applied Social Sciences that will provide students with a survey understanding of social scientific research. This course will include examination of empirical research, including literature reviews, theory, methodology, data collection, data analysis and presentation of results. (3 hr. lecture)

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite: MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033 Any Mathematics level higher than MAT 1033 will satisfy this requirement.

MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

HUS1302 Basic Counseling Skills 3.000 credits

Development of the skills of observation, recording, reporting, interviewing and counseling. These skills are presented in the context of general counseling theory.

Lecture Hours: 48.000

CLP2140 Psychopathology 3.000 credits

This course examines the major categories of mental disorders. Diagnostic criteria, treatment methods, cultural factors, public attitudes, community resources, ethical issues and legislation applicable to individuals with mental disorders are studied. The impact of mental disorders on individuals, families and society are discussed.

Lecture Hours: 48.000

Prerequisite: PSY2012

HUS2303 Counseling Techniques 3.000 credits

Specific counseling techniques are introduced within the various counseling theories. Work involves both group and individual techniques.

Lecture Hours: 48.000

HUS2500 Issues & Ethics in Human Services 3.000 credits

This course is designed to familiarize students with the ethical problems that emerge from counseling the chemically dependent client. Emphasis will be placed on the following: the history and theory of ethics in health care; professionals' and patients' rights and responsibilities; the relationship between ethics and law; confidentiality and truth-telling in clinical relationships; technology; diagnostic testing and treatment; treatment of terminal illness; distribution of scarce medical resources and access to health care and systems payment. Prerequisite: PSB2442.

Lecture Hours: 48.000

SOP2002 Social Psychology 3.000 credits

Combines a knowledge of psychology and sociology, in an interdisciplinary approach to the study of human interaction. Main themes deal with the nature of attitudes, how attitudes may be changed, the processes of interaction and the nature of group structures.

Lecture Hours: 48.000

Program Description

Sociology

Associate in Arts | Code: 12203 | 60 credits

Sociology is the systematic study of human interaction, that is, society, social relationships, social structures and social change. Coursework emphasizes liberal arts topics such as literature, cultural anthropology, theatre appreciation and history, as well as introductory courses in sociology. Graduates with a Bachelor's degree can work within community organizations, government agencies and the criminal justice field. Many students go on to pursue graduate degrees and work in social policy, public administration, law, government or social services.

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

SYG2010 Social Problems 3.000 credits

An analysis of the major contemporary and recurring social problems, emphasizing scientific search for variables involved and exploring alternative solutions.

Lecture Hours: 48.000

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

ISS1301 Intro. to Social Research 3.000 credits

This course is a general introduction to research methodology in the Social Sciences, paying particular attention to research design, data collection and data analysis. This is a course in Applied Social Sciences that will provide students with a survey understanding of social scientific research. This course will include examination of empirical research, including literature reviews, theory, methodology, data collection, data analysis and presentation of results. (3 hr. lecture)

Lecture Hours: 48.000

SYG2230 Multi-Ethnic America 3.000 credits

In this course, students will gain an understanding of the theory and problems of underrepresented populations in American society, with an emphasis on inequity, bias, and the evolving dynamics of bias and discrimination. Additionally, the course will critically examine the portrayal of underrepresented populations in the Western Canon, providing insight into the historical and cultural influences that have shaped societal perceptions and attitudes.

SYG2430 Marriage and The Family 3.000 credits

The family as a social institution — its origin and development, its forms and functions, its interrelation with other social institutions, and its role in contemporary civilization. Areas of study include factors contributing to or acting against successful, stable marriage.

Lecture Hours: 48.000

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

Program Description

Speech Pathology & Audiology

Associate in Arts | Code: 11501 | 60 credits

This program provides fundamental coursework in biology and communications so that students may transfer to a four-year institution. The curriculum leading to the Baccalaureate degree is usually designed as pre-professional education for a graduate program. Speech language pathologists and audiologists provide clinical services to individuals with speech, language and hearing impairments. Eligibility for the Certificate of Clinical Competence from the American Speech-Language-Hearing Association and state licensure are not possible until requirements for the graduate degree are met.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0
BSC 1005	General Education Biology	3.0
CLP 2000	Dynamics of Behavior	3.0
ENC 1101	English Composition 1	3.0
MGF 1130	Mathematical Thinking	3.0
Semester 2		Units: 12.0
ENC 1102	English Composition 2	3.0
Humanities		3.0
HUM 1020	Humanities	3.0
OR		
ARH 1000	Art Appreciation	3.0
OR		
LIT 2000	Introduction to Literature	3.0
OR		
MUL 1010	Music Appreciation	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
OR		
THE 2000	Theatre Appreciation	3.0
PSY 2012	Introduction to Psychology	3.0
STA 2023	Statistical Methods	3.0
Semester 3		Units: 9.0
PHI 2600	Introduction to Ethics	3.0
SPC 1017	Introduction to Communication	3.0
Social Science		3.0

AMH 2010	History of the US to 1877	3.0

Total: 60.0

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CLP2000 Dynamics of Behavior 3.000 credits

Analysis of mechanisms of adjustment, motivation, frustration and conflict, learning personality and psychotherapy. Emphasis is on the psychological processes of the normal individual functioning in society rather than on behavior disorders.

Lecture Hours: 48.000

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context. Lecture Hours: 48.000

Lecture Hours: 48.000

Course User Fee: \$10.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course. Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CLP2140 Psychopathology 3.000 credits

This course examines the major categories of mental disorders. Diagnostic criteria, treatment methods, cultural factors, public attitudes, community resources, ethical issues and legislation applicable to individuals with mental disorders are studied. The impact of mental disorders on individuals, families and society are discussed.

Lecture Hours: 48.000

Prerequisite: PSY2012

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy & Physiology Lab 1 1.000 credits

In this laboratory course, student will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

DEP2100 Child Growth And Development 3.000 credits

This course in Child Growth and Development is designed especially for the student interested in the human life span from birth through the first eight years. The course is intended to acquaint the student with basic theoretical models of development and such specific topics as heredity teratogenic agents, learning, intelligence, socialization, personality, sex role identification, language acquisition and moral development.

Lecture Hours: 48.000

Program Description

Teaching (Pre-Elementary/Early Childhood)

Associate in Arts | Code: 10809 | 60 credits

This program prepares students to major in elementary education by presenting the science, liberal arts and education curriculum necessary for transfer to Florida colleges and universities. Areas of specialization include elementary, pre-elementary/early childhood, exceptional student and secondary education. Available areas of specialization in secondary education are biology, chemistry, earth/space science, English and foreign language, mathematics, physics and social science. Additionally, a specialization in vocational secondary education is available. This includes agriculture, business, home economics and technical coursework. A curriculum appropriate to each area of specialization is featured in the specific A.A. program. Students should work with an advisor to determine the appropriate coursework for transfer into their intended area of study.

*Select 6 credits from the following course options: EEC 1200, EEC 1311, EEC 2407, EEC2002, EEC2520, EEC2523, EEC2527, ECW 2010, PHI

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

EEC1000 Introduction to Early Childhood Education 3.000 credits

Students will be introduced to the field of early childhood education with a focus on infants, toddlers, and preschool-aged children from birth through age five, highlighting play as a developmentally appropriate and research-supported approach to early learning. The course examines the purpose and scope of early childhood education and the roles of children, families, and educators. Students gain an overview of foundational theories and philosophies, family and societal influences, learning environments, classroom routines, and guidance practices that support development across domains. Common early childhood program types and curriculum models serving birth-five settings are also explored. Ten hours of service learning in an early childhood setting are required. Fingerprinting through MDC's school of education must be completed before starting this course. See the MDC SOE Work-Force handbook.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

EDF1005 Introduction to the Education Profession 3.000 credits

This course provides an overview of Florida's educator certification pathways and career options in education in accordance with Florida statutes. Topics include: key educational philosophies; professional ethics; legal responsibilities, including mandatory reporting for child abuse and neglect; the Florida educator accomplished practices (FEAP); key instructional practices associated with effective teaching of students with exceptionalities; Florida's state academic standards; and historical, legal and financial foundations of the Florida education systems. Students will explore effective teaching strategies in classroom management, educational technology and the foundations of all student learning needs. A minimum of 15 hours of required clinical experience in a variety of school settings is included.

Lecture Hours: 48.000

Course User Fee: \$18.00

CAI1001C Artificial Intelligence (AI) Thinking 3.000 credits

A survey of artificial intelligence (AI) where students explore different technologies utilizing concepts and skills widely accepted for AI and digital competency. Classification algorithms, supervised vs. unsupervised learning, data preparation, and training/using learning models for predictions are presented. CGS1060C and MAT1033 are recommended, but not required.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

EEC1200 Early Childhood Curriculum 1 (Birth - Age 5) 3.000 credits

Students will design and implement developmentally appropriate curriculum for children from birth to age five using the NAEYC Professional Standards as a guiding framework. Emphasis is placed on foundational curriculum planning grounded in children's interests, with focus on development, social studies, language and literacy, and creative expression through the arts. Course content includes observation-based planning, learning centers, classroom and outdoor environments, daily routines, and play-based experiences. Key early learning concepts, including play, cause and effect, and communication, are integrated to support developmentally appropriate practice, early learning, and school readiness. This course is paired with EEC1311, which extends curriculum planning through integrated and inquiry-based applications. Ten (10) hours of service learning in an approved early childhood setting are required.

Lecture Hours: 48.000

Pre/Corequisite: EEC1000

EEC1311 Curriculum II: Integrated, Inquiry-Based Curriculum (Birth to Age 5) 3.000 credits

Students will design and implement integrated, developmentally appropriate curriculum for children from birth to age five, building on foundational curriculum planning introduced in EEC 1200. Emphasis is placed on arts-integrated STEM learning through inquiry-based curriculum planning, with focus on scientific inquiry, mathematical thinking, building and engineering, technology, and maker spaces for creative and artistic expression. Course content includes inquiry-based planning, learning centers, enriching classroom and outdoor environments, and play-based investigations that extend children's thinking across domains. Key early learning concepts, including play, cause and effect, and communication, are integrated to support developmentally appropriate practice, early learning, and school readiness. Ten (10) hours of service learning in an approved early childhood setting are required.

Lecture Hours: 48.000

Pre/Corequisite: EEC1000 AND EEC1200

Course User Fee: \$10.00

EEC2407 Foundations of Learning and Executive Function in Early Childhood (Birth - 5) 3.000 credits

Students will build foundational knowledge of executive-function life skills, including focus and self-control, perspective taking, communication, making connections, critical thinking, taking on challenges, and self-directed learning, as the basis for learning in early childhood (Birth–5). The course examines how these skills interact with interpersonal development and cognitive growth, drawing on neuroscience and research on child development. Reciprocal family partnerships, observation-based reflection, and ethical considerations guide the analysis of young children’s interactions and abilities. Emphasis is placed on research-based inhibitory control strategies that support neurocognitive development. Students will connect these executive-function skills and regulation strategies to developmentally appropriate teaching methods across home and early education settings. Ten hours of service learning in an approved early childhood setting are required. See the School of Education workforce handbook.

Lecture Hours: 48.000

EEC2002 Operation of an Early Childhood Facility 3.000 credits

This introductory course provides an overview for early childhood administrators to develop and enhance their leadership role in designing and implementing quality early care and education programs. The student will study the following topics: organizational leadership and management, programming, and financial and legal issues. This course meets the requirements for the Education Program Administrator Foundational Level Credential.

Lecture Hours: 48.000

EEC2520 Early Childhood Organization Leadership 3.000 credits

The student will develop skills needed by early childhood program administrators to manage a high-quality center. The student will learn about organizational structure of a center; ethics and professionalism; leadership strategies, skills, and competencies; self-reflection and work environment; quality improvement; staff recruitment, evaluation, and retention. This course meets the requirements for the Florida Advanced Level Child Care and Education Administrator Credential. (Requires employment at an early childhood center.)

Lecture Hours: 48.000

Prerequisite: EEC2002

Course User Fee: \$10.00

EEC2523 Programming & Management for Early Childhood Admin 3.000 credits

The student will learn about developmentally and culturally appropriate environments, curriculum, and professional standards for early childhood care program administrators. The student will develop an understanding of child observation, assessment, documentation, and referrals and their importance. The student will learn about program evaluation, health, safety, healthy nutrition practices, and the importance of partnerships with families. This course meets the requirements for the Florida Advanced Level Child Care and Education Administrator Credential. (Requires employment at an early childhood center.).

Lecture Hours: 48.000

Course User Fee: \$10.00

EEC2527 Legal and Financial Issues in Childcare 3.000 credits

The student will learn about the legal and financial issues related to operating a successful early childhood center. The student learns about financial planning, personnel cost and allocation, budgeting and accounting. The student will develop knowledge about compensation and benefit, risk management, marketing and public relations, regulatory requirements, and legal issues related to childcare management. This course meets the requirements for the Florida Advanced Level Child Care and Education Administrator Credential.

Lecture Hours: 48.000

Prerequisite: EEC2002

ECW2010 Teaching with AI: Designing Human-Centered Classrooms 3.000 credits

This course invites learners to explore the integration of artificial intelligence through a pedagogical lens, where technology serves as a tool for reimagining teaching and learning. Learners will critically engage with AI tools by grounding their use in learning theory and evidence-based design practices. Through inquiry, collaboration, and hands-on experimentation, learners will examine how AI can amplify creativity, personalize learning, and promote human-centeredness.

Lecture Hours: 48.000

PHI2680 Artificial Intelligence and Ethics 3.000 credits

This course acquaints students with ethics as relevant to the design, implementation, and administration of artificial intelligence and emerging technologies. It will explore issues such as the biases of algorithms, autonomous warfare, the risks of surveillance technologies, and the effects of technologies on employment. In addition, this course will also delve into the critical examination of the Western Canon's influence on the development and ethical implications of artificial intelligence and emerging technologies.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized. Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course. Lecture Hours: 48.000

EDF2144 Maximizing Student Potential in the School Context 3.000 credits

The student will explore various aspects of learning and brain development in schools. Students will be introduced to the latest neuroscience education strategies used in schools to optimize their learning potential from infancy through adolescence.

Lecture Hours: 48.000

EME2040 Creativity, Innovation, and Technology 3.000 credits

The student will learn to manage a productive & safe technology environment by promoting creativity and innovation in the classroom. The student will gain 21st century knowledge, skills, and attitudes for applying technology across multiple disciplines and grade levels.

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Prerequisite: CGS1060 OR Passing Score on the Computer Competency Exam

Course User Fee: \$190.03

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

EDG2943 Educational Service Field Work 1.000 - 3.000 credits

The student will learn to compile the necessary documents and complete the process of obtaining a state and/or national early childhood credential. The student must complete the four courses in either the Infant/Toddler Specialization or the Preschool Specialization in order to take this course.

Lecture Hours: 16.000 - 48.000

Prerequisite: EEC1000, EEC1200, EEC1311, EEC2202, or EEC2002, EEC2520, EEC2523, EEC2527

Program Description

Teaching (Exceptional Student Education)

Associate in Arts | Code: 10804 | 60 credits

This program prepares students to major in elementary education by presenting the science, liberal arts and education curriculum necessary for transfer to Florida colleges and universities. Areas of specialization include elementary, pre-elementary/early childhood, exceptional student and secondary education. Available areas of specialization in secondary education are biology, chemistry, earth/space science, English and foreign language, mathematics, physics and social science. Additionally, a specialization in vocational secondary education is available. This includes agriculture, business, home economics and technical coursework. A curriculum appropriate to each area of specialization is featured in the specific A.A. program. Students should work with an advisor to determine the appropriate coursework for transfer into their intended area of study.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

EDF1005 Introduction to the Education Profession 3.000 credits

This course provides an overview of Florida's educator certification pathways and career options in education in accordance with Florida statutes. Topics include: key educational philosophies; professional ethics; legal responsibilities, including mandatory reporting for child abuse and neglect; the Florida educator accomplished practices (FEAP); key instructional practices associated with effective teaching of students with exceptionalities; Florida's state academic standards; and historical, legal and financial foundations of the Florida education systems. Students will explore effective teaching strategies in classroom management, educational technology and the foundations of all student learning needs. A minimum of 15 hours of required clinical experience in a variety of school settings is included.

Lecture Hours: 48.000

Course User Fee: \$18.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

EDF2144 Maximizing Student Potential in the School Context 3.000 credits

The student will explore various aspects of learning and brain development in schools. Students will be introduced to the latest neuroscience education strategies used in schools to optimize their learning potential from infancy through adolescence.

Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

EME2040 Creativity, Innovation, and Technology 3.000 credits

The student will learn to manage a productive & safe technology environment by promoting creativity and innovation in the classroom. The student will gain 21st century knowledge, skills, and attitudes for applying technology across multiple disciplines and grade levels.

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Prerequisite: CGS1060 OR Passing Score on the Computer Competency Exam

Course User Fee: \$190.03

CAI1001C Artificial Intelligence (AI) Thinking 3.000 credits

A survey of artificial intelligence (AI) where students explore different technologies utilizing concepts and skills widely accepted for AI and digital competency. Classification algorithms, supervised vs. unsupervised learning, data preparation, and training/using learning models for predictions are presented. CGS1060C and MAT1033 are recommended, but not required.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

EEX2000 Introduction to Exceptional Student Education 3.000 credits

The student will learn about the history, legal issues, and legislation related to exceptional student education in K–12. The student will learn about the differing types of exceptionalities, supports, and accommodations provided for students with differing learning profiles from birth to adulthood.

Lecture Hours: 48.000

Prerequisite: EDF1005

Course User Fee: \$18.00

EEC1000 Introduction to Early Childhood Education 3.000 credits

Students will be introduced to the field of early childhood education with a focus on infants, toddlers, and preschool-aged children from birth through age five, highlighting play as a developmentally appropriate and research-supported approach to early learning. The course examines the purpose and scope of early childhood education and the roles of children, families, and educators. Students gain an overview of foundational theories and philosophies, family and societal influences, learning environments, classroom routines, and guidance practices that support development across domains. Common early childhood program types and curriculum models serving birth–five settings are also explored. Ten hours of service learning in an early childhood setting are required. Fingerprinting through MDC's school of education must be completed before starting this course. See the MDC SOE Work-Force handbook.

Lecture Hours: 48.000

EEC1200 Early Childhood Curriculum 1 (Birth - Age 5) 3.000 credits

Students will design and implement developmentally appropriate curriculum for children from birth to age five using the NAEYC Professional Standards as a guiding framework. Emphasis is placed on foundational curriculum planning grounded in children's interests, with focus on development, social studies, language and literacy, and creative expression through the arts. Course content includes observation-based planning, learning centers, classroom and outdoor environments, daily routines, and play-based experiences. Key early learning concepts, including play, cause and effect, and communication, are integrated to support developmentally appropriate practice, early learning, and school readiness. This course is paired with EEC1311, which extends curriculum planning through integrated and inquiry-based applications. Ten (10) hours of service learning in an approved early childhood setting are required.

Lecture Hours: 48.000

Pre/Corequisite: EEC1000

EEC1311 Curriculum II: Integrated, Inquiry-Based Curriculum (Birth to Age 5) 3.000 credits

Students will design and implement integrated, developmentally appropriate curriculum for children from birth to age five, building on foundational curriculum planning introduced in EEC 1200.

Emphasis is placed on arts-integrated STEM learning through inquiry-based curriculum planning, with focus on scientific inquiry, mathematical thinking, building and engineering, technology, and maker spaces for creative and artistic expression. Course content includes inquiry-based planning, learning centers, enriching classroom and outdoor environments, and play-based investigations that extend children's thinking across domains. Key early learning concepts, including play, cause and effect, and communication, are integrated to support developmentally appropriate practice, early learning, and school readiness. Ten (10) hours of service learning in an approved early childhood setting are required.

Lecture Hours: 48.000

Pre/Corequisite: EEC1000 AND EEC1200

Course User Fee: \$10.00

EEC2407 Foundations of Learning and Executive Function in Early Childhood (Birth - 5) 3.000 credits

Students will build foundational knowledge of executive-function life skills, including focus and self-control, perspective taking, communication, making connections, critical thinking, taking on challenges, and self-directed learning, as the basis for learning in early childhood (Birth–5). The course examines how these skills interact with interpersonal development and cognitive growth, drawing on neuroscience and research on child development. Reciprocal family partnerships, observation-based reflection, and ethical considerations guide the analysis of young children's interactions and abilities. Emphasis is placed on research-based inhibitory control strategies that support neurocognitive development. Students will connect these executive-function skills and regulation strategies to developmentally appropriate teaching methods across home and early education settings. Ten hours of service learning in an approved early childhood setting are required. See the School of Education workforce handbook.

Lecture Hours: 48.000

EEC2002 Operation of an Early Childhood Facility 3.000 credits

This introductory course provides an overview for early childhood administrators to develop and enhance their leadership role in designing and implementing quality early care and education programs. The student will study the following topics: organizational leadership and management, programming, and financial and legal issues. This course meets the requirements for the Education Program Administrator Foundational Level Credential.

Lecture Hours: 48.000

EEC2520 Early Childhood Organization Leadership 3.000 credits

The student will develop skills needed by early childhood program administrators to manage a high-quality center. The student will learn about organizational structure of a center; ethics and professionalism; leadership strategies, skills, and competencies; self-reflection and work environment; quality improvement; staff recruitment, evaluation, and retention. This course meets the requirements for the Florida Advanced Level Child Care and Education Administrator Credential. (Requires employment at an early childhood center.)

Lecture Hours: 48.000

Prerequisite: EEC2002

Course User Fee: \$10.00

EEC2523 Programming & Management for Early Childhood Admin 3.000 credits

The student will learn about developmentally and culturally appropriate environments, curriculum, and professional standards for early childhood care program administrators. The student will develop an understanding of child observation, assessment, documentation, and referrals and their importance. The student will learn about program evaluation, health, safety, healthy nutrition practices, and the importance of partnerships with families. This course meets the requirements for the Florida Advanced Level Child Care and Education Administrator Credential. (Requires employment at an early childhood center.).

Lecture Hours: 48.000

Course User Fee: \$10.00

EEC2527 Legal and Financial Issues in Childcare 3.000 credits

The student will learn about the legal and financial issues related to operating a successful early childhood center. The student learns about financial planning, personnel cost and allocation, budgeting and accounting. The student will develop knowledge about compensation and benefit, risk management, marketing and public relations, regulatory requirements, and legal issues related to childcare management. This course meets the requirements for the Florida Advanced Level Child Care and Education Administrator Credential.

Lecture Hours: 48.000

Prerequisite: EEC2002

ECW2010 Teaching with AI: Designing Human-Centered Classrooms 3.000 credits

This course invites learners to explore the integration of artificial intelligence through a pedagogical lens, where technology serves as a tool for reimagining teaching and learning. Learners will critically engage with AI tools by grounding their use in learning theory and evidence-based design practices.

Through inquiry, collaboration, and hands-on experimentation, learners will examine how AI can amplify creativity, personalize learning, and promote human-centeredness.

Lecture Hours: 48.000

PHI2680 Artificial Intelligence and Ethics 3.000 credits

This course acquaints students with ethics as relevant to the design, implementation, and administration of artificial intelligence and emerging technologies. It will explore issues such as the biases of algorithms, autonomous warfare, the risks of surveillance technologies, and the effects of technologies on employment. In addition, this course will also delve into the critical examination of the Western Canon's influence on the development and ethical implications of artificial intelligence and emerging technologies.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

Program Description

Teaching Secondary (Biology)

Associate in Arts | Code: 10815 | 60 credits

This program prepares students to major in elementary education by presenting the science, liberal arts and education curriculum necessary for transfer to Florida colleges and universities. Areas of specialization include elementary, pre-elementary/early childhood, exceptional student and secondary education. Available areas of specialization in secondary education are biology, chemistry, earth/space science, English and foreign language, mathematics, physics and social science. Additionally, a specialization in vocational secondary education is available. This includes agriculture, business, home economics and technical coursework. A curriculum appropriate

to each area of specialization is featured in the specific A.A. program. Students should work with an advisor to determine the appropriate coursework for transfer into their intended area of study.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
EDF 1005	Introduction to the Education Profession	3.0
SLS 1106	First Year Experience Seminar	1.0
Semester 2		Units: 13.0
ENC 1102	English Composition 2	3.0
DEP 2000	Human Growth and Development	3.0
MAC 1147	Pre-Calculus Algebra and Trigonometry	5.0
EDF 2144	Maximizing Student Potential in the School Context	3.0
Semester 3		Units: 9.0
SPC 2608	Introduction to Public Speaking	3.0
EME 2040	Creativity, Innovation, and Technology	3.0
<i>Computer Competence</i>		3.0
CAI 1001C	Artificial Intelligence (AI) Thinking	3.0
OR		
CGS 1060C	Introduction to Computer Technology and Applications	4.0
Semester 4		Units: 13.0
BSC 2010	Principles of Biology	3.0
BSC 2010L	Principles of Biology 1 Laboratory	2.0
CHM 1045	General Chemistry and Qualitative Analysis	3.0
CHM 1045L	General Chemistry Lab	2.0
<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
EEX 2000	Introduction to Exceptional Student Education	3.0
Semester 5		Units: 12.0
BSC 2011	Principles of Biology 2	3.0
BSC 2011L	Principles of Biology 2 Laboratory	2.0
CHM 1046	General Chemistry and Qualitative Analysis	3.0
CHM 1046L	General Chemistry & Qualitative Analysis Lab	2.0
PHI 2600	Introduction to Ethics	3.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

EDF1005 Introduction to the Education Profession 3.000 credits

This course provides an overview of Florida's educator certification pathways and career options in education in accordance with Florida statutes. Topics include: key educational philosophies; professional ethics; legal responsibilities, including mandatory reporting for child abuse and neglect; the Florida educator accomplished practices (FEAP); key instructional practices associated with effective teaching of students with exceptionalities; Florida's state academic standards; and historical, legal and financial foundations of the Florida education systems. Students will explore effective teaching strategies in classroom management, educational technology and the foundations of all student learning needs. A minimum of 15 hours of required clinical experience in a variety of school settings is included.

Lecture Hours: 48.000
Course User Fee: \$18.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000
Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics.

Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000
Prerequisite: MAC1105
Course User Fee: \$18.00

EDF2144 Maximizing Student Potential in the School Context 3.000 credits

The student will explore various aspects of learning and brain development in schools. Students will be introduced to the latest neuroscience education strategies used in schools to optimize their learning potential from infancy through adolescence.

Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

EME2040 Creativity, Innovation, and Technology 3.000 credits

The student will learn to manage a productive & safe technology environment by promoting creativity and innovation in the classroom. The student will gain 21st century knowledge, skills, and attitudes for applying technology across multiple disciplines and grade levels.

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Prerequisite: CGS1060 OR Passing Score on the Computer Competency Exam

Course User Fee: \$190.03

CAI1001C Artificial Intelligence (AI) Thinking 3.000 credits

A survey of artificial intelligence (AI) where students explore different technologies utilizing concepts and skills widely accepted for AI and digital competency. Classification algorithms, supervised vs. unsupervised learning, data preparation, and training/using learning models for predictions are presented. CGS1060C and MAT1033 are recommended, but not required.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

EEX2000 Introduction to Exceptional Student Education 3.000 credits

The student will learn about the history, legal issues, and legislation related to exceptional student education in K-12. The student will learn about the differing types of exceptionalities, supports, and accommodations provided for students with differing learning profiles from birth to adulthood.

Lecture Hours: 48.000

Prerequisite: EDF1005

Course User Fee: \$18.00

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

**BSC2011L Principles of Biology 2 Laboratory
2.000 credits**

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

**CHM1046 General Chemistry and Qualitative
Analysis 3.000 credits**

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

**CHM1046L General Chemistry & Qualitative
Analysis Lab 2.000 credits**

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students.

Lab Hours: 64.000

Prerequisite: CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

Program Description

Teaching Secondary (Mathematics Education)

Associate in Arts | Code: 10812 | 60 credits

This program prepares students to major in elementary education by presenting the science, liberal arts and education curriculum necessary for transfer to Florida colleges and universities. Areas of specialization include elementary, pre-elementary/early childhood, exceptional student and secondary education. Available areas of specialization in secondary education are biology, chemistry, earth/space science, English and foreign language, mathematics, physics and social science. Additionally, a specialization in vocational secondary education is available. This includes agriculture, business, home economics and technical coursework. A curriculum appropriate to each area of specialization is featured in the specific A.A. program. Students should work with an advisor to determine the appropriate coursework for transfer into their intended area of study.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 13.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		

AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
EDF 1005	Introduction to the Education Profession	3.0
SLS 1106	First Year Experience Seminar	1.0

Semester 2 **Units: 12.0**

ENC 1102	English Composition 2	3.0
MAC 1147	Pre-Calculus Algebra and Trigonometry	5.0
STA 2023	Statistical Methods	3.0
DEP 2000	Human Growth and Development	3.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 3 **Units: 11.0**

BSC 1005	General Education Biology	3.0
MAC 2311	Calculus and Analytical Geometry 1	5.0
SPC 2608	Introduction to Public Speaking	3.0

Semester 4 **Units: 12.0**

<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
MAC 2312	Calculus and Analytical Geometry 2	4.0
EDF 2144	Maximizing Student Potential in the School Context	3.0
EME 2040	Creativity, Innovation, and Technology	3.0

Semester 5 **Units: 12.0**

PHI 2600	Introduction to Ethics	3.0
MAC 2313	Calculus and Analytic Geometry 3	4.0
<i>Natural Science</i>		3.0
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		
HUN 1012	Nutritional Counseling	3.0
OR		
PSC 1515	Energy in the Natural Environment	3.0
EEX 2000	Introduction to Exceptional Student Education	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

EDF1005 Introduction to the Education Profession 3.000 credits

This course provides an overview of Florida's educator certification pathways and career options in education in accordance with Florida statutes. Topics include: key educational philosophies; professional ethics; legal responsibilities, including mandatory reporting for child abuse and neglect; the Florida educator accomplished practices (FEAP); key instructional practices associated with effective teaching of students with exceptionalities; Florida's state academic standards; and historical, legal and financial foundations of the Florida education systems. Students will explore effective teaching strategies in classroom management, educational technology and the foundations of all student learning needs. A minimum of 15 hours of required clinical experience in a variety of school settings is included.

Lecture Hours: 48.000

Course User Fee: \$18.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics.

Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC1114 both with a minimum grade of C

Course User Fee: \$18.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

EDF2144 Maximizing Student Potential in the School Context 3.000 credits

The student will explore various aspects of learning and brain development in schools. Students will be introduced to the latest neuroscience education strategies used in schools to optimize their learning potential from infancy through adolescence.

Lecture Hours: 48.000

EME2040 Creativity, Innovation, and Technology 3.000 credits

The student will learn to manage a productive & safe technology environment by promoting creativity and innovation in the classroom. The student will gain 21st century knowledge, skills, and attitudes for applying technology across multiple disciplines and grade levels.

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Prerequisite: CGS1060 OR Passing Score on the Computer Competency Exam

Course User Fee: \$190.03

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

HUN1012 Nutritional Counseling 3.000 credits

This course focuses on the application of scientific knowledge to actual case studies. Techniques for effective nutrition interviewing and counseling are covered. The goal of this course is to acquire the basic skills required for conducting interviews and counseling sessions related to the field of nutrition and dietetics. (3 credits)

Lecture Hours: 48.000

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

EEX2000 Introduction to Exceptional Student Education 3.000 credits

The student will learn about the history, legal issues, and legislation related to exceptional student education in K-12. The student will learn about the differing types of exceptionalities, supports, and accommodations provided for students with differing learning profiles from birth to adulthood.

Lecture Hours: 48.000

Prerequisite: EDF1005

Course User Fee: \$18.00

Associate in Science (AS)

Program Description

Accounting Technology

Associate in Science | Code: 25022 | 60 credits

The Accounting Technology Associate in Science (A.S.) program offers opportunities to earn multiple credentials that help students find jobs quickly while advancing both their academic and professional careers. The A.S. in Accounting Technology allows students to gain valuable experience in this in-demand field. Graduates of the Accounting program develop a strong, competitive accounting foundation.

Accounting and bookkeeping are essential functions of any business. Experienced accounting professionals have a high degree of job stability and are often top-tier salary earners. This A.S. allows for a seamless transition into the [Bachelor of Applied Science in Leadership Management and Innovation with a Concentration in Accounting](#).

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This is a required general education core course in college-level writing. The students will learn to compose essays and other works using various methods of development. This course fulfills the Gordon Rule writing requirement and must be completed with a grade "C" or better. Pre-requisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ACG2011 Principles of Accounting II 3.000 credits

This is the second part of the introductory financial accounting series, which includes ACG2001 and ACG2011, with emphasis on accounting owner's equity and corporate financial statements. Other topics include receivables, fixed assets, intangible assets, current and long-term liabilities. Co-requisite: ACG2011L

Lecture Hours: 48.000

ACG2011L Principles of Accounting 2 Lab 1.000 credits

Students will use personal computer software and financial accounting applications to analyze accounting records, prepare financial statements, and compile EXCEL spreadsheets. This course will reinforce, with tutorial help and problem-solving, the concepts needed to achieve the objectives of ACG2011. Corequisite: ACG2011.

Lab Hours: 32.000

Corequisite: ACG2001

Course User Fee: \$22.00

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

BUL2131 Legal Environment 3.000 credits

Law in relation to the proper conduct of business includes a consideration of the nature and sources of law, its legal environment and history. The topics of business torts, crimes, contracts, and forms of organizations are also covered.

Lecture Hours: 48.000

Course User Fee: \$10.00

BUL2241 Business Law 1 3.000 credits

Law in relation to the proper conduct of business, including a consideration of the nature and source of law, courts and courtroom procedure, contracts, sales of goods, negotiable instruments and secured transactions. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites:

ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

MAN2021 Principles of Management 3.000 credits

The student will learn to analyze the major functions of management. Emphasis is placed on learning how to manage organizations for excellence in both performance and employee satisfaction. Major topics include but are not limited to business ethics and social responsibility, strategic and operational planning, decision making, organization structure and behavior, managing groups and teams, communication and information technology.

Lecture Hours: 48.000

Course User Fee: \$15.00

TAX2000 Income Tax 3.000 credits

Federal income tax fundamentals with emphasis on individual returns. Topics considered include gross income, capital gains and losses, deductions and exemptions, and tax credits.

Lecture Hours: 48.000

Course User Fee: \$15.00

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.

Lecture Hours: 48.000

Course User Fee: \$10.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

ACG2450 Microcomputers in Accounting 3.000 credits

Accounting application of electronic data processing including the preparation, interpretation and use of computer information in financial decision-making. Pre/Corequisite: ACG2021. Special fee.

Lecture Hours: 48.000

Pre/Corequisite: ACG2021

Course User Fee: \$22.00

FIN2000 Principles of Finance 3.000 credits

The creation, allocation, and utilization of money, and the effect of monetary policy upon individuals, business, national and international economics. This course provides a basis for further study of monetary theory, banking, finance and securities.

Lecture Hours: 48.000

OST2335 Business Writing 3.000 credits

Covers the procedures for writing effective business letters and memorandums, a review of grammar, and the proper format of today's business correspondence. Students learn how to prepare inquiry letters, direct and indirect response letters, application letters and resumes, and short reports.

Lecture Hours: 48.000

Course User Fee: \$15.00

Program Description

Aerospace Technician

Associate in Science | Code: 25081 | 64 credits

The Associate of Science in Aerospace Technician program provides hands-on training across a range of critical skills needed by technicians in the aerospace industry. Students train in assembling, servicing, operating, and repairing aircraft, spacecraft, and non-flight hardware and systems that support a launch. This comprehensive program prepares graduates for careers in the commercial, government, and military sectors, equipping them with the technical knowledge and practical experience required to excel in the field of aerospace technology.

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

EET1033C Electrical Fundamentals 4.000 credits

This course is designed for students obtaining a CCC or AS degree in Engineering Technology, and related disciplines. The student will learn the basic concepts of electronics principles including Direct Current, Alternating Current, Series and Parallel circuits topologies, Basic electronics components, electronics measure tools and software simulation tools. Lecture Hours: 32.000, Lab Hours: 64.000
Course User Fee: \$103.00

ETI1043C Introduction to Aerospace 3.000 credits

This course includes an overview of aerospace industry terminology and acronyms, along with practical activities involving tools, procedures, and standard practices. Additionally, it covers inspection procedures, workplace rules and regulations, safety measures, maintenance protocols, and career options in the aeronautical technician workforce. (2 hr. lecture, 2 hr. lab)
Lecture Hours: 16.000, Lab Hours: 64.000
Course User Fee: \$63.00

ETI1853C Aerospace Safety and Quality 3.000 credits

This course delves into the identification of hazards, the use of personal protective equipment, and the implementation of safe practices and measures for the protection of personnel, property, and equipment in the aerospace sector. It also addresses safety procedures, including compliance with OSHA regulations and the handling of hazardous materials. The course additionally explores fundamental principles of quality assurance engineering as they pertain to work processes. It includes the use of computer-based tools for analysis and reporting. (2 hr. lecture, 2 hr. lab)
Lecture Hours: 32.000, Lab Hours: 32.000
Course User Fee: \$63.00

CET1110C Digital Circuits 4.000 credits

This is an introductory course in digital circuits for engineering and other technology majors. Students learn how to apply electronic principles to digital computer circuits and systems. Students will also learn how to simplify logic circuits, build digital circuits, and perform other laboratory activities. Pre/Co-requisite: MAC1105. Laboratory fee. Lecture Hours: 32.000, Lab Hours: 64.000
Pre/Corequisite: MAC1105
Course User Fee: \$63.00

ETI1830C Materials and Processes 1 3.000 credits

In this course, students explore the physical properties and characteristics of materials and commodities commonly utilized in the aerospace industry. It delves into materials compatibility, basics of metallurgy, and treatment processes, offering a foundation of how these elements interact and are applied within aerospace contexts. (1 hr. lecture, 4 hr. lab)

Lecture Hours: 16.000, Lab Hours: 64.000

Course User Fee: \$63.00

ETI1851C Applied Mechanics 4.000 credits

This course adopts a practical approach to teaching the identification, usage, and maintenance of tools and equipment utilized in aerospace systems. It covers blueprint reading, geometric dimensioning, tolerancing, and using both English and metric measuring systems. (2 hr. lecture, 4 hr. lab)

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$63.00

ETS2632C Introduction to Computer Aided Manufacturing 3.000 credits

An introduction into the fundamentals of Computer Integrated Manufacturing as it relates to theory, operation, setup, safety, and practices. Students will learn the application of Computer Aided Drawing (CAD) and Computer Aided Manufacturing (CAM) software to develop prototypes. Prerequisite: MAC1105.

Lecture Hours: 32.000, Lab Hours: 32.000

Pre/Corequisite: MAC1105

Course User Fee: \$63.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.
Lecture Hours: 48.000

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.
Lecture Hours: 48.000
Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.
Lecture Hours: 48.000
Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.
Lecture Hours: 48.000
Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.
Lecture Hours: 48.000
Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

ETI1855C Aerospace Structural Fabrication 1 3.000 credits

This course covers essential skills in metalworking, machining, and aerospace fastener applications. Students will learn blueprint interpretation, sheet metal repair, and the use of tools like brakes, shears, and rivets, while gaining hands-on experience in project construction and layout design, following industry standards. Prerequisites: ETI 1830C and ETI 1851C. (1 hr. lecture, 4 hr. lab)

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: ETI1830C AND ETI1851C

Course User Fee: \$63.00

ETI2321C Aerospace Systems and Propulsion 4.000 credits

This course introduces aeronautical and spacecraft systems, including hydraulic, pneumatic, electrical, propulsion, mechanical, HVAC, and ECLSS (Environmental Control and Life Support Systems). It covers system interactions with computer and data acquisition systems, emphasizing safety, power sources, assembly, troubleshooting, and integration for aerospace operations. Prerequisites: AFR 1100C (2 hr. lecture, 4 hr. lab)

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ETI1043C

Course User Fee: \$63.00

ETI2832C Materials and Processes 2 3.000 credits

This course provides information in aerospace applications of non-metallic materials. The use of adhesives, coatings, sealing, and issues with delamination, and faulty bonds are covered.

Prerequisite: ETI 1830C (1 hr. lecture, 4 hr. lab)

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: ETI1830C

Course User Fee: \$98.00

ETS1603C Introduction to Robotics 4.000 credits

This is an introductory level course designed as an introduction to robotics and robotic applications. Students learn topics related to robotic design including robotic terminology, robotic programming, sensing and sensors, actuators, modeling and sensing, robotic platforms, and the application of artificial intelligence in robotics. Laboratory activities provide hands-on application of concepts and theories.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$63.00

ETI1852C Aerospace Test and Measurements 4.000 credits

This course covers the principles and applications of primarily nondestructive testing techniques used to examine materials and components of spacecraft systems. Students learn to interpret procedures, operate testing equipment, and apply safety measures while conducting visual, dye penetrant, magnetic particle, ultrasonic, and Eddy-current inspections. Emphasis is placed on accurate measurement, tool selection, and result evaluation.

Prerequisite: ETI 1830C. (2 hr. lecture, 4 hr. lab)

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ETI1830C

Course User Fee: \$63.00

**ETI2856C Aerospace Structural Fabrication 2
4.000 credits**

This course introduces the student to the theory, materials, and basic manufacturing processes of composite materials. The course focuses on basic composite theory, including fiber reinforcements, matrix systems, fabrication techniques, and safety. It also introduces common core materials that are used in composites manufacturing, and outlines inspection and repair of composites structures including damage detection and repair instructions. Prerequisites: ETI 1855C and ETI 2832C (2 hr. lecture, 4 hr. lab)

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ETI1855C AND ETI2832C

Course User Fee: \$98.00

**ETI2951C Aerospace Technician Capstone 3.000
credits**

This course guides students through a capstone project, emphasizing project management, testing, troubleshooting, and documentation. Students evaluate requirements, conduct testing, resolve issues, and complete failure analysis. The course culminates with a comprehensive project presentation and a "lessons learned" review.

Prerequisites: ETI 1855C and ETI 2832C; Pre/

Corequisites: ETI 1852C and ETI 2856C (1 hr. lecture, 4 hr. lab)

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: ETI1855C AND ETI2832C AND Pre/

Corequisite: ETI1852C AND ETI2856C

Course User Fee: \$98.00

**EVR1001 Introduction to Environmental Science
3.000 credits**

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

Program Description

Animation & Game Art

Associate in Science | Code: 25074 | 60 credits

The Animation & Game Art is an intensive hands-on program in which students learn narrative structure along with technical skills required in the animation industry. Students learn character design and animation, 3D modeling, storyboarding and environment design. Graduates are prepared for entry level jobs as 3D artist and animators.

Program Modality: Both [In-Person (IP) and On-line]

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

DIG1111 Digital Character Design 3.000 credits

This course, for students majoring in Animation and Game Art, covers the observation and translation of three-dimensional form into two-dimensional drawings. Students will learn the interpretation of the human body, based on major masses organized by gestural lines. Students will create original characters and create design elements to support them. Students will transition to draw on digital tablets, knowledge or proficiency in Adobe Photoshop recommended. (3 hr. lecture)

Lecture Hours: 48.000, Other Hours: 3.000

Course User Fee: \$129.55

DIG1132 Digital Art and Design 3.000 credits

This course is for students majoring in Animation and Game Art and introduces environmental design. Students will learn the concepts, hardware, and software related to digital image acquisition, image editing, manipulation, color management basics, masking, layering, retouching, scanning and output, and color theory as it relates to digital media. Knowledge or proficiency in Adobe Photoshop and Illustrator recommended. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$129.55

DIG1430 Storyboarding 3.000 credits

This course is for students majoring in Animation and Game Art. It introduces the necessary tasks in the storytelling phase of an animation project. Students will learn how to develop and design visual storyboards and how to sell their storyboard ideas. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$97.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

DIG1302 3D Modeling 4.000 credits

This course, for students majoring in Animation & Game Art introduces students to the basic tools, techniques and applications for feature 3D animation and game development. Students will learn how to manipulate objects, build models, employ lighting, design movement, work with materials and textures and render a final image. (4 hr. lecture)

Lecture Hours: 64.000

Course User Fee: \$129.55

DIG1437 Narrative Storytelling 3.000 credits

This course is for students majoring in Animation and Game Art. It introduces the conceptual structure and design of visual storytelling. Students will learn principles of animation, mechanics, cinematics, character development, personality of place, exaggeration and effects, adapting movement for the animation medium, and how to create the illusion of life. Pre/Corequisite of DIG 1430 with a Grade of C or better, or equivalent (3 hr. lecture)

Lecture Hours: 48.000, Lab Hours: -2.000, Clinical Hours: -1.000, Practicum Hours: -2.000

Pre/Corequisite: DIG1430

Course User Fee: \$129.55

DIG2113 Post Production & Editing 4.000 credits

This course, for students majoring in Animation & Game Art, equips students with skills required in post-production editing. Students will learn how to combine computer-generated imagery with matte painting and backgrounds and the core principles of proper compositing, color correction, and editing. Pre/Corequisite of DIG 1430 with a Grade of C or better, or equivalent (4 hr. lecture)

Lecture Hours: 64.000

Pre/Corequisite: DIG1430

Course User Fee: \$129.55

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics.

Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

DIG2396C Motion Capture 4.000 credits

This course is for students majoring in Animation and Game Art. Students will learn to digitize motion and clean-up and editing techniques. They will also learn how to set up motion capture and shooting, data tracking, skeleton retargeting, as well as animation correction and enhancements. Pre/Corequisite of DIG 1302 with a Grade of C or better, or equivalent (4 hr. lecture)

Lecture Hours: 64.000

Pre/Corequisite: DIG1302

Course User Fee: \$129.55

DIG2318 Animation Studio 1 3.000 credits

This course is for students majoring in Animation and Game Art. Students will learn to design and implement a project involving computer animation, game production, VFX or scientific/architecture visualization. Students will work in collaboration with faculty and industry mentors. Prerequisite of DIG 1430; Prerequisite of DIG 1302; Prerequisite of DIG 1437 with a Grade of C or better, or equivalent (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: DIG1430 AND DIG1302 AND DIG1437

Course User Fee: \$129.55

CAP2048 Game Development Project I 3.000 credits

This capstone course is for students majoring in Game Development and Game Animation. Students will work in cross disciplinary teams to develop a working animated game or film. Students will learn how to apply the skills and knowledge they have acquired in a real-world working development environment. Prerequisites: CAP2047 or DIG1302, COP1334 or DIG1111, COP2335 or DIG1437, DIG1430, DIG1710 or DIG1132; Pre/Corequisite: DIG1712 or DIG2113.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAP2047, Corequisite: DIG2626, Pre/Corequisite: DIG1712

Course User Fee: \$129.55

DIG2370 Character Modeling & Rigging 4.000 credits

This course focuses on the modeling and rigging of characters for performance. Students will solve complex issues of character articulation with an emphasis on skeleton, skin, and binding techniques. Prerequisite of DIG 1302 with a Grade of C or better, or equivalent. Prerequisite of DIG 1302 with a Grade of C or better, or equivalent (4 hr. lecture)

Lecture Hours: 64.000

Prerequisite: DIG1302

Course User Fee: \$129.55

DIG2790 Texturing & Environment Design 4.000 credits

This course is for students majoring in Animation & Game Art. Students will learn advanced 3D animation job skills used in creating 3D feature animation and game development, including advanced texturing, lighting and rendering a final image. Prerequisite of DIG 1302 with a Grade of C or better, or equivalent. Prerequisite of DIG 1302 with a Grade of C or better, or equivalent (4 hr. lecture)

Lecture Hours: 64.000

Prerequisite: DIG1302

Course User Fee: \$129.55

DIG2304 Character Animation 3.000 credits

This course, for students majoring in Animation & Game Art, equips students with the skills needed to create animated characters. Students will learn in-depth character design, development, rigging, and animation techniques, how to create segmented and solid model mesh of bipeds and quadrupeds, and techniques used to create facial expressions and lip syncing. Prerequisite of DIG 2790 with a Grade of C or better, or equivalent (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: DIG2790

Course User Fee: \$129.55

DIG2319 Animation Studio 2 3.000 credits

This is a capstone course for students majoring in Animation and Game Art. Building on skills learned in Animation Studio 1, students will learn enhanced skills in the areas of 3D modeling, texturing, lighting, and animation. Working in groups, students develop a project plan and produce a short, 3D animated movie. Prerequisite of DIG 2318 with a Grade of C or better, or equivalent or Prerequisite of CAP 2048 with a Grade of C or better, or equivalent (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: DIG2318 OR CAP2048

Course User Fee: \$97.00

CAP2920C Game Development Project II 3.000 credits

This capstone course is for students majoring in Game Development and Game Animation. Students will work in cross disciplinary teams to develop a working 5-10 min interactive game experience. Students will learn how to apply the skills and knowledge they have acquired in a real world working development environment. Prerequisites: CAP2048, DIG1712 or DIG 2113.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAP2048 AND DIG1430 AND Corequisite: DIG1705

Course User Fee: \$129.55

DIG2391C Animation Studio 3 4.000 credits

This is a capstone course for students majoring in Animation and Game Art. Students develop a project plan and produce a short, 3D animated movie. Students also create a website for the project, social media and market campaigns, and submit the short animated movie to festivals. Pre/Corequisite of DIG 2319 with a Grade of C or better, or equivalent or Pre/Corequisite of CAP 2920C with a Grade of C or better, or equivalent (4 hr. lecture)

Lecture Hours: 64.000

Pre/Corequisite: DIG2319 OR CAP2920C

Course User Fee: \$129.55

Program Description

Applied Artificial Intelligence

Associate in Science | Code: 25080 | 60 credits

The Associate in Science in Applied Artificial Intelligence introduces learners to the importance of managing the lifecycle of an artificial intelligence (AI) project and ethical considerations relevant to its design and implementation. It offers hands-on learning on the applications of AI and use cases. Students also learn concepts and popular tools such as machine learning, data collection, classification, natural language processing, the functions of AI virtual assistants, and techniques used in AI for computer vision as domains to build AI solutions. The program is geared for those who want to enter or upskill into the field as AI Developers or AI Specialists.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 14.0
CAI 1001C	Artificial Intelligence (AI) Thinking	3.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
COP 1047C	Introduction to Python Programming	4.0
MAC 1105	College Algebra	3.0
Semester		Units: 12.0
CAI 2100C	Machine Learning Foundations	3.0
ENC 1101	English Composition 1	3.0
PHI 2680	Artificial Intelligence and Ethics	3.0
STA 2023	Statistical Methods	3.0
Semester 3		Units: 7.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
CGS 1540C	Database Concepts Design	4.0
Semester 4		Units: 14.0
CAI 2300C	Introduction to Natural Language Processing	3.0

CAI 2840C	Introduction to Computer Vision	3.0
CTS 1145	Cloud Essentials	4.0
Elective*		4.0

Select 4 credits from the following course option: CAI, CAP*, CEN*, CET*, CGS*, CIS*, CNT*, COP*, CTS*, MAC*, MAD*, MAP*, CAP1788, COP2800, CTS1120, ETS1603C, GEB1432, HSC2060.

Semester 5

Units: 13.0

CAI 2820C	Artificial Intelligence Applications Solutions	3.0
<i>Humanities</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
HUM 1020	Humanities	3.0
OR		
LIT 2000	Introduction to Literature	3.0
OR		
MUL 1010	Music Appreciation	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
OR		
THE 2000	Theatre Appreciation	3.0
<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
CHM 1020	General Education Chemistry	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		
PHY 1020	General Education Physics	3.0
Elective*		4.0

Select 4 credits from the following course option: CAI, CAP*, CEN*, CET*, CGS*, CIS*, CNT*, COP*, CTS*, MAC*, MAD*, MAP*, CAP1788, COP2800, CTS1120, ETS1603C, GEB1432, HSC2060.

Total: 60.0

CAI1001C Artificial Intelligence (AI) Thinking 3.000 credits

A survey of artificial intelligence (AI) where students explore different technologies utilizing concepts and skills widely accepted for AI and digital competency. Classification algorithms, supervised vs. unsupervised learning, data preparation, and training/using learning models for predictions are presented. CGS1060C and MAT1033 are recommended, but not required.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CAI2100C Machine Learning Foundations 3.000 credits

Students are introduced to machine learning concepts and Python applications, including data acquisition, supervised, unsupervised, and reinforced learning. In addition, students will develop and deploy artificial intelligence (AI) models utilizing classification algorithms. Prerequisites: CAI1001C, COP1047C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI1001CCOP1047C or equivalent knowledge of Python programming language.

Course User Fee: \$63.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

PHI2680 Artificial Intelligence and Ethics 3.000 credits

This course acquaints students with ethics as relevant to the design, implementation, and administration of artificial intelligence and emerging technologies. It will explore issues such as the biases of algorithms, autonomous warfare, the risks of surveillance technologies, and the effects of technologies on employment. In addition, this course will also delve into the critical examination of the Western Canon's influence on the development and ethical implications of artificial intelligence and emerging technologies.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

CAI2300C Introduction to Natural Language Processing 3.000 credits

Students will learn the fundamental concepts of Natural Language Processing (NLP) and text processing. In addition, focus will be on knowledge and skills necessary to create a language recognition application. Pre/Corequisite: CAI2100C.

Lecture Hours: 32.000, Lab Hours: 32.000

Pre/Corequisite: CAI2100C

Course User Fee: \$63.00

CAI2840C Introduction to Computer Vision 3.000 credits

Students will learn fundamental concepts in Computer Vision (CV) and image processing, including introduction to necessary proprietary and open-source Python libraries. Pre/Corequisite: CAI2100C.

Lecture Hours: 32.000, Lab Hours: 32.000

Pre/Corequisite: CAI2100C

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CAI2820C Artificial Intelligence Applications Solutions 3.000 credits

A lower division course for students majoring in Applied Artificial Intelligence (AI). Students will demonstrate competence to scope, acquire/explore data, model, evaluate, and deploy an AI/machine learning solution in a team environment. Students will create and present a code or no-code AI solution. Must be taken during the last semester before graduation. Prerequisites: CAI2300C and CAI2840C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI2840C AND CAI2300C

Course User Fee: \$63.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

Program Description

[Aviation Administration](#)

Associate in Science | Code: 26028 | 60 credits

The Aviation Administration program is designed to prepare students to succeed in the dynamic aviation industry. The program focuses on the necessary entry-level skills for most aviation employment fields. The Air Traffic Control option provides students with the opportunity to be hired with the Federal Aviation Administration (FAA). Accordingly, graduates

find opportunities in airline sales and reservations, air cargo, airport operations and many data-entry positions required by the airline management. Additional Information: Contact the Aviation Department at (305) 237-5950 for information and advisement.

Program Modality: Resident [In-Person (IP)]

Contracted: No

Semester 1		Units: 14.0
ATF 1601L	Flight Orientation Simulator Lab	1.0
AVM 1010	Aviation Industry Operation	3.0
AVM 1022	Flight Operations	3.0
AVM 1062	Aviation Career Planning	1.0
ENC 1101	English Composition 1	3.0
STA 2023	Statistical Methods	3.0
Computer Competency Test *		

*Computer Competency Test (CCT) ---OR--- CGS1060C - Introduction to Computer Technology and Applications.
Departmental Recommendation: Computer Competency Test (CCT)

Semester 2		Units: 12.0
ASC 1210	Aviation Meteorology	3.0
AVM 1121	Hazardous Materials/Dangerous Goods	3.0
HUM 1020	Humanities	3.0
<i>Social Science</i>		3.0

AVM 2510	Airline Management	3.0
AVM 2515	Airline Marketing	3.0

Total: 59.0

ATF1601L Flight Orientation Simulator Lab 1.000 credits

This course will provide the student with an introduction to the environment of operating an aircraft from a pilot's point of view. It is designed to provide this knowledge to those students such as Air Traffic Controllers and Aviation Administration Students who have no piloting experience. Special fee.

Lab Hours: 32.000

Course User Fee: \$200.00

AVM1010 Aviation Industry Operation 3.000 credits

The course provides insight into the development and present status of aircraft and air transportation, governmental organizations, controls and regulations, and career opportunities in the field.

Lecture Hours: 48.000

AVM1022 Flight Operations 3.000 credits

An investigation of the occupational duties, responsibilities, and physical facilities required by the positions of pilot, co-pilot, flight engineer, dispatcher and flight attendant.

Lecture Hours: 48.000

AVM1062 Aviation Career Planning 1.000 credits

This course provides direction and guidance in career planning for all aviation students. Topics of discussion will include the job search education and training requirements, resume writing, business etiquette, interview skills and follow-up techniques

Lecture Hours: 16.000

ENC1101 English Composition 1 3.000 credits

This is a required general education core course in college-level writing. The students will learn to compose essays and other works using various methods of development. This course fulfills the Gordon Rule writing requirement and must be completed with a grade "C" or better. Pre-requisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Lecture Hours: 48.000

Course User Fee: \$15.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

ASC1210 Aviation Meteorology 3.000 credits

This is a core aviation course. The student will be prepared to understand weather and environmental issues in commercial aviation. Topics covered will be atmospheric phenomena relating to aircraft operations, the analysis and use of weather data as presented by the U.S. National Weather Service. Prerequisite: ATT1100 or equivalent; Corequisite: ATT2110 or equivalent.

Lecture Hours: 48.000

AVM1121 Hazardous Materials/Dangerous Goods 3.000 credits

This course is designed to provide the student with knowledge of dangerous goods/ hazardous materials and their effect in air transportation and logistics. The students will be conversant in hazardous material regulations for cargo and passenger transportation. The course will encompass the identification, labeling, packaging and handling of 9 types of dangerous goods in air transportation and general logistics. Prerequisite: AVM2120. Special fee.

Lecture Hours: 48.000

Prerequisite: AVM2120

Course User Fee: \$25.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ASC2320 Aviation Laws and Regulations 3.000 credits

Insight pertinent to federal governing bodies, and current local, federal and international laws forming the present structure of aviation law.

Lecture Hours: 48.000

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.

Lecture Hours: 48.000

Course User Fee: \$10.00

AVM1440 Aviation/Airport Security 3.000 credits

This course will provide the student with knowledge of the issues and strategies that are used to protect the national airspace system, airports and airlines from security threats. The various types of threats and responses to those threats will be covered. In addition, the legal requirements, planning issues, physical equipment and facility requirements and personnel issues will also be discussed.

Lecture Hours: 48.000

Course User Fee: \$50.00

AVM2120 Air Cargo 3.000 credits

The course develops a comprehensive grasp of the characteristics and evolution of air cargo, its impact on United States industry, inherent problems and future development.

Lecture Hours: 48.000

AVM2410 Principles of Airport Management 3.000 credits

This course provides the student with a broad background in the Principles of Airport Management. This includes the airport system and its history, planning, land use, community relation issues, financial issues, capacity and growth, operations, organization and administration. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$25.00

AVM2441 Aviation Safety and Human Factors 3.000 credits

This course will provide the student with an understanding of human factors and safety concepts as they apply to aviation. There will be an evaluation of aircraft accidents and their causal factors. Accident prevention measures are stressed as integral parts of an aviation safety program.

Lecture Hours: 48.000

Course User Fee: \$25.00

AVM2450 Airport Facilities/Financial Planning 3.000 credits

This course provides the student with an in-depth knowledge of the techniques and strategies of the airport master plan in planning airport facilities and financial resources. Forecasting, demand analysis, sources of funding, planning requirements, environmental issues and requirements and compliance issues will be discussed. Also, implementation and control issues, financial management, budgets, costs and revenues as well as airport economics will be discussed. Prerequisite: AVM2410. Special fee.

Lecture Hours: 48.000

Prerequisite: AVM2410

Course User Fee: \$25.00

ATT2820 Air Traffic Control 3.000 credits

The basic elements of air traffic control operations, providing the necessary foundation for successful completion of the Air Traffic Control Basic Certification Examination. Prerequisite: sophomore standing in major program.

Lecture Hours: 48.000

Prerequisite: Sophomore standing in major program.

AVM2431 Customer Service Agent 3.000 credits

This course covers the generic skills needed for any airline position involving regular contact with the traveling public. It includes human relations, personal appearance enhancement, etiquette, conflict management, speech skills, and the acquisition of attributes that would promote a proper professional image.

Lecture Hours: 48.000

AVM2510 Airline Management 3.000 credits

This course offers an insight relative to the business policies and the functions of management in airline operations. The course involves various internal managerial facets and the impact of external regulatory and economic implications.

Lecture Hours: 48.000

AVM2515 Airline Marketing 3.000 credits

A differentiation of the functions of marketing in airline operations; market research, demand analysis, advertising and promotion, sales, traffic, and the theory of price determination.

Lecture Hours: 48.000

Program Description

Aviation Maintenance Management

Associate in Science | Code: 26027 | 83 credits

The Aviation Maintenance Management is a special program in which 45 semester hours are awarded to students who possess the Federal Aviation Administration Aircraft and Powerplant (A & P) certificate. The 38 additional required credits consist of general education and aviation requirements needed by the licensee for the Associate in Science degree. Additional Information: Contact the Aviation Department at (305) 237-5950 for information and advisement.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: Yes

Semester 1

Units: 12.0

ASC 2320	Aviation Laws and Regulations	3.0
AVM 1160	Aviation Maintenance Programs and Inspections	3.0
ENC 1101	English Composition 1	3.0
PHY 1020	General Education Physics	3.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---OR--- CGS1060C - Introduction to Computer Technology and Applications.
Departmental Recommendation: Computer Competency Test (CCT).

Semester 2

Units: 12.0

AVM 1161	Aircraft Performance Measures and Maintenance Requirements	3.0
AVM 1162	Maintenance Repair and Overhaul (MRO) Interactions with Commercial Airline Operations	3.0
MAC 1105	College Algebra	3.0
<i>Social Science</i>		3.0

POS 2041	American Federal Government	3.0

Semester 3

Units: 9.0

ASC 1610	Aircraft Engines and Structure Theory	3.0
AVM 2510	Airline Management	3.0
PHI 2010	Introduction to Philosophy	3.0

Semester 4

Units: 51.0

AVM 1163	Policies and Procedures for Commercial Airlines Maintenance Programs	3.0
AVM 1164	Logistics and Maintenance Programs for Commercial Airlines	3.0
AVM 9996	FAA Certification	45.0

Total: 84.0

ASC2320 Aviation Laws and Regulations 3.000 credits

Insight pertinent to federal governing bodies, and current local, federal and international laws forming the present structure of aviation law.

Lecture Hours: 48.000

AVM1160 Aviation Maintenance Programs and Inspections 3.000 credits

This course provides an in-depth study of aircraft inspection programs and maintenance scheduling procedures. Students will learn national and international regulations governing aircraft inspection, maintenance evaluation, and the required procedures to update airline and governmental maintenance technical manuals.

Lecture Hours: 48.000

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

AVM1161 Aircraft Performance Measures and Maintenance Requirements 3.000 credits

Students will learn aircraft performance measures and maintenance requirements for airplanes powered by reciprocating, turboprop, and/or jet turbine and turbofan engines. Topics include stability and control, weight and balance, performance charts and graphs, takeoff and cruise control, airplane performance characteristics, from which they will extract data that maximizes performance.

Lecture Hours: 48.000

AVM1162 Maintenance Repair and Overhaul (MRO) Interactions with Commercial Airline Operations 3.000 credits

Students will learn the Maintenance Repair and Overhaul (MRO) Procedures in Commercial Airline Operations. Topics include airline maintenance operations, engineering, maintenance, repair of structures, systems, and aircraft components. In addition, students will explore MRO financing, domestic and offshore operations, regulatory requirements, logistics, supply chain support, human resources and industry oversight.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view. Lecture Hours: 48.000

ASC1610 Aircraft Engines and Structure Theory 3.000 credits

This is a foundation course in aircraft engines and structure. Students will learn the elements of aircraft engines, engine theory, construction, systems, operating procedures, performance diagnosis, and aircraft structures. Lecture Hours: 48.000

AVM2510 Airline Management 3.000 credits

This course offers an insight relative to the business policies and the functions of management in airline operations. The course involves various internal managerial facets and the impact of external regulatory and economic implications. Lecture Hours: 48.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

AVM1163 Policies and Procedures for Commercial Airlines Maintenance Programs 3.000 credits

Students will learn the maintenance policies and programs for commercial airlines. Concepts of Maintenance Steering Group (MSG) and Reliability Centered Maintenance (RCM) programs, Maintenance Control by Reliability Methods (MCEM) program, and Operational Availability (OA) for Commercial Aircraft will be discussed.

Lecture Hours: 48.000

AVM1164 Logistics and Maintenance Programs for Commercial Airlines 3.000 credits

This course focuses on the concepts and application of logistics and supply chain management utilized within the aviation maintenance industry to increase efficiency in production and maintenance. Students will learn the logistics support from Maintenance Repair Operators and Original Equipment Manufacturers in aviation maintenance operations.

Lecture Hours: 48.000

AVM9996 FAA Certification 45.000 credits

The Federal Aviation Administration (FAA) Certification placeholder awards equivalent college credit for non-collegiate training based on Technical Manual of Procedure Number 1100:815701(A) and 1100:815701B.

Students must provide original FAA certificate in order to receive credit.

Lecture Hours: 720.000

Program Description

Biomedical Engineering Technology

Associate in Science | Code: 26053 | 62 credits

The Biomedical Engineering Technology program prepares students for employment as Biomedical Engineering Technicians/Technologists and in related occupations in health-related fields. The program also provides supplemental training for persons currently or previously employed in these occupations. The program focuses on the understanding and applying of concepts in electronics, in addition to troubleshooting techniques, to digital, microprocessor, or computer-based systems as they relate to medical devices. Assembly, installation, operations maintenance, calibration, trouble-shooting, repairing and elementary design on medical systems are taught using an integrated, applied and theoretical approach.

Program Modality: Both [In-Person (IP) and On-line]

Total: 62.0

CET1487C Network+ 3.000 credits

This is an intermediate level course designed for students preparing for the hardware component of the Network+ certification. Students will learn how to install, configure, manage, troubleshoot and upgrade network devices including network interface cards, switches, hubs, wireless access points, routers, and patch panels. They will also learn about the construction, installation, testing and repair of the physical layer of the network, including wired cables, fiber optic media, wireless transmitters and antennas. Demonstrated knowledge of microcomputer fundamentals and system components is required. Recommended Preparation: CET1178C or A+ certification. Laboratory fee. A.S. degree credit only.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP2270 C for Engineers 4.000 credits

This course is intended for students majoring in Computer Engineering Technology, Electronics Engineering Technology, or any engineering discipline. Students will learn the "C" programming language, MATLAB, and the Engineering Problem Solving Method to analyze, design, code, compile and execute programs that solve engineering related problems. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Pre/Corequisite: MAC1105, Recommended Preparation: CGS1060 OR knowledge of computer skills

Course User Fee: \$63.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

EET1015C Direct Current Circuits 4.000 credits

This course is intended for students majoring in electronics engineering technology and related disciplines. Students will learn electrical components, inductance, capacitance, and elementary network analysis. Students will additionally learn to verify and apply basic theories and principles through hands-on, laboratory experiments utilizing modern testing equipment. Pre/corequisite: MAT 1033. Laboratory fee. (2 hr. lecture; 4 hr. lab)

Lecture Hours: 32.000, Lab Hours: 48.000

Pre/Corequisite: MAT1033

Course User Fee: \$63.00

HIM2472 Medical Terminology 3.000 credits

Analysis of medical terms through learning basic roots, prefixes and suffixes permitting the student to have a working knowledge of the language of medicine. Prerequisite: Permission of department chairperson.

Lecture Hours: 48.000

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

CET1110C Digital Circuits 4.000 credits

This is an introductory course in digital circuits for engineering and other technology majors. Students learn how to apply electronic principles to digital computer circuits and systems. Students will also learn how to simplify logic circuits, build digital circuits, and perform other laboratory activities. Pre/Co-requisite: MAC1105. Laboratory fee.

Lecture Hours: 32.000, Lab Hours: 64.000

Pre/Corequisite: MAC1105

Course User Fee: \$63.00

EET1025C Alternating Current Circuits 4.000 credits

This course is intended for students majoring in electronics engineering technology and related disciplines. Students will learn inductance, capacitance, vector notation, AC circuits, impedance, phase shift, networks, transformers, and resonance. Students will apply and verify theories and principles through hands-on, laboratory experiments utilizing modern testing equipment.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1015C AND MAC1114 OR MAC1147

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

EET1141C Electronics 1 4.000 credits

This course is intended for students majoring in Electronics Engineering Technology or related fields. Students will learn how to apply electronic principles to analog circuits and systems, including semiconductor diodes, applying the fundamental theory of transistors and other solid-state devices; analysis of amplifiers, oscillators, and other applications using a sinusoidal wave. Students also learn basic safety procedures to follow when working in an electronics laboratory and with electronic circuits and systems.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1025C AND MAC1114 OR MAC1147

Course User Fee: \$63.00

ETS2673C Programmable Logic Controls 4.000 credits

This course is intended for students majoring in Electronics Engineering Technology and Industrial Engineering Technology. Students will learn the principals of Programmable Logic Controls (PLC) including hardware, programming, and troubleshooting. Students will also develop advanced working programs, and troubleshoot hardware and software communication problems. Prerequisite: CET110C

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET1110C

Course User Fee: \$63.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

EET2101C Electronics 2 4.000 credits

This course is intended for students majoring in electronics or computer engineering technologies. Students will learn how to apply electronic principles to analog circuits including transistor amplifiers, feedback and frequency response of linear circuits, operational amplifiers, MOSFET and oscillators.

Lecture Hours: 32.000, Lab Hours: 48.000

Prerequisite: EET1141C

Course User Fee: \$63.00

Program Description

Biotechnology

Associate in Science | Code: 22027 | 61 credits

The Biotechnology Program exposes students to a breadth of topics and emphasizes hands-on learning in a variety of techniques and procedures necessary for employment in the bioscience industry. The program includes modules designed to enhance critical thinking and technical communication skills. It focuses on developing broad transferable skills and stresses understanding and demonstration of laboratory/industry protocols and regulations, bio-safety and safe operating procedures, ethical and environmental issues, product generation/formulation, quality control, validation, instrumentation, and computing.

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

CHM 1045 is the first semester of a two-semester general chemistry course for science, premedical science and engineering students. Students will learn stoichiometry, atomic structure, completing and balancing chemical reactions, nomenclature, bonding, acid-base theories, solutions, gas laws and beginning thermodynamics.

Special fee.

Lecture Hours: 48.000

Prerequisite: CHM1025or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC2426 Biotechnology Methods and Applications 1 3.000 credits

This course addresses the basic principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical, biotechnology and/or research laboratory setting(s). Practical applications of biotechnology are explored.

Lecture Hours: 48.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426L

BSC2426L Biotechnology Methods and Applications 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2426 Biotechnology Methods and Applications 1. This is a hands-on course that emphasizes the basic laboratory principles, techniques, and instrumentation, necessary for effective work in pharmaceutical, biotechnology, and/or research laboratory settings(s).

Lab Hours: 64.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426

Course User Fee: \$50.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

BSC2427 Biotechnology Methods and Applications 2 3.000 credits

This course addresses advanced principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical-biotechnology and/or research-laboratory setting(s). The following areas of contemporary biotechnology are covered: forensics, bioremediation, and animal-, plant-, and marine biotechnology.

Lecture Hours: 48.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427L

BSC2427L Biotechnology Methods and Applications 2 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2427 Biotechnology Methods and Applications 2. This is a hands-on course that emphasizes advanced laboratory principles, techniques, and instrumentation necessary for effective work in a pharmaceutical, biotechnology, and/or research-laboratory setting(s).

Lab Hours: 64.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427

Course User Fee: \$50.00

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds.

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM 2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting.

Lab Hours: 64.000

Prerequisite: CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

BSC2943L Bioscience Internship 3.000 - 6.000 credits

This internship course is a capstone for students majoring in bioscience and related programs. Students will learn to apply acquired knowledge and skills to gain experience in the bioscience workplace.

Other Hours: 144.000 - 288.000

Course User Fee: \$21.00

CHM2211 Organic Chemistry 2 3.000 credits

In organic chemistry 2, students will learn about nomenclature, preparation reactions, and electronic and structural features of alcohols, ethers, phenols, aldehydes, ketones, carboxylic acids, acid anhydrides, amides, esters, and other organic compounds.

Lecture Hours: 48.000

Prerequisite: CHM2210, CHM2210L, Corequisite: CHM2211L

Course User Fee: \$15.00

CHM2211L Organic Chemistry 2 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2211. Topics include nomenclature, preparation reactions, and electronic and structural features of alcohols, ethers, phenols, aldehydes, ketones, carboxylic acids, acid anhydrides, amides, esters, and other organic compounds will be performed in a laboratory setting.

Lab Hours: 64.000

Prerequisite: CHM2210, CHM2210L, Corequisite: CHM2211

Course User Fee: \$45.00

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

Program Description

Building Construction Technology

Associate in Science | Code: 26033 | 60 credits

The Building Construction Technology program is designed to furnish technically trained personnel for the building construction industry. The graduate may work with a contractor as part of the administrative team in such entry-level job positions as those leading to estimators, job coordinators, or project managers. Technical jobs may also be available in the following areas: land and project developers; technical sales for building materials, systems, and equipment; with local, state, and federal government agencies; as well as various financial institutions.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ARC 1126C	Architectural Drawing 1	4.0
BCN 1272	Building Construction Plans Interpretation 1	3.0
BCN 1275	Building Construction Plans Interpretation 2	3.0
ENC 1101	English Composition 1	3.0
Computer Competency Test*		

* Computer Competency Test (CCT) ---OR--- CGS1060C - Introduction to Computer Technology and Applications.
Departmental Recommendation: Computer Competency Test (CCT)

Semester 2		Units: 12.0
BCT 1770	Building Construction Estimating Fundamentals	3.0
BCT 1771	Building Construction Advanced Estimating	3.0
MAC 1105	College Algebra	3.0
Electives *		3.0

Select 3 credits from the following course option: ARC, BCN*, BCT*, CGS1060C, ETM1700.

Semester 3	Units: 10.0
------------	-------------

ARC 2171C	Computer Aided Drafting 1	4.0
MAC 1114	Trigonometry	3.0
<i>Social Science</i>		3.0

		Total: 60.0

ARC1126C Architectural Drawing 1 4.000 credits

This course exercises the visualization and drafting of architectural objects and construction conditions. Students will learn to draw orthographic projections, isometric and sectional drawings as an expression of architectural communication. Topics include drawing plans, elevations, details, schedules, and sections of wood frame and masonry structures.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

BCN1272 Building Construction Plans Interpretation 1 3.000 credits

Develops the students' ability to interpret working drawings. Students will learn the conventions of graphic and symbolic language used by construction professionals to communicate information on drawings. Emphasis is on architectural and structural details with limited coverage on mechanical and electrical aspects. Develops the students' ability to interpret working drawings. Students will learn the conventions of graphic and symbolic language used by construction professionals to communicate information on drawings. Emphasis is on architectural and structural details with limited coverage on mechanical and electrical aspects.

Lecture Hours: 48.000

Course User Fee: \$10.00

BCN1275 Building Construction Plans Interpretation 2 3.000 credits

In this course, students will plan interpretation of complex working drawings for multi-story residential and commercial buildings. Students will learn to read and understand construction working drawings, identify structural systems and their details. Familiarity with all aspects of complex working drawings will be addressed.

Prerequisite: BCN1272.

Lecture Hours: 48.000

Prerequisite: BCN1272

Course User Fee: \$10.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BCT1770 Building Construction Estimating Fundamentals 3.000 credits

This course is an analysis and calculation of building construction costs. Students will learn the classification of materials, labor, and subcontracted work into the smallest manageable units. Students will also develop a simple estimate for a residential structure. Prerequisite: BCN1272.

Lecture Hours: 48.000

Prerequisite: BCN1272

Course User Fee: \$10.00

BCT1771 Building Construction Advanced Estimating 3.000 credits

Estimating more advanced elements of building construction. Students will learn to calculate direct, indirect, and overhead costs, as well as prepare bid proposals and related documents for commercial buildings.

Prerequisites: BCN1275, BCT1770.

Lecture Hours: 48.000

Prerequisite: BCN1275, BCT1770

Course User Fee: \$10.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

ARC2171C Computer Aided Drafting 1 4.000 credits

Computer-aided drafting as it applies in the fields of architecture and interior design using office simulation. Emphasis is on the production of computer-aided drafting of working drawings involving different types of structure.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ARC1126C OR ARC2461

Course User Fee: \$50.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ARC2461 Architectural Materials and Construction 1 4.000 credits

An introduction to basic materials and methods of building construction. Emphasis is on wood, concrete, unit masonry, and light steel construction. Laboratory projects may include working drawings' interpretation, sketching construction details, or field trips to construction sites and fabricant plants. Designed primarily as the initial materials and methods course for architectural transfer students.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ARC1126C OR BCN1251

Course User Fee: \$25.00

BCT1743 Building Construction Law 3.000 credits

In this course, students will learn the legal aspects of construction contracts and the responsibilities arising particularly from the field operations. This course also includes the relationship of the general contractor to owner, architect, and subcontractor; material men and mechanics lien law; bonds; labor law; and other statutes and ordinances regulating contractors.

Lecture Hours: 48.000

Course User Fee: \$10.00

BCT1750 Building Construction Financing 3.000 credits

This course is a study of building construction financing and related contract requirements. Topics include construction loans, permanent building mortgages, construction bids and contracts, penalty and incentive provisions, progress payments and retention, escalation, escalation provisions, costs extras, performance and bid bonds, company profits, cash flow, and business loans.

Lecture Hours: 48.000

Course User Fee: \$10.00

BCT2760 Building Code Regulations 3.000 credits

In this course, students will learn the restrictions and limitations of the various agencies concerned with the building industry. Provisions of the South Florida Building Code are stressed.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARC2681 Environmental Technology 3.000 credits

An introduction to technological aspects of building design, which relates to human comfort, safety, and building performance. Includes a survey of the fundamentals of water supply, waste lines, plumbing equipment, heat and air conditioning, solar applications, and electrical components and equipment in the design and construction of buildings. Prerequisite: ARC1126C.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.

Lecture Hours: 48.000

Course User Fee: \$10.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues.

Lecture Hours: 48.000

Course User Fee: \$5.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

SUR1001C Construction Survey 3.000 credits

Practice of surveying as related to the building and construction industry. Includes a combination of classroom instruction and practical field problems with the tape, level and transit.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147

Course User Fee: \$55.00

Program Description

Associate in Science | Code: 25051 | 60 credits

This program transfers to four-year institutions. See department for information. The Business Administration program trains individuals to assume management or supervisory positions in business, industry, and government. It provides basic skills in a broad range of business functions including accounting, computer usage, management and marketing. Successful completion of this program earns the student entry into any university in the State University System as part of the A.S. to B.S. program.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Select 3-12 credits from the following course options: ACG, BAN*, BUL*, ECO*, ENC*, FIN*, GEB*, HFT*, LIS*, MAC*, MAN*, MAR*, MKA*, MNA*, MTB*, OST*, PUR*, QMB*, SBM*, SPC*, SPM*, TAX*, TRA

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite: MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033 Any Mathematics level higher than MAT 1033 will satisfy this requirement.

MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law. Lecture Hours: 48.000

Course User Fee: \$20.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ACG2011 Principles of Accounting II 3.000 credits

This is the second part of the introductory financial accounting series, which includes ACG2001 and ACG2011, with emphasis on accounting owner's equity and corporate financial statements. Other topics include receivables, fixed assets, intangible assets, current and long-term liabilities. Co-requisite: ACG2011L

Lecture Hours: 48.000

ACG2011L Principles of Accounting 2 Lab 1.000 credits

Students will use personal computer software and financial accounting applications to analyze accounting records, prepare financial statements, and compile EXCEL spreadsheets. This course will reinforce, with tutorial help and problem-solving, the concepts needed to achieve the objectives of ACG2011. Corequisite: ACG2011.

Lab Hours: 32.000

Corequisite: ACG2001

Course User Fee: \$22.00

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

Program Description

Business Intelligence Specialist

Associate in Science | Code: 25073 | 60 credits

The Associate in Science in Business Intelligence Specialist prepares students for employment as business intelligence analysts and related occupations and/or for upper division studies in data analytics. Business intelligence is a broad category of application programs and technologies for gathering, storing, analyzing, and providing access to data to help enterprise users make improved business decisions. Students will learn how to build business intelligence applications and how to manipulate massive amounts of data, turning it into useful information and reports.

Total: 60.0

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CAP1788 Introduction to Data Analytics 4.000 credits

This course offers a broad introduction to data analytics and the role it plays in modern organizations.

Students will use Excel and Tableau to import, clean, transform, and visualize data. Students will also learn how to effectively communicate findings to decision makers.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

CAP2761C Intermediate Analytics 4.000 credits

This course offers an introduction to the SQL language and how it can be used by data analysts to query databases and gain valuable insights. Students will also gain extensive hands-on experience with Microsoft SQL Server, Azure, and GitHub. Prerequisites: CAP1788, CGS1540C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CGS1540C

Course User Fee: \$63.00

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CAP2743C Power BI - Data Visualization and Analysis 4.000 credits

This is the second of two introductory courses aimed at preparing students for the Microsoft Power BI certification exam. Students will learn how to create informative data visualizations and leverage Power BI's analytic capabilities to provide meaningful business insights. Prerequisite: CAP2791C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CAP2791C

Course User Fee: \$63.00

CAP2791C Power BI - Data Preparation and Modeling 4.000 credits

This is one of two introductory courses aimed at preparing students for the Microsoft Power BI certification exam. Students will learn how to get data from different sources, clean and transform the data, and design a data model that will be used in analysis and reports. Prerequisites: CAP1788 and CGS1540C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CAP1788 AND CGS1540C

Course User Fee: \$63.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

Program Description

Civil Engineering Technology

Associate in Science | Code: 26035 | 63 credits

The Civil Engineering Technology program is designed for those students who wish immediate job placement prior to or after graduation. This program also satisfies many of the civil engineering freshman and sophomore requirements for the Bachelor of Engineering Technology degree offered by certain universities. Consult your Civil Engineering advisor prior to registration.

Program Modality: Both [In-Person (IP) and On-line]

SUR 2400C	Land Surveying 1	3.0
SUR 2404C	Land Surveying 2	3.0

Total: 63.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ETD1110 Technical Drawing 4.000 credits

Introduces students to the principles of instrument drawing, orthographic projection, visualization, specialized computer processes and introductory computer aided drawing (CAD). Students develop drawing and sketching techniques common to industry.

Lecture Hours: 32.000, Lab Hours: 64.000

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics.

Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

ETD1542 Structural Drafting 4.000 credits

Development of structural, fabrication and erecting drawings. Course involves study of structural shapes, their properties, and methods of developing connections, as well as study of common reinforced concrete practices. Laboratory fee.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ETD1110

Course User Fee: \$63.00

ETG2502 Statics 3.000 credits

The application of dead and live loads to rigid bodies at rest, including the force and moment of laws of equilibrium, determination of the direction and intensity of reactions, moments and stress in the design of engineering and architectural structures.

Lecture Hours: 48.000

Prerequisite: MAC1105

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

SUR1001C Construction Survey 3.000 credits

Practice of surveying as related to the building and construction industry. Includes a combination of classroom instruction and practical field problems with the tape, level and transit.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147

Course User Fee: \$55.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues.

Lecture Hours: 48.000

Course User Fee: \$5.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ETC2450 Concrete Construction 3.000 credits

The use of concrete in construction to include foundations, columns, beams, slabs, hydraulic conduits.

Lecture Hours: 48.000

Prerequisite: ETG2502

ETG2530C Strength of Materials 3.000 credits

The elastic behavior of materials under tension, compression, direct shear, torsion, bending, and column action. Problems in analysis and design of members under single and combined loading. Laboratory tests and demonstrations to illustrate the theory.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: ETG2502

SUR1101C Surveying 1 4.000 credits

The theories and practices in surveying and the use of the principal types of surveying instruments in horizontal and vertical planes. Problems include the measurement of distance; the use of compass, sextant, transit traverse, stadia, and basic mapping. Field and laboratory practice are required. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147

Course User Fee: \$55.00

SUR2462C Subdivisions 3.000 credits

Actual plant construction from tract description to final record plat. Research current plat laws and regulations, meaning of legal parts, necessary computations and graphical representation.

Lecture Hours: 64.000

SUR1202 Surveying 2 4.000 credits

Advanced study in route, land, and mapping surveying to include triangulation, astronomic observations, topographic and photogrammetric mapping. Field demonstrations and surveys performed with many modern types of survey instruments. Laboratory fee.

Lecture Hours: 32.000 - 30.000, Lab Hours: 64.000 - 6.000

Prerequisite: SUR1001C

Course User Fee: \$55.00

SUR2301C Topography and Mapping 4.000 credits

Field and engineering graphic methods of map construction. Mapping principles and their application in producing topographic, land survey, hydrographic, and photographic maps. Field work includes control and detail surveys using transit-tape and transit-stadia, plane table and alidade applications. Measuring areas of straight or irregular boundaries with the planimeter.

Lecture Hours: 96.000

Prerequisite: Permission of Department Chairperson.

SUR2400C Land Surveying 1 3.000 credits

The theory and practice of land surveying, subdivision, filing and recording deeds; United States Government survey of public land; Florida laws governing land surveys, descriptions, coordinate systems and professional licensing. Field surveys are performed.

Lecture Hours: 64.000

Prerequisite: SUR1101C

SUR2404C Land Surveying 2 3.000 credits

Emphasizes the practice of surveying and the writing of legal descriptions. Areas studied include legal principles of retracement under Federal rules, combination of sequence and simultaneous conveyances, locating reversion rights, riparian and littoral owners, state statutes and regulations, standards of practice, field and office guidelines, performing the survey, legal authority and liability of the surveyor.

Lecture Hours: 64.000

Prerequisite: SUR2400C

Program Description

Clinical Laboratory Science

Associate in Science | Code: 23024 | 76 credits

The Clinical Laboratory Science program prepares the graduate to work as part of the health care delivery team in a non-profit clinical laboratory or research laboratory. Clinical practice is conducted in local health care facilities under the supervision of qualified registered professional personnel. Graduates are eligible for Florida State Licensure and Registry with the American Society of Clinical Pathologists and equivalent licensure.

Total: 76.0

ENC1101 English Composition 1 3.000 credits

This is a required general education core course in college-level writing. The students will learn to compose essays and other works using various methods of development. This course fulfills the Gordon Rule writing requirement and must be completed with a grade "C" or better. Pre-requisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Lecture Hours: 48.000

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

**BSC2085 Human Anatomy and Physiology 1
3.000 credits**

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

**BSC2085L Human Anatomy and Physiology 1
Laboratory 1.000 credits**

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

**CHM1033 Chemistry for Health Sciences 3.000
credits**

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions. Corequisites: CHM 1033L, MAT 1033 (3 hr. lecture)

Lecture Hours: 48.000

Corequisite: CHM1033L, Prerequisite: MAT1033

Course User Fee: \$15.00

**CHM1033L Chemistry for Health Sciences Lab
1.000 credits**

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite:

MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

**BSC2086 Human Anatomy & Physiology 2 3.000
credits**

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

**BSC2086L Human Anatomy & Physiology 2
Laboratory 1.000 credits**

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

MLT1040L Fundamentals of Laboratory Operations 1.000 credits

Collection of blood by venipuncture, skin puncture and donor room techniques. This includes handling of specimens, professional ethics, basic anatomy and physiology of the circulatory system, medical terminology and safety practices, including those for AIDS patients.

Lecture Hours: 32.000

Course User Fee: \$184.16

MLT1210C Clinical Urinalysis with Lab 2.000 credits

Theoretical concepts and practice in the collection and analysis of urine and other body fluids by combination of didactic and laboratory instruction. Performance of routine urinalysis procedures, including microscopy with identification of related disease states.

Lecture Hours: 48.000

Course User Fee: \$65.00

MLT1300 Clinical Hematology 2.000 credits

Didactic study of blood cells to include the origin, morphology, function and dysfunction of cells and related disease states of the blood. Theoretical concepts and principles of routine hematology procedures, quality control and instrumentation.

Lecture Hours: 32.000

Corequisite: MLT1300L

MLT1300L Clinical Hematology Laboratory 2.000 credits

Manual and automated procedures in hematology. This includes blood cell counts and other basic hematologic procedures in the simulated laboratory and in the clinical setting.

Lab Hours: 64.000

Corequisite: MLT1300

Course User Fee: \$90.00

MLT1752 Quality Control Laboratory Mathematics 2.000 credits

Emphasis on mathematical computations related to procedures in the clinical laboratory including dilutions, solutions, colorimetry, hematology math, enzymatic calculations, calculations relating to renal function tests, and mathematical principles related to ionic solutions. The student will also be given specific statistical tools necessary for quality control procedures as well as interpretations of Levy-Jennings charts and troubleshooting tools.

Lecture Hours: 32.000

MLT1500 Clinical Immunology/Serology 2.000 credits

Theoretical concepts of the human immune system in health and disease. Relationships to immunohematology, infection, and serological procedures are analyzed.

Lecture Hours: 32.000

Prerequisite: BSC 2085, BSC 2086, Corequisite: MLT1500L

MLT1500L Clinical Immunology/Serology Laboratory 1.000 credits

Performance of serological procedures that are identified in MLT 1500. The clinical significance of test results to disease states is included.

Lab Hours: 32.000

Prerequisite: BSC 2085L, BSC 2086L, Corequisite: MLT1500

Course User Fee: \$49.00

MLT1610 Clinical Chemistry 1 2.000 credits

Theoretical concepts and principles of carbohydrate, nonprotein nitrogen, and electrolyte chemistry analyses with emphasis on their relationships to various disease states. Analytical procedures to assess liver function and acid-base balance are also included.

Lecture Hours: 32.000

Prerequisite: CHM1025, Corequisite: MLT1610L

MLT1610L Clinical Chemistry 1 Laboratory 2.000 credits

Performance of chemistry procedures on body fluids with emphasis on manual and automated instrumentation.

Lab Hours: 64.000

Prerequisite: CHM1025L, Corequisite: MLT1610

Course User Fee: \$40.00

MLT2440 Clinical Microbiology 1 1.000 credits

This course will provide an overview of clinical mycology and parasitology. Topics will include both parasites and fungi and will cover life cycles, epidemiology, and etiology. Emphasis will be given to the most commonly encountered mycoses and parasitic infestations. This course should be taken concurrently with Clinical Microbiology 1 Lab.

Lecture Hours: 16.000

Corequisite: MLT 2400L

MLT2440L Clinical Microbiology Lab 1 1.000 credits

This course provides a practical overview of mycology and parasitology. Students will also obtain hands-on experience working with formalin preserve ova and parasites. They will also obtain the knowledge necessary to be able to identify at least the genus level of the most commonly encountered yeasts and fungi using microscopic and macroscopic techniques. This course should be taken concurrently with Clinical Microbiology.

Lab Hours: 32.000

Corequisite: MLT2440

Course User Fee: \$50.00

MLT1330 Clinical Coagulation 1.000 credits

Didactic study of hemostasis, various clotting mechanisms, and related disease states.

Lecture Hours: 16.000

Prerequisite: MLT1300, Corequisite: MLT 1330L

MLT1300L Clinical Hematology Laboratory 2.000 credits

Manual and automated procedures in hematology. This includes blood cell counts and other basic hematologic procedures in the simulated laboratory and in the clinical setting.

Lab Hours: 64.000

Corequisite: MLT1300

Course User Fee: \$90.00

MLT2525 Immunohematology 2.000 credits

Theoretical concepts involving blood group systems, hemolytic diseases, and blood bank procedures relating to transfusion and component therapy.

Lecture Hours: 32.000

Prerequisite: MLT1500, Corequisite: MLT2525L

MLT2525L Immunohematology Laboratory 2.000 credits

Performance of basic blood typing, blood bank assays on prepared specimens, and appropriate quality control procedures. Interpretation of results is included.

Lab Hours: 64.000

Prerequisite: MLT1500L, Corequisite: MLT2525

Course User Fee: \$45.00

MLT2403 Clinical Microbiology 2 2.000 credits

This course will provide a working knowledge of clinical bacteriology and should complement the Microbiology 2 Lab. The student will be exposed to some of the indigenous flora and the pathogenicity of microorganisms as they affect various body sites. Specimen transport, collection, laboratory identification techniques, and antimicrobial therapy also provides the knowledge base necessary for working in a clinical setting.

Lecture Hours: 32.000

Prerequisite: MLT2440, Corequisite: MLT2403L

MLT2403L Clinical Microbiology Lab 2 2.000 credits

This course is designed to complement the Microbiology 2 lecture and provide students with the necessary knowledge base and laboratory skills to effectively identify microorganisms associated with infectious diseases.

Lab Hours: 64.000

Prerequisite: MLT2440L, Corequisite: MLT2403

Course User Fee: \$50.00

MLT2620 Clinical Chemistry 2 2.000 credits

Theoretical concepts and principles of proteins, enzymes, and lipids with emphasis on their relationship to various disease states.

Lecture Hours: 32.000

Prerequisite: MLT1610, Corequisite: MLT2620L

MLT2620L Clinical Chemistry 2 Laboratory 1.000 credits

Performance on those analyses identified in MLT 2620 including electrophoresis and quality control.

Lab Hours: 32.000

Prerequisite: MLT1610L, Corequisite: MLT2620

Course User Fee: \$83.00

MLT2624L Special Techniques In Clinical Chemistry 2.000 credits

The principles and performance of radioimmunoassay, EMIT, ELISA, and toxicological techniques for thyroid function, hormones, and toxic substances.

Lab Hours: 64.000

Prerequisite: MLT 1610, MLT 1610L, Corequisite: MLT 2620, MLT 2620L

Course User Fee: \$62.00

MLT2807L Hospital Practicum: Immunohematology 3.000 credits

A supervised laboratory rotation in a clinical immunohematology facility. This provides the student an opportunity for the practice of skills previously learned and for the acquisition of new procedural skills. The development of interpersonal skills and the transition from student to professional are emphasized.

Clinical Hours: 144.000

Prerequisite: MLT 2525, MLT 2525L, Corequisite: MLT 2930

MLT2809L Hospital Practicum: Hematology 3.000 credits

A supervised laboratory rotation in a clinical hematology facility. This provides the student an opportunity for the practice of skills previously learned and for the acquisition of new procedural skills. The development of interpersonal skills and the transition from student to professional are emphasized.

Clinical Hours: 144.000

Prerequisite: MLT 1300, MLT 1300L, MLT 1330, MLT 1330L, Corequisite: MLT 2930

MLT2810L Hospital Practicum: Chemistry 3.000 credits

A supervised laboratory rotation in a clinical chemistry facility. The development of interpersonal skills the transition from student to professional are emphasized. This provides the student an opportunity for the practice of skills previously learned and for the acquisition of new procedural skills.

Clinical Hours: 144.000

Prerequisite: MLT 2620, MLT 2620L, MLT 2624L, Corequisite: MLT 2930

MLT2811L Hospital Practicum: Microbiology 3.000 credits

A supervised laboratory rotation in a clinical microbiology facility. This provides the student an opportunity for the practice of skills previously learned and for the acquisition of new procedural skills.

Clinical Hours: 144.000

Prerequisite: MLT 2403, MLT 2403L, Corequisite: MLT 2930

MLT2930 Medical Laboratory Technology Seminar 2.000 credits

Clinical correlations, professional issues, updates in Medical Laboratory Technology with student's reports on recent professional journal articles, and the use of microcomputers in the laboratory.

Lecture Hours: 32.000

Prerequisite: MLT 2807L, MLT 2809L, MLT 2810L, MLT 2811L

Course User Fee: \$35.00

Program Description

Computer Engineering Technology

Associate in Science | Code: 26052 | 68 credits

The Computer Engineering Technology program prepares students for employment as computer engineering technicians/technologists and in related occupations in electronics. It also provides supplemental training for persons currently or previously employed in these occupations. The program focuses on the understanding and applying of hardware and software concepts, in addition to troubleshooting techniques to digital, microprocessor or computer-based systems. Assembly, installation, operation, maintenance, calibration, troubleshooting, repairing and elementary designs of medical systems are taught using an integrated and theoretical approach.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 12.0

CET 1171	Introduction to Computer Service and Maintenance	3.0
EET 1082	Introduction to Electronics	3.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0

Semester 2

Units: 14.0

CET 1178C	A+ Computer Hardware Service	3.0
COP 2270	C for Engineers	4.0
EET 1015C	Direct Current Circuits	4.0
MAC 1114	Trigonometry	3.0

Semester 3

Units: 6.0

<i>Humanities</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
HUM 1020	Humanities	3.0
OR		
LIT 2000	Introduction to Literature	3.0
OR		
MUL 1010	Music Appreciation	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
OR		
THE 2000	Theatre Appreciation	3.0
CET 1487C	Network+	3.0
Computer Competency Test *		

*Computer Competency Test (CCT) ---OR--- CGS1060C - Introduction to Computer Technology and Applications.
Departmental Recommendation: Computer Competency Test (CCT).

Semester 4

Units: 14.0

CET 1110C	Digital Circuits	4.0
EET 1025C	Alternating Current Circuits	4.0
<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
CHM 1020	General Education Chemistry	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		
GLY 1010	Physical Geology	3.0
OR		
PHY 2053	Physics (without Calculus) 1	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		

POS 2041	American Federal Government	3.0
----------	-----------------------------	-----

Semester 5		Units: 15.0
CET 2113C	Advanced Digital Circuits	4.0
CET 2123C	Microprocessors	4.0
CET 2588C	Server + Service and Maintenance	3.0
<i>Program Electives</i>		4.0
EET 1141C	Electronics 1	4.0

Semester 6		Units: 7.0
EET 2351C	Digital and Data Communications	4.0
<i>Program Electives*</i>		3.0

*Select 3 credits from the following course option: EET2101C, EET2323C, MAC1140, PHY2053.

Total: 68.0

CET1171 Introduction to Computer Service and Maintenance 3.000 credits

This course is designed as an introduction for students new to IT. Students will learn about the history, design, construction, and maintenance of microcomputers, including the proper handling and use of computer components and tools; how to assemble and disassemble computers; how to perform preventive maintenance; how to identify and upgrade components; how to interpret error messages, and how to perform basic troubleshooting.

Lecture Hours: 48.000

Course User Fee: \$63.00

EET1082 Introduction to Electronics 3.000 credits

Learn by building practical electronic circuits. Survey course suitable for both majors and non-majors. Instructors and tutors are available to assist in project completion. Topics include: schematics, pictorials, amplifiers, oscillators, burglar alarms, radios, digital circuits. Students will develop individual career plans and learn about employment opportunities within the field.

Lecture Hours: 48.000

Course User Fee: \$63.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CET1178C A+ Computer Hardware Service 3.000 credits

This is an intermediate level course that prepares students for A+ hardware certification. Students will learn how to: install, configure, and upgrade components; diagnose and troubleshoot computer systems, identify, test, and troubleshoot motherboards, processors, memory, and printers, and connect network equipment.

Prerequisite: CET1171. Special fee. A.S. credit only.

Lecture Hours: 48.000

Course User Fee: \$63.00

COP2270 C for Engineers 4.000 credits

This course is intended for students majoring in Computer Engineering Technology, Electronics Engineering Technology, or any engineering discipline. Students will learn the "C" programming language, MATLAB, and the Engineering Problem Solving Method to analyze, design, code, compile and execute programs that solve engineering related problems. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Pre/Corequisite: MAC1105, Recommended Preparation: CGS1060 OR knowledge of computer skills

Course User Fee: \$63.00

EET1015C Direct Current Circuits 4.000 credits

This course is intended for students majoring in electronics engineering technology and related disciplines. Students will learn electrical components, inductance, capacitance, and elementary network analysis. Students will additionally learn to verify and apply basic theories and principles through hands-on, laboratory experiments utilizing modern testing equipment. Pre/corequisite: MAT 1033. Laboratory fee. (2 hr. lecture; 4 hr. lab)

Lecture Hours: 32.000, Lab Hours: 48.000

Pre/Corequisite: MAT1033

Course User Fee: \$63.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

CET1487C Network+ 3.000 credits

This is an intermediate level course designed for students preparing for the hardware component of the Network+ certification. Students will learn how to install, configure, manage, troubleshoot and upgrade network devices including network interface cards, switches, hubs, wireless access points, routers, and patch panels. They will also learn about the construction, installation, testing and repair of the physical layer of the network, including wired cables, fiber optic media, wireless transmitters and antennas. Demonstrated knowledge of microcomputer fundamentals and system components is required. Recommended Preparation: CET1178C or A+ certification. Laboratory fee. A.S. degree credit only.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

CET1110C Digital Circuits 4.000 credits

This is an introductory course in digital circuits for engineering and other technology majors. Students learn how to apply electronic principles to digital computer circuits and systems. Students will also learn how to simplify logic circuits, build digital circuits, and perform other laboratory activities. Pre/Co-requisite: MAC1105. Laboratory fee.

Lecture Hours: 32.000, Lab Hours: 64.000

Pre/Corequisite: MAC1105

Course User Fee: \$63.00

EET1025C Alternating Current Circuits 4.000 credits

This course is intended for students majoring in electronics engineering technology and related disciplines. Students will learn inductance, capacitance, vector notation, AC circuits, impedance, phase shift, networks, transformers, and resonance. Students will apply and verify theories and principles through hands-on, laboratory experiments utilizing modern testing equipment.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1015C AND MAC1114 OR MAC1147

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view. Lecture Hours: 48.000

CET2113C Advanced Digital Circuits 4.000 credits

This is a second level course in digital circuits for students majoring in electronics and related engineering technologies that extends the application of sequential and combinational logic circuits and other digital applications. Students will learn to program, operate, and interface with a micro-computer and its elements. Prerequisites: CET1110C, COP2270. Laboratory fee. Lecture Hours: 32.000, Lab Hours: 64.000

CET2123C Microprocessors 4.000 credits

This course is intended for students majoring in Electronics or Computer Engineering Technology. Students will learn to apply digital principles to the understanding of microprocessor parameters and characteristics (addressing range and models, instruction set, architecture, input/output, interrupts, and programming). Students will build practical microprocessor and/or microcontroller based systems to perform a variety of engineering applications. Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: CET1110C AND COP2270
Course User Fee: \$63.00

CET2588C Server + Service and Maintenance 3.000 credits

This course is designed for students preparing for the hardware component of the Server + certification. Students will learn how to install, configure, and upgrade workstations and servers, configure and test network and peripheral equipment, and diagnose and troubleshoot advanced computer systems. Laboratory fee. College readiness in reading and math required. Recommended Preparation: CET1178C or A+ certification. Special fee.

Lecture Hours: 48.000

Course User Fee: \$63.00

EET1141C Electronics 1 4.000 credits

This course is intended for students majoring in Electronics Engineering Technology or related fields. Students will learn how to apply electronic principles to analog circuits and systems, including semiconductor diodes, applying the fundamental theory of transistors and other solid-state devices; analysis of amplifiers, oscillators, and other applications using a sinusoidal wave. Students also learn basic safety procedures to follow when working in an electronics laboratory and with electronic circuits and systems.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1025C AND MAC1114 OR MAC1147

Course User Fee: \$63.00

EET2351C Digital and Data Communications 4.000 credits

This course is intended for students majoring in Electronics or Computer Engineering Technology. It provides a theoretical and practical background in the basic concepts and applications of digital and data communications. Students will learn analog-to-digital (A/D) and digital-to-analog (D/A) conversions; data communications codes and standards; wired and wireless digital communications; modulation, transmission impairment, the telephone system, modems, multiplexers, and electrical interface standards.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET2123C

Course User Fee: \$63.00

Program Description

Computer Information Technology

Associate in Science | Code: 25055 | 60 credits

The Computer Information Technology program is to provide an opportunity to establish a basic foundation in computer applications. Graduates are prepared for positions as microcomputer support specialists, user support specialists, applications system specialists and computer information managers to meet the demands of today's automated offices. In addition, program objectives are designed to assist students in their development of interpersonal and communication skills required by office professionals.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 14.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
		4.0
CTS 1134	Networking Technologies	4.0
OR		
CTS 1650	CCNA 1: Cisco Fundamentals	4.0
ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
Semester 2		Units: 12.0

CGS 1560	A+ Computer Operating Systems	4.0
CTS 1328	Supporting Microsoft Clients	4.0
Program Electives*		4.0

*Select 4 credits from the following course option: CAP1788, CAP2761C, CIS1949, CIS2010C, CIS2900, COP1047C, COP2041C, COP2800, CTS1111, CTS1120, CTS1145, CTS1651, CTS2143C, CTS2192C, CTS2375C, CTS2652, CTS2960, GIS1040, GIS2045.

Semester 3 Units: 9.0

<i>Humanities</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
HUM 1020	Humanities	3.0
OR		
LIT 2000	Introduction to Literature	3.0
OR		
MUL 1010	Music Appreciation	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
OR		
THE 2000	Theatre Appreciation	3.0
<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		
OCE 1001	Introduction to Oceanography	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0

Semester 4 Units: 12.0

CTS 1131	A+ Computer Essentials & Support	4.0
CTS 2148C	IT Project Management	4.0
CTS 2153	Supporting Windows Users & Applications	4.0

Semester 5 Units: 13.0

CGS 2108	Advanced Desktop Applications	4.0
Program Electives*		9.0

*Select 9 credits from the following course option: CAP1788, CAP2761C, CIS1949, CIS2010C, CIS2900, COP1047C, COP2041C, COP2800, CTS1111, CTS1120, CTS1145, CTS1651, CTS2143C, CTS2192C, CTS2375C, CTS2652, CTS2960, GIS1040, GIS2045.

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1134 Networking Technologies 4.000 credits

This course will provide an introduction to the technical areas of network connectivity, data communications, and communication protocols. Emphasis on understanding the foundation of networking technologies and data communication concepts. Topics covered will include an exploration of computer networking development, the OSI reference model, data signaling, data translation, standards for communications and data transmissions, network topologies and access methods. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1650 CCNA 1: Cisco Fundamentals 4.000 credits

This is the first course of the four-course Cisco curriculum that will prepare students for professional certification as a Cisco Certified Network Associate (CCNA). Students will learn networking concepts and practices, network terminology and protocols, the OSI reference model, cabling, cabling tools, routers, router and switch configurations, LAN/WAN topologies, IP addressing, and network standards.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Knowledge of computer operating systems and hardware is required.

Course User Fee: \$63.00

ENC1101 English Composition 1 3.000 credits

This is a required general education core course in college-level writing. The students will learn to compose essays and other works using various methods of development. This course fulfills the Gordon Rule writing requirement and must be completed with a grade "C" or better. Pre-requisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Lecture Hours: 48.000

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CGS1560 A+ Computer Operating Systems 4.000 credits

This is a comprehensive course in the use of operating systems for microcomputers suitable for students seeking preparation for A+ operating system certification. Students will learn how to install, configure, use, manage, and troubleshoot the Disk Operating System (DOS), Microsoft Windows, and other microcomputer operating systems. Recommended CGS 1060C or computer experience. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1328 Supporting Microsoft Clients 4.000 credits

This course is intended for students preparing for IT careers as desktop and network support specialists and server administrators, as well as candidates for industry certification. Students will learn how to implement and maintain a Microsoft client operating system.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Recommended: CGS1060C or equivalent computer experience, knowledge or skills.

Course User Fee: \$63.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CTS1131 A+ Computer Essentials & Support 4.000 credits

This is an intermediate level course designed for students preparing for A+ certification as a support technician. Students will learn how to install, configure, upgrade and replace computer system components; how to troubleshoot processors, memory, storage devices, adapter cards, peripherals and other system components; how to install, configure and troubleshoot operating systems, laptops, portable devices, printers, scanners, network devices, security measures and virtualization and cloud computing; and how to provide professional IT support and customer service. Prerequisite: CGS1560. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CGS1560

Course User Fee: \$63.00

CTS2148C IT Project Management 4.000 credits

This course prepares students to effectively plan, implement, coordinate and manage small to medium size information technology-related projects. The concepts and tools covered in this course offers practical knowledge on managing project scope, planning and scheduling, risk assessment, and identification of project resources. This course also prepares students for the CompTIA Project+ examination, an industry standard IT certification. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS2153 Supporting Windows Users & Applications 4.000 credits

This is an advanced course designed to help students prepare for the Microsoft Certified IT Professional Support Technician Certification. Students will learn how to install, configure and manage Windows applications in a networked Windows environment and how to support enterprise users. Students will also deploy Windows and applications using various methods, resolve installation and compatibility issues, establish group policies and user profiles, perform support functions, troubleshoot user and application issues, secure the desktop and network from unauthorized use, install software upgrades and updates, perform systems monitoring and documentation, and develop customer service skills.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1328

Course User Fee: \$63.00

CGS2108 Advanced Desktop Applications 4.000 credits

This is an advanced level course for major and non-major students who have completed CGS 1060C, Introduction to Computer Technology and Applications. Students will learn advanced computer skills using software applications, such as word processing, spreadsheets, database, presentation graphics, and communications and scheduling software. Students will also learn advanced file management techniques, deal with security issues, and troubleshoot hardware and software. Prerequisite: CGS1060C. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

Program Description

[Computer Programming and Analysis - Business Application Programming](#)

Associate in Science | Code: 25065 | 60 credits

The Computer Programming and Analysis program with a Business Application Programming concentration provides an opportunity to establish a foundation in computer programming in scientific, commercial, industrial and government data processing applications. Graduates are prepared for positions as entry-level application programmers, programmer specialists, computer programmers and programmer analysts.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 14.0

CGS 1060C	Introduction to Computer Technology and Applications	4.0
COP 1047C	Introduction to Python Programming	4.0
ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0

Semester 2

Units: 13.0

CGS 1540C	Database Concepts Design	4.0
CIS 2331	Systems Analysis, Design and Implementation	5.0
COP 1334	Introduction to C++ Programming	4.0

Semester 3

Units: 7.0

<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
COP 2800	Java Programming	4.0

Semester 4

Units: 13.0

		4.0
COP 2041C	Python Programming 2	4.0

OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		
OCE 1001	Introduction to Oceanography	3.0
Program Electives *		6.0

* Select 6 credits from the following course option: CAI1001C, CAI1320C, CAI2100C, CAI2300C, CAI2820C, CAI2840C, CEN2211, CEN2212C, CGS2091, COP2041C, CTS1120, CTS1145, CTS2192C, CTS2375C, PHI2680.

Total: 60.0

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

CIS2331 Systems Analysis, Design and Implementation 5.000 credits

This course is designed for computer and information technology majors. Students learn to investigate, analyze, plan, design, implement and document an information system using the traditional Systems Development Life Cycle (SDLC).

Lecture Hours: 64.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP1334 Introduction to C++ Programming 4.000 credits

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Corequisite: COP1047C OR COP1334 OR COP2270

Course User Fee: \$63.00

COP2041C Python Programming 2 4.000 credits

This is an advanced level programming course using Python. Students will learn how to code, compile, and execute programs. Topics include problem solving, object-oriented programming, database programming, data visualization, and secure software development. Prerequisite: COP1047C; (3hr. lecture; 2hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1047C

Course User Fee: \$63.00

COP2335 C++ Programming 2 4.000 credits

This course delves further into the application of C++ programming techniques including classes, object orientation, function and operator overloading, inheritance and dynamic polymorphism, templates, exception handling, standard template library, data structures, and other advanced C++ techniques. Prerequisite: COP 1334 (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1334

Course User Fee: \$63.00

COP2805C Java Programming 2 4.000 credits

This is an advanced level programming course using Java. Students will learn how to code, compile and execute programs. Topics include object serialization, Java Collection, sorting/searching algorithms, multithreading, and Java databases. Prerequisite: COP 2800. (3hr. lecture; 2hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800

Course User Fee: \$63.00

GEB1432 Applied Artificial Intelligence (AI) in Business 3.000 credits

This course illustrates how Artificial Intelligence (AI) is currently applied in industries and across business functions to support business strategy formulation, implementation and evaluation. This course introduces the data-driven outcomes and ethical issues to be considered when implementing responsible AI in business and industry. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$35.20

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

COP2041C Python Programming 2 4.000 credits

This is an advanced level programming course using Python. Students will learn how to code, compile, and execute programs. Topics include problem solving, object-oriented programming, database programming, data visualization, and secure software development. Prerequisite: COP1047C; (3hr. lecture; 2hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1047C

Course User Fee: \$63.00

COP2335 C++ Programming 2 4.000 credits

This course delves further into the application of C++ programming techniques including classes, object orientation, function and operator overloading, inheritance and dynamic polymorphism, templates, exception handling, standard template library, data structures, and other advanced C++ techniques. Prerequisite: COP 1334 (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1334

Course User Fee: \$63.00

COP2805C Java Programming 2 4.000 credits

This is an advanced level programming course using Java. Students will learn how to code, compile and execute programs. Topics include object serialization, Java Collection, sorting/searching algorithms, multithreading, and Java databases. Prerequisite: COP 2800. (3hr. lecture; 2hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth’s connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth’s spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

Program Description

Computer Programming and Analysis - Internet of Things (IoT) Applications

Associate in Science | Code: 25076 | 60 credits

The Associate in Science in Computer Programming and Analysis with an IoT Application concentration provides students with a comprehensive foundation in the technologies driving today’s smart, connected world. IoT connects everyday devices to the internet to collect, exchange, and analyze data, enabling innovation across industries. This degree program emphasizes programming, database design, embedded systems, cloud platforms, and securing IoT systems. Students gain hands-on experience developing IoT solutions that integrate data analytics and artificial intelligence. Graduates are prepared to enter the workforce where IoT and emerging technologies converge.

Program Modality: Both [In-Person (IP) and On-line]

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CEN2211 C/C++ Programming for Embedded Devices 4.000 credits

This course teaches the principles of programming in the C/C++ languages for embedded devices. The student will learn how to create programs to control open-source hardware for building digital devices that can sense and control the physical world around them.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$63.00

CIS2010C Introduction to Internet of Things Networking and Security 4.000 credits

This course explores Internet of Things (IoT) networks' design, implementation, and security, providing a well-rounded understanding of protocols and standards governing the Internet and IoT. Students gain experience performing security assessments and vulnerability testing of IoT systems using industry-standard tools, focusing on identifying and mitigating risks to build secure and resilient IoT solutions.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS2331 Systems Analysis, Design and Implementation 5.000 credits

This course is designed for computer and information technology majors. Students learn to investigate, analyze, plan, design, implement and document an information system using the traditional Systems Development Life Cycle (SDLC).

Lecture Hours: 64.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Corequisite: COP1047C OR COP1334 OR COP2270

Course User Fee: \$63.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view. Lecture Hours: 48.000

CEN2211 C/C++ Programming for Embedded Devices 4.000 credits

This course teaches the principles of programming in the C/C++ languages for embedded devices. The student will learn how to create programs to control open-source hardware for building digital devices that can sense and control the physical world around them.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$63.00

CEN2212C Introduction to Programming the Internet of Things (IoT) 4.000 credits

This course teaches the principles of programming Internet of Things devices using a computer language. The student will learn fundamental programming concepts and systematic design techniques. At the end of the course, the student will be able to write programs that control development boards, with sensors, connected to the Internet. Prerequisite: CEN2211.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CEN2211

Course User Fee: \$63.00

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

CIS2012C Introduction to Data Analytics and AI for the Internet of Things 4.000 credits

This course equips students with the knowledge and skills necessary to navigate the complex landscape of data analytics and artificial intelligence within the context of the Internet of Things (IoT), empowering them to contribute to the development of smart, data-driven IoT solutions. Prerequisites: CIS 2010C, CIS 2011C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS2010C AND CIS2011C

Course User Fee: \$63.00

CIS2013C Internet of Things Applications 4.000 credits

In this course, students learn about the practical applications of the Internet of Things (IoT) across various sectors and industries. They explore real-world use cases, ranging from smart homes and smart cities to the latest developments in the field. The course offers insights into how IoT solutions are designed, developed, and deployed, equipping students with the knowledge to create innovative IoT applications.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS2010C AND CIS2011C

Course User Fee: \$63.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

Program Description

Computer Programming and Analysis - Mobile Applications Development

Associate in Science | Code: 25070 | 60 credits

The Computer Programming and Analysis program provides an opportunity to establish a foundation in computer programming in scientific, commercial, industrial and government data processing applications. The Mobile Applications Development concentration additionally offers hands-on instruction with current technology for Apple and Android mobile device platforms. Graduates are prepared for positions as app developers.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 14.0

CGS 1060C	Introduction to Computer Technology and Applications	4.0
COP 1334	Introduction to C++ Programming	4.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0

Semester 2

Units: 13.0

CGS 1540C	Database Concepts Design	4.0
CIS 2331	Systems Analysis, Design and Implementation	5.0
COP 2800	Java Programming	4.0

Semester 3

Units: 9.0

<i>Humanities</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
HUM 1020	Humanities	3.0
OR		
LIT 2000	Introduction to Literature	3.0
OR		
MUL 1010	Music Appreciation	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
OR		
THE 2000	Theatre Appreciation	3.0
<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
ESC 1000	General Education Earth Science	3.0

EVR 1001	Introduction to Environmental Science	3.0
OR		
OCE 1001	Introduction to Oceanography	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0

Semester 4

Units: 12.0

COP 2664	iPhone Application Development 1	4.0
COP 2658	iPhone Application Development 2	4.0
Program Elective *		4.0

*Select 4 credits from the following course option: CAI1001C, CAI1320C, CAI2100C, CAI2300C, CAI2840C, CEN2211, CEN2212C, CGS2091, COP2805, CTS1120, CTS1145, CTS2192C, CTS2375C, GEB1432, PHI2680.

Semester 5

Units: 12.0

COP 2660	Android Application Development 1	4.0
COP 2662	Android Application Development 2	4.0
Program Elective *		4.0

*Select 4 credits from the following course option: CAI1001C, CAI1320C, CAI2100C, CAI2300C, CAI2840C, CEN2211, CEN2212C, CGS2091, COP2805, CTS1120, CTS1145, CTS2192C, CTS2375C, GEB1432, PHI2680.

Total: 60.0

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP1334 Introduction to C++ Programming 4.000 credits

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

CIS2331 Systems Analysis, Design and Implementation 5.000 credits

This course is designed for computer and information technology majors. Students learn to investigate, analyze, plan, design, implement and document an information system using the traditional Systems Development Life Cycle (SDLC).

Lecture Hours: 64.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Corequisite: COP1047C OR COP1334 OR COP2270

Course User Fee: \$63.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics.

Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

COP2664 iPhone Application Development 1 4.000 credits

This is an introduction to iOS programming course using the Objective C computer language, recommended for Computer Science and Computer Information Systems majors. Students will learn to code, compile and execute mobile iOS applications while learning advanced programming concepts and object oriented programming design concepts and principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1332 OR COP1334

Course User Fee: \$63.00

COP2658 iPhone Application Development 2 4.000 credits

This intermediate iOS course teaches the principles of iPhone application development for majors in Computer Science, Computer Information Systems, and related disciplines. Students will learn how to create mobile applications that can be deployed to iPhone smartphones, tablets or simulators utilizing Cocoa and XCode for development. Emphasis will be placed on learning the underlying iPhone framework and components in order to create quality mobile applications.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2654

Course User Fee: \$63.00

COP2660 Android Application Development 1 4.000 credits

This course teaches the principles of Android application development for majors in Computer Science, Computer Information Systems, and related disciplines. Students will learn how to create mobile applications for deployment to Android smartphones, tablets or simulators utilizing open source software (Java, Eclipse IDE, Android Plug-In and Android SDK) for development. Emphasis will be placed on the underlying Android framework to create quality applications.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800

Course User Fee: \$63.00

COP2662 Android Application Development 2 4.000 credits

This course for majors in Computer Science, Computer Information Systems, and related disciplines teaches how to develop advanced Android applications. Students will learn how to create applications utilizing the advanced capabilities of Android smartphones, including interfacing the application to the device's content providers' databases, GPS and location based services, notifications, background threads, audio, video, SMS, motion sensors and network connectivity. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2660, COP2800

Course User Fee: \$58.00

Program Description

Crime Scene Technology - Crime Scene Investigation

Associate in Science | Code: 27026 | 60 credits

The Associate in Science Degree in Crime Scene Technology prepares students for employment in the field of criminalistics with a specialty in Crime Scene Investigation or Forensic Science. Graduates of this program may find employment as a Forensic Science Technician, Crime Scene Technician, Medical Examiner Investigator, Medical Investigator, Insurance Investigator, Legal Investigator, Forensic Paralegal, Crime Scene Investigator, and Laboratory Technician, among others. Students may also continue their formal education with the College and receive a Bachelor of Applied Science in Public Safety Management.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0
CCJ 1020	Introduction to Criminal Justice	3.0
CJE 2671	Basic Fingerprinting	3.0
ENC 1101	English Composition 1	3.0
<i>Mathematics</i>		3.0

CJE 1642	Crime Scene Technology 2	3.0
CJE 1772	Crime Scene Photography 2	3.0
CJE 2672	Fingerprint Development	3.0
CJL 2610	Courtroom Presentation	3.0

Total: 61.0

CCJ1020 Introduction to Criminal Justice 3.000 credits

This course will explore and define the various components of the criminal justice system. It is designed for the entry level criminal justice practitioner and beginning student interested in entering the field.

Lecture Hours: 48.000

CJE2671 Basic Fingerprinting 3.000 credits

This course provides a foundation in basic fingerprinting. Students will learn topics which include classification, identification, filing and rolling of fingerprints, problems and practices associated with post mortem fingerprinting and proper presentation of fingerprint evidence. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$11.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

CCJ1191 Human Behavior in Criminal Justice 3.000 credits

Human behavior and how it relates to the duties and responsibilities of the criminal justice practitioner.

Lecture Hours: 48.000

CHS1522C Forensic Science 1 4.000 credits

An introductory course in the principles and techniques of forensic science. Students will learn how forensic science pertains to crime scene investigation and crime laboratory analysis.

Lecture Hours: 48.000, Lab Hours: 32.000

CJE1640 Crime Scene Technology 1 3.000 credits

This is an introductory course in Crime Scene Technology. Students will learn the techniques, materials and instrumentation used in securing, searching, recording, collecting, and examining physical evidence. There will be special emphasis on the tools, instruments, and techniques used in the studies of crime scene reconstruction, fingerprints, firearms, tool marks, and blood stain pattern analysis.

Lecture Hours: 48.000

CJE2600 Criminal Investigation 3.000 credits

Fundamentals of criminal investigation, theory and practice, including crime scene search; preservation, collection and transportation of physical evidence; interviewing, interrogating; statement taking; and case preparation, with investigation of specific offenses; relationship with the police science laboratory.

Lecture Hours: 48.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics.

Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

CJE1673 Crime Scene Photography 1 3.000 credits

This is an introductory study of the history of photography including basic photography skills. Students will learn camera operations, exposure control, relational photographs and flash control for crime scene and evidentiary documentation. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

CJE2644 Crime Scene Safety 3.000 credits

This course provides the fundamentals of protecting and preserving the crime scene and identifies the essential techniques of properly handling physical evidence. Students will learn the understanding of various hazards and safety issues and provides basic techniques for preserving evidence as it relates to various hazardous chemical and biological materials. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$14.00

CCJ2358 Criminal Justice Reporting 3.000 credits

This course prepares students through instruction and practice to properly prepare written reports common to the criminal justice community. Students will learn a variety of criminal justice scenarios presented and students will be instructed as to proper report format and presentation. Prerequisite: ENC1101.

Lecture Hours: 48.000

Prerequisite: ENC1101

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CCJ2053 Criminal Justice Ethics and Professionalism 3.000 credits

This course will provide students with an overview of moral, ethical, and professional issues and dilemmas facing individuals and organizations within the criminal justice system. Students will learn to define and implement ethical and professional standards by examining what they will be confronted with and how to respond appropriately. Prerequisite: PHI 2600.

Lecture Hours: 48.000

Prerequisite: PHI2600

CJE1642 Crime Scene Technology 2 3.000 credits

This course covers advanced principles, theories and applications in crime scene technology. Students will learn collection procedures of weapons, arson, gunshot residue, blood spatter, and recovery of human remains. Data analysis, reporting and plan of action development are emphasized.

Lecture Hours: 48.000

Prerequisite: CJE1640

CJE1772 Crime Scene Photography 2 3.000 credits

This course expands upon concepts; knowledge and skills taught in Crime Scene Photography 1. Students will learn to include specialty light sources, darkroom techniques and procedures, filters and specialized equipment including black and white and color enlargers.

Lecture Hours: 48.000

Prerequisite: CJE1673

CJE2672 Fingerprint Development 3.000 credits

This course provides a continuation of Basic Fingerprinting. Students will learn different methods involved in detection, enhancement, and recovery of latent fingerprints. Techniques will involve chemical and mechanical methods on substrates and evaluation for proper application in both theory and practices.

Lecture Hours: 48.000

Prerequisite: CJE2671

CJL2610 Courtroom Presentation 3.000 credits

This course introduces students to proper courtroom presentation and procedures. Students will learn the appropriate techniques for proper attire, grooming, speaking, listening and stress control during courtroom proceedings, visual aid preparation, and presentations of all evidence (commonly referred to as "scientific evidence") collected at the crime scene are also included.

Lecture Hours: 48.000

Program Description

Crime Scene Technology - Forensic Science

Associate in Science | Code: 27027 | 60 credits

The Associate in Science Degree in Crime Scene Technology prepares students for employment in the field of criminalistics with a specialty in Crime Scene Investigation or Forensic Science. Graduates of this program may find employment as a Forensic Science Technician, Crime Scene Technician, Medical Examiner Investigator, Medical Investigator, Insurance Investigator, Legal Investigator, Forensic Paralegal, Crime Scene Investigator, and Laboratory Technician, among others. Students may also continue their formal education with the College and receive a Bachelor of Applied Science in Public Safety Management.

Program Modality: Both [In-Person (IP) and On-line]

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

CCJ1020 Introduction to Criminal Justice 3.000 credits

This course will explore and define the various components of the criminal justice system. It is designed for the entry level criminal justice practitioner and beginning student interested in entering the field.

Lecture Hours: 48.000

ENC1101 English Composition 1 3.000 credits

This is a required general education core course in college-level writing. The students will learn to compose essays and other works using various methods of development. This course fulfills the Gordon Rule writing requirement and must be completed with a grade "C" or better. Pre-requisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Lecture Hours: 48.000

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BSC2426 Biotechnology Methods and Applications 1 3.000 credits

This course addresses the basic principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical, biotechnology and/or research laboratory setting(s). Practical applications of biotechnology are explored.

Lecture Hours: 48.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426L

BSC2426L Biotechnology Methods and Applications 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2426 Biotechnology Methods and Applications 1. This is a hands-on course that emphasizes the basic laboratory principles, techniques, and instrumentation, necessary for effective work in pharmaceutical, biotechnology, and/or research laboratory settings(s).

Lab Hours: 64.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426

Course User Fee: \$50.00

CHS1522C Forensic Science 1 4.000 credits

An introductory course in the principles and techniques of forensic science. Students will learn how forensic science pertains to crime scene investigation and crime laboratory analysis.

Lecture Hours: 48.000, Lab Hours: 32.000

CJE1640 Crime Scene Technology 1 3.000 credits

This is an introductory course in Crime Scene Technology. Students will learn the techniques, materials and instrumentation used in securing, searching, recording, collecting, and examining physical evidence. There will be special emphasis on the tools, instruments, and techniques used in the studies of crime scene reconstruction, fingerprints, firearms, tool marks, and blood stain pattern analysis.

Lecture Hours: 48.000

CJE2600 Criminal Investigation 3.000 credits

Fundamentals of criminal investigation, theory and practice, including crime scene search; preservation, collection and transportation of physical evidence; interviewing, interrogating; statement taking; and case preparation, with investigation of specific offenses; relationship with the police science laboratory.

Lecture Hours: 48.000

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

CHM 1045 is the first semester of a two-semester general chemistry course for science, premedical science and engineering students. Students will learn stoichiometry, atomic structure, completing and balancing chemical reactions, nomenclature, bonding, acid-base theories, solutions, gas laws and beginning thermodynamics.

Special fee.

Lecture Hours: 48.000

Prerequisite: CHM1025or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: MAC1105, Corequisite: CHM1045, Prerequisite: CHM1025Or an approved ACS Proficiency Exam score.

Course User Fee: \$30.00

CHS2523 Forensic Science 2 3.000 credits

This is a continuation of Forensic Science 1. Students will learn topics which include but are not limited to: drug identification and toxicology; document analysis; death determination; soil examination methodology; forensic anthropology; tool marks and casts/impressions. Prerequisite: CHS1522C.

Lecture Hours: 48.000

CJE2671 Basic Fingerprinting 3.000 credits

This course provides a foundation in basic fingerprinting. Students will learn topics which include classification, identification, filing and rolling of fingerprints, problems and practices associated with post mortem fingerprinting and proper presentation of fingerprint evidence. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$11.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

CCJ1191 Human Behavior in Criminal Justice 3.000 credits

Human behavior and how it relates to the duties and responsibilities of the criminal justice practitioner.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view. Lecture Hours: 48.000

BSC2427 Biotechnology Methods and Applications 2 3.000 credits

This course addresses advanced principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical-biotechnology and/or research-laboratory setting(s). The following areas of contemporary biotechnology are covered: forensics, bioremediation, and animal-, plant-, and marine biotechnology.

Lecture Hours: 48.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427L

BSC2427L Biotechnology Methods and Applications 2 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2427 Biotechnology Methods and Applications 2. This is a hands-on course that emphasizes advanced laboratory principles, techniques, and instrumentation necessary for effective work in a pharmaceutical, biotechnology, and/or research-laboratory setting(s).

Lab Hours: 64.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427

Course User Fee: \$50.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

Program Description

Criminal Justice Technology

Associate in Science | Code: 27012 | 60 credits

Upon completion of the Criminal Justice Technology program, the student will be eligible for the Associate in Science degree. The A.S. degree opens up entry-level non-sworn positions in local, state and federal agencies, i.e., juvenile justice, private security, law enforcement, corrections, probation and parole, detention centers and community based intervention programs.

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

CCJ1020 Introduction to Criminal Justice 3.000 credits

This course will explore and define the various components of the criminal justice system. It is designed for the entry level criminal justice practitioner and beginning student interested in entering the field.

Lecture Hours: 48.000

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

CCJ1010 Introduction to Criminology 3.000 credits

Theories and causes of criminal and delinquent behavior, including its variations, ramifications, explanations and measures of prevention, control and treatment.

Lecture Hours: 48.000

CJC1000 Introduction to Corrections 3.000 credits

A comprehensive view of the historical and philosophical treatment programs and developments in the field of adult institutional corrections. Emphasis is on understanding the offender in the correctional system; an examination of the correctional client and staff, agencies and recidivism; (3 hr. lecture).

Lecture Hours: 48.000

CJ1162 Parole and Probation 3.000 credits

The history, current practices and the consideration of philosophical concepts in the areas of probation and parole; (3 hr. lecture)

Lecture Hours: 48.000

CJL2062 Constitutional Law and Legal Procedure or Evidence 3.000 credits

An examination of the United States and Florida Constitutions, with emphasis on leading cases dealing with arrest, search and seizure, confessions and the rules of evidence.

Lecture Hours: 48.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CCJ1191 Human Behavior in Criminal Justice 3.000 credits

Human behavior and how it relates to the duties and responsibilities of the criminal justice practitioner.

Lecture Hours: 48.000

CJE2600 Criminal Investigation 3.000 credits

Fundamentals of criminal investigation, theory and practice, including crime scene search; preservation, collection and transportation of physical evidence; interviewing, interrogating; statement taking; and case preparation, with investigation of specific offenses; relationship with the police science laboratory.

Lecture Hours: 48.000

CJL1100 Criminal Law 3.000 credits

Historical background and foundations of American criminal law, including United States Constitutional requirements, Federal and State court organization and jurisdiction, criminal law basics, Florida statutes, rules of evidence and procedure.

Lecture Hours: 48.000

CCJ2650 Narcotics and Drug Education 3.000 credits

The general problems created by illegal use of narcotics and dangerous substances, with emphasis upon classification, description and history of drugs, etiology of addiction, extent of drug use and its relationship to criminal behavior and methods of control.

Lecture Hours: 48.000

DSC1006 Introduction to Homeland Security 3.000 credits

This course will introduce students to the vocabulary and important components of Homeland Security. Students will learn about the agencies associated with Homeland Security and their interrelated duties and relationships.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CCJ2053 Criminal Justice Ethics and Professionalism 3.000 credits

This course will provide students with an overview of moral, ethical, and professional issues and dilemmas facing individuals and organizations within the criminal justice system. Students will learn to define and implement ethical and professional standards by examining what they will be confronted with and how to respond appropriately. Prerequisite: PHI 2600.

Lecture Hours: 48.000

Prerequisite: PHI2600

CJJ2002 Juvenile Delinquency 3.000 credits

A history of the juvenile court system in the United States. An analysis of delinquency and the family structure. Delinquency control including the police function with juveniles and their families, preventative measures by adequate court and police enforcement, rehabilitative processes, and the philosophy and programs of schools for boys and girls and detention homes.

Lecture Hours: 48.000

DSC2242 Transportation and Border Security 3.000 credits

This course introduces students to global supply chains and intermodal transportation systems. Students will learn the threats to these systems, their vulnerabilities and potential for terrorist attacks, and the measures being undertaken to secure them.

Lecture Hours: 48.000

DSC2590 Intelligence Analysis and Security Management 3.000 credits

This course examines intelligence analysis and its indispensable relationship to the security management of terrorist attacks, man-made disasters and natural disasters. Students will learn substantive issues regarding intelligence support of Homeland Security measures implemented by the United States and explore how the intelligence community operates.

Lecture Hours: 48.000

Program Description

Culinary Arts Management

Associate in Science | Code: 22031 | 60 credits

The Associate in Science degree in Culinary Arts Management will groom individuals for careers in the widely varied areas of the culinary industry, including production line and supervisory positions. This competency based culinary program will provide the student with a unique combination of comprehensive theoretical knowledge and practical hands-on training. Students will master the fundamentals of culinary production in an environment that builds teamwork while gaining practical individualized experiences. The course content includes food preparation and service; identification, storage, selection and presentation of foods; training in communication, leadership, human relations, and employability skills; and sanitation and safe work practices. Earning a degree will

enable students to pursue further education at the university level or begin working in the field immediately upon graduation.

Program Modality: Both [In-Person (IP) and On-line]

FSS 2940	Culinary Management Externship	4.0
PHI 2010	Introduction to Philosophy	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

FSS1200 Culinary Terminology and Procedures 3.000 credits

This is an introductory course in which students will learn to integrate industry vocabulary, terminology, knowledge, skills, and practices required for careers in the food service industry. The students will learn standard kitchen phrases, how to identify and describe equipment, recipe reading, costing, conversion formulas, product identification, measurements and basic cooking procedures. Corequisite: FSS1202C.

Lecture Hours: 48.000

Corequisite: FSS1202C

FSS1202C Food Production 1 - Foundational Skills 3.000 credits

This course is an introductory kitchen lecture/lab experience in which students will be provided hands-on orientation to tools, equipment, recipe production, measurements, knife cut techniques and basic cooking procedures. Students will practice classic cooking methods, product identification and the functions of the production kitchen in a "green" team environment. Corequisite: FSS1200. A.S. degree credit only.

Lecture Hours: 16.000, Practicum Hours: 96.000

Corequisite: FSS1200

Course User Fee: \$1981.97

HFT1212 Safety and Sanitation 3.000 credits

Students will learn industry standards on sanitation as it relates to food preparation and kitchen operations. Students will recognize proper sanitation techniques and explain how to implement sanitation programs in food service operations.

Lecture Hours: 48.000

Course User Fee: \$125.00

FSS1204C Food Production 2 - American Regional Cuisine 3.000 credits

The lecture/practicum course reinforces the knowledge and skills learned in the preceding classes and helps students build confidence in the techniques of basic cookery. The development of knife skills is accented. American Regional Cuisine explores the use of indigenous ingredients in the preparation of traditional and contemporary American specialties. The importance and basics of "sustainable agriculture" are introduced. The concepts of mise en place, timelines, plate presentation, and teamwork in a production setting are introduced and accentuated. Timing and organization skills are emphasized. Prerequisites: FSS1200, FSS1202C.

Lecture Hours: 16.000, Practicum Hours: 96.000

Prerequisite: FSS1200 AND FSS1202C

Course User Fee: \$1981.99

FSS1246C Basic Baking - Foundational Skills 3.000 credits

This is an introductory course in which students will learn the fundamentals of baking science, terminology, equipment, ingredients, weights, measures, formula conversion and storage. Students will learn the functions of various baking ingredients and execute baking recipes, including competencies relating to doughs, breads, cookies, pies, puff pastries, sweet & savory pastry fillings, quick breads, cakes and basic decorating techniques.

Prerequisites: FSS1200, FSS1202C.

Lecture Hours: 16.000, Practicum Hours: 96.000

Prerequisite: FSS1200, FSS1202C

Course User Fee: \$1981.98

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

FSS2248C Garde Manger 3.000 credits

This is a foundational lecture/lab course in the preparation of cold food, hors d'oeuvres, display platters, charcuteries, smoking techniques, butchery and seafood. Students will prepare edible buffet centerpieces. Students will also have hands-on experiences in ice carving. Production methods and safe food handling techniques are re-emphasized. Prerequisites: FSS1200, FSS1202C, FSS1246C.

Lecture Hours: 16.000, Practicum Hours: 96.000

Prerequisite: FSS1200, FSS1202C, FSS1204C

Course User Fee: \$1981.95

HFT1220 Supervisory Development 3.000 credits

This introductory course will assist students in learning basic supervisory skills. The students will learn how to conduct proper employee evaluations, as well as how to apply discipline. Effective communication techniques, use of delegation and diversity in the workforce are discussed. Issues concerning employee relations and current topics in management are addressed.

Lecture Hours: 48.000

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

FSS1801 Culinary Sustainability and Practices 3.000 credits

This course will engage students in growing and producing food, processing, distribution, and end user/purchaser aspects of food systems. Students will explore how to reduce the carbon footprint of food service operations and understand the importance of bringing seasonal food to the table at its peak of freshness and height of nutritional value. With hands-on approach and a focus on biodiversity, sustainability, healthy food and animal welfare, students will develop critical thinking to understanding local and global food systems. The course includes on-site visits with farmers, food processors, and experts in our local food system to engage in health and sustainability practices related to food safety, water and waste systems, food marketing, and the heritage food movement. Prerequisite: FSS2248C.

Lecture Hours: 48.000

Prerequisite: FSS2248C

Course User Fee: \$583.82

FSS2242C International Cuisine 3.000 credits

This is an advanced course in which students will reinforce their knowledge of equipment, vocabulary and theories learned in prerequisite classes. Students will learn to use global ingredients, explore international cooking techniques and methods and be exposed to equipment specific to a myriad of world regions. Students will have the opportunity to develop international menus and prepare dishes from many countries.

Prerequisites: FSS1200, FSS1202C, FSS1204C, FSS1246C, FSS2248C.

Lecture Hours: 16.000, Practicum Hours: 96.000

Prerequisite: FSS1200, FSS1202C, FSS1204C, FSS1246C, FSS2248C

Course User Fee: \$1981.97

HFT1454 Food and Beverage Cost Controls 3.000 credits

Covers the principles and procedures involved in an effective food and beverage control system, including standards determination, the operation budget, income and cost control, menu pricing, and computer applications.

Lecture Hours: 48.000

Course User Fee: \$15.00

ACG1403 Excel for Business 1.000 - 3.000 credits

This course will cover Excel topics relevant to the field of accounting and finance including, but not limited to, VLOOKUP, HLOOKUP, INDEX, MATCH, IF, AND, OR, Pivot Tables, Named Ranges, Array Formulas, Custom Number Formats, Conditional Formatting, Absolute References and Keyboard Shortcuts.

Lecture Hours: 16.000 - 48.000

Course User Fee: \$22.00

FSS2205C Food Production 3 - Contemporary Cuisine and Modernist Methods 3.000 credits

This lecture/lab course is an introduction to alternative methods of food production using science as the platform. Students will further develop their understanding of modernist and molecular cuisine through hands-on approach, utilizing state-of-art equipment and techniques. Prerequisites: FSS1200, FSS1202C, FSS1204C, FSS1246C, FSS2242C, FSS2248C.

Lecture Hours: 16.000, Practicum Hours: 96.000

Prerequisite: FSS1200 AND FSS1202C AND FSS1204C AND FSS1246C AND FSS2242C AND FSS2248C

Course User Fee: \$1981.96

FSS2381 MCI Café Management Internship 4.000 credits

This required internship is designed to provide hands-on culinary training through industry work experience. Students will be located in an approved site to reinforce their skills while being exposed to various stations in a food services operation. Students will learn to actively participate in various aspects of the operation including cooking, cost controls, and sanitation programs. Prerequisite: FSS2205C. .

Practicum Hours: 192.000

Prerequisite: FSS2205C

Course User Fee: \$1981.97

FSS2940 Culinary Management Externship 4.000 credits

This course is designed to provide advanced hands-on culinary training for culinary students through work experience in an approved commercial foodservice or hospitality establishment. Students on externship will receive feedback from their supervisor and keep an externship manual to record and reflect on their work experience.

Internship Hours: 192.000

Course User Fee: \$249.05

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

Program Description

Cybersecurity

Associate in Science | Code: 25079 | 60 credits

The Cybersecurity program prepares students to fill a critical and growing need for cybersecurity personnel through hands-on experience along with simulation training and group/team-based learning to simulate a

professional work environment. The program covers a wide range of topics including cybersecurity fundamentals, computer forensics and network security. Upon completion of the program, the student will have learned to evaluate security trends, recognize best practices, and understand IT security products and threats. Additionally, the curriculum is designed to aid students in preparing for many of the certification exams in the field.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1134 Networking Technologies 4.000 credits

This course will provide an introduction to the technical areas of network connectivity, data communications, and communication protocols. Emphasis on understanding the foundation of networking technologies and data communication concepts. Topics covered will include an exploration of computer networking development, the OSI reference model, data signaling, data translation, standards for communications and data transmissions, network topologies and access methods. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CGS1700 Introduction to Operating Systems 4.000 credits

This course examines the role of operating systems as the interface between the hardware, the software and the users of a computer system. It explores the concepts such as processes and threads, file systems, virtual memory, interrupt handling, virtualization and security.

Lecture Hours: 48.000, Lab Hours: 32.000

CIS1531 Introduction to Secure Scripting 4.000 credits

This course provides students with the knowledge and skills to: create secure scripts and programs using system shells and programming languages; implement and debug algorithms to solve problems; automate and perform administrative tasks; manage data handling, and backup and storage.

Lecture Hours: 48.000, Lab Hours: 32.000

CTS1120 Cybersecurity Fundamentals 4.000 credits

This course provides a foundation of knowledge in the information technology security field. Students will learn general network security concepts; compliance and operational security; threats and vulnerabilities; application, data, and host security; access control and identity management; cryptography. Hands-on training benefits the novice as well as the experienced network professional.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Note: Students are strongly encouraged to complete CTS 1134 prior to enrollment in CTS 1120. Students who enroll concurrently should ensure they have a foundational understanding of networking concepts, including IP addressing, protocols, and network services. In mini-term formats, students should complete CTS 1134 during the first half of the term and CTS 1120 during the second half.

Course User Fee: \$63.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CTS1111 Linux + 4.000 - 32.000 credits

This course is designed to help students prepare for the CompTIA Linux+ Certification Exam and to teach the skills needed to administer GNU/Linux-based work-stations and servers. Prerequisite: CGS 1060 or computer experience is required. (3 hr. lecture; 2 hr. lab)

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Course User Fee: \$63.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

CET2880C Digital Forensics 4.000 credits

This is an introductory digital forensics course for students who are studying cybersecurity, electronics or computer engineering technologies. In this course, students will learn the setup and use of an investigator's laboratory, how to perform data acquisition, web forensics, email forensics, mobile forensics, network analysis, and file recovery.

Lecture Hours: 32.000, Lab Hours: 64.000

CTS2314 Network Defense and Countermeasures 4.000 credits

In this course, students will take an in-depth look at network defense concepts and techniques. Coverage includes network defensive concepts; policy development; problem-solving; and implementation of firewalls, DMZ, VPN, IDS, NAT and proxy servers.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1120, CTS1134

CIS2350 Cybersecurity Analysis (CySA+) 4.000 credits

This course provides students an intermediate skills-level approach to cybersecurity analysis. Students learn to identify the phases of an attack, the motivations of the adversary, the resources and techniques they use, the intended effect, or end-game, and how to mitigate threats. Topics include intrusion detection and response, analytics and advanced threat visibility. Prerequisites: CTS1120, CTS1134. Laboratory Fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1120, CTS1134

Course User Fee: \$63.00

CAI1001C Artificial Intelligence (AI) Thinking 3.000 credits

A survey of artificial intelligence (AI) where students explore different technologies utilizing concepts and skills widely accepted for AI and digital competency. Classification algorithms, supervised vs. unsupervised learning, data preparation, and training/using learning models for predictions are presented. CGS1060C and MAT1033 are recommended, but not required.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

CAI1320C Introduction to Prompt Engineering 3.000 credits

This course introduces students to prompt engineering, focusing on foundational concepts and practical applications across various tools. Students will learn to craft prompts that enhance creativity, precision, and efficiency, leveraging AI to optimize workflows and productivity.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

CAI2100C Machine Learning Foundations 3.000 credits

Students are introduced to machine learning concepts and Python applications, including data acquisition, supervised, unsupervised, and reinforced learning. In addition, students will develop and deploy artificial intelligence (AI) models utilizing classification algorithms. Prerequisites: CAI1001C, COP1047C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI1001C/COP1047C or equivalent knowledge of Python programming language.

Course User Fee: \$63.00

CAI2300C Introduction to Natural Language Processing 3.000 credits

Students will learn the fundamental concepts of Natural Language Processing (NLP) and text processing. In addition, focus will be on knowledge and skills necessary to create a language recognition application. Pre/Corequisite: CAI2100C.

Lecture Hours: 32.000, Lab Hours: 32.000

Pre/Corequisite: CAI2100C

Course User Fee: \$63.00

CAI2820C Artificial Intelligence Applications Solutions 3.000 credits

A lower division course for students majoring in Applied Artificial Intelligence (AI). Students will demonstrate competence to scope, acquire/explore data, model, evaluate, and deploy an AI/machine learning solution in a team environment. Students will create and present a code or no-code AI solution. Must be taken during the last semester before graduation. Prerequisites: CAI2300C and CAI2840C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI2840C AND CAI2300C

Course User Fee: \$63.00

CAI2840C Introduction to Computer Vision 3.000 credits

Students will learn fundamental concepts in Computer Vision (CV) and image processing, including introduction to necessary proprietary and open-source Python libraries. Pre/Corequisite: CAI2100C.

Lecture Hours: 32.000, Lab Hours: 32.000

Pre/Corequisite: CAI2100C

Course User Fee: \$63.00

CIS1949 CO-Op Work Experience 1: CIS 1.000 - 4.000 credits

This course is designed as a work experience for students majoring in computer information systems programs. Students will learn to apply the skills and knowledge that they have acquired through their program of study in a real work environment.

Prerequisite: Successful completion of required program course work. Department approval required.

Lecture Hours: 16.000 - 64.000

Prerequisite: Successful completion of required program course work. Department approval required.

CIS2010C Introduction to Internet of Things Networking and Security 4.000 credits

This course explores Internet of Things (IoT) networks' design, implementation, and security, providing a well-rounded understanding of protocols and standards governing the Internet and IoT. Students gain experience performing security assessments and vulnerability testing of IoT systems using industry-standard tools, focusing on identifying and mitigating risks to build secure and resilient IoT solutions.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS2900 Directed Study in IT 1.000 credits

This course, for majors in Information Technology, provides students the opportunity to pursue projects under faculty supervision through self-directed research, experiences, and presentations.

Prerequisite: Successful completion of required program course work. Department approval required.

Lab Hours: 32.000

Recommended Preparation: Successful completion of required program course work. Department approval required

CJE1680 Introduction to Computer Crimes 3.000 credits

This course provides the student with an overview of crimes involving the use of computer technology and the internet. Students will learn how computer related crimes are committed and how they are investigated. Topics covered will include computer crime scene management and the legal issues involved in the prosecution of computer crimes and legislation enacted to protect the public.. (3 hr. lecture)

Lecture Hours: 48.000

CJL2062 Constitutional Law and Legal Procedure or Evidence 3.000 credits

An examination of the United States and Florida Constitutions, with emphasis on leading cases dealing with arrest, search and seizure, confessions and the rules of evidence.

Lecture Hours: 48.000

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP1334 Introduction to C++ Programming 4.000 credits

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP2041C Python Programming 2 4.000 credits

This is an advanced level programming course using Python. Students will learn how to code, compile, and execute programs. Topics include problem solving, object-oriented programming, database programming, data visualization, and secure software development. Prerequisite: COP1047C; (3hr. lecture; 2hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1047C

Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Corequisite: COP1047C OR COP1334 OR COP2270

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS2143C Server Administration 4.000 credits

This course is designed for students preparing for IT careers as server administrators, and focuses on server hardware and operating systems, system management and administration, security and disaster recovery, infrastructure and network services, data storage, and troubleshooting. This course is intended to prepare students for the CompTIA Server+ certification.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Server operating systems experience.

Course User Fee: \$63.00

CTS2148C IT Project Management 4.000 credits

This course prepares students to effectively plan, implement, coordinate and manage small to medium size information technology-related projects. The concepts and tools covered in this course offers practical knowledge on managing project scope, planning and scheduling, risk assessment, and identification of project resources. This course also prepares students for the CompTIA Project+ examination, an industry standard IT certification. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS2192C Microsoft Azure Administration 4.000 credits

This course is intended for students preparing for IT careers as cloud administrators, as well as candidates for industry certification. Students will learn the administration skills and knowledge required to implement, manage, and monitor identity, governance, storage, and compute virtual networks in the Microsoft Azure cloud environment.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: CTS1145 or equivalent knowledge in Microsoft Azure Fundamentals

Course User Fee: \$63.00

CTS2303 Windows Server Administration 4.000 credits

This course is intended for students preparing for IT careers as network support specialists as well as server and cloud administrators. Students will learn the fundamental administration skills and knowledge required to deploy and support Windows Server core services.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: CGS1060 and CTS1134 or equivalent knowledge

Course User Fee: \$63.00

CTS2375C Cloud Infrastructure and Services 4.000 credits

This course helps students develop technical expertise in Cloud computing and prepares them for industry certification. Students will learn the essentials of Cloud computing, business security and compliance considerations, migrating to the Cloud, architecting a Cloud server, and how to troubleshoot Cloud services.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS2145

Course User Fee: \$63.00

CTS2670 Check Point Security Administration 4.000 credits

This course, designed for students specializing in network security, prepares students for the Check Point Certified Security Administrator (CCSA) certification exam. Students will learn how to install security gateways; configure rules on servers; create a rule base; assign user permissions; schedule backups and upgrades; monitor and troubleshoot common network traffic.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1120, CTS1134

CTS2671 Check Point Security Engineering 4.000 credits

This course, for students specializing in network security, prepares students for the Check Point Certified Security Expert (CCSE) certification examination. Students learn how to configure, build, modify, deploy and troubleshoot a secure network utilizing firewall technologies. Topics include clustering, software acceleration, advanced VPN concepts and implementation, and monitoring and reporting tools.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1120, CTS1134, CTS2670

Course User Fee: \$63.00

Program Description

Database Technology - Oracle Database Administration

Associate in Science | Code: 25058 | 60 credits

The Database Technology program is designed to provide an opportunity to establish a basic foundation in the field of database administration for employment in commercial, industrial and government institutions. Graduates are prepared for positions as database administrators and database developers.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 14.0
ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
COP 1334	Introduction to C++ Programming	4.0
Semester 2		Units: 12.0
CGS 1540C	Database Concepts Design	4.0
COP 2800	Java Programming	4.0
<i>Program Electives</i>		4.0
CAP 1788	Introduction to Data Analytics	4.0
OR		

CAP 2743C	Power BI - Data Visualization and Analysis	4.0
OR		
CAP 2761C	Intermediate Analytics	4.0
OR		
CAP 2791C	Power BI - Data Preparation and Modeling	4.0
OR		
CIS 1949	CO-Op Work Experience 1: CIS	1.0
OR		
CIS 2900	Directed Study in IT	1.0
OR		
COP 2805C	Java Programming 2	4.0
OR		
CTS 1111	Linux +	4.0
OR		
CTS 1120	Cybersecurity Fundamentals	4.0
OR		
CTS 1145	Cloud Essentials	4.0
OR		
CTS 2143C	Server Administration	4.0
OR		
CTS 2192C	Microsoft Azure Administration	4.0
OR		
CTS 2375C	Cloud Infrastructure and Services	4.0

Semester 3

Units: 6.0

<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0

AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0

Semester 4

Units: 15.0

<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
CTS 2440	Introduction to Oracle: SQL And PL/SQL	4.0
CTS 2441	Introduction to Oracle Database Administration	4.0
Program Electives ¹⁾		4.0

¹⁾Select 4 credits from the following course options: CAP 1788, CAP 2743C, CAP 2761C, CAP 2791C, CIS 1949, CIS 2900, COP 2805C, CTS 1111, CTS 1120, CTS 1145, CTS 2143C, CTS 2192C, CTS 2375C

Semester 5

Units: 13.0

CTS 2442	Intermediate Oracle Database Administration	4.0
CTS 2444	Oracle Database Performance Tuning	4.0
Program Electives ¹⁾		5.0

¹⁾Select 5 credits from the following course options: CAP 1788, CAP 2743C, CAP 2761C, CAP 2791C, CIS 1949, CIS 2900, COP 2805C, CTS 1111, CTS 1120, CTS 1145, CTS 2143C, CTS 2192C, CTS 2375C

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP1334 Introduction to C++ Programming 4.000 credits

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)
Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$63.00

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement.
Lecture Hours: 48.000, Lab Hours: 32.000
Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.
Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.
Lecture Hours: 48.000, Lab Hours: 32.000
Corequisite: COP1047C OR COP1334 OR COP2270
Course User Fee: \$63.00

CAP1788 Introduction to Data Analytics 4.000 credits

This course offers a broad introduction to data analytics and the role it plays in modern organizations. Students will use Excel and Tableau to import, clean, transform, and visualize data. Students will also learn how to effectively communicate findings to decision makers.
Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$63.00

CAP2743C Power BI - Data Visualization and Analysis 4.000 credits

This is the second of two introductory courses aimed at preparing students for the Microsoft Power BI certification exam. Students will learn how to create informative data visualizations and leverage Power BI's analytic capabilities to provide meaningful business insights. Prerequisite: CAP2791C.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CAP2791C
Course User Fee: \$63.00

CAP2761C Intermediate Analytics 4.000 credits

This course offers an introduction to the SQL language and how it can be used by data analysts to query databases and gain valuable insights. Students will also gain extensive hands-on experience with Microsoft SQL Server, Azure, and GitHub.
Prerequisites: CAP1788, CGS1540C.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CGS1540C
Course User Fee: \$63.00

CAP2791C Power BI - Data Preparation and Modeling 4.000 credits

This is one of two introductory courses aimed at preparing students for the Microsoft Power BI certification exam. Students will learn how to get data from different sources, clean and transform the data, and design a data model that will be used in analysis and reports. Prerequisites: CAP1788 and CGS1540C.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CAP1788 AND CGS1540C
Course User Fee: \$63.00

CIS1949 CO-Op Work Experience 1: CIS 1.000 - 4.000 credits

This course is designed as a work experience for students majoring in computer information systems programs. Students will learn to apply the skills and knowledge that they have acquired through their program of study in a real work environment. Prerequisite: Successful completion of required program course work. Department approval required.
Lecture Hours: 16.000 - 64.000
Prerequisite: Successful completion of required program course work. Department approval required.

CIS2900 Directed Study in IT 1.000 credits

This course, for majors in Information Technology, provides students the opportunity to pursue projects under faculty supervision through self-directed research, experiences, and presentations.

Prerequisite: Successful completion of required program course work. Department approval required.

Lab Hours: 32.000

Recommended Preparation: Successful completion of required program course work. Department approval required

COP2805C Java Programming 2 4.000 credits

This is an advanced level programming course using Java. Students will learn how to code, compile and execute programs. Topics include object serialization, Java Collection, sorting/searching algorithms, multithreading and networking capabilities, and Java databases.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800

Course User Fee: \$63.00

CTS1111 Linux + 4.000 - 32.000 credits

This course is designed to help students prepare for the CompTIA Linux+ Certification Exam and to teach the skills needed to administer GNU/Linux-based work-stations and servers. Prerequisite: CGS 1060 or computer experience is required. (3 hr. lecture; 2 hr. lab)

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Course User Fee: \$63.00

CTS1120 Cybersecurity Fundamentals 4.000 credits

This course provides a foundation of knowledge in the information technology security field. Students will learn general network security concepts; compliance and operational security; threats and vulnerabilities; application, data, and host security; access control and identity management; cryptography. Hands-on training benefits the novice as well as the experienced network professional.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Note: Students are strongly encouraged to complete CTS 1134 prior to enrollment in CTS 1120. Students who enroll concurrently should ensure they have a foundational understanding of networking concepts, including IP addressing, protocols, and network services. In mini-term formats, students should complete CTS 1134 during the first half of the term and CTS 1120 during the second half.

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS2143C Server Administration 4.000 credits

This course is designed for students preparing for IT careers as server administrators, and focuses on server hardware and operating systems, system management and administration, security and disaster recovery, infrastructure and network services, data storage, and troubleshooting. This course is intended to prepare students for the CompTIA Server+ certification.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Server operating systems experience.

Course User Fee: \$63.00

CTS2192C Microsoft Azure Administration 4.000 credits

This course is intended for students preparing for IT careers as cloud administrators, as well as candidates for industry certification. Students will learn the administration skills and knowledge required to implement, manage, and monitor identity, governance, storage, and compute virtual networks in the Microsoft Azure cloud environment.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: CTS1145 or equivalent knowledge in Microsoft Azure Fundamentals

Course User Fee: \$63.00

CTS2375C Cloud Infrastructure and Services 4.000 credits

This course helps students develop technical expertise in Cloud computing and prepares them for industry certification. Students will learn the essentials of Cloud computing, business security and compliance considerations, migrating to the Cloud, architecting a Cloud server, and how to troubleshoot Cloud services.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS2145

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CTS2440 Introduction to Oracle: SQL And PL/SQL 4.000 credits

This is an introductory level course for students majoring in the Oracle Database Administrator and/or Solutions Developer programs. Students will learn the fundamentals of SQL and PL/SQL programming languages including the concepts of relational databases, how to create and maintain database objects, and how to store, retrieve, and manipulate data. Students will also learn to create PL/SQL blocks of application code that can be shared by multiple forms, reports, and data management applications.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CGS1060C

Course User Fee: \$63.00

CTS2441 Introduction to Oracle Database Administration 4.000 credits

This course is designed to give students who are preparing to become Oracle database administrators (DBA) a firm foundation in basic administrative tasks. Students will learn through instructor-led learning, structured hands-on practices, and challenge-level exercise labs, the necessary knowledge and skills to set up, maintain and troubleshoot an Oracle database.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS2440

Course User Fee: \$63.00

CTS2442 Intermediate Oracle Database Administration 4.000 credits

This is the second course in Oracle database administration. Students will learn basic network administration, including techniques to backup and to recover an Oracle database. The skills developed in this class will help prepare students for the Oracle database administrator (DBA) certification exam.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS2441

Course User Fee: \$63.00

**CTS2444 Oracle Database Performance Tuning
4.000 credits**

This course teaches students tuning steps which can be used to improve database performance. Students will learn through a combination of demonstrations, lectures, and lab exercises, gaining practical experience tuning an Oracle database. Students will also learn how to recognize, troubleshoot and resolve common performance-related problems in administering an Oracle database.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS2441

Course User Fee: \$63.00

Program Description

Dental Hygiene

Associate in Science | Code: 23021 | 88 credits

The Dental Hygienist is a licensed member of the dental health team dedicated to helping patients maintain good oral health and prevent dental disease and disorders. The dental hygienist performs dental cleaning, teaches patients proper oral care, takes x-rays and provides nutritional counseling for optimal oral health.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 15.0
ENC 1101	English Composition 1	3.0
CHM 1033	Chemistry for Health Sciences	3.0
MGF 1130	Mathematical Thinking	3.0
Social Science		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
PSY 2012	Introduction to Psychology	3.0
Semester 2		Units: 7.0
BSC 2085	Human Anatomy and Physiology 1	3.0
BSC 2085L	Human Anatomy and Physiology 1 Laboratory	1.0
PHI 2010	Introduction to Philosophy	3.0
Computer Competency *		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 3		Units: 9.0
BSC 2086	Human Anatomy & Physiology 2	3.0
BSC 2086L	Human Anatomy & Physiology 2 Lab	1.0

MCB 2010	Microbiology	3.0
MCB 2010L	Microbiology Laboratory	2.0

Semester 4 (In Milestone)

Units: 13.0

DEH 1002	Pre-Clinical Dental Hygiene	2.0
DEH 1002L	Pre-Clinical Dental Hygiene Laboratory	2.0
DEH 1133	Dental Anatomy, Histology and Physiology	2.0
DEH 1710	Oral Health Literacy	1.0
DEH 1720	Preventative Dentistry	2.0
DES 1200	Dental Radiology	2.0
DES 1200L	Dental Radiology Laboratory	2.0

Semester 5 (In Milestone)

Units: 14.0

DEH 1400	General and Oral Pathology	3.0
DEH 1800	Dental Hygiene 1	2.0
DEH 1800L	Dental Hygiene 1 Clinic	3.0
DEH 1811	Professional Issues	2.0
DEH 2202	Nutrition and Dental Health	2.0
DES 1600	Dental Office Emergency	2.0

Semester 6 (In Milestone)

Units: 6.0

DEH 1802L	Dental Hygiene 2 Clinic	1.0
DEH 1804L	Dental Hygiene 3 Clinic	1.0
DEH 1840L	Advanced Radiographic & Clinical Assessment Tecniq	1.0
DEH 2300	Pharmacology and Pain Control	1.0
DEH 2300L	Pharmacology and Pain Control Laboratory	1.0
DEH 2602	Periodontology 1	1.0

Semester 7 (In Milestone)

Units: 12.0

DEH 2603	Periodontology 2	2.0
DEH 2603L	Periodontology 2 Laboratory	1.0
DEH 2701	Community Dental Health 1	3.0
DEH 2806	Oral Health for Special Populations	2.0
DEH 2806L	Dental Hygiene 4 Clinic	4.0

Semester 8 (In Milestone)

Units: 12.0

DEH 2702L	Community Dental Health 2 Clinic	2.0
DEH 2808	Dental Hygiene Practice Management and Leadership	2.0
DEH 2808L	Dental Hygiene 5 Clinic	4.0
DEH 2810L	Interprofessional Practice and Education Lab	1.0
DES 2100	Dental Materials	2.0
DES 2100L	Dental Materials Laboratory	1.0

Total: 88.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions.

Prerequisite: MAT1033; Corequisite: CHM1033L.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: CHM1033L

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence. Lecture Hours: 48.000

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Lab 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development, from an experiential approach.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

DEH1002 Pre-Clinical Dental Hygiene 2.000 credits

Introduction to procedures relevant to the practice of dental hygiene.

Lecture Hours: 32.000

Corequisite: DEH 1002L, DEH 1133, DEH 1710, DEH 1720, DES 1200, DES 1200L

DEH1002L Pre-Clinical Dental Hygiene Laboratory 2.000 credits

Laboratory for DEH 1002.

Clinical Hours: 96.000

Corequisite: DEH 1002, DEH 1133, DEH 1710, DEH 1720, DES 1200, DES 1200L

Course User Fee: \$120.00

DEH1133 Dental Anatomy, Histology and Physiology 2.000 credits

This course covers specific tissues of the oral cavity, head, neck and their embryonic development. The students will learn structure, morphology and function of the primary and permanent dentitions.

Lecture Hours: 32.000

Corequisite: DEH 1002, DEH 1002L, DEH 1710, DEH 1720, DES 1200, DES 1200L

DEH1710 Oral Health Literacy 1.000 credits

Students will learn the concepts of oral health literacy. Students will also identify how to improve patient's oral health literacy and the barriers that impede oral health care.

Lecture Hours: 16.000

Corequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1720, DES 1200, DES 1200L

DEH1720 Preventative Dentistry 2.000 credits

This is a foundation course in dental hygiene preventive care. Students will learn the concepts of oral health and how to prevent future disease. Students will become engaged in developing their own prevention strategies by selecting with a rationale, appropriate oral health devices used for self-care.

Lecture Hours: 32.000

Prerequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1710, DES 1200, DES 1200L

DES1200 Dental Radiology 2.000 credits

Techniques and theory for the safe and effective use of radiographs as related to dentistry.

Lecture Hours: 32.000

Corequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1710, DEH 1720, DES 1200L

DES1200L Dental Radiology Laboratory 2.000 credits

Laboratory for DES 1200.

Lab Hours: 64.000

Corequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1710, DEH 1720, DES 1200

Course User Fee: \$90.00

DEH1400 General and Oral Pathology 3.000 credits

Processes of inflammation, necrosis, retrograde changes, diseases caused by bacteria, viruses, and other organisms. Emphasis will be placed on differentiating between normal and abnormal conditions of the oral cavity.

Lecture Hours: 48.000

Prerequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1710, DEH 1720, DES 1200, DES 1200L, Corequisite: DEH 1800, DEH 1800L, DEH 1811, DEH 2202, DES 1600

DEH1800 Dental Hygiene 1 2.000 credits

Theory of the removal of hard and soft deposits from the teeth, and other related postoperative and preventive procedures.

Lecture Hours: 32.000

Prerequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1710, DEH 1720, DES 1200, DES 1200L, Corequisite: DEH 1400, DEH 1800L, DEH 1811, DEH 2202, DES 1600

DEH1800L Dental Hygiene 1 Clinic 3.000 credits

Clinic for DEH 1800.

Clinical Hours: 144.000

Prerequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1710, DEH 1720, DES 1200, DES 1200L, Corequisite: DEH 1400, DEH 1800, DEH 1811, DEH 2202, DES 1600
Course User Fee: \$135.00

DEH1811 Professional Issues 2.000 credits

This course is designed to provide the dental hygiene student with an understanding of the political, social, environmental and professional issues that affect the practice of dental hygiene. These issues include: a) cultural diversity, b) legal and ethical responsibilities, c) sexual harassment, d) child abuse, e) problem solving, f) communication style.

Lecture Hours: 32.000

Prerequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1710, DEH 1720, DES 1200, DES 1200L, Corequisite: DEH 1400, DEH 1800, DEH 1800L, DEH 2202, DES 1600

DEH2202 Nutrition and Dental Health 2.000 credits

This course provides a study of nutrients, their nature, source, and utilization. Students will learn the relationship between diet and oral health care and oral manifestations of nutritional deficiencies.

Lecture Hours: 32.000

Prerequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1710, DEH 1720, DES 1200, DES 1200L, Corequisite: DEH 1400, DEH 1800, DEH 1800L, DEH 1811, DES 1600

DES1600 Dental Office Emergency 2.000 credits

This course is designed to instruct students in the fundamental patient assessment skills needed to identify and manage emergencies that may arise in the dental office.

Lecture Hours: 32.000

Prerequisite: DEH 1002, DEH 1002L, DEH 1133, DEH 1710, DEH 1720, DES 1200, DES 1200L, Corequisite: DEH 1400, DEH 1800, DEH 1800L, DEH 1811, DEH 2202

DEH1802L Dental Hygiene 2 Clinic 1.000 credits

Continuation of clinical skills from DEH 1800L.

Clinical Hours: 48.000

Prerequisite: DEH 1400, DEH 1800, DEH 1800L, DEH 1811, DEH 2202, DES 1600, Corequisite: DEH 1804L, DEH 1840L, DEH 2300, DEH 2300L, DEH 2602
Course User Fee: \$75.00

DEH1804L Dental Hygiene 3 Clinic 1.000 credits

Designed to further student's knowledge and skills through clinical experiences more difficult than those experienced in DEH 1802L.

Clinical Hours: 48.000

Prerequisite: DEH 1400, DEH 1800, DEH 1800L, DEH 1811, DEH 2202, DES 1600, Corequisite: DEH 1802L, DEH 1840L, DEH 2300, DEH 2300L, DEH 2602

Course User Fee: \$75.00

DEH1840L Advanced Radiographic & Clinical Assessment Tecniq 1.000 credits

A laboratory course introducing advanced digital radiographic techniques, the intraoral camera, periodontal probing and dental charting software and other clinical assessment tools. These skills will enable the student to provide comprehensive patient treatment and enhance their ability to interpret intraoral conditions.

Clinical Hours: 48.000

Prerequisite: DEH 1400, DEH 1800, DEH 1800L, DEH 1811, DEH 2202, DES 1600, Corequisite: DEH 1802L, DEH 1804L, DEH 2300, DEH 2300L, DEH 2602

Course User Fee: \$60.00

DEH2300 Pharmacology and Pain Control 1.000 credits

This course introduces the student to a broad range of pharmacological concepts including drug categories, drug action, and adverse drug effects. Dental prescriptions such as the antibiotics, antifungals and antivirals will be studied. Students will learn the common medical conditions affecting dental hygiene care, such as cardiovascular disease, endocrine and neurological disorders as well as their drug management will be examined.

Lecture Hours: 16.000

Prerequisite: DEH 1400, DEH 1800, DEH 1800L, DEH 1811, DEH 2202, DES 1600, Corequisite: DEH 1802L, DEH 1804L, DEH 1840L, DEH 2300L, DEH 2602

DEH2300L Pharmacology and Pain Control Laboratory 1.000 credits

This course is designed to prepare the dental hygiene student for the safe and effective administration of local anesthesia. Students will learn about the psychology of pain management, pharmacology of anesthetic agents, emergency precautions, and a review of anatomy and physiology as they relate to the administration of anesthetic agents. This course will include online and clinical instruction.

Lab Hours: 32.000

Prerequisite: DEH 1400, DEH 1800, DEH 1800L, DEH 1811, DEH 2202, DES 1600, Corequisite: DEH 1802L, DEH 1804L, DEH 1840L, DEH 2300, DEH 2602

Course User Fee: \$100.00

DEH2602 Periodontology 1 1.000 credits

This course will introduce the student to the concepts of non-surgical periodontal therapy, risk factors in periodontal diseases, classifications of periodontal diseases, the components of the comprehensive periodontal assessment and care plan. Ultrasonic periodontal debridement will be studied. Furthermore, the course will include the study of behavior motivation, the dental hygiene human needs conceptual model, the phases of self-care education and the importance of case presentation in modifying client self-care.

Lecture Hours: 16.000

Prerequisite: DEH 1400, DEH 1800, DEH 1800L, DEH 1811, DEH 2202, DES 1600, Corequisite: DEH 1802L, DEH 1804L, DEH 1840L, DEH 2300, DEH 2300L

DEH2603 Periodontology 2 2.000 credits

Etiology, classification, diagnosis, treatment and maintenance of the periodontal patient.

Lecture Hours: 32.000

Prerequisite: DEH 1802L, DEH 1804L, DEH 1840L, DEH 2300, DEH 2300L, DEH 2602, Corequisite: DEH 2603L, DEH 2701, DEH 2806, DEH 2806L

DEH2603L Periodontology 2 Laboratory 1.000 credits

Laboratory for DEH 2603.

Lab Hours: 32.000

Prerequisite: DEH 1802L, DEH 1804L, DEH 1840L, DEH 2300, DEH 2300L, DEH 2602, Corequisite: DEH 2603, DEH 2701, DEH 2806, DEH 2806L

Course User Fee: \$100.00

DEH2701 Community Dental Health 1 3.000 credits

Public Health Dentistry and the role of the dental hygienist.

Lecture Hours: 48.000

Prerequisite: DEH 1802L, DEH 1804L, DEH 1840L, DEH 2300, DEH 2300L, DEH 2602, Corequisite: DEH 2603, DEH 2603L, DEH 2806, DEH 2806L

DEH2806 Oral Health for Special Populations 2.000 credits

This course is a continuation of dental hygiene theory and practice. Students will learn the process and procedures for gingival curettage and root planning.

Lecture Hours: 32.000

Prerequisite: DEH1804L, Corequisite: DEH2806L

Course User Fee: \$362.24

DEH2806L Dental Hygiene 4 Clinic 4.000 credits

Clinic for DEH 2806.

Clinical Hours: 192.000

Prerequisite: DEH 1802L, DEH 1804L, DEH 1840L, DEH 2300, DEH 2300L, DEH 2602, Corequisite: DEH 2603, DEH 2603L, DEH 2701, DEH 2806

Course User Fee: \$150.00

DEH2702L Community Dental Health 2 Clinic 2.000 credits

Provides the student an opportunity for application of the principles of public and community dentistry.
Lab Hours: 64.000

Prerequisite: DEH 2603, DEH 2603L, DEH 2701, DEH 2806, DEH 2806L, Corequisite: DEH 2808, DEH 2808L, DEH 2810L, DES 2100, DES 2100L

DEH2808 Dental Hygiene Practice Management and Leadership 2.000 credits

Students will learn the basic dental and behavioral sciences within the practice of dental hygiene. Special emphasis is given to Florida laws governing dental hygiene practices.

Lecture Hours: 32.000

Prerequisite: DEH 2603, DEH 2603L, DEH 2701, DEH 2806, DEH 2806L, Corequisite: DEH 2702L, DEH 2808L, DEH 2810L, DES 2100, DES 2100L

DEH2808L Dental Hygiene 5 Clinic 4.000 credits

Ongoing experience in total dental hygiene care of the periodontally involved patient.

Clinical Hours: 192.000

Prerequisite: DEH 2603, DEH 2603L, DEH 2701, DEH 2806, DEH 2806L, Corequisite: DEH 2702L, DEH 2808, DEH 2810L, DES 2100, DES 2100L

Course User Fee: \$150.00

DEH2810L Interprofessional Practice and Education Lab 1.000 credits

Students will learn to examine the Dental Hygiene scope of practice through professional identity by way of interprofessional collaboration. Students will also develop knowledge and skills to serve on health professional teams to improve health outcomes.

Lab Hours: 32.000

Prerequisite: DEH 2603, DEH 2603L, DEH 2701, DEH 2806, DEH 2806L, Corequisite: DEH 2702L, DEH 2808, DEH 2808L, DES 2100, DES 2100L

DES2100 Dental Materials 2.000 credits

Physical properties of dental materials and their use in the oral cavity.

Lecture Hours: 32.000

Prerequisite: DEH 2603, DEH 2603L, DEH 2701, DEH 2806, DEH 2806L, Corequisite: DEH 2702L, DEH 2808, DEH 2808L, DEH 2810L, DES 2100L

DES2100L Dental Materials Laboratory 1.000 credits

Laboratory for DES 2100.

Lab Hours: 32.000

Prerequisite: DEH 2603, DEH 2603L, DEH 2701, DEH 2806, DEH 2806L, Corequisite: DEH 2702L, DEH 2808, DEH 2808L, DEH 2810L, DES 2100

Course User Fee: \$190.00

Program Description

Diagnostic Medical Sonography

Associate in Science | Code: 23038 | 77 credits

The Diagnostic Medical Sonography program prepares the student to become a Diagnostic Medical Sonographer. The Diagnostic Medical Sonographer provides patient services, using diagnostic ultrasound under the supervision of a doctor of medicine or osteopathy who is responsible for the use and interpretation of ultrasound procedures. The sonographer assists the physician in gathering sonographic data necessary to reach diagnostic decisions.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 10.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
BSC 2085	Human Anatomy and Physiology 1	3.0
BSC 2085L	Human Anatomy and Physiology 1 Laboratory	1.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 2

Units: 10.0

BSC 2086	Human Anatomy & Physiology 2	3.0
BSC 2086L	Human Anatomy & Physiology 2 Laboratory	1.0
<i>Physics</i>		3.0
PHY 1020	General Education Physics	3.0
OR		
PHY 1025	Basic Physics	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
Semester 3		Units: 12.0
SON 1000L	Introduction to Sonography 1	1.0
SON 1006L	Professional Aspects of Sonography	1.0
SON 1100L	Principles of Protocols Of Imaging	2.0
SON 1111C	Abdominal Sonography 1	2.0
SON 1113L	Sonography Cross Sectional Anatomy	2.0
SON 1121C	Obstetrics/Gynecology Sonography 1	2.0
SON 1804	Clinic 1	2.0
Semester 4		Units: 11.0
SON 1001L	Introduction to Sonography 2	1.0
SON 1005L	Basic Sonography	2.0
SON 1112C	Abdominal Sonography 2	2.0
SON 1122C	Obstetrics/Gynecology Sonography 2	2.0
SON 1814	Clinic 2	2.0
SON 2400C	Echocardiography 1	2.0
Semester 5		Units: 5.0
SON 1141C	Small Parts Sonography	2.0
SON 1824	Clinic 3	3.0
Semester 6		Units: 11.0
SON 1115L	Duplex Abdominal Sonography	1.0
SON 1145L	Pediatric Sonography	1.0
SON 2139L	Cardiovascular Principles	1.0
SON 2151C	Neurosonography	2.0
SON 2401C	Echocardiography 2	2.0
SON 2614C	Acoustical Physics and Instrumentation 1	2.0
SON 2834	Clinic 4	2.0
Semester 7		Units: 11.0
PHI 2010	Introduction to Philosophy	3.0
SON 2618C	Acoustical Physics and Instrumentation 2	2.0
SON 2619C	Doppler Principles and Instrumentation	2.0
SON 2844	Clinic 5	3.0

SON 2935L	Diagnostic Ultrasound Imaging: Advanced Techniques and Case Analysis	1.0
Semester 8		Units: 7.0
SON 2854	Clinic 6	3.0
SON 2930L	Seminar in Sonography	1.0
<i>Elective</i>		3.0
DEP 2000	Human Growth and Development	3.0
OR		
SYG 2000	Introduction to Sociology	3.0

Total: 77.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SON1000L Introduction to Sonography 1 1.000 credits

An introduction to the physical principles of diagnostic ultrasound. Bases of imaging with ultra sound are discussed as well as clinical units in the various areas of specialization. In conjunction with the lectures, supervised laboratory classes are conducted to familiarize students with operations of the equipment in each of the clinical areas.

Lab Hours: 32.000

Corequisite: SON 1111C, SON 1121C

SON1006L Professional Aspects of Sonography 1.000 credits

An introduction to the professional aspects of sonography. Topics include: medical ethics and law, hospital administration, quality assurance/quality control and management. Laboratory experience includes actual phantom scanning conducting equipment QA protocols, and participation on a mock ethics board.

Lab Hours: 32.000

SON1100L Principles of Protocols Of Imaging 2.000 credits

An introduction to radiographic film, its handling & processing and the various radiographic specialties.

Laboratory experience includes: film composition and identification, rapid processing, photographic techniques, reading H&D curves, performing sensitometry and identifying film artifacts. During radiographic specialties, there will be an introduction to CT, MRI, and the areas of radiologic technology in order to discover how these modalities compliment sonography.

Lab Hours: 64.000

SON1111C Abdominal Sonography 1 2.000 credits

An in-depth course designed to cover all aspects of clinical abdominal ultrasound studies. Subject matter includes: review of normal anatomy (ultrasonic appearance), indications for ultrasound studies, clinical presentation and data, pathophysiological basis of disease, ultrasonic manifestations of diseases, recognition of adequate images and scanning pitfalls.

Lecture Hours: 16.000, Lab Hours: 32.000

Corequisite: SON1000L

SON1113L Sonography Cross Sectional Anatomy 2.000 credits

A thorough course aimed at teaching the student to understand anatomical relationships and recognize structures on cross-sectional and sagittal diagrams, photographs of gross anatomy and sonography. The laboratory conducted in conjunction with the classroom lectures is designed to identify all normal anatomical landmarks in multiple planes in actual scanning situations.

Lab Hours: 64.000

SON1121C Obstetrics/Gynecology Sonography 1 2.000 credits

An in-depth course designed to present all aspects of clinical OB/GYN ultrasound studies. Subject matter includes: review of normal anatomy (ultrasound appearance), indications for ultrasonic studies, clinical presentation, clinical data, pathophysiological basis of disease, ultrasonic manifestations of diseases, recognition of adequate images and scanning pitfalls.

Lecture Hours: 16.000, Lab Hours: 32.000

Corequisite: SON1000L

SON1804 Clinic 1 2.000 credits

This is the first in a series of six (6) clinics in which the student is assigned to a medical facility. The student is afforded a hands-on experience in sonography under the supervision of a clinical instructor, sonographer or physician.

Clinical Hours: 96.000

Corequisite: SON1000L

SON1001L Introduction to Sonography 2 1.000 credits

This second introductory course will cover the past present and future of sonography. After the historical landmarks are identified, the focus will be on the current diversity of applications of diagnostic medical sonography. Students will also discover future trends and developments on the technology horizon of the profession.

Lab Hours: 32.000

Prerequisite: SON1000L

SON1005L Basic Sonography 2.000 credits

This course is designed to cover the essential of the profession of Diagnostic Medical Sonography. Topics include: professionalism, medical ethics, hospital administration, sonographic terminology, quality assurance, photographic principles, related radiological specialties and scanning techniques. Laboratory experience will include equipment use and quality assurance techniques.

Lab Hours: 64.000

Prerequisite: SON1000L

Course User Fee: \$15.00

SON1112C Abdominal Sonography 2 2.000 credits

An in-depth course designed to cover all aspects of clinical abdominal ultrasound studies. Subject matter includes: review of normal anatomy (ultrasonic appearance), indications for ultrasound studies, clinical presentation and data, pathophysiological basis of disease, ultrasonic manifestations of diseases, recognition of adequate images and scanning pitfalls.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: SON1111C

Course User Fee: \$15.00

SON1122C Obstetrics/Gynecology Sonography 2 2.000 credits

An in-depth course designed to cover all aspects of clinical OB/GYN ultrasound studies. Subject matter includes: review of normal anatomy (ultrasound appearance), indications for ultrasonic studies, clinical presentation, clinical data, pathophysiological basis of disease, ultrasonic manifestations of diseases, recognition of adequate images and scanning pitfalls.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: SON1121C

SON1814 Clinic 2 2.000 credits

This is the second in a series of six (6) clinics in which the student is assigned to a medical facility. The student is afforded hands-on experience in sonography under the supervision of a clinical instructor, sonographer or physician.

Clinical Hours: 96.000

Prerequisite: SON1804

SON2400C Echocardiography 1 2.000 credits

An in-depth course designed to present all aspects of clinical cardiovascular ultrasound studies. Topics discussed are: pathophysiological basis of diseases, clinical presentation and clinical data, Doppler and echocardiographic findings in disease, hemodynamic relationships, scanning pitfalls and differential diagnosis.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: SON1000L, SON1113L

SON1141C Small Parts Sonography 2.000 credits

An in-depth course designed to cover all aspects of clinical abdominal ultrasound studies. Subject matter includes: review of normal anatomy (ultrasonic appearance), indications for ultrasound studies, clinical presentation and data, pathophysiological basis of disease, ultrasonic manifestations of diseases, recognition of adequate images and scanning pitfalls. Prerequisite: SON 1112C. (2 hr. lab.)

Lab Hours: 48.000

SON1824 Clinic 3 3.000 credits

This is the third in a series of six (6) clinics in which the student is assigned to a medical facility. The student is afforded hands-on experience in sonography under the supervision of a clinical instructor, sonographer or physician.

Clinical Hours: 144.000

Prerequisite: SON1814

SON1115L Duplex Abdominal Sonography 1.000 credits

This course is designed to cover aspects of duplex abdominal sonography applications. Topics include: the aorta and its branches, the IVC and its tributaries, and the portal system. Subject matter includes: etiology, pathophysiology, clinical presentations, sonographic appearance and differential diagnosis of diseases.

Lab Hours: 32.000

Prerequisite: SON1112C

SON1145L Pediatric Sonography 1.000 credits

This course is designed to cover aspects of pediatric ultrasound examinations. Topics include: Liver, biliary, spleen, renal, adrenal, gastrointestinal, scrotum, and musculoskeletal structures. Subject matter includes: etiology, pathophysiology, clinical presentations, sonographic appearance and differential diagnosis.

Lab Hours: 32.000

Prerequisite: SON1141C

SON2139L Cardiovascular Principles 1.000 credits

An introductory course to techniques other than echocardiography utilized in the diagnosis of cardiovascular disease. Topics discussed include physical examination, electrocardiogram, Phonocardiogram, cardiac catheterization, and nuclear medicine cardiology.

Lab Hours: 32.000

Prerequisite: SON2400C, Corequisite: SON2401C

SON2151C Neurosonography 2.000 credits

A comprehensive course designed to examine sonographic imaging of the neonatal and infant brain, with an introduction to intraoperative brain and spinal cord imaging. Emphasis is placed on normal brain anatomy, congenital and malformations and acquired pathologic conditions.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: SON1113L, SON1141C

Course User Fee: \$15.00

SON2401C Echocardiography 2 2.000 credits

An in-depth course designed to cover all aspects of clinical cardiovascular ultrasound studies. Topics discussed are pathophysiological basis of diseases, clinical presentation and clinical data, Doppler and echocardiographic findings in disease, hemodynamic relationships, scanning pitfalls and differential diagnosis.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: SON2401C

SON2614C Acoustical Physics and Instrumentation 1 2.000 credits

The course will present a review of fundamental physics and in-depth study of the physical principles of diagnostic ultrasound. Topics discussed include: properties of sound waves, interaction of sound waves with matter, generation of ultrasound and principles of Doppler ultrasound.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: SON1005L

SON2834 Clinic 4 2.000 credits

This is the fourth in a series of six (6) clinics in which the student is assigned to a medical facility. The student is afforded hands-on experience in sonography under the supervision of a clinical instructor, sonographer or physician.

Clinical Hours: 96.000

Prerequisite: SON1824

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics.

Writing Intensive Course.

Lecture Hours: 48.000

SON2618C Acoustical Physics and Instrumentation 2 2.000 credits

Physical principles of Ultrasound Instrumentation -A course designed to familiarize the student with the physical principles and modes of operation of diagnostic ultrasound equipment. Subject matter includes: transducers, display systems, component parts of a scanning system, real-time scanners, Doppler equipment, quality control, routine maintenance and recent developments.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: SON2614C

SON2619C Doppler Principles and Instrumentation 2.000 credits

This course presents a review of fundamental physics and an in-depth study of Doppler Physical Principles of Diagnostic Ultrasound. Topics also include Doppler Instrumentation, equipment, display systems, quality control, and hemodynamics of blood flow. Prerequisite: SON 2618C. Laboratory fee. (1 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000

Course User Fee: \$41.00

SON2844 Clinic 5 3.000 credits

This is the fifth in a series of six (6) clinics in which the student is assigned to a medical facility. The student is afforded hands-on experience in sonography under the supervision of a clinical instructor, sonographer or physician.

Clinical Hours: 144.000

Prerequisite: SON2834

SON2935L Diagnostic Ultrasound Imaging: Advanced Techniques and Case Analysis 1.000 credits

An extensive laboratory aimed at teaching the student to recognize quality images, anatomy, patient positioning, pathology, and scanning technique errors as well as artifacts. For each class, the student will present a case from their current rotation of the teaching file. The presentation will include all technical and clinical information as well as the final interpretation by the supervising physician.

Lab Hours: 32.000

SON2854 Clinic 6 3.000 credits

This is the last in a series of six (6) clinics in which the student is assigned to a medical facility. The student is afforded hands-on experience in sonography under the supervision of a clinical instructor, sonographer or physician.

Clinical Hours: 144.000

Prerequisite: SON2844

SON2930L Seminar in Sonography 1.000 credits

Students will participate in the various types of continuing education. This may include: society meetings, seminars, conferences and in-services.

Lab Hours: 32.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

Program Description

Electronics Engineering Technology

Associate in Science | Code: 26039 | 68 credits

The Electronics Engineering Technology program prepares students for work as technicians in various fields of electronics technology. No previous experience is required to enter. Courses offered cover basic and advanced electrical circuits, semi-conductors, integrated circuits, pulse circuits, digital computer circuits, electrical machinery, communication systems and industrial control. Theory and laboratory experience is provided. *Note: This program transfers to four-year institutions. See department advisor for information.*

Total: 68.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

COP2270 C for Engineers 4.000 credits

This course is intended for students majoring in Computer Engineering Technology, Electronics Engineering Technology, or any engineering discipline. Students will learn the "C" programming language, MATLAB, and the Engineering Problem Solving Method to analyze, design, code, compile and execute programs that solve engineering related problems. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Pre/Corequisite: MAC1105, Recommended

Preparation: CGS1060 OR knowledge of computer skills

Course User Fee: \$63.00

EET1015C Direct Current Circuits 4.000 credits

This course is intended for students majoring in electronics engineering technology and related disciplines. Students will learn electrical components, inductance, capacitance, and elementary network analysis. Students will additionally learn to verify and apply basic theories and principles through hands-on, laboratory experiments utilizing modern testing equipment. Pre/corequisite: MAT 1033. Laboratory fee. (2 hr. lecture; 4 hr. lab)

Lecture Hours: 32.000, Lab Hours: 48.000

Pre/Corequisite: MAT1033

Course User Fee: \$63.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CET1110C Digital Circuits 4.000 credits

This is an introductory course in digital circuits for engineering and other technology majors. Students learn how to apply electronic principles to digital computer circuits and systems. Students will also learn how to simplify logic circuits, build digital circuits, and perform other laboratory activities. Pre/Co-requisite: MAC1105. Laboratory fee.

Lecture Hours: 32.000, Lab Hours: 64.000

Pre/Corequisite: MAC1105

Course User Fee: \$63.00

ETI2670 Engineering Economic Analysis 3.000 credits

This course is designed for students who are majoring in any engineering discipline. Students will learn the basic methods of engineering cost analysis including equivalence, value measurement, interest relationships and decision support theory and techniques as applied to capital projects. Various problem solving methods will be used for decision making, multiple alternatives and uncertainty.

Lecture Hours: 48.000

Prerequisite: MAC1105

EET1025C Alternating Current Circuits 4.000 credits

This course is intended for students majoring in electronics engineering technology and related disciplines. Students will learn inductance, capacitance, vector notation, AC circuits, impedance, phase shift, networks, transformers, and resonance. Students will apply and verify theories and principles through hands-on, laboratory experiments utilizing modern testing equipment.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1015C AND MAC1114 OR MAC1147

Course User Fee: \$63.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

PHY2053L Physics (Without Calculus) 1 Lab 1.000 credits

This laboratory course is designed to complement PHY2053. Students will engage in hands-on experiments that reinforce theoretical concepts related to kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Through practical applications of algebra and trigonometry, learners will develop analytical skills while conducting experiments that illustrate key physical principles. The course emphasizes critical thinking and problem-solving as students collect and analyze data, interpret results, and communicate their findings effectively. This lab experience aims to deepen students' understanding of the scientific concepts covered in the parent course and their relevance to real-world situations.

Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053

Course User Fee: \$20.00

CET2113C Advanced Digital Circuits 4.000 credits

This is a second level course in digital circuits for students majoring in electronics and related engineering technologies that extends the application of sequential and combinational logic circuits and other digital applications. Students will learn to program, operate, and interface with a micro-computer and its elements. Prerequisites: CET1110C, COP2270. Laboratory fee.

Lecture Hours: 32.000, Lab Hours: 64.000

EET1141C Electronics 1 4.000 credits

This course is intended for students majoring in Electronics Engineering Technology or related fields. Students will learn how to apply electronic principles to analog circuits and systems, including semiconductor diodes, applying the fundamental theory of transistors and other solid-state devices; analysis of amplifiers, oscillators, and other applications using a sinusoidal wave. Students also learn basic safety procedures to follow when working in an electronics laboratory and with electronic circuits and systems.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1025C AND MAC1114 OR MAC1147

Course User Fee: \$63.00

ETS2673C Programmable Logic Controls 4.000 credits

This course is intended for students majoring in Electronics Engineering Technology and Industrial Engineering Technology. Students will learn the principals of Programmable Logic Controls (PLC) including hardware, programming, and troubleshooting. Students will also develop advanced working programs, and troubleshoot hardware and software communication problems. Prerequisite: CET110C

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET1110C

Course User Fee: \$63.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CET2123C Microprocessors 4.000 credits

This course is intended for students majoring in Electronics or Computer Engineering Technology. Students will learn to apply digital principles to the understanding of microprocessor parameters and characteristics (addressing range and models, instruction set, architecture, input/output, interrupts, and programming). Students will build practical microprocessor and/or microcontroller based systems to perform a variety of engineering applications. Prerequisites: CET1110C, COP 2270. Special Fee.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET1110C AND COP2270

Course User Fee: \$63.00

EET2101C Electronics 2 4.000 credits

This course is intended for students majoring in electronics or computer engineering technologies. Students will learn how to apply electronic principles to analog circuits including transistor amplifiers, feedback and frequency response of linear circuits, operational amplifiers, MOSFET and oscillators.

Lecture Hours: 32.000, Lab Hours: 48.000

Prerequisite: EET1141C

Course User Fee: \$63.00

EET1082 Introduction to Electronics 3.000 credits

Learn by building practical electronic circuits. Survey course suitable for both majors and non-majors. Instructors and tutors are available to assist in project completion. Topics include: schematics, pictorials, amplifiers, oscillators, burglar alarms, radios, digital circuits. Students will develop individual career plans and learn about employment opportunities within the field.

Lecture Hours: 48.000

Course User Fee: \$63.00

EET2323C Analog Communications 4.000 credits

This course is designed for students majoring in Electronics Engineering Technology, Telecommunications Engineering Technology, and related disciplines. Students will learn the principles of radio wave transmission and reception, including AM and FM transmitters, receivers, single sideband, television and digital data transmission lines, wave propagation antennas and microwaves. Laboratory fee.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1141C

Course User Fee: \$63.00

EET2351C Digital and Data Communications 4.000 credits

This course is intended for students majoring in Electronics or Computer Engineering Technology. It provides a theoretical and practical background in the basic concepts and applications of digital and data communications. Students will learn analog-to-digital (A/D) and digital-to-analog (D/A) conversions; data communications codes and standards; wired and wireless digital communications; modulation, transmission impairment, the telephone system, modems, multiplexers, and electrical interface standards.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET2123C

Course User Fee: \$63.00

EGN2200 Computer Applications in Engineering 3.000 credits

An introduction to fundamental concepts and skills of mathematical programming and computer-aided design. This course explores the use of computer software to solve engineering problems and bring ideas from a concept to a model.

Lecture Hours: 32.000, Lab Hours: 32.000

Pre/Corequisite: MAC1114 OR MAC1147

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course. Lecture Hours: 48.000

Program Description

Emergency Medical Services

Associate in Science | Code: 23047 | 73 credits

The Emergency Medical Services program is designed according to national and state standards. Graduates will perform as advanced practitioners and as leaders in the technical supervisory and managerial aspects of advanced emergency care. Graduates will be prepared primarily for employment in agencies providing pre-hospital emergency medical care and secondarily, for jobs in emergency and other acute care areas of the hospital.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy & Physiology Lab 1 1.000 credits

In this laboratory course, student will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy.

Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Lab 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development, from an experiential approach.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

EMS1059 Emergency Medical Responder 1.000 credits

Provides training in emergency medical care for those who may be first to respond to an accident. The course meets the basic requirements of the U.S. Department of Transportation. Recommended for students who are not required to be certified EMTs.

Lecture Hours: 16.000

Corequisite: EMS1059L

EMS1059L Emergency Medical Responder Laboratory 1.000 credits

Provide training in emergency medical care for those who may be first to respond to an accident. The course meets the basic requirements of the U.S. Department of Transportation.

Lab Hours: 32.000

Corequisite: EMS1059

Course User Fee: \$35.00

MNA1345 Effective Supervision 3.000 credits

Students will learn to implement supervisory and management practices. Emphasis is placed on learning to communicate more effectively with employees, motivating employees, increasing one's leadership effectiveness, delegating, counseling problem employees, conducting performance reviews, maintaining a discrimination and harassment-free workplace, and managing time.

Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

EMS1119 Emergency Medical Technician 4.000 credits

A review of basic life support theory. Areas of emphasis include the prehospital environment, preparatory information, patient assessment, medical emergencies, behavioral emergencies, OB/GYN emergencies, trauma emergencies, pediatric emergencies and EMS operations.

Lecture Hours: 64.000

Corequisite: EMS1119L, EMS1431

EMS1119L Emergency Medical Technician Lab and Clinic 3.000 credits

Practical application of the content covered in EMS 1119 with an emphasis on cardiopulmonary resuscitation, splinting, bandaging, patient movement, and other skills as recommended by the U.S. Department of Transportation for the EMT-A level practitioner.

Lab Hours: 96.000

Corequisite: EMS1119, EMS1431

Course User Fee: \$55.00

EMS1431 EMT Hospital/Field Experience 3.000 credits

Practice in local emergency departments and rescue agencies under professional supervision. This course meets the skills recommended by the U.S.

Department of Transportation.

Clinical Hours: 144.000

Corequisite: EMS1119, EMS1119L

EMS9996 Emergency Medical Technician (EMT) - Basic 10.000 credits

This course provides academic credit for students who have successfully completed a State of Florida-approved Emergency Medical Technician (EMT-Basic) Applied Technology Diploma (ATD) program and are enrolled in the related Associate in Science degree within the School of Health Sciences. In accordance with TMOP 1100-816125, the course recognizes competencies attained through prior educational and certification experiences, including emergency patient assessment, airway management, trauma care, medical emergency response, patient transportation, and prehospital care procedures. Credit awarded through this course supports academic progression and acknowledges demonstrated achievement of industry-recognized emergency medical services competencies. Other Hours: 160.000

EMS2601 Paramedic Lecture 1 8.000 credits

EMS2601 is the first course in the sequence necessary for completion of the Paramedic Certificate program. The course is designed to reinforce concepts and clinical skills learned at the EMT level and to integrate this knowledge beginning with advanced life support concepts and skills. Emphasis is placed on EMS systems, illness and injury prevention, medical-legal issues, patient assessment, airway management and ventilation, pathophysiology, pharmacology, shock, decision-making, and the management of trauma-related injuries. This course includes Modules 1–4 of the 1998 DOT National Standard Curriculum for Paramedic Programs.

Lecture Hours: 128.000

Corequisite: EMS2601L

Course User Fee: \$96.00

EMS2601L Paramedic Laboratory 1 4.000 credits

A review of basic life support practice and an introduction to advanced life support practice. Areas of emphasis include patient assessment, trauma emergencies, obstetric emergencies, gynecological emergencies, pediatric emergencies and psychiatric emergencies. Students will be expected to master the techniques of patient assessment, intravenous techniques and endotracheal intubation.

Lab Hours: 128.000

Corequisite: EMS2601

Course User Fee: \$75.00

EMS2664 Paramedic Clinic 1 3.000 credits

EMS 2664 is designed to allow the students "hands-on" practice of the skills and theories learned in EMS 2601 and 2601L. Clinical experience will take place in many areas including the emergency department, operating room and medical examiner's office. All patient care experience will be practiced under the direct supervision of a medical professional (Paramedic, Nurse, Physician, etc.).

Clinical Hours: 144.000

Corequisite: EMS2601, EMS2601L

EMS2602 Paramedic Lecture 2 8.000 credits

EMS 2602 is the second course in the sequence necessary for the completion of the Paramedic Certificate Program. This course is designed to reinforce and expand upon the material and skills learned in Paramedic 1 level and to integrate prior learning with enhanced life support concepts and skills. Emphasis is placed on patient assessment and recognition of significant findings, pre-hospital diagnosis and differential diagnosis, treatment strategies, anatomy and physiology, pathophysiology, and the management of various emergencies, patients with special challenges, assessment based management, and EMS operations. This course includes Modules 5-8 of the 1998 DOT National Standard Curriculum for Paramedic Programs.

Lecture Hours: 128.000

Prerequisite: EMS2601L, EMS2601, EMS2664,

Corequisite: EMS2602L, EMS2665

EMS2602L Paramedic Laboratory 2 4.000 credits

Continuation of advanced life support practice. Areas of emphasis include patient assessment, trauma emergencies, obstetric emergencies, gynecological emergencies, pediatric emergencies and psychiatric emergencies. Students will be expected to master the techniques of patient assessment, intravenous techniques, endotracheal intubation, and advanced life support.

Lab Hours: 128.000

Corequisite: EMS2602, EMS2665

Course User Fee: \$75.00

EMS2665 Paramedic Clinic 2 3.000 credits

EMS 2665 is designed to allow the students "hands-on" practice of the skills and theories learned in EMS 2602 and 2602L. Clinical experience will take place in many areas including the emergency department, operating room and critical care unit. All patient care experience will be practiced under the direct supervision of a medical professional (paramedic, nurse, physician, etc.).

Clinical Hours: 144.000

Prerequisite: EMS2664, Corequisite: EMS2602, EMS2602L

**EMS2311 Emergency Medical Services Operations
2.000 credits**

Advanced theory of management operations currently used nationally by comprehensive emergency medical service systems. Legal issues as related to various aspects of the system, personnel policies, provider versus client roles, disaster planning, communications, budgeting and evaluation of the system will be discussed.

Lecture Hours: 32.000

Prerequisite: MNA1345

**EMS2659 EMS-Field Internship and Conference
8.000 credits**

A supervised clinical experience on an Advanced Life Support (ALS) vehicle. The student obtains increasing patient care responsibilities as a working member of the EMS team under the direct supervision of a designated preceptor.

Clinical Hours: 384.000

Prerequisite: EMS2602, EMS2602L, EMS2665

Program Description

Entrepreneurship

Associate in Science | Code: 20002 | 60 credits

The Associate in Science (AS) in Entrepreneurship prepares students to start-up and operate a business or social venture with a foundation in opportunity recognition, analysis, business model development and business plan creation. Graduates will bring a critically-informed perspective to their own start-up venture, family-owned business, or social venture.

Program Modality: Both [In-Person (IP) and On-line]

¹⁾Select 11 credits from the following course

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

BUL2241 Business Law 1 3.000 credits

Law in relation to the proper conduct of business, including a consideration of the nature and source of law, courts and courtroom procedure, contracts, sales of goods, negotiable instruments and secured transactions. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

ENT1501 Fundamentals of Changemaking and Social Innovation 3.000 credits

This course introduces students to the work of changemaking and the field of social innovation. Students will explore principles of social innovation and social change, while developing the skills to analyze social issues, generate solutions to those issues, and become an effective social change agent.

Lecture Hours: 48.000

Course User Fee: \$43.00

ENT2212 Entrepreneurial Leadership 3.000 credits

The student will learn key skills and traits of successful entrepreneurs. Students will explore the notion of values-based business formation, personal strength and weakness identification, leadership for team building, project and personal time management, and story-telling.

Lecture Hours: 48.000

Course User Fee: \$100.00

MAC1106 Integrated College and Precalculus Algebra 5.000 credits

The student will learn to analyze linear, quadratic, polynomial, rational, radical, absolute value, composite, inverse, piecewise, exponential, and logarithmic functions, conic sections, systems of equations/inequalities, matrices and determinants, sequences & series, the Binomial Theorem, and applications of mathematical modeling including exponential growth and decay. Prerequisite: MAT1033 with a grade of "B" or better.

Computational Course.

Lecture Hours: 80.000

Prerequisite: MAT1033 or appropriate placement scores.

Course User Fee: \$10.00

MAC2233 Business Calculus 3.000 credits

This course introduces the basic concepts of differential and integral calculus for students majoring in business administration and related fields. Topics include limits, continuity, differentiation and integration of polynomials, logarithmic and exponential functions with applications to business, economics, and the life sciences. Prerequisite: MAC 1105 or MAC1106 with a grade of C or better or departmental permission. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

MAR2704 Marketing Web Analytics 3.000 credits

This course helps students to develop a deep understanding of the digital analytics landscape. The student will learn how to identify which metrics are best to measure web, mobile, social and marketing channels, and how organizations use web analytics to obtain higher profits, improved customer relationships, and measurable value. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$57.00

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications.

Lecture Hours: 48.000

Prerequisite: MAT0022C OR MAT0028 OR MAT0057 or by placement score, or eligible exemption.

Course User Fee: \$18.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAR1720 Marketing in a Digital World 3.000 credits

This course provides an introduction to new marketing concepts and the broad spectrum of digital marketing. Students will learn to utilize digital tools, social networks and media, strategies, and tactics to create awareness and to promote products and services to consumers and businesses.

Lecture Hours: 48.000

Course User Fee: \$60.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite: MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033Any Mathematics level higher than MAT 1033 will satisfy this requirement.

MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011;

Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

ENT2201 Introduction to Lean Start-Up 3.000 credits

The student will learn how successful start-ups find a repeatable, scalable business model that creates value for themselves and customers. In this experientially driven course, student teams develop, validate and refine a business model by creating a hypothesis, designing products/services, testing the hypotheses, and reflecting on what has been learned.

Prerequisite: GEB2112.

Lecture Hours: 48.000

Prerequisite: GEB2112

Course User Fee: \$69.00

ACG2450 Microcomputers in Accounting 3.000 credits

Accounting application of electronic data processing including the preparation, interpretation and use of computer information in financial decision-making.

Pre/Corequisite: ACG2021. Special fee.

Lecture Hours: 48.000

Pre/Corequisite: ACG2021

Course User Fee: \$22.00

TAX2021 Taxation of Business Organizations 3.000 credits

This course will cover federal income taxation of corporations, S Corporations, limited liability companies and partnerships. Topics covered include determining the tax consequences of income, expenses, distributions, redemptions and liquidations for business entities. Practical application of the tax law will be emphasized along with analysis of tax procedures.

Lecture Hours: 48.000

Course User Fee: \$22.00

Program Description

Fashion Design

Associate in Science | Code: 22005 | 60 credits

The Associate in Science degree in Fashion Design offers students a comprehensive education of the fashion business. The program offers students instruction in process, skills, and designs from concept development through production for emergence into the fashion business or fashion design segments of the industry.

Program Modality: Both [In-Person (IP) and On-line]

CTE1050 Introduction to Fashion Design and Related Industries 3.000 credits

In this course students will learn the basic design process, history, characteristics and global interrelationships of the fashion industry segments. The course explores how fashion, textile and apparel producers, retailers and related industries use merchandising and market their products within the industry and ultimately, to the consumer.
Lecture Hours: 48.000

CTE1743C Patternmaking Level 1 3.000 credits

This course will focus on the development of basic blocks, dart manipulation, bodice, skirt and sleeve styling methods in accordance with approved garment trade practices. Students will learn to draft and manipulate the various garment components and develop patterns and samples. Must be met with a grade of "C" or higher.
Lecture Hours: 16.000, Lab Hours: 64.000
Corequisite: CTE2310C
Course User Fee: \$241.00

CTE2310C Basic Clothing Construction Methods 3.000 credits

Students will learn the basic elements of sewing utilized and incorporated into all designs in the garment industry. These garment structures form the fundamentals of sewing and are integrated into the construction methods used by each company in the applications to a specific design. Must be met with a grade of "C" or higher.
Lecture Hours: 16.000, Lab Hours: 64.000
Corequisite: CTE1743C
Course User Fee: \$241.00

CTE2732 Fashion Illustration Technology 3.000 credits

This course introduces the basics of fashion illustration technology targeted specifically for the fashion industry. Using various computer software and tools, including but not limited to Photoshop, Fashion CAD, C-Design, Adobe Illustrator, and Digital Fashion Pro, students will learn the techniques to conceptualize, create, and manage fashion designs and collections, and create industry-standard presentations.
Lecture Hours: 48.000

CTE1401 Textiles 3.000 credits

This is a survey course designed for students majoring in fashion-related curriculum or with a general interest in textile materials. Students will learn basic elements of the transformation from fiber of textiles into finished goods. The course provides insights into textile manufactures with a primary focus on general textile applications relative to end-use consumer products. Students will learn the terminology needed for effective communication throughout the fashion supply chain, gain insight and appreciation for the relative value of textile products and the appropriateness of specific textile uses.

Lecture Hours: 48.000

CTE1721C Fashion Design 1 3.000 credits

This introductory course on flat patterns explores the two-dimensional method of creating basic slopers in order to execute designs. Students will learn the two methods of making a basic set of slopers.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: CTE1401 AND CTE1401L

Course User Fee: \$241.00

CTE2330C Clothing Construction Methods Level 2 3.000 credits

This course focuses on the principles and techniques of applied clothing constructions. Students will learn to apply the principles and techniques of clothing construction using original student design and pattern work.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: CTE2310C, Corequisite: CTE2745C

Course User Fee: \$241.00

CTE2745C Patternmaking Level 2 3.000 credits

This course focuses on the integration of flat patterns and draping. Students will learn the foundations of Draping as a design development and execution technique. How to move from the form to the flat and on to the body. Must be met with a grade of "C" or higher.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: CTE1743C, Corequisite: CTE2330C

Course User Fee: \$241.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CTE1841C Apparel Evaluation & Production 3.000 credits

This is an introductory course in the apparel development process. Students will learn to facilitate the communication and coordination of pre-product development tasks achieved through linking design, costing, and manufacturing technology in the production setup for each design. Students will learn how outsourcing affects the product development process in editing garment designs and the line development calendar.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: CTE1401 AND CTE1401L

CTE2342C Clothing Construction Methods Level 3 3.000 credits

This course advances students' knowledge about materials, core properties and construction techniques that inform their choices made for silhouette creation and hands-on prototype development. Students will explore more advanced principles and techniques of unstructured draping using soft fabric for the creative interpretation and artistic development of contemporary designs. Emphasis on proportion, balance and shape as related to design aesthetics. Must be met with a grade of "C" or higher.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: CTE2330C, Corequisite: CTE2749C

CTE2722C Fashion Design 2 3.000 credits

This course focuses on the use and development of basic slopers. Students will learn to proceed from basic applications and principles of patternmaking to the advanced process of design development. Combining the bodice and sleeve slopers to develop a kimono/dolman sloper is one example of the application of basic slopers to the comprehensive understanding of principles of pattern and design development.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: CTE1721C

Course User Fee: \$241.00

CTE2749C Patternmaking Level 3 3.000 credits

This course reinforces the students' understanding of the art of draping and patternmaking and diverse methods the industry uses to create production patterns. Students will analyze draping and drafting techniques to create an awareness of which method is most applicable for a given situation. Analytical thinking and hands-on class experiences will strengthen students' skills, thus enabling them to expand on their creativity and provide a proper fit for their creations. Must be met with a grade of "C" or higher.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: CTE2745C, Corequisite: CTE2342C

CTE1942 Fashion Industry Internship 3.000 credits

This internship course provides eligible students with placement in premier fashion settings and with the professional and practical experiences needed to further their education in a variety of fashion-based positions. Students control the internship selection process and work with an internship coordinator in the revisions of their resumes and schedule of interviews within the network of fashion companies. Fashion internships are available in the areas of design, merchandising, buying, show-room, and fashion public relations. (144 hr. Internship)

Internship Hours: 144.000

Recommended Preparation: Departmental Approval & Completion of the Program Core Requirements

CTE2760C Creative Design 3.000 credits

In this capstone course, the student will focus on the acquisition of a multidisciplinary methodology needed to produce a collection. The student will also survey the various steps of building a collection, from conception and range planning through to design, execution and presentation. A minimum of 6 looks will be produced by the end of the semester.

Prerequisite: CTE2342C and CTE2722C and CTE2749C. (1 hr. lecture, 2 hr. lab)

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: CTE2722C AND CTE2342C AND CTE2749C

Course User Fee: \$241.00

CTE2120 Portfolio Collection Development 3.000 credits

In this course students will learn the basics for the development of a presentation portfolio collection. Students will research fabrics to use in the design of collection concepts for specific market areas. Various formats will be explored using digital and analog media. Retail market research and the internet may be applied as a basis for a design presentation.

Lecture Hours: 48.000

Prerequisite: CTE1401 AND CTE1401L

**EVR1001 Introduction to Environmental Science
3.000 credits**

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

Program Description

Fashion Merchandising

Associate in Science | Code: 22020 | 60 credits

The Associate in Science degree in Fashion Merchandising offers students a comprehensive education of the fashion business. The program offers students instruction in process, skills, and designs from concept development through production for emergence into the fashion business or fashion design segments of the industry.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0
CTE 1050	Introduction to Fashion Design and Related Industries	3.0
CTE 2732	Fashion Illustration Technology	3.0
GEB 1011	Principles of Business	3.0
MAR 1011	Principles of Marketing	3.0

Total: 60.0

CTE1050 Introduction to Fashion Design and Related Industries 3.000 credits

In this course students will learn the basic design process, history, characteristics and global interrelationships of the fashion industry segments. The course explores how fashion, textile and apparel producers, retailers and related industries use merchandising and market their products within the industry and ultimately, to the consumer.
Lecture Hours: 48.000

CTE2732 Fashion Illustration Technology 3.000 credits

This course introduces the basics of fashion illustration technology targeted specifically for the fashion industry. Using various computer software and tools, including but not limited to Photoshop, Fashion CAD, C-Design, Adobe Illustrator, and Digital Fashion Pro, students will learn the techniques to conceptualize, create, and manage fashion designs and collections, and create industry-standard presentations.
Lecture Hours: 48.000

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.
Lecture Hours: 48.000
Course User Fee: \$20.00

MAR1011 Principles of Marketing 3.000 credits

This introductory course emphasizes key concepts and issues underlying the modern practice of marketing. The course provides the student with a clear understanding of marketing's role in the 21st Century and introduces the student to both traditional and contemporary ways of marketing. The student will learn how marketers deliver value by satisfying customer needs and wants, determine which target markets to serve, and decide which goods and services are needed to serve these markets.
Lecture Hours: 48.000
Course User Fee: \$10.00

CTE1801 Introduction to Fashion Merchandising 3.000 credits

This introductory class provides an exposure to merchandising and terminology. Students will learn the entrepreneurs who influence the industry, career possibilities and an overview of the components of a manufacturer's or retailer's promotional techniques. Lecture Hours: 48.000

CTE2301 Product Development 3.000 credits

In this course students will learn the concepts and methods by which retailers create special, store-branded merchandise for targeted customer segments. The process of product development, from research to production to distribution, is studied.

Lecture Hours: 48.000

Prerequisite: CTE1401 AND CTE1401L

CTE2610 Fashion Forecasting and Research 3.000 credits

In this course students will learn to explore and apply forecast research methods in preparation for developing, planning, purchasing, or merchandising apparel lines and collections. Using the case study method, trend research is evaluated through the use of scholarly texts, articles, databases, and relevant websites to identify opportunities for growth and profitability in a fashion business.

Lecture Hours: 48.000

Prerequisite: CTE1050 AND MAR1011

MAR1720 Marketing in a Digital World 3.000 credits

This course provides an introduction to new marketing concepts and the broad spectrum of digital marketing. Students will learn to utilize digital tools, social networks and media, strategies, and tactics to create awareness and to promote products and services to consumers and businesses.

Lecture Hours: 48.000

Course User Fee: \$60.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CTE2388 Principles of Contemporary Retailing 3.000 credits

In this course students will learn the operational segments of the fashion industry and their functions. The course focus is on the contributions employees add to sales productivity and customer satisfaction in retail establishments and on the exploration of new technologies and their impact on consumers' shopping experiences.

Lecture Hours: 48.000

Prerequisite: CTE1050

CTE2802 Fashion Merchandising Strategies 3.000 credits

In this course students will gain comprehensive knowledge of the merchandising environment, including the functions and objectives of the merchandising team, the principles and techniques of today's buyers, planners, product developers, and account executives.

Lecture Hours: 48.000

Prerequisite: CGS1060C

CTE2836 Global Merchandising 3.000 credits

In this course students will learn the merchandising practices used around the world in fashion apparel companies, both in retail and wholesale. American merchandising theory is used as a base of comparison in the consideration of various religions, cultures, legal systems, and other global systems.

Lecture Hours: 48.000

Corequisite: CTE2802

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

CTE1942 Fashion Industry Internship 3.000 credits

This internship course provides eligible students with placement in premier fashion settings and with the professional and practical experiences needed to further their education in a variety of fashion-based positions. Students control the internship selection process and work with an internship coordinator in the revisions of their resumes and schedule of interviews within the network of fashion companies.

Fashion internships are available in the areas of design, merchandising, buying, show-room, and fashion public relations. (144 hr. Internship)

Internship Hours: 144.000

Recommended Preparation: Departmental Approval & Completion of the Program Core Requirements

CTE2111C Digital Fashion Portfolio 3.000 credits

In this course students will learn to integrate computer aided design tools in the creative process of developing a digital fashion collection portfolio. Visual presentation and specific applications will be used.

Lecture Hours: 16.000, Lab Hours: 32.000

Recommended Preparation: CAD/Photoshop/ Illustrator

CTE2800 Textile, Apparel & Retail Analysis 3.000 credits

In this course students will learn about textile marketing of sustainable apparel and the textile value chains from product concept to the consumer. A variety of topics on global value chains, market analysis, product development, manufacturing, market and sourcing are explored. The global impact of trade and sourcing constraints are examined. Through readings, case studies and in-class industry presentations, students will explore a comprehensive array of contemporary issues, both social and regulatory, that help in understanding the complex value and supply chain.

Lecture Hours: 48.000

Prerequisite: CTE2388

ENT2212 Entrepreneurial Leadership 3.000 credits

The student will learn key skills and traits of successful entrepreneurs. Students will explore the notion of values-based business formation, personal strength and weakness identification, leadership for team building, project and personal time management, and story-telling.

Lecture Hours: 48.000

Course User Fee: \$100.00

Program Description

Associate in Science | Code: 26044 | 64 credits

The Film Production Technology program prepares students to learn all aspects of the film industry through hands-on, production-oriented classes both in the studio and on location. Students can receive training in cinematography, lighting, audio recording and editing. High-end equipment is used by students to shoot and edit sound 16mm film. Students are also exposed to video and the business aspects of the industry.

Program Modality: Both [In-Person (IP) and On-line]

FIL1100 Screenwriting 1: Introduction to Story Structure 3.000 credits

A workshop-style introductory class covering narrative script writing for film and television. Students will learn to develop a short-format screenplay incorporating three-act story structure, script elements, and standard industry formatting. Lecture Hours: 48.000

FIL1420C Film Production 1: Introduction to the Filmmaking 4.000 credits

An introductory overview of the art and technology of narrative motion picture production. Students will learn basic production techniques, from pre-production through production to final screening. Lecture Hours: 32.000, Lab Hours: 64.000

Corequisite: FIL2552C
Course User Fee: \$150.00

FIL2552C Editing Level 1: Introduction to Editing 3.000 credits

An introductory course in which students will learn the practice of editing digital media.

Lecture Hours: 32.000, Lab Hours: 32.000
Course User Fee: \$35.00

VIC1000 Visual Communications 3.000 credits

An introductory course in which students will learn the visual aspects of film, video, photography and graphic arts, specifically dealing with design elements and principles.

Lecture Hours: 32.000, Lab Hours: 32.000
Course User Fee: \$10.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

FIL1431C Film Production 2: Cinematography and Sound 4.000 credits

An introductory course in which students will learn cinematography and sync-sound motion picture production.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: FIL1420C AND Corequisite: FIL2553C
Course User Fee: \$150.00

FIL2131 Screenwriting 2: Character Development and Advanced Story Structure 3.000 credits

In this workshop-style intermediate level course students will learn about character development and various story structures for narrative motion picture screenplays.

Lecture Hours: 48.000

Prerequisite: FIL1100

FIL2553C Editing Level 2: Intermediate Editing and Visual Effects 3.000 credits

An intermediate course in which students will learn video editing with an emphasis on sound design and visual effects.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: FIL2552C

Course User Fee: \$35.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

FIL2560C Editing Level 3: Advanced Editing: Color Correction and Finishing 3.000 credits

An advanced course in which students will learn the practice of color correcting and finishing fiction and non-fiction projects.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: FIL2553C

Course User Fee: \$35.00

RTV1240C Sound Design 3.000 credits

In this introductory Sound Design course students will learn an overview of sound recording and audio post-production.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

FIL1030 History of Film 3.000 credits

In this introductory course students will learn about the history of motion pictures, with an emphasis on American and European films.

Lecture Hours: 48.000

FIL2480C Film Production 3: Directing 4.000 credits

An intermediate practicum in motion picture direction through the analysis of various directors and their cinematic styles. Students will learn the role of the director by interpreting dramatic material, effectively guiding acting performances, and communicating a story visually.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: FIL1431C AND FIL2553C, RTV1240C

Course User Fee: \$25.00

FIL2611 Film Business Marketing Distribution Exhibition 3.000 credits

Examination of the functional areas within marketing as well as the various distribution means (both current and projected) that are governing the sale of independent feature films or films financed outside of the studio system. Students learn to distribute their own selected films in this course. Prerequisite: FIL 1276. (3 hr. lecture)

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

FIL2515C Film Production 4: Producing the Short Film 4.000 credits

An advanced course in film production. Students will learn to apply the fundamentals of film production as introduced in Film Production 1, 2, & 3 to the production of a portfolio-quality narrative short film.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: FIL2480C

Course User Fee: \$250.00

FIL1055 American Independent Film 3.000 credits

In this introductory course, students will learn about the American independent film movement with an emphasis on American directors and producers.
Lecture Hours: 48.000

FIL1060 Survey of Documentary Film 3.000 credits

In this introductory course students will learn the history of nonfiction films, with an emphasis on American and European filmmakers.
Lecture Hours: 48.000

FIL2413 Screenwriting 3 3.000 credits

An advanced course in which the fundamentals of story structure and character development introduced in Screenwriting 1 and Screenwriting 2 are refined. The student will learn how to write an outline for a feature-length motion picture.
Lecture Hours: 48.000
Prerequisite: FIL2131

FIL2945 Film Internship 3.000 credits

Students will learn to apply the various skills gained throughout the program in a semester long immersion at an established film entertainment company.
Lecture Hours: 240.000
Prerequisite: FIL2480C AND Recommended Preparation: Professor Permission

FIL2951 Film Festival Experience 3.000 credits

An immersive experience in a film festival. Students engage directly with films and filmmakers through their attendance to festival screenings and professional panels and discussions. Students become acquainted with a festival's organization and develop their professional skills by participating as volunteers in a multi-cultural community event.
Lecture Hours: 48.000
Recommended Preparation: Registration with Professor Approval Only.

TPP1100 Acting 1 3.000 credits

The fundamentals of stage performance, stressing voice, movement, and the more formal and technical aspects of the actor's art. May be repeated for credit.
Lecture Hours: 48.000

TPP1110 Acting 1 3.000 credits

Continuation of TPP 1100.
Lecture Hours: 48.000
Prerequisite: TPP1100

Program Description

Financial Services - Banking

Associate in Science | Code: 22026 | 60 credits

The Financial Services program is designed to meet the needs of students who plan to seek employment with commercial banks, stock brokerage companies and related financial organizations. It is also planned for students who are currently employed and desire advancement to positions of greater responsibility with financial organizations. This program meets most of the requirements for the American Institute of Banking diploma/certificates. The Associate in Arts degree is also available to the student planning to transfer to a senior institution after graduation from MDC. Consult an advisor about which additional courses are included in that program.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 12.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
BAN 1004	Banking Fundamentals, Evolution, and Compliance	3.0
BAN 2511	Marketing for Financial Services	3.0

Semester 2

Units: 13.0

ACG 2021	Financial Accounting	3.0
ACG 2021L	Financial Accounting Lab	1.0

BAN 1240	Essentials for Retail Lending	3.0
BAN 2501	Money, Banking and Financial Markets	3.0
STA 2023	Statistical Methods	3.0
Course Competency *		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 3	Units: 12.0
-------------------	--------------------

<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
ACG 1403	Excel for Business	2.0
BAN 1231	Commercial Lending	3.0
BAN 2210	Analyzing Financial Statements	3.0
FIN 1930	Special Topic Seminar	1.0

Semester 4	Units: 13.0
-------------------	--------------------

BAN 2211	Applied Financial Statement Analysis	3.0
ECO 2013	Principles of Economics (Macro)	3.0
MKA 1022	Relationship Selling	3.0
MNA 1130	Business for Financial Services	1.0
PHI 2010	Introduction to Philosophy	3.0

Semester 5	Units: 10.0
-------------------	--------------------

<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
ACG 2071	Managerial Accounting	3.0
ACG 2071L	Managerial Accounting Lab	1.0
REE 2304	Commercial Real Estate	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BAN1004 Banking Fundamentals, Evolution, and Compliance 3.000 credits

In this course, students will learn the foundation, structure and function of financial systems. The course plan includes a review of the role of banks as businesses and their impact on the economy. The students will receive an overview of the main entities that comprise the financial system: financial intermediaries, investments and financial markets. The students will be able to describe the risk infrastructure of financial institutions, the regulatory environment, and the responsibilities inherent in complying with regulatory requirements associated with the safety and soundness of banks.

Lecture Hours: 48.000

BAN2511 Marketing for Financial Services 3.000 credits

Marketing of financial services is a specialized segment of marketing. It is highly competitive, making the process of selling for bankers a highly specialized and challenging endeavor. Changing market conditions, deregulation, the emergence of new competitors from within and external to the banking industry and the rapid integration of new technologies are some of the challenges bankers encounter. It covers the aspects of a consultative selling approach with emphasis on planning, implementing and fostering a long-term advisory relationship with clients. The students will learn to become proficient in how to prepare for a successful sales presentation and closing.

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

BAN1240 Essentials for Retail Lending 3.000 credits

In this course, the student will learn a comprehensive approach to consumer lending, identifying financial risks and the regulatory environment that impact and promote safety and soundness in lending. The course centers around providing a practical approach to the fundamentals of consumer installment lending, including a review of different loan products, their life cycles, the credit application process and the essentials of the closing process.

Lecture Hours: 48.000

BAN2501 Money, Banking and Financial Markets 3.000 credits

The course is designed to provide students with an overview of the US financial system, including theory and practice of monetary policy and financial instruments. Students will learn about interest rate determination, the structure and role of banks, financial institutions in the intermediation process, the factors impacting inflation, and variables in the economy. The course plan is designed not only for students but for individuals working in the financial services industry, including junior officers to mid-management and entry level staff who are considering pursuing a career in the banking field.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

ACG1403 Excel for Business 1.000 - 3.000 credits

This course will cover Excel topics relevant to the field of accounting and finance including, but not limited to, VLOOKUP, HLOOKUP, INDEX, MATCH, IF, AND, OR, Pivot Tables, Named Ranges, Array Formulas, Custom Number Formats, Conditional Formatting, Absolute References and Keyboard Shortcuts.

Lecture Hours: 16.000 - 48.000

Course User Fee: \$22.00

BAN1231 Commercial Lending 3.000 credits

This course provides an increased awareness of the credit underwriting process. It provides a comprehensive foundation to the lending process including technical and interpretative analysis of financial information from liquidity, solvency, ratio and cash flow analysis to the basics for the completion of a credit approval memorandum. Students will learn the concepts of qualitative analysis including the assessment of industry risk, market risk and management risk. The course provides an understanding of the role of loan policy and the need to summarize the borrowers' various risks into an appropriate credit risk rating.

Prerequisite: BAN2210.

Lecture Hours: 48.000

Prerequisite: BAN2210

BAN2210 Analyzing Financial Statements 3.000 credits

In this course the students will learn the framework and resources available to analyze financial statements and to assess a company's operation and future performance. The course covers the critical objectives with the assessment of business performance such as: the relationship between the company's business and financial strategy, their financial statements, ratio, profitability, balance sheet and cash flow analysis. The course plan includes the use of financial and accounting information to make lending/credit and investment decisions. The course is targeted to a wide range of students including those pursuing careers in banking, general management, investment banking, financial analysis and consulting. Prerequisite: ACG2021.

Lecture Hours: 48.000

Prerequisite: ACG2021

FIN1930 Special Topic Seminar 1.000 credits

This course centers around topics of current interest or of special interest. Topics or focus may vary from semester to semester. (1 hr. lecture)

Lecture Hours: 16.000

Course User Fee: \$35.00

BAN2211 Applied Financial Statement Analysis 3.000 credits

This course provides a comprehensive analysis of business strategy, operating performance, financial condition and cash flow strength. The student will learn basic and advanced financial concepts impacting the viability of a business, including accounting rules, methods of credit analysis, assessment of financial ratios, historical financial analysis, cash flow and financial forecasting.

Prerequisite: BAN2210.

Lecture Hours: 48.000

Prerequisite: BAN2210

Course User Fee: \$20.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

MKA1022 Relationship Selling 3.000 credits

This course introduces the role that relationship building plays in sales. Students will explore the communication process and the importance of interpersonal skills in developing a relationship for an effective sales strategy. Students will develop a sales presentation based around consumer needs.

Lecture Hours: 48.000

Course User Fee: \$47.44

MNA1130 Business for Financial Services 1.000 credits

This course teaches business professionals a structured approach to create clear, effective, professional business writing, including e-mail, memos, letters, and reports. (1 hr. lecture)

Lecture Hours: 16.000

Course User Fee: \$45.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L
Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.
Lab Hours: 32.000
Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071
Course User Fee: \$32.00

REE2304 Commercial Real Estate 3.000 credits

In this course, the student will learn specific financial tools and techniques required to assess the feasibility of commercial real estate investment, funding and financing options, risks associated with real estate transactions and factors impacting real estate investment decisions. The student will learn how the commercial real estate process works, the different interested parties involved in the transaction, the essentials of risk and return, financing options and different phases in a commercial real estate transaction.

Lecture Hours: 48.000

Course User Fee: \$70.00

Program Description

Financial Services - Wealth Management

Associate in Science | Code: 22024 | 60 credits

The Financial Services program is designed to meet the needs of students who plan to seek employment with commercial banks, stock brokerage companies and related financial organizations. It is also planned for students who are currently employed and desire advancement to positions of greater responsibility with financial organizations. This program meets most of the requirements for the American Institute of Banking diploma/certificates. The Associate in Arts degree is also available to the student planning to transfer to a senior institution after graduation from MDC. Consult an advisor about which additional courses are included in that program.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 12.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
BAN 1004	Banking Fundamentals, Evolution, and Compliance	3.0
FIN 2000	Principles of Finance	3.0

Semester 2

Units: 14.0

ACG 1403	Excel for Business	2.0
FIN 2010	Investments in Stocks and Bonds	3.0
FIN 2032	Fundamentals of Wealth Management, Institutions, Markets and Products	3.0
FIN 2100	Personal Finance	3.0
STA 2023	Statistical Methods	3.0
Computer Competency*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 3		Units: 12.0
ACG 2021	Financial Accounting	3.0
ACG 2021L	Financial Accounting Lab	1.0
FIN 1930	Special Topic Seminar	1.0
MNA 1130	Business for Financial Services	1.0
<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BAN1004 Banking Fundamentals, Evolution, and Compliance 3.000 credits

In this course, students will learn the foundation, structure and function of financial systems. The course plan includes a review of the role of banks as businesses and their impact on the economy. The students will receive an overview of the main entities that comprise the financial system: financial intermediaries, investments and financial markets. The students will be able to describe the risk infrastructure of financial institutions, the regulatory environment, and the responsibilities inherent in complying with regulatory requirements associated with the safety and soundness of banks.

Lecture Hours: 48.000

FIN2000 Principles of Finance 3.000 credits

The creation, allocation, and utilization of money, and the effect of monetary policy upon individuals, business, national and international economics. This course provides a basis for further study of monetary theory, banking, finance and securities.

Lecture Hours: 48.000

ACG1403 Excel for Business 1.000 - 3.000 credits

This course will cover Excel topics relevant to the field of accounting and finance including, but not limited to, VLOOKUP, HLOOKUP, INDEX, MATCH, IF, AND, OR, Pivot Tables, Named Ranges, Array Formulas, Custom Number Formats, Conditional Formatting, Absolute References and Keyboard Shortcuts.

Lecture Hours: 16.000 - 48.000

Course User Fee: \$22.00

FIN2010 Investments in Stocks and Bonds 3.000 credits

The basic principles of the stock market as they affect the individual investor in stocks and bonds. Investment in these securities is studied from the standpoint of the short-term and long-term investors.

Lecture Hours: 48.000

Course User Fee: \$10.00

FIN2032 Fundamentals of Wealth Management, Institutions, Markets and Products 3.000 credits

This course is a standard introduction to the financial services profession, financial markets, and financial institutions. It touches on nearly every aspect of financial services. It assists professionals in understanding concepts, markets, products, regulations and the application of financial planning and development of wealth management skills.

Lecture Hours: 48.000

Prerequisite: ACG2021, ACG2021L

Course User Fee: \$70.00

FIN2100 Personal Finance 1.000 - 3.000 credits

A study of economic and personal goals including personal budgeting, credit budgeting, borrowing money, banking facilities, the nature of investments, life insurance, casualty insurance, home ownership, stocks and bonds, and retirement plans.

Lecture Hours: 16.000 - 48.000

Course User Fee: \$20.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

FIN1930 Special Topic Seminar 1.000 credits

This course centers around topics of current interest or of special interest. Topics or focus may vary from semester to semester. (1 hr. lecture)

Lecture Hours: 16.000

Course User Fee: \$35.00

MNA1130 Business for Financial Services 1.000 credits

This course teaches business professionals a structured approach to create clear, effective, professional business writing, including e-mail, memos, letters, and reports. (1 hr. lecture)

Lecture Hours: 16.000

Course User Fee: \$45.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision- making. Prerequisites:

ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

BAN2210 Analyzing Financial Statements 3.000 credits

In this course the students will learn the framework and resources available to analyze financial statements and to assess a company's operation and future performance. The course covers the critical objectives with the assessment of business performance such as: the relationship between the company's business and financial strategy, their financial statements, ratio, profitability, balance sheet and cash flow analysis. The course plan includes the use of financial and accounting information to make lending/credit and investment decisions. The course is targeted to a wide range of students including those pursuing careers in banking, general management, investment banking, financial analysis and consulting. Prerequisite: ACG2021.

Lecture Hours: 48.000

Prerequisite: ACG2021

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

MKA1022 Relationship Selling 3.000 credits

This course introduces the role that relationship building plays in sales. Students will explore the communication process and the importance of interpersonal skills in developing a relationship for an effective sales strategy. Students will develop a sales presentation based around consumer needs.

Lecture Hours: 48.000

Course User Fee: \$47.44

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

FIN2031 Risk Management and Compliance 3.000 credits

This course offers an analysis of the risks faced by investors and savers interacting through both financial institutions and financial markets. It will provide insight at the risks and opportunities of doing business in today's financial markets and the challenges presented by both regulators and market participants. The course will review the increasing integration of foreign and domestic financial markets. (3hr lecture)

Lecture Hours: 48.000

Course User Fee: \$70.00

FIN2642 Financial Analysis and Valuation 3.000 credits

This course will cover financial institutions, financial Investments, financial planning and analysis and international financial perspectives. It addresses core principles of value creation, merger, analysis of historical financial performance, cash flows and the identification of sources of value. (3 hr. lecture)

Lecture Hours: 48.000, Clinical Hours: 1.000

Course User Fee: \$70.00

Program Description

Financial Technology

Associate in Science | Code: 22035 | 60 credits

The Financial Technology Associate of Science is a comprehensive 60-credit degree program that combines finance expertise with advanced technology skills. Students learn financial big data modeling, machine learning, blockchain technology, and digital banking solutions while developing competencies in data analytics, cybersecurity, and regulatory compliance. The curriculum covers emerging fintech innovations including robo-advisors, mobile payments, and alternative lending platforms, alongside traditional banking principles and Federal Reserve oversight. Graduates are prepared for advanced careers in fintech companies, traditional banks adopting digital solutions, and other organizations integrating technology with financial services.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BAN1004 Banking Fundamentals, Evolution, and Compliance 3.000 credits

In this course, students will learn the foundation, structure and function of financial systems. The course plan includes a review of the role of banks as businesses and their impact on the economy. The students will receive an overview of the main entities that comprise the financial system: financial intermediaries, investments and financial markets. The students will be able to describe the risk infrastructure of financial institutions, the regulatory environment, and the responsibilities inherent in complying with regulatory requirements associated with the safety and soundness of banks.

Lecture Hours: 48.000

FIN2000 Principles of Finance 3.000 credits

The creation, allocation, and utilization of money, and the effect of monetary policy upon individuals, business, national and international economics. This course provides a basis for further study of monetary theory, banking, finance and securities.

Lecture Hours: 48.000

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

FIT2000 Introduction to Financial Technology 3.000 credits

This course introduces students to the foundations, innovations, and applications of Financial Technology (FinTech). Topics include the evolution of money, core banking systems, digital payments, blockchain, big data, artificial intelligence, cybersecurity, and FinTech regulations. Students will explore how technology is transforming banking, insurance, investment, and other sectors, while developing a framework for ethical and regulatory compliance in digital finance.

Lecture Hours: 48.000

BUL2241 Business Law 1 3.000 credits

Law in relation to the proper conduct of business, including a consideration of the nature and source of law, courts and courtroom procedure, contracts, sales of goods, negotiable instruments and secured transactions. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1120 Cybersecurity Fundamentals 4.000 credits

This course provides a foundation of knowledge in the information technology security field. Students will learn general network security concepts; compliance and operational security; threats and vulnerabilities; application, data, and host security; access control and identity management; cryptography. Hands-on training benefits the novice as well as the experienced network professional.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Note: Students are strongly encouraged to complete CTS 1134 prior to enrollment in CTS 1120. Students who enroll concurrently should ensure they have a foundational understanding of networking concepts, including IP addressing, protocols, and network services. In mini-term formats, students should complete CTS 1134 during the first half of the term and CTS 1120 during the second half.

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite: MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033 Any Mathematics level higher than MAT 1033 will satisfy this requirement.

MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

FIN2010 Investments in Stocks and Bonds 3.000 credits

The basic principles of the stock market as they affect the individual investor in stocks and bonds.

Investment in these securities is studied from the standpoint of the short-term and long-term investors.

Lecture Hours: 48.000

Course User Fee: \$10.00

FIN2051 International Financial Management 3.000 credits

The student will learn basic concepts and principles of international finance, with consideration of the financial environment, transactions, and flows.

Exchange rates, risks, and government policies affecting business are analyzed as well as management policies and decisions.

Lecture Hours: 48.000

Course User Fee: \$20.00

GEB1432 Applied Artificial Intelligence (AI) in Business 3.000 credits

This course illustrates how Artificial Intelligence (AI) is currently applied in industries and across business functions to support business strategy formulation, implementation and evaluation. This course introduces the data-driven outcomes and ethical issues to be considered when implementing responsible AI in business and industry. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$35.20

MAR1720 Marketing in a Digital World 3.000 credits

This course provides an introduction to new marketing concepts and the broad spectrum of digital marketing. Students will learn to utilize digital tools, social networks and media, strategies, and tactics to create awareness and to promote products and services to consumers and businesses.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAR1930 Introduction to Salesforce Marketing Cloud 1.000 credits

This course introduces students on how to build and personalize a 1:1 marketing campaign that can help connect and deliver the right message, to the right person, at the right time. Students will learn how to manage the most utilized marketing channels in the industry and discover new marketing tools.

Lecture Hours: 16.000

Course User Fee: \$33.69

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

FIN2031 Risk Management and Compliance 3.000 credits

This course offers an analysis of the risks faced by investors and savers interacting through both financial institutions and financial markets. It will provide insight at the risks and opportunities of doing business in today's financial markets and the challenges presented by both regulators and market participants. The course will review the increasing integration of foreign and domestic financial markets. (3hr lecture)

Lecture Hours: 48.000

Course User Fee: \$70.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

FIN2032 Fundamentals of Wealth Management, Institutions, Markets and Products 3.000 credits

This course is a standard introduction to the financial services profession, financial markets, and financial institutions. It touches on nearly every aspect of financial services. It assists professionals in understanding concepts, markets, products, regulations and the application of financial planning and development of wealth management skills.

Lecture Hours: 48.000

Prerequisite: ACG2021, ACG2021L

Course User Fee: \$70.00

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement. Lecture Hours: 48.000, Lab Hours: 32.000
Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

GEB2100 Introduction to Business Analytics 3.000 credits

This course is for students majoring in business, marketing, business intelligence, computer science and other majors and introduces how information and technology are used in organizations to create market advantage. Students will learn about the operational units of an organization and the information requirements to support the organization.

Lecture Hours: 48.000

Program Description

Fire Science Technology

Associate in Science | Code: 27018 | 60 credits

The Fire Science Technology program prepares students for a wide variety of technical positions in the area of fire prevention and control. Students will learn about safety factors, building code requirements, national and local standards, hazardous materials, supervision and management skills, hydraulics, fire apparatus, tactics and strategy. The program has been designed to meet both the Florida Fire Fighters Pre-Officer Requirements and the NFPA 1021 Fire Officer Level Two Requirements.

Program Modality: Both [In-Person (IP) and On-line]

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

FFP1000 Introduction to Fire Science 3.000 credits

This course provides an overview of fire protection and emergency services; career opportunities in fire protection and related fields; culture and history of emergency services; fire loss analysis; organization and function of public and private fire protection services; fire departments as part of local government; laws and regulations affecting the fire service; fire service nomenclature; specific fire protection functions; basic fire chemistry and physics; introduction to fire protection systems; introduction to strategy and tactics; and life safety initiatives. (3 hr. lecture)

Lecture Hours: 48.000

FFP1301 Fire Service Hydraulics 3.000 credits

This course covers the relationship between flow, pressure, and mathematical hydraulic formulas. The course includes pump theory, pump rating, and pressure and vacuum gauges. (3 hr. lecture)

Lecture Hours: 48.000

FFP1505 Fire Prevention Practices 3.000 credits

The purpose of this course is to place emphasis on fire prevention through inspection, code enforcement, the use of model building and fire prevention codes, including detailed information on the legal, economic, and political aspects of the fire inspection process. (3 hr. lecture)

Lecture Hours: 48.000

FFP1740 Fire Service Course Delivery 3.000 credits

The curriculum draws from many recognized authorities in exploring the methods and mechanics of imparting information and adult learning principles. The course emphasizes techniques that have wide application in teaching situations, as well as devices for specific training areas. The course also stresses measuring teaching effectiveness, and the use of media and visual aids. (3 hr. lecture)

Lecture Hours: 48.000

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

FFP1540 Private Fire Protection Systems 1 3.000 credits

This is a study of private fire protection and detection systems such as sprinkler and standpipe systems, chemical extinguishing systems, and detection systems and devices. Each system is discussed as to its need, construction, preventative maintenance and individual use. (3 hr. lecture)
Lecture Hours: 48.000, Practicum Hours: 3.000

FFP1810 Firefighting Tactics & Strategy 1 3.000 credits

This course will provide students with a basic understanding of factors involved in coping with a fire emergency and determining the best use of available resources in protecting lives and property. The course emphasizes the changing nature of an emergency situation and the ways in which the fire officer can evaluate the effectiveness of their proposed incident action plan. (3 hr. lecture)
Lecture Hours: 48.000
Prerequisite: , FFP1000

FFP2120 Building Construction for the Fire Service 3.000 credits

This course will provide the student with a basic understanding of building design and construction methods which will aid in decision making processes related to fire prevention and control. Students will gain an understanding of construction principles and practices related to fire loads and behavior to make more effective, safer, and timely decisions to protect people and property from potential and actual fires. (3 hr. lecture)
Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

FFP1302 Apparatus Operations 3.000 credits

This course covers the laws, rules and driving techniques for emergency vehicles as well as a review of hydraulics. Fireground evolutions and driving make up the practical part of the course. The evolution portion of the course includes the use of pre-connected lines, tandem pumping, drafting relays, and master streams. The student should have a basic understanding of fire stream hydraulics prior to entering this course. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: FFP1301

FFP1510 Codes and Standards 3.000 credits

The purpose of this course is to familiarize students or current inspectors with the Florida Fire Prevention Code which includes NFPA 101, NFPA 1, FSS 633 and FAC 69A. Students will learn how to research the codes and apply them to inspection activities. (3 hr. lecture)

Lecture Hours: 48.000

FFP2521 Construction Documents and Plans Review 3.000 credits

This curriculum is geared towards teaching the student how to assimilate information contained in working, drawing, and specifications as they relate to the fire inspector. The curriculum includes how to interpret conventional graphic communications. Accepted standards and conventions are introduced. Symbols, abbreviations, principles of technical projection, as well as a review of geometry are included. Related worksheets are used to allow for applied experience of finding and interpreting information from authentic drawings. (3 hr. lecture)

Lecture Hours: 48.000

FFP2741 Fire Service Course Design 3.000 credits

The curriculum draws from many recognized authorities in exploring the methods and mechanics of imparting information and adult learning principles. The course emphasizes techniques that have wide application in teaching situations, as well as devices for specific training areas. The course also stresses measuring teaching effectiveness, and the use of media and visual aids. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: FFP1740

EMS9995 Emergency Medical Responder 2.000 credits

This course is designed for students who have earned the Emergency Medical Responder (EMR) credential and provides academic recognition of the knowledge, skills, and competencies demonstrated through certification attainment. The course validates proficiency in emergency patient assessment, basic life support, trauma care, medical emergencies, patient stabilization, and emergency response procedures. Credit awarded through this course supports academic progression and recognizes documented achievement of industry-recognized competencies in prehospital emergency care. Clinical Hours: 96.000

EMS9996 Emergency Medical Technician (EMT) - Basic 10.000 credits

This course provides academic credit for students who have successfully completed a State of Florida-approved Emergency Medical Technician (EMT-Basic) Applied Technology Diploma (ATD) program and are enrolled in the related Associate in Science degree within the School of Health Sciences. In accordance with TMOP 1100-816125, the course recognizes competencies attained through prior educational and certification experiences, including emergency patient assessment, airway management, trauma care, medical emergency response, patient transportation, and prehospital care procedures. Credit awarded through this course supports academic progression and acknowledges demonstrated achievement of industry-recognized emergency medical services competencies. Other Hours: 160.000

FFP9996 Fire Fighting and Protection - Firefighter II 3.000 credits

This course provides academic credit for students who have successfully completed Firefighter II training through an approved fire science training provider. In accordance with TMOP 1100:815720, the course serves as a mechanism for awarding college credit to Miami Dade College (MDC) students based on documented completion of approved fire science training. The course recognizes competencies attained in fire suppression, rescue operations, hazardous materials response, fire prevention, emergency services, and firefighter safety. Credit awarded through this course supports academic progression and acknowledges industry-recognized skills and professional preparation in the field of fire science and emergency services. Lecture Hours: 48.000

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L. Lecture Hours: 48.000
Corequisite: BSC2085L
Course User Fee: \$8.00

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications. Lecture Hours: 48.000
Prerequisite: MAT0022C OR MAT0028 OR MAT0057 or by placement score, or eligible exemption.
Course User Fee: \$18.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture) Lecture Hours: 48.000
Course User Fee: \$7.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

FFP2720 Company Officer 3.000 credits

This course is designed to provide the student with an understanding of being a company officer through various areas of knowledge as well as solving the varied problems and situations they will be required to manage effectively in today's ever-changing fire service. The curriculum includes a review of fire department organization and administration, management theory, leadership, communications, motivation and group dynamics. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: FFP1000

Program Description

Funeral Service Education

Associate in Science | Code: 23049 | 72 credits

Students in the Funeral Service Education program are given a broad understanding of all phases of funeral home operations as well as the public health responsibilities of the funeral director and embalmer. The Funeral Service Education associate degree program at Miami Dade College is accredited by the American Board of Funeral Service Education (ABFSE), 992 Mantua Pike, Suite 108, Woodbury Heights, NJ 08097 (816) 233-3747. Web: www.abfse.org. All students must register to take the International Conference of Funeral Service Examining Boards, Inc. National Board Examination during their final semester. Students who plan Funeral Service licensure in other states must contract the respective state board to determine licensing requirements and the student is responsible for complying with all particular laws of that state. National Board Examination pass rates, graduation rates, and employment rates for this and other ABFSE-accredited programs are available at www.abfse.org. To request a printed copy of this program's rates, go to the Funeral Service Education Office (Building 3142) or by telephone 305-237-1244. Students who plan Funeral Service licensure in other states must contract the respective state board to determine licensing requirements and the student is responsible for complying with all particular laws of that state. National Board Examination pass rates, graduation rates, and employment rates for this and other ABFSE-accredited programs are available at www.abfse.org. To request a printed copy of this program's rates, go to the Funeral Service Education Office (Building 3142) or by telephone 305-237-1244.

Total: 72.0

BSC1084 Functional Human Anatomy 3.000 credits

This course covers basic human anatomy for students in allied health and mortuary science programs. It includes the dynamics of gross and functional anatomy, terminology, body orientation, and systematic relationships.

Lecture Hours: 48.000

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2020 Human Biology: Fundamentals of Anatomy/Physiology 3.000 credits

This course provides a basic understanding of the human body, its systems, and their functions. It includes the dynamics of physiology, terminology, and physiological relationships of the body systems.

Lecture Hours: 48.000

Course User Fee: \$10.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

FSE1000 History of Funeral Service 3.000 credits

This course traces the origins of funeral service practice from antiquity to modern day practice. Students will learn the evolution of the ethical obligations, fundamental requirements, skills, aptitudes, and qualifications of funeral service professionals. Requires a grade of C or better to pass the course.

Lecture Hours: 48.000

FSE1105 Funeral Service Chemistry 3.000 credits

A survey of the basic principles of chemistry as they relate to funeral service. Especially stressed are the chemical principles and precautions involved in sanitation, disinfection, public health and embalming practice.

Lecture Hours: 48.000

BUL2131 Legal Environment 3.000 credits

Law in relation to the proper conduct of business includes a consideration of the nature and sources of law, its legal environment and history. The topics of business torts, crimes, contracts, and forms of organizations are also covered.

Lecture Hours: 48.000

Course User Fee: \$10.00

BUL2241 Business Law 1 3.000 credits

Law in relation to the proper conduct of business, including a consideration of the nature and source of law, courts and courtroom procedure, contracts, sales of goods, negotiable instruments and secured transactions. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

FSE2202 Funeral Service Business Management 3.000 credits

The role and function of an effective manager is explored. Emphasis is placed on the management functions of planning, organizing, motivating, directing, and controlling. How to purchase a small business is also covered.

Lecture Hours: 48.000

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

FSE2100 Embalming 1 3.000 credits

Designed as an introductory course outlining the basic skills, aptitudes, and personal qualifications necessary for successful embalmers. The subject in embalming is taught so that the student is trained in all phases of the embalming process. Prerequisite: BSC1084 or FSE1001

Lecture Hours: 48.000, Lab Hours: 48.000

Pre/Corequisite: BSC1084 OR FSE1001

FSE2100L Embalming 1 Lab 2.000 credits

Laboratory for FSE 2100. Laboratory fee. Corequisite: FSE 2100. A.S. degree credit only. (4 hr. lab)

Lab Hours: 64.000

Pre/Corequisite: FSE2100

Course User Fee: \$490.00

FSE2106 Funeral Service Microbiology 3.000 credits

This course is a survey of the basic principles of microbiology as it relates to Funeral Science. It emphasizes the importance of sanitation, disinfection, and public health in the embalming practice.(3 hr. lecture)

Lecture Hours: 48.000

FSE2060 Funeral Directing 3.000 credits

Study of various religious, fraternal, military, traditional, nontraditional and humanistic variations of funeral ceremonies, including cultural, ethnic and geographic customs.

Lecture Hours: 48.000

FSE2061 Funeral Service Counseling and Ethics 3.000 credits

This course emphasizes the psychological and sociological dynamics of death, dying, and bereavement and the funeral director's role in counseling families through the process. A clear understanding of the grief process and its variations among individuals as influenced by psychological factors is addressed. Ethical and moral decisions involving end of life and the funeral arrangement process are discussed. The course also addresses the funeral director as a facilitating agent for effective mourning through personal interaction and the design and implementation of the funeral.

Lecture Hours: 48.000

FSE2140 Embalming 2 3.000 credits

This course is a continuation of Embalming 1 lecture and places emphasis on embalming considerations and procedures for pathogenesis and advanced decomposition. Students will learn to use specialized chemicals, treatment of post-mortem cases and advanced embalming techniques. Corequisite: FSE2140L. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: FSE2100, Recommended Preparation: Completed FSE2100L - Embalming 1 Lab - with a "C" or better.

FSE2140L Embalming 2 Laboratory 2.000 credits

This course is a continuation of FSE2100 and complements the lecture co-requisite FSE2140. Students will learn advanced procedures to enhance their foundational knowledge of embalming technique as learned in the prerequisite classes FSE2100/FSE2100L. Learning the fundamentals of general embalming technique as outlined by the American Board of Funeral Service Education Standards will enable students to work in a preparation room as embalming apprentices to licensed embalmers.

Lab Hours: 64.000

Prerequisite: FSE2100, FSE2100L, Corequisite: FSE2140

Course User Fee: \$490.00

FSE2160 Funeral Service Pathology 3.000 credits

General, systemic and forensic pathology with emphasis on analysis of pre-and post-mortem histology, cytology and etiology. Students will learn the causative factors relating to death and determination of cause of death.

Lecture Hours: 48.000

ACG2001 Principles of Accounting I 3.000 credits

An introduction to the basic principles of financial accounting with emphasis on basic accounting procedures such as recording of transactions and the preparation of financial statements. Other topics include inventory and cash. ACG2001 and ACG2011 can be substituted for ACG2021. Co-requisite: ACG2001L

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

FSE2200 Funeral Service Accounting 3.000 credits

An introduction to basic principles of accounting theory. This subject covers financial statements and their analysis, journalizing, receivables, payables, deferrals, and accruals. Inventory costing models, depreciation models and payroll accounting are included. Applications to funeral home operations are made throughout the subject material.

Lecture Hours: 48.000

FSE1080 Funeral Law 3.000 credits

Federal, state and municipal statutes, rules, regulations and ordinances pertaining to funeral service; torts, contract and administrative laws, and financial disclosures pertinent to funeral operations and management.

Lecture Hours: 48.000

FSE2120C Restorative Art 4.000 credits

Anatomical study of human features; familiarization with instruments, human proportions, special materials and techniques.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: FSE2100, FSE2100L

FSE2201 Funeral Home Operations 3.000 credits

Theoretical and practical training in all areas of funeral home operations; laboratory experience in merchandising and funeral arrangements.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.
Lecture Hours: 48.000

FSE2203 Funeral Home Applications 4.000 credits

Funeral Home Applications reinforces the academic and theory of prior classes with hands on, practical exercises. Students will learn procedures on taking first call, buying and selling of merchandise, funeral arranging, and conducting funerals. Must complete this course with a grade of "C" or better.
Lecture Hours: 64.000
Prerequisite: FSE2060, FSE2201

FSE2930L Funeral Service Professional Review 2.000 credits

This course is offered for the Funeral Service Education student who is in their final semester of study. The course is a comprehensive review of the assessed material on the National Board Exam to help prepare the student for the examination and professional licensure. A grade of "C" or better is required to successfully complete the class. Pre/Corequisite: FSE1000, FSE1080, FSE2060, FSE2061, FSE2100, FSE2106, FSE2120C, FSE2140, FSE2201, FSE2202, FSE2203, FSE2160.
Lab Hours: 64.000
Pre/Corequisite: FSE1000 AND FSE1080 AND FSE2060 AND FSE2061 AND FSE2100 AND FSE2106 AND FSE2120 AND FSE2140 AND FSE2160 AND FSE2201 AND FSE2203

FSE2932 Funeral Science Professional Review 2 1.000 credits

This course is for the funeral Science student who is graduating and taking the National Board Examination at the end of the semester that this course is being offered. The course is a review of the Arts section of the Funeral Science courses in order to help prepare the student for the National Board Examination.
Lecture Hours: 32.000
Prerequisite: Departmental Permission Required

Program Description

Game Development & Design

Associate in Science | Code: 25075 | 60 credits

This curriculum allows students to explore the entertainment technology landscape while still pursuing a broad-based education. With an emphasis on game programming, the program exposes students to the development and design processes. Students can further specialize in game design, production, engines and systems, graphics programming and animation, mobile, and more.

Program Modality: Both [In-Person (IP) and On-line]
Contracted: No

Semester 1

Units: 12.0

COP 1334 Introduction to C++ Programming 4.0

DIG 1710	Introduction to Game Development	4.0
DIG 1729C	Game Engines	4.0
Semester 2		Units: 14.0
MAC 1105	College Algebra	3.0
CAP 2047	User Interface Design	4.0
COP 2335	C++ Programming 2	4.0
DIG 1430	Storyboarding	3.0
Semester 3		Units: 6.0
ENC 1101	English Composition 1	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
Semester 4		Units: 14.0
<i>Hum</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
HUM 1020	Humanities	3.0
OR		
MUL 1010	Music Appreciation	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
CAP 2048	Game Development Project I	3.0
DIG 1772C	Introduction to Virtual & Augmented Reality Technologies	4.0
DIG 2712	Level Building & Design	4.0
Semester 5		Units: 14.0
<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
PHY 1020	General Education Physics	3.0
CAP 2920C	Game Development Project II	3.0
DIG 2626	Artificial Intelligence	4.0
DIG 2717C	Game Systems Design	4.0
		Total: 60.0

**COP1334 Introduction to C++ Programming
4.000 credits**

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)
Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$63.00

**DIG1710 Introduction to Game Development
4.000 credits**

This course is an introduction to the computer game design and development industry. Students will learn about game development careers, game development and design processes, marketing themes, copyright laws, game company structures, programming languages used by different types of games, the impact of video games on modern society, general programming concepts, how to create game design documentation, and how to use common game development environments.
Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$97.00

DIG1729C Game Engines 4.000 credits

This course is an introduction to game engines and their uses. Students will learn the basic techniques for creating interactive applications and how this techniques can be used for Virtual Reality (VR) and Augmented Reality (AR) projects. (3 hr. lecture, 2 hr. lab)
Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$129.55

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.
Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

CAP2047 User Interface Design 4.000 credits

This course is for students majoring in game development. It covers designing and developing interfaces for games. Students will learn how to use different input/output hardware devices, how to create and use existing interfaces for different types of hardware, and the development process for different types of gaming systems. Prerequisites: DIG1710 and DIG1729C; Pre/Corequisite: COP2335.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: DIG1710, DIG1729C AND Pre/Corequisite: COP2335
Course User Fee: \$129.55

COP2335 C++ Programming 2 4.000 credits

This course delves further into the application of C++ programming techniques including classes, object orientation, function and operator overloading, inheritance and dynamic polymorphism, templates, exception handling, standard template library, data structures, and other advanced C++ techniques. Prerequisite: COP 1334 (3 hr. lecture; 2 hr. lab).
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: COP1334
Course User Fee: \$63.00

DIG1430 Storyboarding 3.000 credits

This course is for students majoring in Animation and Game Art. It introduces the necessary tasks in the storytelling phase of an animation project. Students will learn how to develop and design visual storyboards and how to sell their storyboard ideas. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$97.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CAP2048 Game Development Project I 3.000 credits

This capstone course is for students majoring in Game Development and Game Animation. Students will work in cross disciplinary teams to develop a working animated game or film. Students will learn how to apply the skills and knowledge they have acquired in a real-world working development environment. Prerequisites: CAP2047 or DIG1302, COP1334 or DIG1111, COP2335 or DIG1437, DIG1430, DIG1710 or DIG1132; Pre/Corequisite: DIG1712 or DIG2113.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAP2047, Corequisite: DIG2626, Pre/Corequisite: DIG1712

Course User Fee: \$129.55

DIG1772C Introduction to Virtual & Augmented Reality Technologies 4.000 credits

This course introduces students to basic concepts, history and tools commonly used for Virtual Reality (AR) and Augmented Reality (AR) technologies. Students will learn the history of VR/AR, its current role in the industry, developer tools, and physical principles. Prerequisite: DIG 1729C. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: DIG1729C

Course User Fee: \$129.55

DIG2712 Level Building & Design 4.000 credits

This course is intended for students majoring in Game Development and Design. Students will learn how to develop game environments in industry standard engines, how to create documentation to plan out effective game play experiences, and the requirements to create virtual worlds. Prerequisites: CAP 2047; COP 2335; DIG 1430. (3 hr. lecture, 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CAP2047 AND COP2335 AND DIG1430

Course User Fee: \$129.55

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

CAP2920C Game Development Project II 3.000 credits

This capstone course is for students majoring in Game Development and Game Animation. Students will work in cross disciplinary teams to develop a working 5-10 min interactive game experience. Students will learn how to apply the skills and knowledge they have acquired in a real world working development environment. Prerequisites: CAP2048, DIG1712 or DIG 2113.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAP2048 AND DIG1430 AND

Corequisite: DIG1705

Course User Fee: \$129.55

DIG2626 Artificial Intelligence 4.000 credits

This course covers key aspects of Artificial Intelligence (AI) for students majoring in game development. Students will learn the origins and history of Artificial Intelligence, current and future uses of AI, AI methods algorithms such as: path planning, stimulus-response agents, agent architectures, decision-making systems, game trees, neural networks, and genetic algorithms. Students will create and modify existing games to include an AI system.

Lecture Hours: 48.000, Lab Hours: 32.000

Pre/Corequisite: COP1334

Course User Fee: \$97.00

DIG2717C Game Systems Design 4.000 credits

This is a core course for students majoring in game development and design. Students will learn how to develop game systems such as combat, economy, and social society. Students will also learn how to model and test systems before incorporating them into development, and how to use probability to create more interesting gameplay. Prerequisites: CAP 2047, DIG 1712, and MAC 1105. (3 hr. lecture, 2 hr. lab).

Lecture Hours: 48.000 - 58.000, Lab Hours: 32.000, Practicum Hours: 1.000

Prerequisite: CAP2047 AND DIG1712 AND MAC1105

Course User Fee: \$129.55

Program Description

Graphic Design Technology

Associate in Science | Code: 26031 | 64 credits

The Graphic Design Technology program is designed to give creative students a rewarding and challenging career in the artistic field of printing, publishing, electronic communication and advertising. An art aptitude is required or supplemental classes may be taken. Miami Dade College's graphic department offers one of the most extensive electronic publishing teaching facilities in the United States. This A.S. degree may transfer to upper- division universities with a Bachelor of Science degree in Graphic Design. This degree will give students employability skills for the printing, publishing, electronic communication, design or advertising industries.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1 **Units: 15.0**

GRA 1111C	Graphic Design Fundamentals	4.0
GRA 1280C	Digital Imaging Fundamentals	4.0
GRA 1750	Web Design Fundamentals	3.0
GRA 2117C	Digital Illustration Fundamentals	4.0

Semester 2 **Units: 14.0**

ENC 1101	English Composition 1	3.0
MGF 1130	Mathematical Thinking	3.0
GRA 1206C	Typography Fundamentals	4.0
GRA 2151C	Advanced Digital Illustration and Imaging	4.0

Semester 3 **Units: 6.0**

<i>Humanities</i>		3.0

Total: 64.0

GRA1111C Graphic Design Fundamentals 4.000 credits

The basics of graphic design comprise this introductory course. The student will analyze the principles and practices of graphic design, and evaluate their creative solutions to challenging design problems. Topics include design vocabulary, elements and principles, the design process, proportion and composition, creativity and visualization, as well as color and typography basics. Assignments are designed to emulate real-world projects, including brainstorming, design, execution, critique, revision and implementation.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$20.00

GRA1280C Digital Imaging Fundamentals 4.000 credits

The student will learn that leading industry-standard image editing software is used to prepare photos for print and digital media in this introductory course. Topics include: resolutions, compositing, masking, correcting and enhancing, as well as applying styles and effects. Assignments are designed to emulate real-world projects, including composite images for graphic design, photographic editing, and web pages.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$35.00

GRA1750 Web Design Fundamentals 3.000 credits

The basics of web design comprise this introductory course. An introduction to the history of the web, including current design trends, a survey of Internet architecture, as well as user experience fundamentals and usability will comprise this introductory-level course. The student will examine the structure and styling of web pages.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$118.00

GRA2117C Digital Illustration Fundamentals 4.000 credits

The student will create illustrations using industry-standard vector-based illustration software. Topics include creating vector-based illustrations, leading to an illustration portfolio. Emphasis will be on both representational as well as commercial art styles. Assignments are designed to emulate real-world projects, including illustration, design, and typography.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$50.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

GRA1206C Typography Fundamentals 4.000 credits

The student will design with type in this introductory course. The student will examine readability vs. legibility, the history of type, type anatomy and how to classify type into groups. The student will examine typographic layout design and how the principals of design apply. Studio projects will introduce the student to expressiveness through typographic creativity, symbolism and abstraction to express a given topic or design solution.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

GRA2151C Advanced Digital Illustration and Imaging 4.000 credits

This is an advanced course in digital illustration and imaging, building on existing skills to design and create portfolio-ready projects. Topics include: perspective illustration, advanced masking and compositing techniques, "comping" for layout presentations, outdoor advertisements or 3-D package designs. The student will explore optimizing graphics for web, animations and video.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA1280C, GRA2117C

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

GRA1113C Visual Identity & Branding Design 4.000 credits

Studio projects involving visual identity and branding design will comprise this intermediate course. The student will examine color theory, branding, and best practices to develop unique and impactful brands, including sustainability and brand value. The student will design logos and style manuals. Trademarks and copyrights will be examined.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA1111C, GRA1206C, GRA2117C

Course User Fee: \$20.00

GRA2121C Publication Design 4.000 credits

Studio projects focusing on periodical and catalog designs comprise this intermediate-level course. The student will apply knowledge and skills toward the design and creation of newsletters, magazines, catalogs, booklets, press media kits and interactive e-books. Emphasis will be on graphic design principles, composition, layout, pagination, style balance format and project planning.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA1111C, GRA1206C, GRA2117C, Pre/
Corequisite: GRA1280C

Course User Fee: \$25.00

GRA2545C Package Design 4.000 credits

The student will create package designs for use in retail sales, merchandising, and point-of-purchase in this introductory-level course. Assignments are designed to emulate real-world projects, including package construction, design, illustration and typography, leading to portfolio-ready projects.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA2151C

Course User Fee: \$50.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GRA2203C Portfolio and Business Practices For Designers 3.000 credits

This advanced course enables students to create a portfolio for self-promotion to prospective employers and clients. The student will revise and assemble projects accomplished throughout their career tracks. The student will also analyze best practices involved in the profession: pricing freelance assignments, contracts, intellectual property rights, and other professional requirements. Course is taken in the semester prior to graduation.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: GRA2121C, GRA2151C

Course User Fee: \$3.00

GRA2207C Capstone Project 4.000 credits

The student will apply cumulative knowledge and integrative skills to the design and creation of a professional-level project. The graphic/web design assignment shall meet the requirements specified in a case study or real-world project. Course is taken in the semester prior to graduation.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA2151C

Course User Fee: \$50.00

GRA2546C Advertising Design 4.000 credits

The student will design and create effective advertising campaign concepts for print, outdoor and digital media in this intermediate-level course. Studio projects will emphasize originality, brainstorming, ad layouts, creative copywriting and persuasion, culminating in portfolio-ready projects.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA1113C AND GRA2151C

Course User Fee: \$50.00

Program Description

Graphic Internet Technology

Associate in Science | Code: 26050 | 60 credits

The Graphic Internet Technology program is designed to prepare creative students for a rewarding and challenging career as a web designer. Students will develop a wide variety of internet communications skills and will learn to design, produce and distribute communications with the internet. Graduates will work in major corporations, web design studios, internet service providers, government departments and various types of communications organizations.

GRA1111C Graphic Design Fundamentals 4.000 credits

The basics of graphic design comprise this introductory course. The student will analyze the principles and practices of graphic design, and evaluate their creative solutions to challenging design problems. Topics include design vocabulary, elements and principles, the design process, proportion and composition, creativity and visualization, as well as color and typography basics. Assignments are designed to emulate real-world projects, including brainstorming, design, execution, critique, revision and implementation.
Lecture Hours: 32.000, Lab Hours: 64.000
Course User Fee: \$20.00

GRA1280C Digital Imaging Fundamentals 4.000 credits

The student will learn that leading industry-standard image editing software is used to prepare photos for print and digital media in this introductory course. Topics include: resolutions, compositing, masking, correcting and enhancing, as well as applying styles and effects. Assignments are designed to emulate real-world projects, including composite images for graphic design, photographic editing, and web pages.
Lecture Hours: 32.000, Lab Hours: 64.000
Course User Fee: \$35.00

GRA1750 Web Design Fundamentals 3.000 credits

The basics of web design comprise this introductory course. An introduction to the history of the web, including current design trends, a survey of Internet architecture, as well as user experience fundamentals and usability will comprise this introductory-level course. The student will examine the structure and styling of web pages.
Lecture Hours: 32.000, Lab Hours: 32.000
Course User Fee: \$118.00

GRA2117C Digital Illustration Fundamentals 4.000 credits

The student will create illustrations using industry-standard vector-based illustration software. Topics include creating vector-based illustrations, leading to an illustration portfolio. Emphasis will be on both representational as well as commercial art styles. Assignments are designed to emulate real-world projects, including illustration, design, and typography.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$50.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

GRA1206C Typography Fundamentals 4.000 credits

The student will design with type in this introductory course. The student will examine readability vs. legibility, the history of type, type anatomy and how to classify type into groups. The student will examine typographic layout design and how the principals of design apply. Studio projects will introduce the student to expressiveness through typographic creativity, symbolism and abstraction to express a given topic or design solution.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

GRA1751 Fixed-Layout Web Design 4.000 credits

The student will design fixed-width layout web pages in this intermediate-level course. The student will apply knowledge and skills to the design and construction of single web pages and multipage websites using a visual editor. Topics include styling, linking, incorporating media, production workflows, and the creation of web forms. Assignments emulate real-world projects, including ideation, design, creation, and revision, leading to portfolio-ready projects.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA1750

Course User Fee: \$118.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

GRA1752 Motion Graphics for Web Design 4.000 credits

This intermediate-level course examines web vector graphics and their ability to display illustrations and animations on a web page. An in-depth examination of web vector graphics which when combined with transitions and transformations, enables web designers to create dynamic online images and animations that are compatible across desktop and mobile web browsers. The student will create portfolio-ready web projects and animations.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA1750, GRA2117C

Course User Fee: \$118.00

GRA1754 Responsive Web Design 4.000 credits

The student will design fluid-layout and responsive pages in this intermediate-level course. Responsive web pages adapt to various devices and user preferences, and examines the advantages of responsive design, as well as the latest industry research reporting on statistics for mobile device use globally. Topics include: fluid grids, responsive typography and images, CSS media queries, "mobile first" workflows, usability, tools and resources.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA1751

Course User Fee: \$118.00

GRA2156C User Interface and Experience Design 4.000 credits

In this intermediate-level course, the student will examine the design and creation of mobile applications. The student will create visual designs for mobile apps, as well as analyze how to build and distribute them. The student will apply skills and knowledge toward creating portfolio-ready design projects. Prerequisites: GRA1751 and GRA1754. (2 hr. lecture; 4 hr. lab.)

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA1751, GRA1754

Course User Fee: \$50.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GRA2203C Portfolio and Business Practices For Designers 3.000 credits

This advanced course enables students to create a portfolio for self-promotion to prospective employers and clients. The student will revise and assemble projects accomplished throughout their career tracks. The student will also analyze best practices involved in the profession: pricing freelance assignments, contracts, intellectual property rights, and other professional requirements. Course is taken in the semester prior to graduation.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: GRA2121C, GRA2151C

Course User Fee: \$3.00

GRA2727 Dynamic Web Design 4.000 credits

The student will design and create dynamic web pages. This course presents PHP programming language to enable students to reduce website maintenance, change content depending on date and time, collect user input from an online form, and link to a MySQL database to display product information. Studio projects culminate in portfolio-ready artifacts.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: GRA1754, GRA2156C

Course User Fee: \$118.00

Program Description

Health Information Technology

Associate in Science | Code: 23052 | 70 credits

The Health Information Management program prepares the individual for employment as a Health Information Technician in a variety of health care facilities. The technician may function in various capacities, having responsibilities such as coding of diagnoses and procedures; processing of health information; storage and retrieval of health information and statistical reporting. Other aspects of the curriculum include medical legal aspects, quality assessment and supervision of the daily operations of a Health Information Department. Management of computerized health information is emphasized. Clinical experiences are provided under the

supervision of qualified professionals to enhance classroom instruction and demonstrate current advances in health information practice. A grade of "C" or better is required in all program courses.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0

HIM 2652C	Electronic Health Record	3.0
HIM 2820	Seminar and Professional Practice Experience 3	2.0

Total: 70.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

HIM1000 Introduction to Health Information Technology 2.000 credits

This course examines the role and functions of a health information technician. Students will learn about the structure, organization, and maintenance of the medical record. Students will also learn about the organization and function of various types of health care facilities, the responsibilities of national, state and local health agencies, and the organization and mission of the American Health Information Management Association.

Lecture Hours: 32.000

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Lab 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development, from an experiential approach.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

HIM1300 Health Care Facility and Delivery Systems 2.000 credits

This course will examine healthcare complexities, the function of various types of health facilities, accreditation standards, Medicare law, and the American health delivery system. Students will learn the components of Medicare, Medicaid, Health Insurance Organizations (HMO's), and the federal laws that govern them.

Lecture Hours: 32.000

HIM2012 Legal Aspects of Health Care 2.000 credits

This course provides basic knowledge of the United States of America court system and the interconnection between the health care system and the federal government. The student will learn concepts relating to the Health Insurance Portability Accountability Act (HIPAA), ethics, release of health information, record retention, and the legalities of electronic health records.

Lecture Hours: 32.000

Prerequisite: ENC1101

HIM2472 Medical Terminology 3.000 credits

Analysis of medical terms through learning basic roots, prefixes and suffixes permitting the student to have a working knowledge of the language of medicine. Prerequisite: Permission of department chairperson.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

HIM1110 Health Information Technology and Data Collection 2.000 credits

This course is designed to provide the skills necessary to function in a health information management department. Students will learn health record data collection and informatics. Students will also learn about the various components and approaches of the electronic health record.

Lecture Hours: 32.000

Prerequisite: HIM1000, HIM2472, Corequisite: HIM1110L

HIM1110L Health Information Management Data Collection Lab 3.000 credits

This course is designed to apply basic requirements imposed by regulatory agencies to health record data. Students will learn how clinical data repositories store health information. Concepts relating to confidentiality, ethics, and release of information will be applied.

Lab Hours: 96.000

Prerequisite: HIM1000, HIM2472, Corequisite: HIM1110

Course User Fee: \$25.00

HIM1800 Professional Practice Experience 1 2.000 credits

This course will provide the student with supervised professional practice experience in a health care setting, utilizing electronic health records and reports to manage health information data. Students will learn an in-depth knowledge of applying the minimum basic requirements for handling records imposed by regulatory agencies.

Clinical Hours: 96.000

Prerequisite: HIM1000, Corequisite: HIM1110, HIM1110L

Course User Fee: \$10.00

HIM2253C Current Procedural Terminology (CPT-4) 2.000 credits

This course provides an in-depth knowledge of coding and reporting using Current Procedural Terminology classification. Students will learn to read and interpret ambulatory health record documentation to classify and assign services and procure codes, and use of encoder and grouper software. HCPCS, APCs, and RBRVS will be discussed.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: BSC2085, BSC2085L, HIM2472

Course User Fee: \$15.00

HIM2222 ICD Coding Systems 2.000 credits

This course is designed to teach the current edition of International Classification of Diseases and Procedures codes. Students will learn code convention and format, usage of anatomy, physiology, and clinical disease processes. Pharmacology, present on admission indicators, correct code assignment and sequencing will be discussed.

Lecture Hours: 32.000

Prerequisite: BSC2085, BSC2085L, HIM2472,

Corequisite: HIM2222L

HIM2222L ICD Coding Systems Laboratory 3.000 credits

This course is designed to apply diagnoses and operations into numerical designations (codes) utilizing the International Classification of Diseases and Procedures. Students will learn correct sequencing, analysis of clinical disease processes, diagnosis and procedural terminology, and application of pharmacology in current coding systems. Encoding software is utilized.

Lab Hours: 96.000

Prerequisite: BSC2085, BSC2085L, HIM2472,

Corequisite: HIM2222

Course User Fee: \$25.00

HIM2433 Pathophysiology and Pharmacology 3.000 credits

This course provides an in-depth knowledge of disease, its etiology, medical complications, and pathophysiologic nature. Students will learn laboratory and other diagnostic tests used to confirm or rule out those diagnoses addressed. Current pharmacological treatments are explored with review and interpretation of health record data.

Lecture Hours: 48.000

Prerequisite: BSC2085, BSC2085L, HIM2472

HIM2512C Supervision & Organization For Health Information Management 2.000 credits

This course will review the basic principles of management and organizational life in a health information management department and the interrelationships within the health care organization. Emphasis will be placed on the supervisory role of the health information professional, including basic motivation and communication principles essential to the practice of health information management. The student will identify and use specific motivational and communication techniques in health information supervision.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: HIM 1000, HIM 1110, HIM 1110L, HIM 1800

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

HIM2211C Health Information Technologies 2.000 credits

This course is designed to examine computer technology used to collect and store health information. The student will learn a variety of applications used to maintain and secure health care data.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: HIM1110, HIM1110L, HIM1800

Course User Fee: \$85.00

HIM2234 Advanced Coding & Reimbursement Systems 2.000 credits

This course is designed to apply the fundamentals of the Prospective Payment Systems as it applies to coding and reimbursement. The student will learn documentation criteria, validation reports of coded data, health record for compliance, and optimum reimbursement under current payment methodologies.

Lecture Hours: 32.000

Prerequisite: HIM2222, HIM2222L, Corequisite: HIM2234L

HIM2234L Advanced Coding & Reimbursement Systems Laboratory 1.000 credits

This course is designed to apply and compute Prospective Payment Systems categories. Students will learn to apply health record documentation to identify and validate correct code and payment assignments. The focus is on the computation of MS-DRGs, APCs and a Case-Mix Index using encoder, grouper, and electronic billing software for reimbursement.

Lab Hours: 32.000

Prerequisite: HIM2222, HIM2222L, Corequisite: HIM2234

Course User Fee: \$15.00

HIM2400C Diversified Non-Hospital Health Records 2.000 credits

This course emphasizes the importance of quality record-keeping practices, data flow, and management of health information systems in a non-acute care setting. The student will learn the documentation requirements based on Federal and State statutes, accreditation standards, Medicare Conditions of Participation, payment systems, funding, Health Insurance Portability Accountability Act, and the evolution of the electronic health record. Lecture Hours: 16.000, Lab Hours: 32.000

Course User Fee: \$15.00

HIM2810 Professional Practice Experience 2 2.000 credits

This course is a supervised professional practice experience in a health care setting utilizing health records and reports to perform medical coding functions. Students will learn to assign Medicare Severity-Diagnosis Related Groups/Ambulatory Payment Classifications using the organization's information systems, encoder and grouper software. Sequencing of International Classification of Disease (ICD) and Current Procedural Terminology (CPT) coding systems will be discussed.

Clinical Hours: 96.000

Prerequisite: HIM2234, HIM2234L

Course User Fee: \$15.00

HIM2214C Health Statistics 2.000 credits

This course will focus on the definitions for analysis, interpretation, and display of healthcare data. The student will learn the acceptable terminology and basic definitions for reporting health statistics.

Emphasis is placed on the use of the formulas necessary for computing standard rates, percentages, and averages from patient data.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: HIM1110, HIM1110L, Corequisite: HIM2512C

Course User Fee: \$20.00

HIM2500 Data Management & Quality Assessment 2.000 credits

This course examines the basic principles of quality assessment, quality improvement and utilization review. Students will learn about the accreditation process, risk management, managed care models, and the methodologies and relationships of these key areas within a health care facility. Prerequisites: HIM 1110, 1110L, 2211C. Corequisite: HIM 2500L.

Lecture Hours: 32.000

Course User Fee: \$75.00

HIM2500L Data Management & Quality Assessment Laboratory 1.000 credits

The application of the basic principles of quality assessment: quality improvement and utilization review. The student will learn to generate models for the evaluation of different types of medical care. Activities will center on the accreditation process, managed care, and risk management. The methodologies and relationships of these key areas within a health care facility are emphasized.

Lab Hours: 32.000

Prerequisite: HIM 1110, HIM 1110L, Corequisite: HIM 2500

HIM2652C Electronic Health Record 3.000 credits

This course reviews the current trends and preparation implementing the electronic health record and reviews documentation requirements for a variety of healthcare settings. Students will learn best practices, problem-solve associated issues, and directly participate in the transitions of electronic health records.

Lecture Hours: 16.000, Lab Hours: 32.000

Pre/Corequisite: HIM2211C

HIM2820 Seminar and Professional Practice Experience 3 2.000 credits

This course is designed to provide students with structured learning experiences necessary for them to enter the health information management field. Students will learn preparation skills for the national examination by analyzing major examination topics offered in curriculum. A professional practice experience will be a component of this course.

Clinical Hours: 96.000

Prerequisite: HIM2810, Corequisite: HIM 2500, 2500L

Course User Fee: \$10.00

Program Description

Health Science - Health Services Management

Associate in Science | Code: 23082 | 60 credits

The Associate in Science degree in Health Sciences: Health Service Management is designed to introduce graduates to the healthcare field and an in-depth background on health care management to prepare them for a health-related career or a graduate professional health program or other graduate programs. In addition, students will acquire extensive knowledge on legal and ethical responsibilities within the health care system, current issues in the health care system, health services management concepts, health care quality management, and managing organizations in a multicultural environment.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

**BSC2085 Human Anatomy and Physiology 1
3.000 credits**

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

**BSC2085L Human Anatomy and Physiology 1
Laboratory 1.000 credits**

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

HIM2472 Medical Terminology 3.000 credits

Analysis of medical terms through learning basic roots, prefixes and suffixes permitting the student to have a working knowledge of the language of medicine. Prerequisite: Permission of department chairperson.

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

MAN2021 Principles of Management 3.000 credits

The student will learn to analyze the major functions of management. Emphasis is placed on learning how to manage organizations for excellence in both performance and employee satisfaction. Major topics include but are not limited to business ethics and social responsibility, strategic and operational planning, decision making, organization structure and behavior, managing groups and teams, communication and information technology.

Lecture Hours: 48.000

Course User Fee: \$15.00

HIM2652C Electronic Health Record 3.000 credits

This course reviews the current trends and preparation implementing the electronic health record and reviews documentation requirements for a variety of healthcare settings. Students will learn best practices, problem-solve associated issues, and directly participate in the transitions of electronic health records.

Lecture Hours: 16.000, Lab Hours: 32.000

Pre/Corequisite: HIM2211C

HIM1300 Health Care Facility and Delivery Systems 2.000 credits

This course will examine healthcare complexities, the function of various types of health facilities, accreditation standards, Medicare law, and the American health delivery system. Students will learn the components of Medicare, Medicaid, Health Insurance Organizations (HMO's), and the federal laws that govern them.

Lecture Hours: 32.000

HIM2253C Current Procedural Terminology (CPT-4) 2.000 credits

This course provides an in-depth knowledge of coding and reporting using Current Procedural Terminology classification. Students will learn to read and interpret ambulatory health record documentation to classify and assign services and procure codes, and use of encoder and grouper software. HCPCS, APCs, and RBRVS will be discussed.

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: BSC2085, BSC2085L, HIM2472

Course User Fee: \$15.00

HSA1380 Health Care Quality Management 3.000 credits

This course examines various efforts being introduced to improve the quality and efficiency of the health care system. Topics covered range from issues of medical error reduction, quality improvements in medical records, and utilization review, models for continuous quality improvement in physician-patient relations. (3 hr. lecture)

Lecture Hours: 48.000

HSA2181 Health Services Management Concepts 3.000 credits

This course provides preparation and fundamental skills required to enter the field of medical office management. Emphasis will be placed on health care delivery in a medical office setting. Topics include an introduction to health care management information systems, an introduction to essential policies and regulations, and an introduction to evaluation of performance and process outcomes.

Lecture Hours: 48.000

HSC1149 General Pharmacology for Health Care Professions 3.000 credits

This course will provide learners with a basic introduction to pharmacology concepts and principles associated with management of common diseases and treatment options. It presents information on major drug classifications, indications for use of common medications, and potential contraindications adversely affecting medical care outcomes.

Lecture Hours: 48.000

HIM2012 Legal Aspects of Health Care 2.000 credits

This course provides basic knowledge of the United States of America court system and the interconnection between the health care system and the federal government. The student will learn concepts relating to the Health Insurance Portability Accountability Act (HIPAA), ethics, release of health information, record retention, and the legalities of electronic health records.

Lecture Hours: 32.000

Prerequisite: ENC1101

HSA1102 Current Issues in Health 3.000 credits

This course covers current issues within the health care system. Emphasis focuses on varied areas of health care and is appropriate for persons directly or indirectly involved in the provision of health care or health education. (3 hr. lecture)

Lecture Hours: 48.000

HSA2001 Interprofessional Team Based Health Care 2.000 credits

This course is an introduction to interprofessional health care delivery. Reviewed are concepts of interprofessional collaboration practices in relation to team formation, ethical consideration with team management, effective communication approaches, and patient care processes. (3 hr. lecture)

Lecture Hours: 32.000

HSC 2810 Professional Practice Experience 4.000 credits

This course provides an opportunity for the student to observe basic principles and techniques of managers in a health care setting. Students apply knowledge from previous health service management courses in completing course assignments. This course has a service learning component at an area health care agency. (3 hr. lecture)

Lecture Hours: 64.000

Program Description

Health Sciences

Associate in Science | Code: 23081 | 60 credits

The Health Sciences program provides students an introduction to the healthcare field and an in-depth science background to prepare them for a health-related career or a graduate professional health program or other graduate program.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 15.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

**BSC2085 Human Anatomy and Physiology 1
3.000 credits**

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

**BSC2085L Human Anatomy and Physiology 1
Laboratory 1.000 credits**

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

**CHM1045 General Chemistry and Qualitative
Analysis 3.000 credits**

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite:

BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites:

BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

HSA2532 Medical Documentation in Health Care 1.000 credits

Medical Documentation in Health Care will introduce the student to documentation in the written patient chart or electronic medical record. Through case discussions and in-class writing assignments, the student will acquire the necessary skills to document in the patient's medical record utilizing medico-legal principles and evaluation and management criteria. Patient confidentiality, billing, and coding will also be discussed.

Lecture Hours: 16.000

PAS1800C Physical Diagnosis I 2.000 credits

A course which provides the students with the critical basis for and clinical exposure to techniques used in the proper performance and recording of the physical examination of patients.

Lecture Hours: 16.000, Clinical Hours: 48.000

Prerequisite: BSC 2086, BSC 2086L, CHM 1046, CHM 1046L, MCB 2010, MCB 2010L

Course User Fee: \$560.00

PAS1803 Clinical Anatomy and Physiology 2.000 credits

This course is designed for students accepted into the Physician Assistant Program. The course will review basic Anatomy and Physiology principles, while integrating important clinical concepts.

Students will learn to transition from Anatomy and Physiology to Pathophysiology.

Lecture Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L AND BSC2086 AND BSC2086L AND CHM1045 AND CHM1045L AND CHM1046 AND CHM1046L AND MCB2010 AND MCB2010L

PAS1831 Clinical Diagnostic Imaging 1.000 credits

The course introduces the PA student to principles of diagnostic imaging and a familiarity with the many diagnostic techniques available, their values and limitations, and how they may be best used in the management of the patient in clinical practice.

Lecture Hours: 16.000

Prerequisite: BSC2085 AND BSC2085L AND BSC2086 AND BSC2086L AND CHM1045 AND CHM1045L AND CHM1046 AND CHM1046L AND MCB2010, MCB2010L

Course User Fee: \$280.00

PAS2936 Contemporary Issues for the PA 1.000 credits

In this course the student will examine current issues, challenges, and practices influencing the physician assistant profession. Historical perspectives will be examined and the contributions of physician assistants in the healthcare system will be researched. The student will learn to use evidenced based medicine to research topics including the changing nature of health care delivery system in the United States; demographic, economic, ethical, and political factors influencing the practice of the physician assistant.

Lecture Hours: 16.000

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PAS1801C Physical Diagnosis 2 2.000 credits

This course will build upon the skills learned in Physical Diagnosis I and will prepare the physician assistant student with the essential skills for entry into clinical practice. Students will learn to perform medical interviews and physical examinations on live and professional patients, and high-fidelity simulators. Prerequisite: PAS1800C , PAS1803, PAS1831 , PAS2936. (1 hr. lecture, 3 hr. clinical) Lecture Hours: 16.000, Clinical Hours: 48.000 Prerequisite: PAS1800C, PAS1803, PAS1831, PAS2936 Course User Fee: \$560.00

PAS1811C Introduction to Medicine I for PAS 5.000 credits

Students will learn the signs, symptoms, and pathophysiology of common diseases affecting pediatric, adult, and geriatric patients. In addition, diagnosis, therapeutic interventions, and follow-up will be learned. Patient education and preventative medicine will also included. 3 hr. lecture, 2 hr. clinical) Lecture Hours: 48.000, Clinical Hours: 96.000 Prerequisite: PAS 1800C, PAS 1803, PAS 1831, PAS 2936

Course User Fee: \$1400.00

PAS1812 Behavioral and Community Medicine 1.000 credits

This course utilizes a biopsychosocial system approach to identify social determinants within the health care delivery system. Students will participate in outreach projects to implement concepts learned in the classroom within a community environment. Prerequisites:

Lecture Hours: 16.000

Prerequisite: PAS1800C AND PAS1831 AND PAS2936, PAS 2YYY

Course User Fee: \$280.00

PAS1813 Pathophysiological Basis of Disease I 2.000 credits

The clinical pathophysiology course serves as a transition from the basic medical sciences to clinical medicine. Students will learn the study of disease, both congenital and acquired with an emphasis on providing understanding of pathologic physiology in conjunction with information regarding medical history and laboratory data to solve case based clinical problems. Students are taught how pathophysiology translates into patient signs, symptoms. Prerequisites: PAS1800C, 2936. (2 hr. clinical)

Clinical Hours: 96.000

Prerequisite: PAS1800C AND PAS2936

PAS1822C Electrocardiography 1.000 credits

Students will learn the basic knowledge to understand, interpret and utilize an electrocardiogram (EKG) as a diagnostic tool. This course provides the foundation for learning to interpret 12-lead EKG tracings and applying those principles to evaluate the EKG tracings of common cardiac disease.

Lab Hours: 32.000

Prerequisite: PAS 1800C, PAS 1803, PAS 1831, PAS 2936

Course User Fee: \$560.00

PAS1823 Pharmacology 1 4.000 credits

This course will focus on the preparation, uses and action of drugs. Students will learn about Pharmacokinetics and Pharmacodynamics. Students will be introduced to Clinical Pharmacology following an organ system approach, covering the major classes of therapeutically relevant drugs, and how they work at the molecular and cellular levels.

Prerequisites: PAS1800C, PAS1803, PAS1831, and PAS2936 (4 hr. lecture)

Lecture Hours: 64.000

Prerequisite: HSA2532, PAS1801C, PAS1803, PAS1831, PAS2936

Course User Fee: \$560.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

Program Description

Histologic Technology

Associate in Science | Code: 23064 | 76 credits

The Histologic Technology program prepares the student for employment in an unlimited choice of practice settings including: hospitals, clinics, clinical laboratories, veterinary pathology and forensic pathology. A Histotechnologist will be able to freeze, embed, and cut tissues, mount tissue samples on slides and stain them with dyes to make the cell details visible under the microscope. Graduates are eligible to sit for the Florida State Licensure and Registry with the American Society of Clinical Pathologists and equivalent licensure.

Program Modality: Both [In-Person (IP) and On-line]

		Total: 76.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions.

Prerequisite: MAT1033; Corequisite: CHM1033L.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: CHM1033L

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite:

MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy.

Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Lab 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development, from an experiential approach.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

MLT1191 Histotechnology 1 3.000 credits

This course will introduce students to the fundamental principles of histologic technology. These include the principles of fixation, processing for paraffin-embedding, microtome sectioning, staining and cover-slipping and laboratory safety.

Lecture Hours: 48.000

MLT1191 Histotechnology 1 3.000 credits

This course will introduce students to the fundamental principles of histologic technology. These include the principles of fixation, processing for paraffin-embedding, microtome sectioning, staining and cover-slipping and laboratory safety.

Lecture Hours: 48.000

MLT1195C Tissue Identification 1 3.000 credits

This course will introduce students to the study of human organs and tissues for the purpose of developing histotechnological skills. It will include recognition, composition, and function of organs and tissues. Macroscopic and microscopic laboratory examination and evaluation of specimens will be included.

Lecture Hours: 32.000, Lab Hours: 32.000

MLT1196 Laboratory Safety and Regulations 3.000 credits

This course will introduce students to the rules and regulations governing safety in the histotechnology laboratory. It will also introduce students to the federal regulations pertaining to the histotechnology laboratory and methods of compliance. Prominent safety issues to be covered include the biological and chemical hazards in histology laboratory, formaldehyde standard, hazardous waste disposal and minimization.

Lecture Hours: 48.000

MLT2192 Histotechnology 2 3.000 credits

This course is a continuation of Histotechnology 1. Students will be introduced to advanced processing techniques of human tissue for anatomical pathology and concepts of instrumentation.

Lecture Hours: 48.000

Prerequisite: MLT1191

Course User Fee: \$100.00

MLT2192L Histotechnology 2 Laboratory 3.000 credits

This course is a continuation of Histotechnology Lab 1. Students will be introduced to more complex laboratory techniques in histotechnology.

Lab Hours: 96.000

Prerequisite: MLT1191, MLT1191L, Corequisite: MLT2197C

MLT2197C Tissue Identification 2 4.000 credits

This course will provide the students with the correlations between histotechnological procedures and diseases processes. Students will study the changes in tissue that are associated with various disease states, and will learn the usefulness of selected special stains and techniques in identifying disease processes.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: MLT1195C

MLT2180C Infectious Diseases & Control Practices 3.000 credits

This course will focus on the principles of transmission and control of diseases with an emphasis on infectious tissue specimens.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: MCB2010, MCB2010L

MLT2198 Histochemistry 3.000 credits

This course will introduce students to organic chemistry of stains and special stains, dyes, hydrocarbons; aromatics, alcohols, ethers, aldehydes, ketones, carbonyl compounds, amines and amides.

Lecture Hours: 48.000

Prerequisite: MLT2192, MLT2192L, Corequisite: MLT2198L

MLT2198L Histochemistry Laboratory 3.000 credits

This course will introduce students to biochemicals used in histology with emphasis on laboratory preparation and use of histochemical and immunohistochemical stains. Prerequisite: CHM 1033L; corequisite: MLT 2198. Laboratory fee. (4 hr. lab)

Lab Hours: 96.000

Prerequisite: CHM 1033, CHM 1033L, MLT 2192, MLT 2192L, Corequisite: MLT2198

HIM2472 Medical Terminology 3.000 credits

Analysis of medical terms through learning basic roots, prefixes and suffixes permitting the student to have a working knowledge of the language of medicine. Prerequisite: Permission of department chairperson.

Lecture Hours: 48.000

MLT1840L Histotechnology Practicum 1 5.000 credits

This is a clinical experience in which students will learn the techniques of processing human tissue for histological purposes.

Practicum Hours: 240.000

Prerequisite: MLT 2180C, MLT 2198, MLT 2198L

MLT2841L Histotechnology Practicum 2 5.000 credits

This clinical experience will introduce the students to the basic techniques of microtomy, staining and preparation of human tissue for anatomical pathology.

Practicum Hours: 240.000

Prerequisite: MLT1840L, Corequisite: MLT2931

MLT2931 Histotechnology Seminar 3.000 credits

This course will prepare students for career entry. Emphasis will be placed on current topics in histotechnology, legal and ethical responsibilities of health care professionals, knowledge of the health care delivery system, including health policies and financing and employability skills.

Lecture Hours: 48.000

Prerequisite: MLT1840L, Corequisite: MLT2841L

Program Description

Hospitality & Tourism Management

Associate in Science | Code: 22016 | 60 credits

The Hospitality and Tourism Management program provides professional preparation for a career in the hospitality industry. Hospitality management is presented as a core curriculum with emphasis on hotel, cruise-line, resorts, conventions, and institutional management. An internship program is required to provide practical experience in the field of the student's choice. The Associate in Arts degree is also available to the student planning to transfer to a four-year institution after graduation from MDC. Consult an advisor about which additional courses are included in that program.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

HFT1000 Introduction to Hospitality 3.000 credits

In this introductory course, the student will learn a basic understanding of the lodging, travel, meeting planning, club management, food and beverage, gaming and cruise industry by tracing the industry's growth and development, reviewing the organization of hospitality operations, and by focusing on industry opportunities and future trends. Career opportunities, interview and resume writing skills are discussed.

Lecture Hours: 48.000

Course User Fee: \$15.00

HFT1210 Human Resources 3.000 credits

Provides information relating to the recruitment and selection of new staff, the handling of difficult employees, motivating employees and conducting performance evaluations. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

HFT1949 Co-Op Work-Study Internships I 3.000 credits

Provides a supervised cooperative education experience in the hospitality industry that combines academic learning with practical workplace training. Students gain hands-on experience in hospitality operations, customer service, professional communication, and industry best practices while working in approved hospitality settings. Emphasis is placed on skill development, workplace professionalism, and career readiness through structured experiential learning.

Lecture Hours: 48.000

Course User Fee: \$25.00

HFT2449 E-Business For The Hospitality Industry 3.000 credits

Prepares student to manage information systems within their organizations. Emphasis is on selecting the right computer systems technology and maximizing available technology in order to promote and sell services. Introduces the use of automation in the broad hospitality sector and exams technological applications ranging from distribution systems (GDS, CRS and Web based), Property Management Systems, and EPOS systems to developments in telecommunications, and assesses their effect on the tourism sector. While a broad interpretation of both technology and tourism will be used, particular emphasis will be placed on the hospitality sector (i.e. hotels and catering) and on distribution technology. A combination of lecture, case studies, seminars, visiting lecture and lab sessions are used.

Lecture Hours: 48.000

Prerequisite: HFT1000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

HFT1852 Menu and Facilities Planning 3.000 credits

This course is a study of the factors involved in planning effective menus for a variety of food service operations. Students will learn to develop a firm working knowledge of menu-writing techniques and participate in actual menu design and facilities layout of a food service establishment.

Lecture Hours: 48.000

Prerequisite: HFT1000

Course User Fee: \$40.00

HFT2421 Managerial Accounting for Hospitality 3.000 credits

Presents managerial accounting concepts and explains how they apply to specific operations within the hospitality industry.

Lecture Hours: 48.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

Program Description

Interior Design Technology

Associate in Science | Code: 26030 | 75 credits

The Interior Design Technology program is planned to develop ability in the design of interiors, to encourage originality and to foster talent in this field. It includes theoretical and technical aspects of interior design. The program is open to those who study for pleasure and those preparing for a career.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1101	English Composition 1	3.0
ARC 1115	Architectural Communications 1	2.0
ARC 1126C	Architectural Drawing 1	4.0
IND 1020	Interior Design 1	4.0

Semester 2		Units: 13.0
MAC 1105	College Algebra	3.0
ARC 2171C	Computer Aided Drafting 1	4.0
IND 1200	Interior Design 2	4.0

IND 2608	Sustainable Design	3.0
Program Electives*		3.0

Select 3 credits from the following course options: ARC, IND*, CGS 1060C

Total: 75.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARC1115 Architectural Communications 1 2.000 credits

Exercises in freehand drawing, sketching and linear perspective are designed to increase the student's awareness of the architectural environment. This is accomplished through a series of form studies of nature, architectural forms, and abstract elements of composition.

Lecture Hours: 16.000, Lab Hours: 32.000

Course User Fee: \$25.00

ARC1126C Architectural Drawing 1 4.000 credits

This course exercises the visualization and drafting of architectural objects and construction conditions. Students will learn to draw orthographic projections, isometric and sectional drawings as an expression of architectural communication. Topics include drawing plans, elevations, details, schedules, and sections of wood frame and masonry structures.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

IND1020 Interior Design 1 4.000 credits

Student's projects develop the ability to plan simple interior floor plans and elevations.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ARC1115

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

ARC2171C Computer Aided Drafting 1 4.000 credits

Computer-aided drafting as it applies in the fields of architecture and interior design using office simulation. Emphasis is on the production of computer-aided drafting of working drawings involving different types of structure. Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: ARC1126C OR ARC2461
Course User Fee: \$50.00

IND1200 Interior Design 2 4.000 credits

Problems in room planning, correlation of color schemes and furnishings. Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: IND1020
Course User Fee: \$25.00

IND1300 Interior Design Presentations 1 2.000 credits

An introductory course in the use of various media for presentation of plans, schemes, and interior perspective renderings. Lecture Hours: 16.000, Lab Hours: 32.000
Prerequisite: IND1020, Corequisite: IND1200
Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ARC2461 Architectural Materials and Construction 1 4.000 credits

An introduction to basic materials and methods of building construction. Emphasis is on wood, concrete, unit masonry, and light steel construction. Laboratory projects may include working drawings' interpretation, sketching construction details, or field trips to construction sites and fabricant plants. Designed primarily as the initial materials and methods course for architectural transfer students.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ARC1126C OR BCN1251

Course User Fee: \$25.00

IND1100 History of Interiors 1 3.000 credits

Lecture Hours: 48.000

Course User Fee: \$10.00

IND2210 Interior Design 3 4.000 credits

Projects provide practice in planning traditional and contemporary interiors including working drawings and specifications.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: IND1200, Corequisite: IND2330

Course User Fee: \$25.00

IND2330 Interior Design Presentations 2 3.000 credits

Emphasis is on perfecting water color, casein and reproducible drawing techniques through the presentation of interior plans, elevations and perspectives. Projects also provide experience in assembling collages.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: IND1300, Corequisite: IND2210

Course User Fee: \$25.00

IND1130 History of Interiors 2 3.000 credits

Emphasis is on perfecting water color, casein and reproducible drawing techniques through the presentation of interior plans, elevations and perspectives. Projects also provide experience in assembling collages.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: IND1300, Corequisite: IND2210

Course User Fee: \$25.00

IND2220 Interior Design 4 4.000 credits

Emphasis is on perfecting watercolor, casein and reproducible drawing techniques through the presentation of interior plans, elevations and perspectives. Projects also provide experience in assembling collages.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: IND2210

Course User Fee: \$25.00

IND2430 Lighting Design 3.000 credits

A survey of utilitarian interior lighting and exterior architectural lighting including fundamentals and basic physic laws, practical applications to interior and exterior spaces and lighting design considering different levels of space utilization and fixture efficiency.

Lecture Hours: 48.000

Prerequisite: IND1200

Course User Fee: \$10.00

IND2500 Professional Practices 3.000 credits

Duties and responsibilities relative to employment and business practices.

Lecture Hours: 48.000

Prerequisite: Sophomore standing level or equivalent.

Course User Fee: \$10.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

**IND2201 Design Principles for Kitchen and Bath
3.000 credits**

A specialized design course for kitchen and baths. Students will learn the basic elements and principles of creating spaces for clients, blending architectural styles, colors and themes with function and purpose.

Lecture Hours: 48.000

Prerequisite: ARC2461, IND1200, IND1300

Course User Fee: \$10.00

IND2608 Sustainable Design 3.000 credits

Introduction to basic theories and practices of ecological design in interiors. Students will learn to take responsibility for their work by understanding the impact their designs have on our environment, and ways to mitigate this impact by gaining a practical understanding of the field of sustainable design.

Lecture Hours: 48.000

Prerequisite: ARC1126C, ARC2461, IND1200, IND1300

Course User Fee: \$10.00

Program Description

Landscape & Horticulture Technology

Associate in Science | Code: 21005 | 60 credits

The purpose of this program is to prepare students for employment in horticulture and landscape industries. The students will learn about plant growth, nutrition and fertilization, plant classification and identification, propagation, pest control, pruning, maintenance and drainage. Students will also gain business management and job skills. Students pursuing the Horticulture Specialization will obtain the skills necessary for protecting, processing, shipping and marketing of commercially viable plants. Students pursuing the Landscape Specialization will obtain the skills necessary for landscape design and installation (Note: The degree is awarded only once.).

Program Modality: Both [In-Person (IP) and On-line]

Total: 60.0

HOS1010 Horticulture 1 3.000 credits

This is an introductory course on the principles of horticulture. Students will learn plant structure and function, plant propagation, plant nutrients and fertilizers, potting media, soils, pruning, and plant pests. A survey of various fields in ornamental horticulture will also be covered.

Lecture Hours: 48.000

IPM2112 Principles of Entomology 3.000 credits

This is an introductory course on the principles of entomology. Students will learn to identify characteristics of arthropods, the insect orders, and the growth cycle of insects. Students will also address insect pests specific to South Florida and methods to responsibly manage plant pests.

Lecture Hours: 48.000

IPM2301 Pesticide Applications 3.000 credits

Students will learn government regulations with regards to pesticide mixing and application, and safety equipment. Preparation for the restricted use applicators license exam will be covered.

Lecture Hours: 48.000

BOT2150C Native Plant Identification and Usage in South FL 3.000 credits

Plants native to South Florida are identified and presented according to their typical ecological communities. Emphasis is placed on pineland, tropical hardwood hammock, mangrove and coastal, Everglades marsh, and cypress swamp ecosystems. Plants suitable for use in urban landscapes, as well as ecological restoration projects, are also covered. This course combines lecture and laboratory instruction.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$23.00

ORH1510 Landscape Plant Identification 1 3.000 credits

Students will learn the identification and usage of plants used in the horticultural trade in South Florida. Subject matter includes trees, shrubs, and flowering plants for both interior and outdoor use.

Lecture Hours: 48.000

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

HOS1011 Horticulture 2 3.000 credits

The student will learn the maintenance and management aspects of horticulture business (nursery facility or landscape maintenance and design) including irrigation systems, plant growing facilities, plant propagation equipment, and landscape maintenance equipment. Hands-on practice in programming of plant production crops and nursery design in our nursery.

Lecture Hours: 48.000

Prerequisite: HOS1010

ORH1251 Nursery Practices 1 3.000 credits

The student will learn the techniques and practices in commercial production of ornamental plants.

Emphasis on types of nurseries.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: HOS1010

ORH2949 Landscape Technology Internship 3.000 credits

The internship will provide students with hands-on work experience in horticulture. Landscape, or related technology industries. Students will learn employability skills, and the specific skills and safety requirements necessary for effective work in this environment.

Other Hours: 144.000

SBM1000 Small Business Management 3.000 credits

Students will learn that growing a business involves shifting from the search for and validation of a business model to executing and scaling the business model. The skill sets are different and more formal management is often required. The course reviews the context and complexity of scaling a business and executing a business model.

Lecture Hours: 48.000

Course User Fee: \$90.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

LDE2310 Irrigation Design & Maintenance 3.000 credits

The students will learn the design, maintenance, and installation of nursery and landscape irrigation systems. All types of nursery systems will be covered including field, shade house, and greenhouse. Both sprinkle and low volume drip systems will be surveyed for appropriateness in nursery and landscape uses. Includes occasional weekend hands-on activities.

Lecture Hours: 48.000

Program Description

Marketing

Associate in Science | Code: 25047 | 60 credits

The Associate in Science (AS) in Marketing is designed mainly for students who intend to seek immediate employment in the fields of marketing, international business and trade, or real estate; also for those desiring to work in a non-profit institution and those presently employed in marketing but seeking advancement. The Associate in Arts degree is also available to the student planning to transfer to a senior institution after graduating from Miami Dade College. Consult an advisor about additional courses for such plans.

Program Modality: Both [In-Person (IP) and On-line]

¹Select 15 credits from the following course option: MAR*, MKA*

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method. Lecture Hours: 48.000
Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations. Lecture Hours: 48.000
Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues. Lecture Hours: 48.000
Course User Fee: \$10.00

**EVR1001 Introduction to Environmental Science
3.000 credits**

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ACG2011 Principles of Accounting II 3.000 credits

This is the second part of the introductory financial accounting series, which includes ACG2001 and ACG2011, with emphasis on accounting owner's equity and corporate financial statements. Other topics include receivables, fixed assets, intangible assets, current and long-term liabilities. Co-requisite: ACG2011L

Lecture Hours: 48.000

ACG2011L Principles of Accounting 2 Lab 1.000 credits

Students will use personal computer software and financial accounting applications to analyze accounting records, prepare financial statements, and compile EXCEL spreadsheets. This course will reinforce, with tutorial help and problem-solving, the concepts needed to achieve the objectives of ACG2011. Corequisite: ACG2011.

Lab Hours: 32.000

Corequisite: ACG2001

Course User Fee: \$22.00

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite: MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033 Any Mathematics level higher than MAT 1033 will satisfy this requirement.

MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

MAR1011 Principles of Marketing 3.000 credits

This introductory course emphasizes key concepts and issues underlying the modern practice of marketing. The course provides the student with a clear understanding of marketing's role in the 21st Century and introduces the student to both traditional and contemporary ways of marketing. The student will learn how marketers deliver value by satisfying customer needs and wants, determine which target markets to serve, and decide which goods and services are needed to serve these markets.

Lecture Hours: 48.000

Course User Fee: \$10.00

MAR1720 Marketing in a Digital World 3.000 credits

This course provides an introduction to new marketing concepts and the broad spectrum of digital marketing. Students will learn to utilize digital tools, social networks and media, strategies, and tactics to create awareness and to promote products and services to consumers and businesses.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAR2101 Social Media Marketing 3.000 credits

This course addresses the changes in marketing as a result of social media. The student will explore in-depth the role of social media in marketing. The student will focus on developing an effective marketing plan utilizing social media, with an emphasis on the importance of building an online customer community and developing customer engagement and loyalty.

Lecture Hours: 48.000

MAR2703 Marketing Content, Branding and Strategy 3.000 credits

This course provides an introduction into branding and content strategy. Students will explore concepts, such as: integrated marketing communications, consumer psychology, buying motivations, appropriate content, branding, and marketing strategy as it relates to digital marketing. Students will have the opportunity to practice their writing and communications skills in the development of digital marketing content.

Lecture Hours: 48.000

Course User Fee: \$57.00

MAR2704 Marketing Web Analytics 3.000 credits

This course helps students to develop a deep understanding of the digital analytics landscape. The student will learn how to identify which metrics are best to measure web, mobile, social and marketing channels, and how organizations use web analytics to obtain higher profits, improved customer relationships, and measurable value. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$57.00

MAR2952 Digital Marketing Capstone 3.000 credits

This course provides a real-world approach to designing, implementing, managing and analyzing a digital marketing campaign or strategy. The student will engage in a comprehensive field experience designed to gain insights into the creative processes and demonstrate competence by applying the knowledge and concepts of marketing.

Lecture Hours: 48.000

MAR1440 Fundamentals of Negotiations 3.000 credits

This course introduces the negotiation process and identifying consumer motivations. Students will analyze the various positions of negotiations from gaining leverage to making considerations. Students will examine a long-term sales strategy and how a balanced negotiation plan impacts it. (3 hr. lecture)

Lecture Hours: 48.000, Lab Hours: 5.000

Course User Fee: \$47.44

MAR1502 Sales and Consumer Behavior 3.000 credits

This course introduces the process consumers use in making purchase decisions. Students will analyze how developing a sales personality factors into producing prospects, leads, and ultimately generating sales. Students will identify how both buyer and seller behaviors interact in the sales process. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$47.44

MAR2419 Technology in Sales 3.000 credits

This course introduces the various technological tools used in the sales process. Students will explore sales management software, data management, artificial intelligence sales technology, and automated sales functions. Students will analyze the benefits of utilizing technology and the competitive advantage it provides to a sales force. Prerequisites: MAR1440, MKA1160, MAR1502, MKA1022, MKA2024. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: MKA1160

Course User Fee: \$47.44

MKA1022 Relationship Selling 3.000 credits

This course introduces the role that relationship building plays in sales. Students will explore the communication process and the importance of interpersonal skills in developing a relationship for an effective sales strategy. Students will develop a sales presentation based around consumer needs.

Lecture Hours: 48.000

Course User Fee: \$47.44

MKA1160 Customer Relationship Management 3.000 credits

This course provides an introduction into Customer Relationship Management (CRM). Students will be exposed to concepts ranging from identifying customer needs, communication channels, customer acquisition cost, demographics and target marketing. Students will learn the role CRM plays in a sales strategy. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$47.44

MKA2024 Organizational Sales Management 3.000 credits

This course introduces the role of a sales manager and sales team within an organization. Students will examine the management process of recruiting, leading, and setting sales targets and quotas for a sales team. Students will explore sales analytics that measure the effectiveness of an organizational sales strategy.

Lecture Hours: 48.000

Course User Fee: \$47.44

OST2335 Business Writing 3.000 credits

Covers the procedures for writing effective business letters and memorandums, a review of grammar, and the proper format of today's business correspondence. Students learn how to prepare inquiry letters, direct and indirect response letters, application letters and resumes, and short reports.

Lecture Hours: 48.000

Course User Fee: \$15.00

Program Description

Music Business - Management and Marketing

Associate in Science | Code: 25019 | 64 credits

The Associate of Science in Music Business with a concentration in Management and Marketing is tailored for students aspiring to build careers in the music and entertainment industries. This program blends core business skills with specialized knowledge and practices unique to the music industry. Graduates will gain the expertise needed to navigate key aspects of the industry, including artist management, event production, music publishing, licensing, administration, marketing, and entrepreneurship. Through hands-on learning and industry-focused coursework, students will be equipped to succeed as professionals in this dynamic field.

MAR 2704	Marketing Web Analytics	3.0
MUM 1949	Music Industry Internship	3.0

Total: 64.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

MUM2700 Music Business 1 3.000 credits

This course is an introduction to the foundational aspects of the music industry, focusing on the essential principles and applications of music copyright law, contracts, publishing, licensing, and management. Students will explore the roles of agencies and organizations in the industry, along with the processes of record production, marketing and distribution. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$20.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

MAN2021 Principles of Management 3.000 credits

The student will learn to analyze the major functions of management. Emphasis is placed on learning how to manage organizations for excellence in both performance and employee satisfaction. Major topics include but are not limited to business ethics and social responsibility, strategic and operational planning, decision making, organization structure and behavior, managing groups and teams, communication and information technology.

Lecture Hours: 48.000

Course User Fee: \$15.00

MAR1011 Principles of Marketing 3.000 credits

This introductory course emphasizes key concepts and issues underlying the modern practice of marketing. The course provides the student with a clear understanding of marketing's role in the 21st Century and introduces the student to both traditional and contemporary ways of marketing. The student will learn how marketers deliver value by satisfying customer needs and wants, determine which target markets to serve, and decide which goods and services are needed to serve these markets.

Lecture Hours: 48.000

Course User Fee: \$10.00

MUM2702 Music Business 2 3.000 credits

This course provides an in-depth exploration of entrepreneurship, employability, and management principles within key areas of the music industry, including music equipment sales, concert promotion, independent record labels, record production, music licensing, and publishing. Students will gain an understanding of the business models and strategic approaches that drive success in each sector, with an emphasis on career skill development such as business planning, marketing, financial management, and contract negotiation. Prerequisite MUM 2700. (3 hr. lecture).

Lecture Hours: 48.000

Prerequisite: MUM2700

Course User Fee: \$20.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

MAR1720 Marketing in a Digital World 3.000 credits

This course provides an introduction to new marketing concepts and the broad spectrum of digital marketing. Students will learn to utilize digital tools, social networks and media, strategies, and tactics to create awareness and to promote products and services to consumers and businesses.

Lecture Hours: 48.000

Course User Fee: \$60.00

MUM2703 Music Business 3 3.000 credits

This course provides hands-on training in essential computer applications and online tools relevant to the music industry. Students will learn to use digital tools to create professional promotional materials, presentations, and documents typically used in music industry transactions. (6 hr. lab)

Lab Hours: 96.000

Course User Fee: \$25.00

BUL2241 Business Law 1 3.000 credits

Law in relation to the proper conduct of business, including a consideration of the nature and source of law, courts and courtroom procedure, contracts, sales of goods, negotiable instruments and secured transactions. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

MAR2101 Social Media Marketing 3.000 credits

This course addresses the changes in marketing as a result of social media. The student will explore in-depth the role of social media in marketing. The student will focus on developing an effective marketing plan utilizing social media, with an emphasis on the importance of building an online customer community and developing customer engagement and loyalty.

Lecture Hours: 48.000

MUM2704 Music Business 4 3.000 credits

This course provides hands-on experience with cross-platform software applications and online resources used within the Music Business environment. Students will create their own website for marketing their own Music Business enterprise.

Prerequisite: MUM 2703. (6 hr. lab)

Lab Hours: 96.000

Prerequisite: MUM2703

Course User Fee: \$25.00

MAR2704 Marketing Web Analytics 3.000 credits

This course helps students to develop a deep understanding of the digital analytics landscape. The student will learn how to identify which metrics are best to measure web, mobile, social and marketing channels, and how organizations use web analytics to obtain higher profits, improved customer relationships, and measurable value. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$57.00

MUM1949 Music Industry Internship 3.000 credits

This course is designed to provide students with practical, hands-on experience in their chosen field of study—such as Music Business, Music Production, or a related field—through on-the-job training and faculty guidance. Students are evaluated on the basis of documented learning outcomes as reported by both the student and the employer. Prerequisite: MUM2700, MUM 2702, and MUM 2703; or department approval.

Lecture Hours: 48.000

Prerequisite: MUM2700 AND MUM2702 AND MUM2703

Program Description

Music Business - Performance and Production

Associate in Science | Code: 25044 | 64 credits

The Associate of Science (A.S.) in Music Business - Performance and Production track offers a comprehensive program for students interested in performing, producing, and composing music. This track is designed to develop a well-rounded understanding of both musical artistry and the business aspects of the music and entertainment industries. Students in this program engage in coursework that includes business essentials, music business practices, music production, performance training, and music theory. The curriculum equips students with the skills needed to manage their own careers as performers and producers while building a strong foundation in the professional and creative aspects of the industry.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MUM2623C MIDI Electronic Music 1 3.000 credits

This course is designed to acquaint music students with basic applications of Musical Instrument Digital Interface (MIDI) for the purpose of composition and performance and learning pre-production concepts with multi-track recording studio. Emphasis will be placed on keyboards, outboard gear, drum machines, and computer-assisted operations. Special fee.

Lecture Hours: 32.000, Lab Hours: 16.000 - 32.000

Course User Fee: \$10.00

MUM2700 Music Business 1 3.000 credits

This course is an introduction to the foundational aspects of the music industry, focusing on the essential principles and applications of music copyright law, contracts, publishing, licensing, and management. Students will explore the roles of agencies and organizations in the industry, along with the processes of record production, marketing and distribution. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$20.00

MVK1111 Class Piano 1 1.000 credits

The secondary area of piano with emphasis on sight-reading, melody harmonization, and ensemble playing. Required of all music students except piano majors. May be repeated for credit.

Lab Hours: 32.000

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

MUM2702 Music Business 2 3.000 credits

This course provides an in-depth exploration of entrepreneurship, employability, and management principles within key areas of the music industry, including music equipment sales, concert promotion, independent record labels, record production, music licensing, and publishing. Students will gain an understanding of the business models and strategic approaches that drive success in each sector, with an emphasis on career skill development such as business planning, marketing, financial management, and contract negotiation. Prerequisite MUM 2700. (3 hr. lecture).

Lecture Hours: 48.000

Prerequisite: MUM2700

Course User Fee: \$20.00

MUT1111 Theory 1 3.000 credits

The techniques of writing four-part chord progressions using root position and inversions of the primary and secondary triads and the dominant and supertonic seventh; also, non-harmonic tones, melodic writing, and an introduction modulation.

Lecture Hours: 48.000

Prerequisite: MUT1001or passing score on departmental placement exam., Corequisite: MUT1241

Course User Fee: \$15.00

MUT1241 Sightsinging & Ear Training 1 Year 1.000 credits

The development of aural skill by means of rhythmic and melodic dictation and sightsinging.

Lab Hours: 32.000

Corequisite: MUT1111, MUT1112

Course User Fee: \$10.00

MVK1112 Class Piano 2 1.000 credits

A continuation of MVK 1111.

Lab Hours: 32.000

Prerequisite: MVK1111or placement by exam.

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAR1011 Principles of Marketing 3.000 credits

This introductory course emphasizes key concepts and issues underlying the modern practice of marketing. The course provides the student with a clear understanding of marketing's role in the 21st Century and introduces the student to both traditional and contemporary ways of marketing. The student will learn how marketers deliver value by satisfying customer needs and wants, determine which target markets to serve, and decide which goods and services are needed to serve these markets.

Lecture Hours: 48.000

Course User Fee: \$10.00

MUM2600 Sound Recording 1 3.000 credits

An introduction to techniques, practices and procedures in making eight-track recordings. The student will gain experience with acoustical balancing, editing and over-dubbing in a wide variety of sound situations.

Lecture Hours: 48.000

Corequisite: MUM2600L

MUM2600L Sound Recording 1 Lab 1.000 credits

Participation in MUM 2600L offers students directed "hands on" experience coinciding with lectures in MUM 2600.

Lab Hours: 32.000

Corequisite: MUM2600

Course User Fee: \$15.00

MUM2703 Music Business 3 3.000 credits

This course provides hands-on training in essential computer applications and online tools relevant to the music industry. Students will learn to use digital tools to create professional promotional materials, presentations, and documents typically used in music industry transactions. (6 hr. lab)

Lab Hours: 96.000

Course User Fee: \$25.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

**EVR1001 Introduction to Environmental Science
3.000 credits**

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

**MUM1949 Music Industry Internship 3.000
credits**

This course is designed to provide students with practical, hands-on experience in their chosen field of study—such as Music Business, Music Production, or a related field—through on-the-job training and faculty guidance. Students are evaluated on the basis of documented learning outcomes as reported by both the student and the employer. Prerequisite: MUM2700, MUM 2702, and MUM 2703; or department approval.

Lecture Hours: 48.000

Prerequisite: MUM2700 AND MUM2702 AND MUM2703

MUM2704 Music Business 4 3.000 credits

This course provides hands-on experience with cross-platform software applications and online resources used within the Music Business environment. Students will create their own website for marketing their own Music Business enterprise.

Prerequisite: MUM 2703. (6 hr. lab)

Lab Hours: 96.000

Prerequisite: MUM2703

Course User Fee: \$25.00

Program Description

Networking Services Technology - Enterprise Cloud Computing

Associate in Science | Code: 25077 | 60 credits

The Networking Services Technology - Enterprise Cloud Computing program is designed to provide an opportunity to establish foundation in architect scalable, highly available application solutions that leverage cloud computing services, utilizing best practices focusing on cloud security, cost, and reliability. Graduates will utilize core design patterns and infrastructure expertise to implement solutions to deploy and maintain workloads and applications.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1**Units: 14.0**

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1134 Networking Technologies 4.000 credits

This course will provide an introduction to the technical areas of network connectivity, data communications, and communication protocols. Emphasis on understanding the foundation of networking technologies and data communication concepts. Topics covered will include an exploration of computer networking development, the OSI reference model, data signaling, data translation, standards for communications and data transmissions, network topologies and access methods. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement. Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

CTS1120 Cybersecurity Fundamentals 4.000 credits

This course provides a foundation of knowledge in the information technology security field. Students will learn general network security concepts; compliance and operational security; threats and vulnerabilities; application, data, and host security; access control and identity management; cryptography. Hands-on training benefits the novice as well as the experienced network professional. Lecture Hours: 48.000, Lab Hours: 32.000
Recommended Preparation: Note: Students are strongly encouraged to complete CTS 1134 prior to enrollment in CTS 1120. Students who enroll concurrently should ensure they have a foundational understanding of networking concepts, including IP addressing, protocols, and network services. In mini-term formats, students should complete CTS 1134 during the first half of the term and CTS 1120 during the second half.

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab). Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CTS1111 Linux + 4.000 credits

This course is designed to help students prepare for the CompTIA Linux+ Certification Exam and to teach the skills needed to administer GNU/Linux-based workstations and servers. Students learn how to plan, install, maintain, document, and troubleshoot GNU/Linux operating system services.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CGS1060C

Course User Fee: \$63.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CTS2303 Windows Server Administration 4.000 credits

This course is intended for students preparing for IT careers as network support specialists as well as server and cloud administrators. Students will learn the fundamental administration skills and knowledge required to deploy and support Windows Server core services.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: CGS1060 and CTS1134 or equivalent knowledge

Course User Fee: \$63.00

CTS2375C Cloud Infrastructure and Services 4.000 credits

This course helps students develop technical expertise in Cloud computing and prepares them for industry certification. Students will learn the essentials of Cloud computing, business security and compliance considerations, migrating to the Cloud, architecting a Cloud server, and how to troubleshoot Cloud services.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS2145

Course User Fee: \$63.00

CTS2960 Cloud Computing Capstone 4.000 credits

This course requires students to demonstrate their competence to analyze, design, develop, and test a cloud based complex system. Each student will create and present a cloud based solution proposal that includes: design documentation, implementation plan, cloud resources required, projected cost analysis, basic security plan and project test plan to create an operational cloud based system solution. Must be taken during the last semester before graduation and with a departmental permission. Prerequisite: Departmental Approval. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: Departmental Approval

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

CTS2192C Microsoft Azure Administration 4.000 credits

This course is intended for students preparing for IT careers as cloud administrators, as well as candidates for industry certification. Students will learn the administration skills and knowledge required to implement, manage, and monitor identity, governance, storage, and compute virtual networks in the Microsoft Azure cloud environment.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: CTS1145 or equivalent knowledge in Microsoft Azure Fundamentals

Course User Fee: \$63.00

CIS1949 CO-Op Work Experience 1: CIS 1.000 - 4.000 credits

This course is designed as a work experience for students majoring in computer information systems programs. Students will learn to apply the skills and knowledge that they have acquired through their program of study in a real work environment. Prerequisite: Successful completion of required program course work. Department approval required.

Lecture Hours: 16.000 - 64.000

Prerequisite: Successful completion of required program course work. Department approval required.

CIS2949 CO-OP WRK EXP 2: CIS 1.000 - 4.000 credits

This course is designed as a second-level capstone for students majoring in computer information systems programs. Students apply advanced skills and knowledge that they have acquired through their first capstone course in a real work environment. Prerequisite: Successful completion of required program course work. Department approval required.

Lecture Hours: 16.000 - 64.000

Prerequisite: CIS1949

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Corequisite: COP1047C OR COP1334 OR COP2270

Course User Fee: \$63.00

CTS2143C Server Administration 4.000 credits

This course is designed for students preparing for IT careers as server administrators, and focuses on server hardware and operating systems, system management and administration, security and disaster recovery, infrastructure and network services, data storage, and troubleshooting. This course is intended to prepare students for the CompTIA Server+ certification.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Server operating systems experience.

Course User Fee: \$63.00

Program Description

Networking Services Technology - Network Infrastructure

Associate in Science | Code: 25062 | 60 credits

The Networking Services Technology program provides an opportunity to establish a foundation in the field of network design and administration for employment in commercial, industrial and government institutions. The Network Infrastructure concentration offers the training needed to connect and secure multiple computing systems and software platforms. Students are additionally eligible to sit for the Cisco Certified Networking Associate (CCNA) certification exam. Graduates are prepared for positions as information technology specialists, help desk specialists, network specialists, entry level security specialists and network systems analysts. Note: There is only one A.S. program in Networking Services Technology with three (3) track specializations—Network Infrastructure, Network Security, and Enterprise Cloud Computing. Students may select from one of the three options, but the A.S. in Networking Services Technology will be awarded to the student only once.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1**Units: 14.0**

ENC 1101	English Composition 1	3.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1134 Networking Technologies 4.000 credits

This course will provide an introduction to the technical areas of network connectivity, data communications, and communication protocols. Emphasis on understanding the foundation of networking technologies and data communication concepts. Topics covered will include an exploration of computer networking development, the OSI reference model, data signaling, data translation, standards for communications and data transmissions, network topologies and access methods. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1120 Cybersecurity Fundamentals 4.000 credits

This course provides a foundation of knowledge in the information technology security field. Students will learn general network security concepts; compliance and operational security; threats and vulnerabilities; application, data, and host security; access control and identity management; cryptography. Hands-on training benefits the novice as well as the experienced network professional.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Note: Students are strongly encouraged to complete CTS 1134 prior to enrollment in CTS 1120. Students who enroll concurrently should ensure they have a foundational understanding of networking concepts, including IP addressing, protocols, and network services. In mini-term formats, students should complete CTS 1134 during the first half of the term and CTS 1120 during the second half.

Course User Fee: \$63.00

CTS1650 CCNA 1: Cisco Fundamentals 4.000 credits

This is the first course of the four-course Cisco curriculum that will prepare students for professional certification as a Cisco Certified Network Associate (CCNA). Students will learn networking concepts and practices, network terminology and protocols, the OSI reference model, cabling, cabling tools, routers, router and switch configurations, LAN/WAN topologies, IP addressing, and network standards. Lecture Hours: 48.000, Lab Hours: 32.000
Recommended Preparation: Knowledge of computer operating systems and hardware is required.
Course User Fee: \$63.00

CTS1651 CCNA 2: Routing and Switching 4.000 credits

This is the second course of the four-course Cisco curriculum that will prepare the student for professional certification as a Cisco Certified Network Associate (CCNA). Students will learn the architecture, components and operation of routers and switches, LAN (Local Area Networks) switch protocols and operations, VLANs (Virtual Local Area Networks), network routing protocols and concepts, static and dynamic routing, router and switch configuration and troubleshooting, and IP Address services. Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CTS1650
Course User Fee: \$63.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course. Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CTS1111 Linux + 4.000 credits

This course is designed to help students prepare for the CompTIA Linux+ Certification Exam and to teach the skills needed to administer GNU/Linux-based workstations and servers. Students learn how to plan, install, maintain, document, and troubleshoot GNU/Linux operating system services.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CGS1060C

Course User Fee: \$63.00

CTS2303 Windows Server Administration 4.000 credits

This course is intended for students preparing for IT careers as network support specialists as well as server and cloud administrators. Students will learn the fundamental administration skills and knowledge required to deploy and support Windows Server core services.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: CGS1060 and CTS1134 or equivalent knowledge

Course User Fee: \$63.00

CTS2652 CCNA 3: Advanced Routing and Switching 4.000 credits

This is the third course of the four-course Cisco curriculum that will prepare the student for professional certification as a Cisco Certified Network Associate (CCNA). Students will learn how to create virtual local area networks (VLANs), configure inter VLAN routing, and implement wireless network access and VLAN security.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1651

Course User Fee: \$63.00

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Corequisite: COP1047C OR COP1334 OR COP2270

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS2375C Cloud Infrastructure and Services 4.000 credits

This course helps students develop technical expertise in Cloud computing and prepares them for industry certification. Students will learn the essentials of Cloud computing, business security and compliance considerations, migrating to the Cloud, architecting a Cloud server, and how to troubleshoot Cloud services.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS2145

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

CTS2143C Server Administration 4.000 credits

This course is designed for students preparing for IT careers as server administrators, and focuses on server hardware and operating systems, system management and administration, security and disaster recovery, infrastructure and network services, data storage, and troubleshooting. This course is intended to prepare students for the CompTIA Server+ certification.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Server operating systems experience.

Course User Fee: \$63.00

CTS2192C Microsoft Azure Administration 4.000 credits

This course is intended for students preparing for IT careers as cloud administrators, as well as candidates for industry certification. Students will learn the administration skills and knowledge required to implement, manage, and monitor identity, governance, storage, and compute virtual networks in the Microsoft Azure cloud environment.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: CTS1145 or equivalent knowledge in Microsoft Azure Fundamentals

Course User Fee: \$63.00

CIS1949 CO-Op Work Experience 1: CIS 1.000 - 4.000 credits

This course is designed as a work experience for students majoring in computer information systems programs. Students will learn to apply the skills and knowledge that they have acquired through their program of study in a real work environment. Prerequisite: Successful completion of required program course work. Department approval required.

Lecture Hours: 16.000 - 64.000

Prerequisite: Successful completion of required program course work. Department approval required.

CIS2900 Directed Study in IT 1.000 credits

This course, for majors in Information Technology, provides students the opportunity to pursue projects under faculty supervision through self-directed research, experiences, and presentations.

Prerequisite: Successful completion of required program course work. Department approval required.

Lab Hours: 32.000

Recommended Preparation: Successful completion of required program course work. Department approval required

Program Description

Nuclear Medicine Technology

Associate in Science | Code: 23068 | 75 credits

The Nuclear Medicine Technology program is designed to prepare selected students to qualify as nuclear medicine technologists in hospitals, outpatient diagnostic imaging centers, and private physician offices. These contributing members of the allied health team prepare and administer the tracer radio pharmaceuticals to the patients and record the image using computerized detection systems for medical diagnosis. Successful completion of this two-year program qualifies graduates to apply for the American Registry for Radiologic Technologists examination in Nuclear Medicine and/or the Nuclear Medicine Technology Certification Board Examination leading to certification as a registered nuclear medicine technologist and gainful employment as such.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 14.0
ENC 1101	English Composition 1	3.0
BSC 2085	Human Anatomy and Physiology 1	3.0
BSC 2085L	Human Anatomy and Physiology 1 Laboratory	1.0
CHM 1033	Chemistry for Health Sciences	3.0
CHM 1033L	Chemistry for Health Sciences Lab	1.0
MAC 1105	College Algebra	3.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 2		Units: 10.0
BSC 2086	Human Anatomy & Physiology 2	3.0
BSC 2086L	Human Anatomy & Physiology 2 Laboratory	1.0
PHY 1004	Physics With Applications 1	3.0
Social Science		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		

POS 2041	American Federal Government	3.0
----------	-----------------------------	-----

Semester 3 (In Program Milestone)		Units: 12.0
NMT 1002L	Introduction to Nuclear Medicine Laboratory	2.0
NMT 1312C	Radiation Protection and Radiobiology	2.0
NMT 1705C	Nuclear Medicine Pre-Clinical	2.0
NMT 2613	Nuclear Medicine Physics and Mathematical Applications	3.0
Elective*		3.0

*Select any appropriate transferable (Credit Type 1 or 2) courses (Check with Advisor).

Semester 4 (In Program Milestone)		Units: 12.0
PHI 2010	Introduction to Philosophy	3.0
NMT 1713C	Nuclear Medicine Methodology 1	2.0
NMT 2102	Nuclear Medicine Administration	1.0
NMT 2534C	Instrumentation, Quality Assurance and Control	3.0
NMT 2804C	Nuclear Medicine Clinic Practice & Conference 1	3.0

Semester 5 (In Program Milestone)		Units: 10.0
NMT 2130C	Nuclear Medicine Radiopharmacy	3.0
NMT 2723C	Nuclear Medicine Methodology 2	2.0
NMT 2814C	Nuclear Medicine Clinic Practice & Conference 2	5.0

Semester 6 (In Program Milestone)		Units: 9.0
NMT 2733C	Nuclear Medicine Methodology 3	2.0
NMT 2779C	Multi-Modalities and Cross-Sectional Anatomy	2.0
NMT 2824C	Nuclear Medicine Clinical Education 3	5.0

Semester 7 (In Program Milestone)		Units: 8.0
NMT 2834C	Nuclear Medicine Clinical Education 4	5.0
NMT 2932C	Nuclear Medicine Seminar	3.0

Total: 75.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions. Prerequisite: MAT1033; Corequisite: CHM1033L.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: CHM1033L

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite: MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

PHY1004 Physics With Applications 1 3.000 credits

Emphasizes the basic concepts and principles and their practical applications. Designed specifically for students in technical studies and for others wishing to strengthen their physics background before taking advanced courses.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: PHY1004L

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

NMT1002L Introduction to Nuclear Medicine Laboratory 2.000 credits

Provides an overview of the field of nuclear medicine. Students will focus on medical terminology, the history of nuclear medicine, basic concepts of radiochemistry, radiation safety, medical law, patient care and positioning, and hospital administration. Field trips to nuclear medicine training facilities are included.

Prerequisites: CHM 1033, 1033L; Corequisites: NMT 1312C, NMT 1705C, NMT 2613. (4 hr. lab)

Lab Hours: 64.000

Prerequisite: CHM1033 AND CHM1033L AND Corequisite: NMT1312 AND NMT2613

NMT1312C Radiation Protection and Radiobiology 2.000 credits

This course covers all local, state and federal regulations related to Nuclear Medicine. Students will learn the appropriate protection procedures to limit exposure, the performance of area surveys and wipe tests, the proper decontamination procedures, the disposal of radioactive waste procedures, and personnel monitoring of radiation exposure. Corequisites: NMT 1002L, 2613. (1 hr. lecture, 2 hr. lab)

Lecture Hours: 16.000, Lab Hours: 32.000

Corequisite: NMT1002L AND NMT2613

NMT1705C Nuclear Medicine Pre-Clinical 2.000 credits

This nuclear medicine technology course prepares students to attend to patients, and evaluate data from patient records, make dose calculations, prepare radio-pharmaceuticals, perform in-vivo and in-vitro diagnostic studies, and perform quality control procedures. Prerequisites: BSC 2085/L, BSC 2086/L, CHM 1033/L; Corequisites: NMT 1002L, NMT 1312C, NMT 2613. (1 hr. lecture, 3 hr. clinical)

Lecture Hours: 16.000, Clinical Hours: 48.000

Course User Fee: \$293.31

NMT2613 Nuclear Medicine Physics and Mathematical Applications 3.000 credits

Students will learn the basic concepts of atomic, nuclear and radiation physics with an emphasis on the interactions of radiation with matter. Alpha, beta, and gamma sources are explained as well mathematical principles associated with the types of radiation sources. Prerequisites: MAC 1105 and PHY 1020; Corequisites: NMT 1002L, NMT 1312C. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: MAC1105 AND PHY1020 AND Corequisite: NMT1002L AND NMT1312

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics.

Writing Intensive Course.

Lecture Hours: 48.000

NMT1713C Nuclear Medicine Methodology 1 2.000 credits

This course will include the imaging parameters necessary to obtain images for the basic procedures performed in a Nuclear Medicine department. Students will learn about imaging procedures related to the following systems: skeletal, central nervous, cardiovascular genitourinary, respiratory and gastrointestinal. Instrumentation necessary to produce the required images as well as patient management during the procedures will be addressed. Prerequisites: BSC 2085, 2085L, 2086, 2086L, CHM1033, 1033L; Co-requisites: NMT 2102, NMT 2534C, NMT 2804C. (1 hr. lecture, 2 hr. lab)

Lecture Hours: 16.000, Lab Hours: 32.000

NMT2102 Nuclear Medicine Administration 1.000 credits

The student will learn the administrative duties required of a nuclear medicine technologist. Areas covered include patient scheduling, radioisotope ordering; scheduling and testing; communication; patient and clinician satisfaction. Prerequisites: NMT 1002L, NMT 1312C, NMT 1705C, NMT 2613; Corequisites: NMT 1713C, NMT 2534C, NMT 2804C. (1 hr. lecture)

Lecture Hours: 16.000

NMT2534C Instrumentation, Quality Assurance and Control 3.000 credits

This course will integrate and correlate the principles of electrical and nuclear physics associated with the operation, calibration, quality assurance and control testing of imaging systems and radiation detection devices employed in nuclear medicine. The student will learn the various types of devices used to provide information obtained from diagnostic images. Prerequisites: NMT 1002L, NMT 1312C, NMT 2613 and PHY1020; Corequisites: NMT 1713C, 2102, 2804C. (1 hr. lecture, 4 hr. lab)

Lecture Hours: 16.000, Lab Hours: 64.000

NMT2804C Nuclear Medicine Clinic Practice & Conference 1 3.000 credits

This course will introduce the student to the fundamentals of clinical nuclear medicine primarily through hospital involvement. The student will learn practical experience in a Nuclear Medicine department by performing the principles taught in class. Prerequisites: NMT 1002L, NMT 1312C, NMT 1705C, NMT 2613; Corequisites: NMT 1713C, NMT 2102, NMT 2534C. (144 hrs. clinic)

Clinical Hours: 144.000

Prerequisite: NMT 1002L, NMT 1312C, NMT 1705C, NMT 2613, Corequisite: NMT 1713C; NMT 2102, NMT 2534C

Course User Fee: \$25.00

NMT2130C Nuclear Medicine Radiopharmacy 3.000 credits

Students will learn how to maintain radiopharmaceutical laboratory records and materials, obtain a generator eluate, prepare radiopharmaceuticals and perform quality control tests, as well as dispose of radioactive waste appropriately. The ordering of pharmaceuticals in appropriate dosage and effective time frames will also be included. Prerequisites: NMT 1002L, NMT 1312C, NMT 1705C, NMT 2613; Corequisites: NMT 2130C, NMT 2723C, NMT 2814C. (1 hr. lecture, 2 hr. lab)

Lecture Hours: 16.000, Lab Hours: 64.000

NMT2723C Nuclear Medicine Methodology 2 2.000 credits

A continuation of Nuclear Medicine Procedures 1, students will learn the imaging parameters necessary to obtain images as well as the use of instrumentation necessary to produce the required images performed in a nuclear medicine department. Exposure to patient management during the procedures will also be addressed. Prerequisites: NMT 1713C, NMT 2102, NMT 2534C, NMT 2804C; Corequisite: NMT 2130C, NMT 2814C. (1 hr. lecture, 3 hr. clinical)

Lecture Hours: 16.000, Clinical Hours: 48.000

Prerequisite: NMT1713 AND NMT2804C, Corequisite: NMT2573 AND NMT2814C

NMT2814C Nuclear Medicine Clinic Practice & Conference 2 5.000 credits

This course is a continuation of NMT 2804C Clinic 1 and will provide the student the opportunity to participate in the fundamentals of clinical nuclear medicine in the hospital involvement. The student will learn practical experience in a Nuclear Medicine department by performing the principles taught in class.

Clinical Hours: 240.000

Prerequisite: NMT2804C, NMT 2130, NMT 2534C, NMT 2613, NMT 2804C

Course User Fee: \$25.00

NMT2733C Nuclear Medicine Methodology 3 2.000 credits

A continuation of Nuclear Medicine Procedures 2, students will learn the imaging parameters necessary to obtain images as well as the use of instrumentation necessary to produce the required images performed in a nuclear medicine department. Exposure to patient management during the procedures will also be addressed. Prerequisites: BSC 2085/L, BSC 2086/L, NMT 1713C, NMT 2723C; Corequisites: NMT 2779C, NMT 2824C. (1 hr. lecture, 3 hr. clinical)

Lecture Hours: 16.000, Clinical Hours: 48.000

Course User Fee: \$239.31

NMT2779C Multi-Modalities and Cross-Sectional Anatomy 2.000 credits

This course educates the student upon proper recognition and interpretation of cross-sectional anatomy. The student will also compare and analyze images from complementary modalities. It is crucial for the nuclear medicine technologist to understand three-dimensional imaging in order to enhance patient care and be an asset to the facility. Prerequisites: NMT 2130C, NMT 2723C, NMT 2814C; Corequisites: NMT 2733C, NMT 2824C. (1 hr. lecture, 2 hr. lab)

Lecture Hours: 16.000, Lab Hours: 32.000

Prerequisite: NMT 2130C, NMT 2723C, NMT 2814C, Corequisite: NMT 2733C, 2824C

Course User Fee: \$239.38

NMT2824C Nuclear Medicine Clinical Education 3 5.000 credits

This is the final course in the series of three clinical courses. Students will learn to apply all didactic competencies in the Nuclear Medicine department setting, as well as perform all procedures from the two Nuclear Medicine Procedures courses with minimal supervision. The ARRT Competency Requirements must be completed in this course. Prerequisites: NMT 2814C.

Clinical Hours: 240.000

Prerequisite: NMT2814C

Course User Fee: \$25.00

NMT2834C Nuclear Medicine Clinical Education 4 5.000 credits

This is the final course in the series of four clinical courses. Students will learn to apply all didactic competencies in the Nuclear Medicine department setting, as well as perform all procedures from the two Nuclear Medicine Procedures courses with minimal supervision. The ARRT Competency Requirements must be completed in this course.

Clinical Hours: 240.000

Prerequisite: NMT2824C

Course User Fee: \$239.31

NMT2932C Nuclear Medicine Seminar 3.000 credits

The student will learn to incorporate all theory related to the production of a nuclear medicine image. The student will also learn about radiation protection, instrumentation, physics, pharmacology, and Quality Assurance/Quality Control.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: NMT1312NMT 2733C, NMT 2779C, NMT 2824C, Corequisite: NMT2824C

Course User Fee: \$25.00

Program Description

Nursing - R.N. (Accelerated)

Associate in Science | Code: 23031 | 72 credits

The Accelerated Option in Nursing is designed to prepare the student with a baccalaureate degree in other disciplines for a career as a Registered Nurse (RN). The content and clinical experiences are designed to meet the learning and professional socialization needs of this special category of student. The program is accredited by the National League for Nursing Accrediting Commission (NLNAC) (61 Broadway, New York, NY 10006, ph. 212-363-5555, www.nlnac.org) and approved by the Florida Board of Nursing (FBON). Graduates are eligible to apply to write the National Council Licensing Examination for Registered Nurses (NCLEX-RN). Selection is based on scores on pre-admission testing and completion of required pre-requisite courses. See a School of Nursing

Information Booklet for more specific details about admission requirements. Pre-Admission tests – Applicants must take the reading portion of the CPT and score 78 or above; the Test of Adult Basic Education (TABE) and score 11 or above in reading, language and total math and the Nurse Entrance Test (NET). The NET is given only on the Medical Campus. Scores on the NET and TABE are used for selection.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1101	English Composition 1	3.0
BSC 2085	Human Anatomy and Physiology 1	3.0
BSC 2085L	Human Anatomy and Physiology 1 Laboratory	1.0
SPC 2608	Introduction to Public Speaking	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0

Semester 2		Units: 10.0
BSC 2086	Human Anatomy & Physiology 2	3.0
BSC 2086L	Human Anatomy & Physiology 2 Laboratory	1.0
MAC 1105	College Algebra	3.0
PHI 2010	Introduction to Philosophy	3.0

Semester 3		Units: 7.0
CHM 1033	Chemistry for Health Sciences	3.0
CHM 1033L	Chemistry for Health Sciences Lab	1.0
MCB 2010	Microbiology	3.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 4 (In Program Milestone)		Units: 18.0
NUR 1025	Fundamentals of Nursing	3.0
NUR 1025C	Fundamentals of Nursing Skills Lab	1.0
NUR 1025L	Fundamentals of Nursing Clinical Lab	2.0
NUR 1060C	Adult Health Assessment	3.0
NUR 1141	Nursing Math & Pharmacology	3.0
NUR 1211	Medical-Surgical Nursing	3.0
NUR 1211L	Medical Surgical Nursing Clinical	2.0
NUR 1214C	Medical Surgical Nursing Skills Lab	1.0

Semester 5 (In Program Milestone)		Units: 11.0
NUR 2220	Medical Surgical Nursing II	3.0
NUR 2220L	Medical Surgical Nursing II Clinical	1.0
NUR 2310	Pediatric Nursing	2.0
NUR 2310L	Pediatric Nursing Clinical Lab	1.0

NUR 2420	Obstetrical Nursing	2.0
NUR 2420L	Obstetrical Nursing Clinical Lab	1.0
NUR 2680L	Community Health Nursing Lab	1.0

Semester 6 (In Program Milestone)

Units: 13.0

NUR 2212	Medical Surgical Nursing III	3.0
NUR 2212L	Medical Surgical Nursing III Clinical Lab	2.0
NUR 2520	Psychiatric Nursing	2.0
NUR 2520L	Psychiatric Nursing Clinical Lab	1.0
NUR 2811C	Professional Nursing Leadership	4.0
NUR 2960	Senior Seminar	1.0

Total: 72.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions. Prerequisite: MAT1033; Corequisite: CHM1033L.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: CHM1033L

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite: MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L. Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

NUR1025 Fundamentals of Nursing 3.000 credits

This course introduces students to the profession of Nursing. The student will learn the roles basic to the practice of nursing, the nursing process, and how nurses are involved in health promoting activities to meet client needs. Pre-Req: Program Admission; Co-Req: NUR 1025C, 1025L, 1060C, and 1141.

Lecture Hours: 48.000

Course User Fee: \$113.00

NUR1025C Fundamentals of Nursing Skills Lab 1.000 credits

Students will learn of the opportunities for the explanation, demonstration, and practice of care provider activities essential to the basic practice of nursing. Learning experiences are provided in the skills laboratory. Pre-Req: Program Admission; Co-Req: NUR 1025, 1025L, 1060C, 1141

Lab Hours: 32.000

Course User Fee: \$105.00

NUR1025L Fundamentals of Nursing Clinical Lab 2.000 credits

Students will learn of the opportunities for the explanation, demonstration, and practice of care provider activities essential to the basic practice of nursing. Learning experiences are provided in the skills laboratory. Pre-Req: Program Admission; Corequisite: NUR 1025, 1025C, 1141, 1060C.

Clinical Hours: 96.000

Course User Fee: \$8.00

NUR1060C Adult Health Assessment 3.000 credits

This course is designed to provide students with the necessary skills to perform an in-depth nursing history and a complete physical examination on an adult client. The focus will be on clients with minimal or no alterations in their health state. Students will be introduced to and will demonstrate the techniques used in physical examination. Prerequisite: Admission to the School of Nursing; Corequisites: NUR 1025, 1025C, 1025L, 1141.

Lecture Hours: 32.000 - 33.000, Lab Hours: 32.000, Practicum Hours: 2.000

Prerequisite: Admission to the program

Course User Fee: \$109.00

NUR1141 Nursing Math & Pharmacology 3.000 credits

Students will learn about medications and their effects on different body systems. The conceptual and mathematical operations necessary for safe and effective administration of intravenous medications, preparing medications that come in powdered form and adjusting medication administration based on medical protocols are discussed. Concepts of medications including history, nomenclature, sources of drug information, federal drug laws and standards, medication classifications, pharmacokinetics, pharmacodynamics, variables affecting medication actions and effects, and methods of delivery will be addressed. Co-Req: NUR 1025, 1025C, 1025L, 1060C.

Lecture Hours: 48.000, Practicum Hours: 1.000

Course User Fee: \$75.00

NUR1211 Medical-Surgical Nursing 3.000 credits

This course provides an introduction to the adult nursing care. Students will learn the nurse's role in meeting the short and long term needs of the client and community through preventive, therapeutic and palliative care are discussed. Pre-Req: NUR 1025, 1025C, 1060C, 1142; Co-Req: NUR 1211L, 1214C.

Lecture Hours: 48.000

Course User Fee: \$121.00

NUR1211L Medical Surgical Nursing Clinical 2.000 credits

Students will learn how to apply concepts of adult health nursing. Experiences in both in-patient and community settings will be provided. Students are encouraged to participate in projects emphasizing preventive aspects of nursing care. Prerequisites: NUR 1025, 1025C, 1025L, 1060C, and 1141

Clinical Hours: 96.000

Course User Fee: \$87.00

NUR1214C Medical Surgical Nursing Skills Lab 1.000 credits

Students will learn the opportunities for the explanation, demonstration, and practice of skills related to adult health nursing. Learning experiences are provided in the School of Nursing Skills Laboratory. Pre-Req: NUR 1025, 1025C, 1025L, 1060C, 1142; CO-REQ: NUR 1211, 1211L.

Lecture Hours: 8.000, Lab Hours: 16.000

Course User Fee: \$114.00

NUR2220 Medical Surgical Nursing II 3.000 credits

This course provides students with the opportunity to apply concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health.

Lecture Hours: 48.000

Prerequisite: NUR1025 AND NUR1025C AND NUR1025L AND NUR1060C AND NUR1141 AND NUR1211 AND NUR1211L AND NUR1214C AND Corequisite: NUR2220L

NUR2220L Medical Surgical Nursing II Clinical 1.000 credits

This course provides students with the opportunity to apply concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health.

Clinical Hours: 48.000

Prerequisite: NUR1025 AND NUR1025C AND NUR1025L AND NUR1060C AND NUR1141 AND NUR1211 AND NUR1211L AND NUR1214C AND Corequisite: NUR2220

NUR2310 Pediatric Nursing 2.000 credits

This course provides a family centered approach to the nursing care of pediatric clients and their families. Students will learn the nurse's role in meeting the short and long term needs of the pediatric client, family, and community through preventative, therapeutic and palliative care, with recognition for the multicultural aspects of client needs. Prerequisites: 1211, 1211L, 1214C or 1002, 1002L; 1142; corequisites: NUR 2310L, 2420, 2420L, 2680L. Special fee. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$126.00

NUR2310L Pediatric Nursing Clinical Lab 1.000 credits

This course allows the student to apply the nursing process to the care of clients in selected pediatric clinical settings. Students will learn to observe cultural diversity and implement care to the pediatric client, family, and community through preventive, therapeutic and palliative measures. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2420, 2420L, 2520, 2520L, 2680L. Laboratory fee.

Clinical Hours: 48.000

Course User Fee: \$86.00

NUR2420 Obstetrical Nursing 2.000 credits

This course provides a family centered approach to the nursing care of obstetrical clients and their families. Students will learn to assess the pregnant client, to implement caring behaviors for the laboring client, educate the postpartum client, manage the care of the newborn and collaboration of care for the high risk client. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142. Corequisites: NUR 2310, 2310L, 2420L, 2680L. Special fee. (2 hr. lecture)

Lecture Hours: 32.000

NUR2420L Obstetrical Nursing Clinical Lab 1.000 credits

This course provides an introduction to obstetrical nursing clinical practice. Students will learn to apply the nursing process to the care of clients in selected obstetrical clinical settings. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2310L, 2420, 2680L. Laboratory fee.

Clinical Hours: 48.000

Course User Fee: \$96.00

NUR2680L Community Health Nursing Lab 1.000 credits

This laboratory course assists the students in applying knowledge of community health resources. Students will learn to manage community health resources to support the delivery of care to the childbearing/child-rearing families. Special emphasis is placed on the understanding of cultural influences on the health practices and beliefs within the family. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; co-requisites: NUR 2310, 2310L, 2420, 2420L.0L. Special fee. (48 hr. clinical)

Clinical Hours: 48.000

Course User Fee: \$81.00

NUR2212 Medical Surgical Nursing III 3.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1008, 1002L; NUR 1141, 2310, 2310L, 2420 2420L, 2680L

Lecture Hours: 48.000

Course User Fee: \$450.00

NUR2212L Medical Surgical Nursing III Clinical Lab 2.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1002, 1008, 1002L; NUR 1141, 2310, 2310L, 2420, 2420L, 2680L

Clinical Hours: 96.000

Course User Fee: \$150.00

NUR2520 Psychiatric Nursing 2.000 credits

This course introduces students to the basic concepts of psychiatric nursing. Students will learn to provide care in in-patient and community settings, focusing on the nurse's role in meeting the needs of the patient, family, and the community. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2520L. Special fee. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$62.00

NUR2520L Psychiatric Nursing Clinical Lab 1.000 credits

This course provides the student opportunities to apply concepts of psychiatric nursing. Students will learn psychiatric procedures for both in-patient and community settings, focusing on the nurse's role on meeting the needs of the client, family, and community. Students actively participate in projects assisting clients in preventative care and maintenance of mental health. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142

Clinical Hours: 48.000

Course User Fee: \$98.00

NUR2811C Professional Nursing Leadership 4.000 credits

This course provides the student with the theoretical and clinical knowledge necessary for actualization of the role of the registered professional nurse, with emphasis on delegation and supervision.

Prerequisites: NUR 2212, 2212L

Lecture Hours: 16.000, Clinical Hours: 144.000

Course User Fee: \$175.00

NUR2960 Senior Seminar 1.000 credits

This course provides a forum for the discussion, and preparation for the NCLEX-RN exam. Explain applicant requirements for the state board of nursing (and licensure eligibility requirements) and examination registration.

Lecture Hours: 16.000

Prerequisite: NUR2811C

Program Description

Nursing - R.N. (Generic Full-Time)

Associate in Science | Code: 23028 | 72 credits

The Generic Nursing Option is designed to prepare students without previous health care education for careers as Registered Nurses. This program is accredited by the National League for Nursing Accrediting Commission (NLNAC), (61 Broadway, New York, NY 10006, phone (212) 363-5555, www.nlnac.org) and approved by the Florida Board of Nursing (FBON). Graduates are eligible to apply to write the National Council Licensing Examination for Registered Nurses (NCLEX-RN). The part-time track is designed for individuals who must work while they attend school. Selection is based on scores on pre-admission testing and completion of required pre-requisite courses. See a School of Nursing Information Booklet for more specific details about admission requirements. Pre-Admission tests – Applicants must take the Test of Adult Basic Education (TABE) and score 11 or above in reading,

language and total math and the Nurse Entrance Test (NET).The NET is given only on the Medical Campus. Scores on the NET and TABE are used for selection.

Program Modality: Both [In-Person (IP) and On-line]

NUR 2212	Medical Surgical Nursing III	3.0
NUR 2212L	Medical Surgical Nursing III Clinical Lab	2.0
NUR 2811C	Professional Nursing Leadership	4.0
NUR 2960	Senior Seminar	1.0

Total: 72.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions. Prerequisite: MAT1033; Corequisite: CHM1033L.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: CHM1033L

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite: MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L. Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

NUR1025 Fundamentals of Nursing 3.000 credits

This course introduces students to the profession of Nursing. The student will learn the roles basic to the practice of nursing, the nursing process, and how nurses are involved in health promoting activities to meet client needs. Pre-Req: Program Admission; Co-Req: NUR 1025C, 1025L, 1060C, and 1141.

Lecture Hours: 48.000

Course User Fee: \$113.00

NUR1025C Fundamentals of Nursing Skills Lab 1.000 credits

Students will learn of the opportunities for the explanation, demonstration, and practice of care provider activities essential to the basic practice of nursing. Learning experiences are provided in the skills laboratory. Pre-Req: Program Admission; Co-Req: NUR 1025, 1025L, 1060C, 1141

Lab Hours: 32.000

Course User Fee: \$105.00

NUR1025L Fundamentals of Nursing Clinical Lab 2.000 credits

Students will learn of the opportunities for the explanation, demonstration, and practice of care provider activities essential to the basic practice of nursing. Learning experiences are provided in the skills laboratory. Pre-Req: Program Admission; Corequisite: NUR 1025, 1025C, 1141, 1060C.

Clinical Hours: 96.000

Course User Fee: \$8.00

NUR1060C Adult Health Assessment 3.000 credits

This course is designed to provide students with the necessary skills to perform an in-depth nursing history and a complete physical examination on an adult client. The focus will be on clients with minimal or no alterations in their health state. Students will be introduced to and will demonstrate the techniques used in physical examination. Prerequisite: Admission to the School of Nursing; Corequisites: NUR 1025, 1025C, 1025L, 1141.

Lecture Hours: 32.000 - 33.000, Lab Hours: 32.000, Practicum Hours: 2.000

Prerequisite: Admission to the program

Course User Fee: \$109.00

NUR1141 Nursing Math & Pharmacology 3.000 credits

Students will learn about medications and their effects on different body systems. The conceptual and mathematical operations necessary for safe and effective administration of intravenous medications, preparing medications that come in powdered form and adjusting medication administration based on medical protocols are discussed. Concepts of medications including history, nomenclature, sources of drug information, federal drug laws and standards, medication classifications, pharmacokinetics, pharmacodynamics, variables affecting medication actions and effects, and methods of delivery will be addressed. Co-Req: NUR 1025, 1025C, 1025L, 1060C. Lecture Hours: 48.000, Practicum Hours: 1.000

Course User Fee: \$75.00

NUR1211 Medical-Surgical Nursing 3.000 credits

This course provides an introduction to the adult nursing care. Students will learn the nurse's role in meeting the short and long term needs of the client and community through preventive, therapeutic and palliative care are discussed. Pre-Req: NUR 1025, 1025C, 1060C, 1142; Co-Req: NUR 1211L, 1214C. Lecture Hours: 48.000

Course User Fee: \$121.00

NUR1211L Medical Surgical Nursing Clinical 2.000 credits

Students will learn how to apply concepts of adult health nursing. Experiences in both in-patient and community settings will be provided. Students are encouraged to participate in projects emphasizing preventive aspects of nursing care. Prerequisites: NUR 1025, 1025C, 1025L, 1060C, and 1141

Clinical Hours: 96.000

Course User Fee: \$87.00

NUR1214C Medical Surgical Nursing Skills Lab 1.000 credits

Students will learn the opportunities for the explanation, demonstration, and practice of skills related to adult health nursing. Learning experiences are provided in the School of Nursing Skills Laboratory. Pre-Req: NUR 1025, 1025C, 1025L, 1060C, 1142; CO-REQ: NUR 1211, 1211L. Lecture Hours: 8.000, Lab Hours: 16.000
Course User Fee: \$114.00

NUR2310 Pediatric Nursing 2.000 credits

This course provides a family centered approach to the nursing care of pediatric clients and their families. Students will learn the nurse's role in meeting the short and long term needs of the pediatric client, family, and community through preventative, therapeutic and palliative care, with recognition for the multicultural aspects of client needs. Prerequisites: 1211, 1211L, 1214C or 1002, 1002L; 1142; corequisites: NUR 2310L, 2420, 2420L, 2680L. Special fee. (2 hr. lecture)
Lecture Hours: 32.000
Course User Fee: \$126.00

NUR2310L Pediatric Nursing Clinical Lab 1.000 credits

This course allows the student to apply the nursing process to the care of clients in selected pediatric clinical settings. Students will learn to observe cultural diversity and implement care to the pediatric client, family, and community through preventive, therapeutic and palliative measures. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2420, 2420L, 2520, 2520L, 2680L. Laboratory fee.
Clinical Hours: 48.000
Course User Fee: \$86.00

NUR2420 Obstetrical Nursing 2.000 credits

This course provides a family centered approach to the nursing care of obstetrical clients and their families. Students will learn to assess the pregnant client, to implement caring behaviors for the laboring client, educate the postpartum client, manage the care of the newborn and collaboration of care for the high risk client. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142. Corequisites: NUR 2310, 2310L, 2420L, 2680L. Special fee. (2 hr. lecture)
Lecture Hours: 32.000

NUR2420L Obstetrical Nursing Clinical Lab 1.000 credits

This course provides an introduction to obstetrical nursing clinical practice. Students will learn to apply the nursing process to the care of clients in selected obstetrical clinical settings. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2310L, 2420, 2680L. Laboratory fee.
Clinical Hours: 48.000
Course User Fee: \$96.00

NUR2220 Medical Surgical Nursing II 3.000 credits

This course provides students with the opportunity to apply concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health.
Lecture Hours: 48.000
Prerequisite: NUR1025 AND NUR1025C AND NUR1025L AND NUR1060C AND NUR1141 AND NUR1211 AND NUR1211L AND NUR1214C AND
Corequisite: NUR2220L

NUR2220L Medical Surgical Nursing II Clinical 1.000 credits

This course provides students with the opportunity to apply concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health.
Clinical Hours: 48.000
Prerequisite: NUR1025 AND NUR1025C AND NUR1025L AND NUR1060C AND NUR1141 AND NUR1211 AND NUR1211L AND NUR1214C AND
Corequisite: NUR2220

NUR2520 Psychiatric Nursing 2.000 credits

This course introduces students to the basic concepts of psychiatric nursing. Students will learn to provide care in in-patient and community settings, focusing on the nurse's role in meeting the needs of the patient, family, and the community. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2520L. Special fee. (2 hr. lecture)
Lecture Hours: 32.000
Course User Fee: \$62.00

NUR2520L Psychiatric Nursing Clinical Lab 1.000 credits

This course provides the student opportunities to apply concepts of psychiatric nursing. Students will learn psychiatric procedures for both in-patient and community settings, focusing on the nurse's role on meeting the needs of the client, family, and community. Students actively participate in projects assisting clients in preventative care and maintenance of mental health. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142
Clinical Hours: 48.000
Course User Fee: \$98.00

NUR2680L Community Health Nursing Lab 1.000 credits

This laboratory course assists the students in applying knowledge of community health resources. Students will learn to manage community health resources to support the delivery of care to the childbearing/child-rearing families. Special emphasis is placed on the understanding of cultural influences on the health practices and beliefs within the family. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; co-requisites: NUR 2310, 2310L, 2420, 2420L.0L. Special fee. (48 hr. clinical)
Clinical Hours: 48.000
Course User Fee: \$81.00

NUR2212 Medical Surgical Nursing III 3.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1008, 1002L; NUR 1141, 2310, 2310L, 2420, 2420L, 2680L
Lecture Hours: 48.000
Course User Fee: \$450.00

NUR2212L Medical Surgical Nursing III Clinical Lab 2.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1002, 1008, 1002L; NUR 1141, 2310, 2310L, 2420, 2420L, 2680L
Clinical Hours: 96.000
Course User Fee: \$150.00

NUR2811C Professional Nursing Leadership 4.000 credits

This course provides the student with the theoretical and clinical knowledge necessary for actualization of the role of the registered professional nurse, with emphasis on delegation and supervision. Prerequisites: NUR 2212, 2212L
Lecture Hours: 16.000, Clinical Hours: 144.000
Course User Fee: \$175.00

NUR2960 Senior Seminar 1.000 credits

This course provides a forum for the discussion, and preparation for the NCLEX-RN exam. Explain applicant requirements for the state board of nursing (and licensure eligibility requirements) and examination registration.
Lecture Hours: 16.000
Prerequisite: NUR2811C

Program Description

Nursing - R.N. (Generic Part-Time)

Associate in Science | Code: 23027 | 72 credits

The Generic Nursing Option is designed to prepare students without previous health care education for careers as Registered Nurses. This program is accredited by the National League for Nursing Accrediting Commission (NLNAC), (61 Broadway, New York, NY 10006, phone (212) 363-5555, www.nlnac.org) and approved by the Florida Board of Nursing (FBON). Graduates are eligible to apply to write the National Council Licensing Examination for Registered Nurses (NCLEX-RN). The part-time track is designed for individuals who must work while they attend school. Selection is based on scores on pre-admission testing and completion of required pre-requisite courses.

See a School of Nursing Information Booklet for more specific details about admission requirements. Pre-Admission tests – Applicants must take the Test of Adult Basic Education (TABE) and score 11 or above in reading, language and total math and the Nurse Entrance Test (NET). The NET is given only on the Medical Campus. Scores on the NET and TABE are used for selection.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 10.0
ENC 1101	English Composition 1	3.0
BSC 2085	Human Anatomy and Physiology 1	3.0

NUR 2960	Senior Seminar	1.0

Total: 72.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view. Lecture Hours: 48.000

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions. Prerequisite: MAT1033; Corequisite: CHM1033L.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: CHM1033L

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite: MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L. Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

NUR1025 Fundamentals of Nursing 3.000 credits

This course introduces students to the profession of Nursing. The student will learn the roles basic to the practice of nursing, the nursing process, and how nurses are involved in health promoting activities to meet client needs. Pre-Req: Program Admission; Co-Req: NUR 1025C, 1025L, 1060C, and 1141.

Lecture Hours: 48.000

Course User Fee: \$113.00

NUR1060C Adult Health Assessment 3.000 credits

This course is designed to provide students with the necessary skills to perform an in-depth nursing history and a complete physical examination on an adult client. The focus will be on clients with minimal or no alterations in their health state. Students will be introduced to and will demonstrate the techniques used in physical examination. Prerequisite: Admission to the School of Nursing; Corequisites: NUR 1025, 1025C, 1025L, 1141.

Lecture Hours: 32.000 - 33.000, Lab Hours: 32.000, Practicum Hours: 2.000

Prerequisite: Admission to the program

Course User Fee: \$109.00

NUR1025C Fundamentals of Nursing Skills Lab 1.000 credits

Students will learn of the opportunities for the explanation, demonstration, and practice of care provider activities essential to the basic practice of nursing. Learning experiences are provided in the skills laboratory.

Pre-Req: Program Admission; Co-Req: NUR 1025, 1025L, 1060C, 1141

Lab Hours: 32.000

Course User Fee: \$105.00

NUR1025L Fundamentals of Nursing Clinical Lab 2.000 credits

Students will learn of the opportunities for the explanation, demonstration, and practice of care provider activities essential to the basic practice of nursing. Learning experiences are provided in the skills laboratory.

Pre-Req: Program Admission; Corequisite: NUR 1025, 1025C, 1141, 1060C.

Clinical Hours: 96.000

Course User Fee: \$8.00

NUR1141 Nursing Math & Pharmacology 3.000 credits

Students will learn about medications and their effects on different body systems. The conceptual and mathematical operations necessary for safe and effective administration of intravenous medications, preparing medications that come in powdered form and adjusting medication administration based on medical protocols are discussed. Concepts of medications including history, nomenclature, sources of drug information, federal drug laws and standards, medication classifications, pharmacokinetics, pharmacodynamics, variables affecting medication actions and effects, and methods of delivery will be addressed. Co-Req: NUR 1025, 1025C, 1025L, 1060C.

Lecture Hours: 48.000, Practicum Hours: 1.000

Course User Fee: \$75.00

NUR1211 Medical-Surgical Nursing 3.000 credits

This course provides an introduction to the adult nursing care. Students will learn the nurse's role in meeting the short and long term needs of the client and community through preventive, therapeutic and palliative care are discussed. Pre-Req: NUR 1025, 1025C, 1060C, 1142; Co-Req: NUR 1211L, 1214C.

Lecture Hours: 48.000

Course User Fee: \$121.00

NUR1211L Medical Surgical Nursing Clinical 2.000 credits

Students will learn how to apply concepts of adult health nursing. Experiences in both in-patient and community settings will be provided. Students are encouraged to participate in projects emphasizing preventive aspects of nursing care. Prerequisites: NUR 1025, 1025C, 1025L, 1060C, and 1141

Clinical Hours: 96.000

Course User Fee: \$87.00

NUR1214C Medical Surgical Nursing Skills Lab 1.000 credits

Students will learn the opportunities for the explanation, demonstration, and practice of skills related to adult health nursing. Learning experiences are provided in the School of Nursing Skills Laboratory. Pre-Req: NUR 1025, 1025C, 1025L, 1060C, 1142; CO-REQ: NUR 1211, 1211L.

Lecture Hours: 8.000, Lab Hours: 16.000

Course User Fee: \$114.00

NUR2310 Pediatric Nursing 2.000 credits

This course provides a family centered approach to the nursing care of pediatric clients and their families. Students will learn the nurse's role in meeting the short and long term needs of the pediatric client, family, and community through preventative, therapeutic and palliative care, with recognition for the multicultural aspects of client needs. Prerequisites: 1211, 1211L, 1214C or 1002, 1002L; 1142; corequisites: NUR 2310L, 2420, 2420L, 2680L. Special fee. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$126.00

NUR2310L Pediatric Nursing Clinical Lab 1.000 credits

This course allows the student to apply the nursing process to the care of clients in selected pediatric clinical settings. Students will learn to observe cultural diversity and implement care to the pediatric client, family, and community through preventive, therapeutic and palliative measures. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2420, 2420L, 2520, 2520L, 2680L. Laboratory fee.

Clinical Hours: 48.000

Course User Fee: \$86.00

NUR2420 Obstetrical Nursing 2.000 credits

This course provides a family centered approach to the nursing care of obstetrical clients and their families. Students will learn to assess the pregnant client, to implement caring behaviors for the laboring client, educate the postpartum client, manage the care of the newborn and collaboration of care for the high risk client.

Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142. Corequisites: NUR 2310, 2310L, 2420L, 2680L.

Special fee. (2 hr. lecture)

Lecture Hours: 32.000

NUR2420L Obstetrical Nursing Clinical Lab 1.000 credits

This course provides an introduction to obstetrical nursing clinical practice. Students will learn to apply the nursing process to the care of clients in selected obstetrical clinical settings. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2310L, 2420, 2680L. Laboratory fee.

Clinical Hours: 48.000

Course User Fee: \$96.00

NUR2520 Psychiatric Nursing 2.000 credits

This course introduces students to the basic concepts of psychiatric nursing. Students will learn to provide care in in-patient and community settings, focusing on the nurse's role in meeting the needs of the patient, family, and the community. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2520L.

Special fee. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$62.00

NUR2520L Psychiatric Nursing Clinical Lab 1.000 credits

This course provides the student opportunities to apply concepts of psychiatric nursing. Students will learn psychiatric procedures for both in-patient and community settings, focusing on the nurse's role on meeting the needs of the client, family, and community. Students actively participate in projects assisting clients in preventative care and maintenance of mental health. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142

Clinical Hours: 48.000

Course User Fee: \$98.00

NUR2220 Medical Surgical Nursing II 3.000 credits

This course provides students with the opportunity to apply concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health.

Lecture Hours: 48.000

Prerequisite: NUR1025 AND NUR1025C AND NUR1025L AND NUR1060C AND NUR1141 AND NUR1211 AND NUR1211L AND NUR1214C AND Corequisite: NUR2220L

NUR2220L Medical Surgical Nursing II Clinical 1.000 credits

This course provides students with the opportunity to apply concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health.

Clinical Hours: 48.000

Prerequisite: NUR1025 AND NUR1025C AND NUR1025L AND NUR1060C AND NUR1141 AND NUR1211 AND NUR1211L AND NUR1214C AND Corequisite: NUR2220

NUR2212 Medical Surgical Nursing III 3.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1008, 1002L; NUR 1141, 2310, 2310L, 2420 2420L, 2680L

Lecture Hours: 48.000

Course User Fee: \$450.00

NUR2212L Medical Surgical Nursing III Clinical Lab 2.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1002, 1008, 1002L; NUR 1141, 2310, 2310L, 2420, 2420L, 2680L

Clinical Hours: 96.000

Course User Fee: \$150.00

NUR2680L Community Health Nursing Lab 1.000 credits

This laboratory course assists the students in applying knowledge of community health resources. Students will learn to manage community health resources to support the delivery of care to the childbearing/child-rearing families. Special emphasis is placed on the understanding of cultural influences on the health practices and beliefs within the family. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; co-requisites: NUR 2310, 2310L, 2420, 2420L.OL. Special fee. (48 hr. clinical)

Clinical Hours: 48.000

Course User Fee: \$81.00

NUR2811C Professional Nursing Leadership 4.000 credits

This course provides the student with the theoretical and clinical knowledge necessary for actualization of the role of the registered professional nurse, with emphasis on delegation and supervision. Prerequisites: NUR 2212, 2212L

Lecture Hours: 16.000, Clinical Hours: 144.000

Course User Fee: \$175.00

NUR2960 Senior Seminar 1.000 credits

This course provides a forum for the discussion, and preparation for the NCLEX-RN exam. Explain applicant requirements for the state board of nursing (and licensure eligibility requirements) and examination registration.

Lecture Hours: 16.000

Prerequisite: NUR2811C

Program Description

Nursing - R.N. (Transitional Full-Time)

Associate in Science | Code: 23025 | 72 credits

The Transitional Option in Nursing is designed to prepare Licensed Practical Nurses (LPN) and selected other individuals with National Licensure or Certification for practice as a Registered Nurse (RN). The content and clinical experiences are designed to meet the learning and professional socialization needs of this special category of student. The program is accredited by the National League for Nursing Accrediting Commission (NLNAC) (61 Broadway, New York, NY 10006, ph. 212-363-5555, www.nlnac.org) and approved by the Florida Board of Nursing (FBON). Graduates are eligible to apply to write the National Council Licensing Examination for Registered Nurses (NCLEX-RN). Selection is based on scores on pre-admission testing and completion of required pre-requisite courses. See a School of Nursing Information Booklet for more specific details about admission requirements. Pre-Admission tests – Applicants must take the Test of Adult Basic Education (TABE) and score 11 or above in reading, language and total math and the Nurse Entrance Test (NET). The NET is given only on the Medical Campus. Scores on the NET and TABE are used for selection.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1**Units: 10.0**

ENC 1101	English Composition 1	3.0
BSC 2085	Human Anatomy and Physiology 1	3.0
BSC 2085L	Human Anatomy and Physiology 1 Laboratory	1.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0

Semester 2**Units: 10.0**

BSC 2086	Human Anatomy & Physiology 2	3.0
BSC 2086L	Human Anatomy & Physiology 2 Laboratory	1.0
MAC 1105	College Algebra	3.0
PHI 2010	Introduction to Philosophy	3.0

Semester 3

Units: 10.0

CHM 1033	Chemistry for Health Sciences	3.0
CHM 1033L	Chemistry for Health Sciences Lab	1.0
MCB 2010	Microbiology	3.0
SPC 2608	Introduction to Public Speaking	3.0
Computer Competency*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 4 (In Milestone)

Units: 22.0

<i>Transitional Course</i>		2.0-5.0
NUR 1002	Transition to Registered Nursing	2.0
OR		
NUR 1006	Health Care Professions to RN Transition	5.0
NUR 1002L	Transition to Medical Surgical Nursing Clinical Lab	2.0
NUR 1008	Transition to Medical Surgical Nursing	5.0
NUR 1141	Nursing Math & Pharmacology	3.0
NUR 9995	Nursing Statewide Industry Certification	10.0

Semester 5 (In Milestone)

Units: 10.0

NUR 2310	Pediatric Nursing	2.0
NUR 2310L	Pediatric Nursing Clinical Lab	1.0
NUR 2420	Obstetrical Nursing	2.0
NUR 2420L	Obstetrical Nursing Clinical Lab	1.0
NUR 2520	Psychiatric Nursing	2.0
NUR 2520L	Psychiatric Nursing Clinical Lab	1.0
NUR 2680L	Community Health Nursing Lab	1.0

Semester 6 (In Milestone)

Units: 10.0

NUR 2212	Medical Surgical Nursing III	3.0
NUR 2212L	Medical Surgical Nursing III Clinical Lab	2.0
NUR 2811C	Professional Nursing Leadership	4.0
NUR 2960	Senior Seminar	1.0

Total: 72.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions.

Prerequisite: MAT1033; Corequisite: CHM1033L.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: CHM1033L

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite: MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

NUR1002 Transition to Registered Nursing 2.000 credits

This course introduces the student with selected prior health care experience and education to the profession of nursing, the roles basic to nursing practice, nursing process and the implementation of health-promoting activities to meet patient needs.

Prerequisite: Admission to the School of Nursing. Co-requisites: NUR 1002L, 1141.

Lecture Hours: 32.000

Course User Fee: \$125.00

NUR1006 Health Care Professions to RN Transition 5.000 credits

This course is designed for Medical Assistants, Respiratory Therapist, and Paramedics entering into the Transition program and will introduce the framework of the nursing process to non-nurse health care providers desiring to transition into the role of the registered nurse. Fundamental nursing concepts related to role transition and the introduction of nursing practices will be emphasized along with essential nursing core competencies including the knowledge, skills, and abilities to provide safe nursing practice. This course also provides the opportunity for participants to observe, review and practice in nursing skills in a simulated laboratory setting. Critical Thinking and Clinical Analysis will be introduced along with the Nursing Process. (NUR 1XXX is required for Licensed Medical Assistant, Paramedic and/or Respiratory Therapist students only). 80.00 hr. lecture

Lecture Hours: 80.000

NUR1002L Transition to Medical Surgical Nursing Clinical Lab 2.000 credits

This lab introduces students with prior health care education to the nursing profession. Students will learn the nurse's role in meeting short and long term needs of the patient through preventive, therapeutic and palliative care. Students will also explore nursing care of the adults with moderate alterations in health within a body systems framework. Pre-Req: Program Admission; Co-Req: NUR 1002 and NUR 1141. (192 Hr. Clinical)

Clinical Hours: 96.000

Course User Fee: \$116.00

NUR1008 Transition to Medical Surgical Nursing 5.000 credits

This course introduces students with prior health care education to the nursing profession. Students will learn the nurse's role in meeting short- and long-term needs of the patient through preventive, therapeutic and palliative care. Students will also explore nursing care of the adults with moderate alterations in health within a body systems framework.

Lecture Hours: 80.000

NUR1141 Nursing Math & Pharmacology 3.000 credits

Students will learn about medications and their effects on different body systems. The conceptual and mathematical operations necessary for safe and effective administration of intravenous medications, preparing medications that come in powdered form and adjusting medication administration based on medical protocols are discussed. Concepts of medications including history, nomenclature, sources of drug information, federal drug laws and standards, medication classifications, pharmacokinetics, pharmacodynamics, variables affecting medication actions and effects, and methods of delivery will be addressed. Co-Req: NUR 1025, 1025C, 1025L, 1060C.

Lecture Hours: 48.000, Practicum Hours: 1.000

Course User Fee: \$75.00

NUR9995 Nursing Statewide Industry Certification 10.000 credits

This course is designed for students who have earned an approved Statewide Nursing Industry Certification and provides academic recognition of the knowledge, skills, and competencies demonstrated through credential attainment. The course validates proficiency in nursing principles, patient care, clinical decision-making, safety practices, and professional standards within healthcare settings. Credit awarded through this course supports academic progression and recognizes documented achievement of industry-recognized nursing competencies. See Advisor to apply Technical Manual of Procedure (TMOP): 1100-815848.

NUR2310 Pediatric Nursing 2.000 credits

This course provides a family centered approach to the nursing care of pediatric clients and their families. Students will learn the nurse's role in meeting the short and long term needs of the pediatric client, family, and community through preventative, therapeutic and palliative care, with recognition for the multicultural aspects of client needs. Prerequisites: 1211, 1211L, 1214C or 1002, 1002L; 1142; corequisites: NUR 2310L, 2420, 2420L, 2680L. Special fee. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$126.00

NUR2310L Pediatric Nursing Clinical Lab 1.000 credits

This course allows the student to apply the nursing process to the care of clients in selected pediatric clinical settings. Students will learn to observe cultural diversity and implement care to the pediatric client, family, and community through preventive, therapeutic and palliative measures. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2420, 2420L, 2680L. Laboratory fee.

Clinical Hours: 48.000

Course User Fee: \$112.00

NUR2420 Obstetrical Nursing 2.000 credits

This course provides a family centered approach to the nursing care of obstetrical clients and their families. Students will learn to assess the pregnant client, to implement caring behaviors for the laboring client, educate the postpartum client, manage the care of the newborn and collaboration of care for the high risk client. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142. Corequisites: NUR 2310, 2310L, 2420L, 2680L. Special fee. (2 hr. lecture)

Lecture Hours: 32.000

NUR2420L Obstetrical Nursing Clinical Lab 1.000 credits

This course provides an introduction to obstetrical nursing clinical practice. Students will learn to apply the nursing process to the care of clients in selected obstetrical clinical settings. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2310L, 2420, 2680L. Laboratory fee. Clinical Hours: 48.000
Course User Fee: \$96.00

NUR2520 Psychiatric Nursing 2.000 credits

This course introduces students to the basic concepts of psychiatric nursing. Students will learn to provide care in in-patient and community settings, focusing on the nurse's role in meeting the needs of the patient, family, and the community. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2520L. Special fee. (2 hr. lecture) Lecture Hours: 32.000
Course User Fee: \$62.00

NUR2520L Psychiatric Nursing Clinical Lab 1.000 credits

This course provides the student opportunities to apply concepts of psychiatric nursing. Students will learn psychiatric procedures for both in-patient and community settings, focusing on the nurse's role on meeting the needs of the client, family, and community. Students actively participate in projects assisting clients in preventative care and maintenance of mental health. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142 Clinical Hours: 48.000
Course User Fee: \$98.00

NUR2680L Community Health Nursing Lab 1.000 credits

This laboratory course assists the students in applying knowledge of community health resources. Students will learn to manage community health resources to support the delivery of care to the childbearing/child-rearing families. Special emphasis is placed on the understanding of cultural influences on the health practices and beliefs within the family. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; co-requisites: NUR 2310, 2310L, 2420, 2420L.0L. Special fee. (48 hr. clinical) Clinical Hours: 48.000
Course User Fee: \$81.00

NUR2960 Senior Seminar 1.000 credits

This course provides a forum for the discussion, and preparation for the NCLEX-RN exam. Explain applicant requirements for the state board of nursing (and licensure eligibility requirements) and examination registration. Lecture Hours: 16.000
Prerequisite: NUR2811C

NUR2811C Professional Nursing Leadership 4.000 credits

This course provides the student with the theoretical and clinical knowledge necessary for actualization of the role of the registered professional nurse, with emphasis on delegation and supervision. Prerequisites: NUR 2212, 2212L Lecture Hours: 16.000, Clinical Hours: 144.000
Course User Fee: \$175.00

NUR2212 Medical Surgical Nursing III 3.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1008, 1002L; NUR 1141, 2310, 2310L, 2420, 2420L, 2680L Lecture Hours: 48.000
Course User Fee: \$450.00

NUR2212L Medical Surgical Nursing III Clinical Lab 2.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1002, 1008, 1002L; NUR 1141, 2310, 2310L, 2420, 2420L, 2680L Clinical Hours: 96.000
Course User Fee: \$150.00

Program Description

Nursing - R.N. (Transitional Part-Time)

Associate in Science | Code: 23026 | 72 credits

The Transitional Option in Nursing is designed to prepare Licensed Practical Nurses (LPN) and selected other individuals with National Licensure or Certification for practice as a Registered Nurse (RN). The content and clinical experiences are designed to meet the learning and professional socialization needs of this special category of student. The program is accredited by the National League for Nursing Accrediting Commission (NLNAC) (61 Broadway, New York, NY 10006, ph. 212-363-5555, www.nlnac.org) and approved by the Florida Board of Nursing (FBON). Graduates are eligible to apply to write the National Council Licensing Examination for Registered Nurses (NCLEX-RN). Selection is based on scores on pre-admission testing and completion of required pre-requisite courses. See a School of Nursing Information Booklet for more specific details about admission requirements. Pre-Admission tests – Applicants must take the Test of Adult Basic Education (TABE) and score 11 or above in reading, language and total math and the Nurse Entrance Test (NET). The NET is given only on the Medical Campus. Scores on the NET and TABE are used for selection.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 10.0
ENC 1101	English Composition 1	3.0
BSC 2085	Human Anatomy and Physiology 1	3.0
BSC 2085L	Human Anatomy and Physiology 1 Laboratory	1.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0

Semester 2		Units: 10.0
BSC 2086	Human Anatomy & Physiology 2	3.0
BSC 2086L	Human Anatomy & Physiology 2 Lab	1.0
MAC 1105	College Algebra	3.0
PHI 2010	Introduction to Philosophy	3.0

Semester 3		Units: 10.0
CHM 1033	Chemistry for Health Sciences	3.0
CHM 1033L	Chemistry for Health Sciences Lab	1.0
MCB 2010	Microbiology	3.0
SPC 2608	Introduction to Public Speaking	3.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 4 (In Program Milestone)		Units: 7.0
<i>Transitional Course</i>		2.0-5.0
NUR 1002	Transition to Registered Nursing	2.0
OR		
NUR 1006	Health Care Professions to RN Transition	5.0
NUR 1008	Transition to Medical Surgical Nursing	5.0

Semester 5 (In Program Milestone)		Units: 15.0
--	--	--------------------

NUR 1002L	Transition to Medical Surgical Nursing Clinical Lab	2.0
NUR 1141	Nursing Math & Pharmacology	3.0
NUR 9995	Nursing Statewide Industry Certification	10.0

Semester 6 (In Program Milestone)

Units: 6.0

NUR 2310	Pediatric Nursing	2.0
NUR 2310L	Pediatric Nursing Clinical Lab	1.0
NUR 2420	Obstetrical Nursing	2.0
NUR 2420L	Obstetrical Nursing Clinical Lab	1.0

Semester 7 (In Program Milestone)

Units: 4.0

NUR 2520	Psychiatric Nursing	2.0
NUR 2520L	Psychiatric Nursing Clinical Lab	1.0
NUR 2680L	Community Health Nursing Lab	1.0

Semester 8 (In Program Milestone)

Units: 10.0

NUR 2212	Medical Surgical Nursing III	3.0
NUR 2212L	Medical Surgical Nursing III Clinical Lab	2.0
NUR 2811C	Professional Nursing Leadership	4.0
NUR 2960	Senior Seminar	1.0

Total: 72.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Lab 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development, from an experiential approach.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions. Prerequisite: MAT1033; Corequisite: CHM1033L.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: CHM1033L

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite: MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L. Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

NUR1002 Transition to Registered Nursing 2.000 credits

This course introduces the student with selected prior health care experience and education to the profession of nursing, the roles basic to nursing practice, nursing process and the implementation of health-promoting activities to meet patient needs.

Prerequisite: Admission to the School of Nursing. Co-requisites: NUR 1002L, 1141.

Lecture Hours: 32.000

Course User Fee: \$125.00

NUR1006 Health Care Professions to RN Transition 5.000 credits

This course is designed for Medical Assistants, Respiratory Therapist, and Paramedics entering into the Transition program and will introduce the framework of the nursing process to non-nurse health care providers desiring to transition into the role of the registered nurse. Fundamental nursing concepts related to role transition and the introduction of nursing practices will be emphasized along with essential nursing core competencies including the knowledge, skills, and abilities to provide safe nursing practice. This course also provides the opportunity for participants to observe, review and practice in nursing skills in a simulated laboratory setting. Critical Thinking and Clinical Analysis will be introduced along with the Nursing Process. (NUR 1XXX is required for Licensed Medical Assistant, Paramedic and/or Respiratory Therapist students only). 80.00 hr. lecture

Lecture Hours: 80.000

NUR1008 Transition to Medical Surgical Nursing 5.000 credits

This course introduces students with prior health care education to the nursing profession. Students will learn the nurse's role in meeting short- and long-term needs of the patient through preventive, therapeutic and palliative care. Students will also explore nursing care of the adults with moderate alterations in health within a body systems framework.

Lecture Hours: 80.000

NUR1002L Transition to Medical Surgical Nursing Clinical Lab 2.000 credits

This lab introduces students with prior health care education to the nursing profession. Students will learn the nurse's role in meeting short and long term needs of the patient through preventive, therapeutic and palliative care. Students will also explore nursing care of the adults with moderate alterations in health within a body systems framework. Pre-Req: Program Admission; Co-Req: NUR 1002 and NUR 1141. (192 Hr. Clinical)

Clinical Hours: 96.000

Course User Fee: \$116.00

NUR1141 Nursing Math & Pharmacology 3.000 credits

Students will learn about medications and their effects on different body systems. The conceptual and mathematical operations necessary for safe and effective administration of intravenous medications, preparing medications that come in powdered form and adjusting medication administration based on medical protocols are discussed. Concepts of medications including history, nomenclature, sources of drug information, federal drug laws and standards, medication classifications, pharmacokinetics, pharmacodynamics, variables affecting medication actions and effects, and methods of delivery will be addressed. Co-Req: NUR 1025, 1025C, 1025L, 1060C.

Lecture Hours: 48.000, Practicum Hours: 1.000

Course User Fee: \$75.00

NUR9995 Nursing Statewide Industry Certification 10.000 credits

This course is designed for students who have earned an approved Statewide Nursing Industry Certification and provides academic recognition of the knowledge, skills, and competencies demonstrated through credential attainment. The course validates proficiency in nursing principles, patient care, clinical decision-making, safety practices, and professional standards within healthcare settings. Credit awarded through this course supports academic progression and recognizes documented achievement of industry-recognized nursing competencies. See Advisor to apply Technical Manual of Procedure (TMOP): 1100-815848.

NUR2310 Pediatric Nursing 2.000 credits

This course provides a family centered approach to the nursing care of pediatric clients and their families. Students will learn the nurse's role in meeting the short and long term needs of the pediatric client, family, and community through preventative, therapeutic and palliative care, with recognition for the multicultural aspects of client needs. Prerequisites: 1211, 1211L, 1214C or 1002, 1002L; 1142; corequisites: NUR 2310L, 2420, 2420L, 2680L. Special fee. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$126.00

NUR2310L Pediatric Nursing Clinical Lab 1.000 credits

This course allows the student to apply the nursing process to the care of clients in selected pediatric clinical settings. Students will learn to observe cultural diversity and implement care to the pediatric client, family, and community through preventive, therapeutic and palliative measures. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2420, 2420L, 2520, 2520L, 2680L. Laboratory fee.

Clinical Hours: 48.000

Course User Fee: \$86.00

NUR2420 Obstetrical Nursing 2.000 credits

This course provides a family centered approach to the nursing care of obstetrical clients and their families. Students will learn to assess the pregnant client, to implement caring behaviors for the laboring client, educate the postpartum client, manage the care of the newborn and collaboration of care for the high risk client. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142. Corequisites: NUR 2310, 2310L, 2420L, 2680L. Special fee. (2 hr. lecture)

Lecture Hours: 32.000

NUR2420L Obstetrical Nursing Clinical Lab 1.000 credits

This course provides an introduction to obstetrical nursing clinical practice. Students will learn to apply the nursing process to the care of clients in selected obstetrical clinical settings. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2310, 2310L, 2420, 2680L. Laboratory fee.

Clinical Hours: 48.000

Course User Fee: \$96.00

NUR2520 Psychiatric Nursing 2.000 credits

This course introduces students to the basic concepts of psychiatric nursing. Students will learn to provide care in in-patient and community settings, focusing on the nurse's role in meeting the needs of the patient, family, and the community. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; 1142. Co-requisites: NUR 2520L. Special fee. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$62.00

NUR2520L Psychiatric Nursing Clinical Lab 1.000 credits

This course provides the student opportunities to apply concepts of psychiatric nursing. Students will learn psychiatric procedures for both in-patient and community settings, focusing on the nurse's role on meeting the needs of the client, family, and community. Students actively participate in projects assisting clients in preventative care and maintenance of mental health. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L, 1142

Clinical Hours: 48.000

Course User Fee: \$98.00

NUR2680L Community Health Nursing Lab 1.000 credits

This laboratory course assists the students in applying knowledge of community health resources. Students will learn to manage community health resources to support the delivery of care to the childbearing/child-rearing families. Special emphasis is placed on the understanding of cultural influences on the health practices and beliefs within the family. Prerequisites: NUR 1211, 1211L, 1214C or 1002, 1002L; co-requisites: NUR 2310, 2310L, 2420, 2420L. Special fee. (48 hr. clinical)

Clinical Hours: 48.000

Course User Fee: \$81.00

NUR2212 Medical Surgical Nursing III 3.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1008, 1002L; NUR 1141, 2310, 2310L, 2420, 2420L, 2680L

Lecture Hours: 48.000

Course User Fee: \$450.00

NUR2212L Medical Surgical Nursing III Clinical Lab 2.000 credits

This course provides students with the opportunity to apply advanced concepts of medical surgical nursing. Students will learn to provide health care delivery in both in-patient and community settings. Students will focus on the nurse's role in meeting the needs of the client, family, and community. Students are encouraged to actively participate in projects assisting clients in preventive care and maintenance of health. Prerequisites: NUR 1211, 1211L, 1214C or NUR 1002, 1008, 1002L; NUR 1141, 2310, 2310L, 2420, 2420L, 2680L

Clinical Hours: 96.000

Course User Fee: \$150.00

NUR2811C Professional Nursing Leadership 4.000 credits

This course provides the student with the theoretical and clinical knowledge necessary for actualization of the role of the registered professional nurse, with emphasis on delegation and supervision.

Prerequisites: NUR 2212, 2212L

Lecture Hours: 16.000, Clinical Hours: 144.000

Course User Fee: \$175.00

NUR2960 Senior Seminar 1.000 credits

This course provides a forum for the discussion, and preparation for the NCLEX-RN exam. Explain applicant requirements for the state board of nursing (and licensure eligibility requirements) and examination registration.

Lecture Hours: 16.000

Prerequisite: NUR2811C

Program Description

Opticianry

Associate in Science | Code: 23041 | 72 credits

The Opticianry program simultaneously prepares students for three ophthalmic health care careers: optician, optometric technician and ophthalmic medical assistant. A concentrated presentation of general education courses combined with career development and clinical experience accomplishes this multi-disciplinary approach. Among the marketable skills acquired are clinical data collection, ophthalmic fabrication and ophthalmic dispensing. The student begins working with patients during the third semester in clinics staffed by ophthalmologists, optometrists and opticians. A student must maintain a grade point average of 2.0 or better in each course with an "OPT" prefix in order to advance within the program. The successful completion of this program offers the graduate a challenging and rewarding career on an ophthalmic health care team. Graduates are eligible to sit for the Opticianry Licensure Examination and the Optometric Technician Registration Examination. After one year of work experience with an ophthalmologist, graduates may sit for the Ophthalmic Medical Assistant Certification Examination. The Opticianry program is approved by the Council on Optometric Education and the Commission on Opticianry Accreditation.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

OPT 2876L	Ophthalmic Dispensing Practicum 2	2.0

Total: 72.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

OPT1110 Physical & Geometrical Optics 4.000 credits

Behavior of light energy as it passes through air, plastic, glass and water with emphasis on how light is modified by prism and curved lens surfaces. These principles relate to the effect these ophthalmic devices have in correcting the errors of human vision.

Lecture Hours: 64.000

Corequisite: OPT 1205, OPT 1330

OPT1205 Ocular Anatomy, Physiology & Pathophysiology 3.000 credits

The structure and function of the systems of the human body, emphasizing the anatomy, physiology and pathophysiology of the human eye. Visual recognition of common eye disorders is also discussed.

Lecture Hours: 48.000

Corequisite: OPT 1110, OPT 1330

OPT1330 Clinical Data Collection 1 2.000 credits

Techniques necessary in a clinical environment for the collection of patient case history, entrance visual acuity, basic visual skills of ocular mobility and accommodation, color discrimination, depth perception and binocular fusion. Emphasis is also placed on gaining familiarity with the medical terminology as it relates to the visual system.

Lecture Hours: 32.000

Corequisite: OPT 1110, OPT 1205

OPT1450 Ophthalmic Dispensing Procedures 1 1.000 credits

Basic procedures of ophthalmic dispensing such as frame selection, measurement and laboratory ordering. Emphasis will be placed on common ophthalmic frame materials; crown glass and CR-39 lenses; absorptive lenses; and frame alignment, adjustment and repair. The student will demonstrate skills necessary for entry level ophthalmic dispensing in Vision Care Clinic.

Lecture Hours: 16.000

Prerequisite: OPT 1110, OPT 1205, OPT 1330,

Corequisite: OPT 1450L

OPT1450L Ophthalmic Dispensing Procedures 1 Laboratory 1.000 credits

Laboratory for OPT 1450.

Lab Hours: 32.000

Prerequisite: OPT 1110, OPT 1205, OPT 1330,

Corequisite: OPT 1450

OPT1150 Ophthalmic Lenses 2.000 credits

Characteristic of unifocal and multifocal lens reference points for proper lens selection to meet visual needs of the patients. Emphasis is on accurate positioning of the optical centers and selected multi-focal addition design. ANSI and FDA standards; prescription ordering; verification procedures; absorptive lenses; and invisible and progressive multi-focals are presented.

Lecture Hours: 32.000

Prerequisite: OPT 1110, OPT 1205, OPT 1330,

Corequisite: OPT 1331, OPT 1331L, OPT 2505, OPT 2070L

OPT1331 Clinical Data Collection 2 2.000 credits

Techniques necessary in a clinical environment for the collection of subjective and objective patient diagnostic information including visual field plotting, tonometry, lensometry, keratometry, and sphygmomanometry.

Lecture Hours: 32.000

Prerequisite: OPT1330OPT 1110, OPT 1205, OPT 1330, Corequisite: OPT 1150, OPT 1331L, OPT 2505, OPT 2070L

OPT1331L Clinical Data Collection 2 Laboratory 1.000 credits

Laboratory for OPT1331 in which students are under the supervision of a licensed practitioner.

Lab Hours: 32.000

Prerequisite: OPT 1110, OPT 1205, OPT 1330,

Corequisite: OPT 1150, OPT 1331, OPT 2505, OPT 2070L

Course User Fee: \$10.00

OPT2070L Computers for Vision Care 1.000 credits

This course introduces students to the use of computers in ophthalmic practice. Students will learn computer basics and the use of application software for maintaining patient records and billing. Elements of ophthalmic coding are included.

Lab Hours: 32.000

Prerequisite: OPT 1110, OPT 1205, OPT 1330,

Corequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 2505

Course User Fee: \$15.00

OPT2451 Ophthalmic Dispensing Procedures 2 1.000 credits

Theory and terminology of advanced ophthalmic dispensing. Emphasis will be placed on new technology in ophthalmic frame materials; multifocal lenses including progressive power and blended bifocals; and high index lenses. The process of analyzing the patient's specific needs for the proper frame and lens selection is highlighted.

Lecture Hours: 16.000

Prerequisite: OPT1450OPT 1150, OPT 1331, OPT 1331L, OPT 1450, OPT 1450L, OPT 2505, OPT 2070, Corequisite: OPT 2451L

OPT2451L Ophthalmic Dispensing Procedures Laboratory 1.000 credits

Laboratory for OPT 2451.

Lab Hours: 32.000

Prerequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 1450, OPT 1450L, OPT 2505, OPT 2070L, Corequisite: OPT 2451

Course User Fee: \$10.00

OPT2505 Contact Lenses 1 3.000 credits

Basic principles of contact lens fitting, emphasizing soft lenses. Topics include lens-relate terminology, anatomy and physiology, patient examination, soft lens materials, design, parameters, handling, fitting and care. Includes introduction to rigid lenses.

Lecture Hours: 48.000

Prerequisite: OPT 1110, OPT 1205, OPT 1330,

Corequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 2070L

OPT2375 Refractometry 1.000 credits

Students will learn the basic principles of refractometry, theoretical aspects of retinoscopy, and the use of cross cylinders. Students will be able to describe various refractive problems and their solutions.

Lecture Hours: 16.000

Prerequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 1450, OPT 1450L, OPT 2505, OPT 2070L, Corequisite: OPT 2375L, OPT 2420, OPT 2420L, OPT 2506, OPT 2506L, OPT 2800L

OPT2375L Refractometry Laboratory 1 1.000 credits

Students will practice theoretical concepts of refractometry using a retinoscope, auto-refractor, and cross cylinders in a laboratory setting.

Lab Hours: 32.000

Prerequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 1450, OPT 1450L, OPT 2505, OPT 2070L, Corequisite: OPT 2375, OPT 2420, OPT 2420L, OPT 2506, OPT 2506L, OPT 2800L

Course User Fee: \$30.00

OPT2420 Eyewear Fabrication 1 2.000 credits

Theory of ophthalmic surfacing procedures. Students acquire knowledge to arrange single vision lenses; use lensometers and lens clock; operate project-o-makers for single vision lens layout; select or fabricate frame patterns; and utilize several systems for edging lenses for ophthalmic frames.

Lecture Hours: 32.000

Prerequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 1450, OPT 1450L, OPT 2505, OPT 2070L, Corequisite: OPT 2375, OPT 2375L, OPT 2420L, OPT 2451, OPT 2451L, OPT 2506, OPT 2506L, OPT 2800L

OPT2420L Eyewear Fabrication 1 Laboratory 1.000 credits

Laboratory for OPT 2420.

Lab Hours: 32.000

Prerequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 1450, OPT 1450L, OPT 2505, OPT 2070L, Corequisite: OPT 2375, OPT 2375L, OPT 2420, OPT 2506, OPT 2506L, OPT 2800L

Course User Fee: \$15.00

OPT2506 Contact Lenses 2 2.000 credits

Principles of contact lens fitting, emphasizing rigid lenses. Topics include materials, design parameters, verification, handling, fitting and care. Considers advanced and specialty design and ocular complications.

Lecture Hours: 32.000

Prerequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 1450, OPT 1450L, OPT 2505, OPT 2070L, Corequisite: OPT 2375, OPT 2375L, OPT 2420, OPT 2420L, OPT 2506L, OPT 2800L

OPT2506L Contact Lenses 2 Lab 1.000 credits

Practical procedures designed to apply technical skills of contact lens application and removal, verification of the contact lens prescription, modification of hard and hard gas permeable contact lenses, and other skills discussed in previous lecture coursework.

Lab Hours: 32.000

Prerequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 1450, OPT 1450L, OPT 2505, OPT 2070L, Corequisite: OPT 2375, OPT 2375L, OPT 2420, OPT 2420L, OPT 2506, OPT 2800L

Course User Fee: \$36.00

OPT2800L Vision Care Clinic 1 2.000 credits

Introductory clinic designed to apply technical skills acquired in previous course work. Recording of clinical data, administrative procedures and techniques in patient handling under close staff supervision.

Clinical Hours: 96.000

Prerequisite: OPT 1150, OPT 1331, OPT 1331L, OPT 1450, OPT 1450L, OPT 2505, OPT 2070L, Corequisite: OPT 2375, OPT 2375L, OPT 2420, OPT 2420L, OPT 2506, OPT 2506L

Course User Fee: \$25.00

OPT2376L Refractometry Lab 2 1.000 credits

This course is designed to provide the student with the hands on experience of hand neutralizing a pair of glasses, retinoscopy, and the use of the phoropter and the Snellen chart.

Lab Hours: 32.000

Prerequisite: OPT 2375, OPT 2375L, OPT 2420, OPT 2420L, OPT 2451, OPT 2451L, OPT 2506, OPT 2506L, OPT 2800L, Corequisite: OPT 2421C, OPT 2801L, OPT 2830C, OPT 2875L

Course User Fee: \$26.00

OPT2421C Eyewear Fabrication 2 3.000 credits

Advanced techniques in measurement, fabrication, and verification of unifocal and multifocal lenses. Students fabricate finished eyewear from written specifications ensuring that current ANSI and FDA standards are exceeded.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: OPT 2375, OPT 2375L, OPT 2420, OPT 2420L, OPT 2451, OPT 2451L, OPT 2506, OPT 2506L, OPT 2800L, Corequisite: OPT 2376L, OPT 2801L, OPT 2830C, OPT 2875L

Course User Fee: \$25.00

OPT2801L Vision Care Clinic 2 4.000 credits

Development of skills in patient reception, clinical data collection, assisting clinician, and ophthalmic dispensing. This is an opportunity to follow the patient through the entire cycle of vision care under close supervision of the clinical staff.

Clinical Hours: 192.000

Prerequisite: OPT 2375, OPT 2375L, OPT 2420, OPT 2420L, OPT 2451, OPT 2451L, OPT 2506, OPT 2506L, OPT 2800L, Corequisite: OPT 2376L, OPT 2421C, OPT 2830C, OPT 2875L

Course User Fee: \$25.00

OPT2830C Contact Lenses Clinic 1 2.000 credits

Observe and assist an optometrist in the initial fitting and follow-up care of rigid and soft contact lenses for patients referred from the Vision Care Clinic when conventional eyewear will not suffice. Familiarization with the instructions for lens handling, cleaning, care and storage of contact lenses.

Lab Hours: 64.000

Prerequisite: OPT 2375, OPT 2375L, OPT 2420, OPT 2420L, OPT 2451, OPT 2451L, OPT 2506, OPT 2506L, OPT 2800L, Corequisite: OPT 2376L, OPT 2421C, OPT 2801L, OPT 2875L

Course User Fee: \$10.00

OPT2875L Ophthalmic Dispensing Practicum 1 2.000 credits

Externship in an approved finishing laboratory of a retail ophthalmic dispensing establishment. The student will gain a working knowledge of ophthalmic frame and lens stock, inventory system, layout and blocking, chemical and heat treating, edging, tinting assembly and alignment of eyewear according to the written prescription.

Practicum Hours: 96.000

Prerequisite: OPT 2375, OPT 2375L, OPT 2420, OPT 2420L, OPT 2451, OPT 2451L, OPT 2506, OPT 2506L, OPT 2800L, Corequisite: OPT 2376L, OPT 2421C, OPT 2801L, OPT 2830C

OPT2060 Ophthalmic Management Policy & Procedures 2.000 credits

Procedures and terminology used in the handling of patients, correspondence, legal and ethical principles, inter- and intra-professional relationships, and office management. Develop feasibility report of opening a retail ophthalmic dispensary. The history of opticianry, optometry and ophthalmology is traced. Special emphasis is on a comprehensive review of the curriculum.

Lecture Hours: 32.000

Prerequisite: OPT 2376L, OPT 2421C, OPT 2801L, OPT 2830C, OPT 2875L, Corequisite: OPT 2377L, OPT 2422C, OPT 2802L, OPT 2831L, OPT 2876L

OPT2377L Refractometry 3 Laboratory 1.000 credits

This laboratory course will continue to advance the skills already introduced in the previous laboratories 1 & 2. The improved skills will enhance the student's ability to determine the refractive status of the eye and be able to practice these skills on patients in the clinic.

Lab Hours: 32.000

Prerequisite: OPT 2376L, OPT 2421C, OPT 2801L, OPT 2830C, OPT 2875L, Corequisite: OPT 2060, OPT 2422C, OPT 2802L, OPT 2831L, OPT 2876L

OPT2422C Eyewear Fabrication 3 3.000 credits

A continuation of OPT 2421. Theory of evaluation and analysis of eyewear for accuracy and quality. Advanced techniques in operation of automated lens analyzer and lens edgers, and maintenance of equipment.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: OPT 2376L, OPT 2421C, OPT 2801L, OPT 2830C, OPT 2875L, Corequisite: OPT 2060, OPT 2377L, OPT 2802L, OPT 2831L, OPT 2876L

Course User Fee: \$25.00

OPT2802L Vision Care Clinic 3 4.000 credits

Development of additional skills in visual fields, tonography, ocular photodocumentation, vision therapy/orthoptics, low vision, aseptic techniques, eye emergencies, and assisting in triage and laboratory diagnosis of external eye disease. On and off-campus clinics will be utilized under the close supervision of optometrists and ophthalmologists.

Clinical Hours: 192.000 - 19.000

Prerequisite: OPT 2376L, OPT 2421C, OPT 2801L, OPT 2830C, OPT 2875L, Corequisite: OPT 2060, OPT 2377L, OPT 2422C, OPT 2831L, OPT 2876L

OPT2831L Contact Lens Clinic 2 1.000 credits

Use of the soft contact lens instruments to confirm all the parameters for replacement lens. Particular attention is devoted to the patient that is having problems with contact lenses after long-term wear due to corneal changes and sensitivity to solutions under direct supervision of an optometrist.

Clinical Hours: 48.000

Prerequisite: OPT 2376L, OPT 2421C, OPT 2801L, OPT 2830C, OPT 2875L, Corequisite: OPT 2060, OPT 2377L, OPT 2422C, OPT 2802L, OPT 2876L

Course User Fee: \$10.00

OPT2876L Ophthalmic Dispensing Practicum 2 2.000 credits

Externship in an approved retail ophthalmic dispensing establishment in the area of frame styling, ordering of appropriately designed lenses, adjustment, repair and dispensing of eyewear. The student will gain a working knowledge of administrative management procedures of the practice.

Practicum Hours: 96.000

Prerequisite: OPT 2376L, OPT 2421C, OPT 2801L, OPT 2830C, OPT 2875L, Corequisite: OPT 2060, OPT 2377L, OPT 2422C, OPT 2802L, OPT 2831L

Program Description

Paralegal Studies - ABA Approved

Associate in Science | Code: 27013 | 64 credits

The Paralegal program prepares students to obtain entry-level employment in law offices, government agencies, banks or business corporations. It also enables persons working in the field without a degree to upgrade their skills to become a qualified paralegal. The MDC Paralegal program is approved by the American Bar Association. The American Bar Association defines a paralegal or as "a person, qualified by education, training or work experience who is employed or retained by a lawyer, law office, corporation, governmental agency or other entity and who performs specifically delegated substantive legal work for which a lawyer is responsible." Paralegals cannot give legal advice, set fees, negotiate or represent clients in court as these activities involve unauthorized practice of law. Paralegals work under the supervision of attorneys and are not just "document preparers," working directly with the public. Additional Information: It is necessary to see an advisor prior to beginning the program and before registering each term. For more information, please contact the Paralegal Program at 305-237-7813 or visit <https://www.mdc.edu/paralegal/>.

Total: 64.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

LCO0999 Law Center Student Orientation 0.000 credits

Law Center Student Orientation

Lecture Hours: 6.000

BUL2241 Business Law 1 3.000 credits

Law in relation to the proper conduct of business, including a consideration of the nature and source of law, courts and courtroom procedure, contracts, sales of goods, negotiable instruments and secured transactions. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

PLA2003 Fundamentals of Law 3.000 credits

This course provides students with an overview of the American legal system. It explores the basic concepts of law in society including the different sources of law. The federal, state and county court systems are examined along with judicial interpretation of the law. The course also covers the distinctions between procedural and substantive law, civil versus criminal and a court of equity and a court of law. The roles of paralegals are discussed with an emphasis given in their professional relationships, functions, career opportunities and ethical obligations.

Lecture Hours: 48.000

Pre/Corequisite: ENC1101, Corequisite: LCO0999, PLA2931

Course User Fee: \$25.00

PLA2931 Legal Specialty Seminar 1.000 credits

Intensive practical and theoretical training is provided in a seminar format. The seminar topics cover current and timely legal issues and are addressed by practicing attorneys. The topics are announced at the beginning of the Fall and Winter semesters. Corequisite: PLA 2003. (1 hr. lecture)

Lecture Hours: 16.000

Corequisite: PLA2003

PLA2120C Legal Research and Analysis 4.000 credits

Legal Research and Analysis is an introduction to the legal system, the law library system, the ethical responsibilities and skills of a paralegal when conducting research for primary and secondary sources of law in the United States. Students must earn a minimum of a C to pass this course. Pre-requisite: ENC1101; Pre/Co-requisites: PLA2003 and PLA2931 with a grade of C or better, and Departmental approval for non-Paralegal Studies majors. (3 hr. lecture, 2 hr. lab).

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: ENC1101 AND Pre/Corequisite: PLA2003, PLA2931

Course User Fee: \$45.84

PLA2704 Professionalism & Civility in the Law 3.000 credits

This class will provide students guidance as they interact in a real-world setting as legal professionals while strengthening their communication skills. This course will cultivate the students' leadership capacities at the intra-personal, interpersonal, and industry levels. The coursework will proceed through experiential learning that is grounded in theory and includes reflection. The study material will develop students' knowledge in the context of the aspiration, relational, and practical aspects of professionalism and civility in the legal field (3 credits)

Lecture Hours: 48.000

Course User Fee: \$45.84

PLA2890 Human Rights Law & Procedure 3.000 credits

This course will address theoretical and practical questions the evolution and development of the laws addressing international human rights issues.

Emphasis will be placed on the core issues, debates, struggles, failures, and successes of legal claims. (3 hr. lecture)

Lecture Hours: 48.000

REE2040 Real Estate Principles and Practices (P&P 1) 4.000 credits

Topics include real property, liens, titles, contracts, tax factors, mortgages, property evaluation, real estate market, licensing requirements, legal aspects of the real estate business, and property management. Completion of this course is required by the Florida Real Estate Commission for approval to take the State Examination.

Lecture Hours: 64.000

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

BUL2242 Business Law 2 3.000 credits

Emphasis on the laws affecting agencies, the formation and operation of partnership and corporation, personal and real property, insurance, surety ship, estates and bankruptcy, and a general review of government regulations affecting usual business operations. Prerequisite: BUL2241. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

PLA2114 Legal Writing 3.000 credits

This course provides knowledge and understanding of how to present legal research and analysis in proper written format. As legal research is an integral part of legal writing, the course will reinforce the skills used in legal research. It will also cover basic writing skills, the process of legal analysis, methodology involved in drafting a Memorandum of law, practice in drafting pleadings, and various types of specific law office correspondence.

Lecture Hours: 48.000

Prerequisite: ENC 1101, PLA 2003, PLA 2120C, PLA 2931

Course User Fee: \$50.00

PLA2227 Civil Law & Litigation 3.000 credits

This course will introduce students to a comprehensive exploration of civil procedure, pleadings, evidence, motions, damages, appeals, and alternative dispute resolution. Students will gain skills in the application of law when preparing documents before, during and post trial. A minimum of a C is required to pass this course. Prerequisites: ENC 1101, PLA 2003, PLA 2120C, and PLA 2931. (3 hr. lecture).

Lecture Hours: 48.000

Prerequisite: ENC1101 AND PLA2003 AND PLA2931, PLA2120C

Course User Fee: \$45.84

PLA2273 Torts 3.000 credits

This course provides an examination of the theories governing tort law and the use of various pre-litigation tools. Topics covered include intentional torts, negligence and strict liability. The course also requires students to utilize the knowledge obtained to draft documents employed in practice.

Lecture Hours: 48.000

Prerequisite: ENC 1101, PLA 2203, PLA 2120C, PLA 2114, PLA 2227, PLA 2931

Course User Fee: \$50.00

PLA2303 Criminal Law & Litigation 3.000 credits

This course focuses on the substantive areas of criminal law including the offenses, elements, defenses and parties to a criminal law proceeding. It also emphasizes the role of the criminal justice system in adjudicating, enforcing and sentencing criminal defendants. It examines the Florida Rules of Criminal Procedure and provides practice in drafting documents required in the conduct of a criminal trial.

Lecture Hours: 48.000

Prerequisite: ENC 1101, PLA 2203, PLA 2120C, PLA 2114, PLA 2227, PLA 2931

Course User Fee: \$50.00

PLA2736 Electronic Discovery, Investigations, and Evidence 3.000 credits

This course will examine the electronic discovery (e-discovery) process primarily following the 9 stages of the Electronic Discovery Reference Model (EDRM). It will include analysis of e-discovery case law including past and current cases; the Federal Rules of Civil Procedure related to e-discovery; different types of e-discovery including litigation, government investigations, and internal audits; and ethical issues related to e-discovery. Additionally, it will have a practical aspect that will teach e-discovery skills related to e-discovery technology, including review platforms. Students must earn a grade of C or better to pass this course. Prerequisites: ENC1101, PLA2003, PLA2120C, PLA2227, and PLA2931.

Lecture Hours: 48.000

Prerequisite: PLA2003ENC 1101, PLA 2203, PLA 2120C, PLA 2114, PLA 2227, PLA 2931

Course User Fee: \$45.84

PLA2800 Family Law 3.000 credits

An examination of the legal aspects of domestic relations. This course focuses upon dissolution of marriage law with emphasis on pleadings, discovery, and property settlements. Other areas of family law such as adoption and annulment will be reviewed.

Lecture Hours: 48.000

Prerequisite: ENC 1101, PLA 2203, PLA 2120C, PLA 2114, PLA 2227, PLA 2931

Course User Fee: \$50.00

PLA2934 Legal Seminar: Immigration Law 1.000 credits

Intensive practical and theoretical training is provided in a seminar format. The seminar topics cover current and timely legal issues and are addressed by practicing attorneys. The topics are announced at the beginning of the Fall and Winter semesters.

Lecture Hours: 16.000

PLA2935 Legal Seminar: Intellectual Property Law 1.000 credits

Intensive practical and theoretical training is provided in a seminar format. The seminar topics cover current and timely legal issues and are addressed by practicing attorneys. The topics are announced at the beginning of the Fall and Winter semesters.

Lecture Hours: 16.000

PLA2631C Real Estate Transactions and Settlement 4.000 credits

This course is a combination of both class lecture and lab. The lecture segment includes an overview of intermediate real estate law topics with a specific emphasis on Florida real estate transactions. Students who complete this course will understand the fundamental concepts and sequences followed in a real estate transaction from initial contract review, through settlement (closing). The lab segment is transaction and problem-oriented. This segment trains students in the use of the industry settlement software to complete title examinations, updates, issuance of title policies & endorsements, and various federal and state regulations that affect real estate settlements. Students may also perform various duties typically assigned to a paralegal in a real estate transaction. Prerequisite: REE2040; Corequisite: PLA2610 (3 hr. lecture, 2 hr. lab). Lecture Hours: 48.000, Lab Hours: 32.000 Prerequisite: REE2040, Corequisite: PLA2610
Course User Fee: \$45.84

PLA2600 Wills, Trust, Estate 3.000 credits

Wills, Trusts, and Estates is a study of the laws governing wills and interstate succession. The course provides practice in drafting a simple will and trust. It also examines the procedures and rules involved in probate administrations and explains the ethical obligations of attorneys and paralegals who are involved in this area of practice. Lecture Hours: 48.000 Prerequisite: PLA 2114, REE 2040
Course User Fee: \$50.00

PLA2610 Introduction to Real Property 4.000 credits

This is an introductory course that provides an overview of the general concepts of real property law applied in most states, including substantive legal issues, ownership, terms and various legal forms, the mechanics of various residential, some commercial transactions, and mortgage foreclosures. Prerequisite: REE2040; Corequisite: PLA2631C (3 hr. lecture) Lecture Hours: 64.000 Prerequisite: REE2040, Corequisite: PLA2631C
Course User Fee: \$45.84

PLA2933 Legal Seminar: Real Estate Closing 1.000 credits

Intensive practical and theoretical training is provided in a seminar format. The seminar topics cover current and timely legal issues and are addressed by practicing attorneys. The topics are announced at the beginning of the Fall and Winter semesters. Prerequisite: REE 2040. (16 hr. Seminar) Lecture Hours: 16.000 Prerequisite: REE2040

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method. Lecture Hours: 48.000
Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues. Lecture Hours: 48.000
Course User Fee: \$10.00

**EVR1001 Introduction to Environmental Science
3.000 credits**

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PLA2763 Law Office Management 3.000 credits

A survey of economical and efficient law office practices and procedures including the proper use of law office equipment; business data processing law office management, personnel selection, training and management; employer/employee relationships; correct utilization of time and space; correct time keeping and billing procedures.

Lecture Hours: 48.000

Prerequisite: PLA2003

Course User Fee: \$50.00

PLA1949 Paralegal Studies Practicum 3.000 credits

This is a course designed to continue training in a student's field of study through work experience. Students are graded on the basis of documentation of learning acquired as reported by student and employer. Students will be assigned specific course prefixes related to their academic major prior to registration. All students must contact the Co-operative Education Office to obtain registration approval.

Other Hours: 144.000

Prerequisite: Departmental Permission Required

PLA2940 Paralegal Studies Internship 3.000 credits

This course provides students with supervised practical experience in a law office, corporate legal department, government agency, court, or other legal setting. Students apply knowledge and skills acquired through paralegal studies coursework to real-world legal environments, gaining experience in legal research, document preparation, case management, client communication, and professional ethics. The internship is designed to enhance professional development, strengthen workplace competencies, and provide exposure to the responsibilities of a paralegal within the legal profession.

Other Hours: 144.000

Prerequisite: Departmental Permission Required

Program Description

Photographic Technology

Associate in Science | Code: 26032 | 64 credits

The Photographic Technology program is designed to meet individual students' needs for either further study or immediate employment in the field of commercial and industrial photography. Students develop a wide variety of photographic and art-related skills and the ability to use these skills to produce commercially viable photographs. Instruction covers portrait photography, still photography, fashion photography, illustrative photography as well as the business skills needed to manage a photographic enterprise. Various internships such as in biomedical and forensic technology are available to students.

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

ART1202C Two-Dimensional Design 4.000 credits

This course is designed to give students an understanding of advanced concepts of two-dimensional design and to give hands on opportunity to transform visual and experiential information into two-dimensional form. Creative individual thinking and image making and successful problem solving both aesthetically and technically are ultimate goals.

Lecture Hours: 32.000, Lab Hours: 64.000

ART1300C Drawing 4.000 credits

Basic problems in freehand drawing, including perspective, still-life and landscape. Emphasis is on developing a sense of structure through line, form and texture.

Lecture Hours: 32.000, Lab Hours: 64.000

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PGY2401C Introduction to Photography 4.000 credits

Fundamentals of black and white photography as an art medium with emphasis on composition, design and processing. Students will supply their own camera, film and paper.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ART 1203C, ART 1300C, or Equivalent

Course User Fee: \$50.00

PGY2404C Intermediate Photography 4.000 credits

Emphasis on achieving more technical control of black and white photography with introduction to larger format photography utilization of studio aspects such as strobe, quartz lighting and view camera controls continued development of aesthetics.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$50.00

PGY2110C Color Photography 1 4.000 credits

An introductory course in the making of Type C photographic prints, including the darkroom techniques of developing color film, color filtering, color balance and density control. There will be an exploration of significant contributions to the aesthetics of color photography. Students must provide their own cameras, film and photographic paper.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: PGY2401C

Course User Fee: \$50.00

PGY2211 Portrait And Still Photography 4.000 credits

Fundamentals of portrait and still photography are presented. Basic and advanced exercises are taught in lighting, posing, make-up and camera angles. Composition, lighting and design functioning to describe people and objects for a variety of clients are explored.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: PGY2401C

PGY2238 Illustrative Photography 1 4.000 credits

The use of the camera to illustrate either an original concept or a concept provided by an art director for clients such as magazines, manufacturing concerns, advertising agents, newspapers, technical publications and schools. The creative approach is stressed in planning and production-effective color and black/white illustrations.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: PGY2401C

PGY2111C Color Photography 2 4.000 credits

Deals primarily with printing methods used in printing color negatives. Concentrated practice is given in light, color balancing, exposure and processing of color printing materials; the techniques of producing matched multi-size prints are demonstrated.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: PGY2110C

Course User Fee: \$50.00

PGY2222 Fashion Photography 4.000 credits

The production of commercially viable photographs illustrating clothes as desirable objects as well as recent trends in fashion industry are studied. An awareness of mood, make-up, and dramatic impact is stressed.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: PGY2239

Course User Fee: \$25.00

PGY2239 Illustrative Photography 2 4.000 credits

A sophisticated level of photographic illustration is reached and emphasis is given to conceptual and visual continuity. Concepts, methods and techniques necessary to produce slide presentations for variety of clients are stressed. Seminars and conferences prepare students for the business aspects of the illustration and advertising markets.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: PGY2238

Course User Fee: \$25.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

PGY2470C Photography Portfolio 4.000 credits

This course is the culmination of artistic and technical experiences acquired in previous photography courses. Students explore portfolio creation through a semester-long analysis, crafting an artist statement, and studio/critique experiences. The course addresses professional practices such as the creation of a resume/CV, a website, and a social media profile. Students gain insights into strategic approaches to pursue opportunities such as transfer applications, seeking exhibitions/grants, entrepreneurship, and job interview readiness.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: PGY 2111C, PGY 2211, PGY 2222, PGY 2238, PGY 2239

Course User Fee: \$25.00

Program Description

Physical Therapist Assistant

Associate in Science | Code: 23034 | 74 credits

The Physical Therapist Assistant program prepares students for employment in hospitals, rehabilitation centers, nursing homes, private practices or other qualified health agencies. Graduates will work under the supervision of a physical therapist in the promotion of optimal human health and function through the application of scientific principles to prevent, identify, correct or alleviate acute or prolonged physical disability of anatomic or physiologic origin. Externship or clinical practice is conducted in local health care facilities under the supervision of qualified professional personnel. The program is accredited by the Commission on Accreditation in Physical Therapy Education. Graduates of the program are eligible to take the State Board Examination and receive an Associate in Science degree in Physical Therapist Assisting.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1**Units: 18.0**

ENC 1101	English Composition 1	3.0
BSC 2085	Human Anatomy and Physiology 1	3.0

BSC 2085L	Human Anatomy & Physiology Lab 1	1.0
MAC 1105	College Algebra	3.0
PHY 1004	Physics With Applications 1	3.0
PHY 1004L	Physics with Applications 1 Lab	1.0
HIM 2472	Medical Terminology	3.0
<i>Program Electives</i>		1.0
IDS 1107	Tools for Success	1.0
OR		
LIS 2004	Digital Research Strategies	1.0
OR		
MAT 1033	Intermediate Algebra	3.0
OR		
SPC 1017	Introduction to Communication	3.0
OR		
PHI 2600	Introduction to Ethics	3.0
OR		
PSY 2012	Introduction to Psychology	3.0
Course Competency Test*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 2	Units: 11.0
-------------------	--------------------

BSC 2086	Human Anatomy & Physiology 2	3.0
BSC 2086L	Human Anatomy & Physiology 2 Laboratory	1.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
PHT 1102C	Anatomy for the Physical Therapist Assistants	4.0

Semester 3	Units: 10.0
-------------------	--------------------

PHI 2010	Introduction to Philosophy	3.0
PHT 1201	Introduction to Physical Therapy	2.0
PHT 1201L	Introduction to Physical Therapy Laboratory	1.0
PHT 1211	Disabilities and Therapeutic Procedures 1	2.0
PHT 1211L	Disabilities and Therapeutic Procedures 1 Lab	2.0

Semester 4	Units: 10.0
-------------------	--------------------

PHT 2120	Applied Kinesiology	2.0
PHT 2120L	Applied Kinesiology Laboratory	1.0
PHT 2224	Disabilities and Therapeutic Procedures II	3.0
PHT 2224L	Disabilities and Therapeutic Procedures II Lab	2.0
PHT 2801C	Clinical Practice and Conference I	2.0

Semester 5	Units: 15.0
-------------------	--------------------

PHT 2162	Survey of Neurological Deficits	3.0
PHT 2701	Rehabilitation Procedures	3.0
PHT 2701L	Rehabilitation Procedures Laboratory	2.0
PHT 2810	Clinical Practice and Conference II	7.0

Semester 6

Units: 10.0

PHT 2820	Clinical Practice and Conference III	7.0
PHT 2931	Seminar for Physical Therapist Assistants	3.0

Total: 74.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy & Physiology Lab 1 1.000 credits

In this laboratory course, student will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

PHY1004 Physics With Applications 1 3.000 credits

Emphasizes the basic concepts and principles and their practical applications. Designed specifically for students in technical studies and for others wishing to strengthen their physics background before taking advanced courses.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: PHY1004L

Course User Fee: \$10.00

PHY1004L Physics with Applications 1 Lab 1.000 credits

Laboratory for PHY 1004.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: PHY1004

Course User Fee: \$20.00

HIM2472 Medical Terminology 3.000 credits

Analysis of medical terms through learning basic roots, prefixes and suffixes permitting the student to have a working knowledge of the language of medicine. Prerequisite: Permission of department chairperson.

Lecture Hours: 48.000

IDS1107 Tools for Success 1.000 credits

This course is for students majoring in science, technology, engineering and mathematics fields (STEM). Students will learn writing, research, presentation, and technological skills necessary for success in STEM-related disciplines. Course topics include learning styles, collaborative skills, power study techniques and will use related technologies related to STEM.

Lecture Hours: 16.000

LIS2004 Digital Research Strategies 1.000 credits

LIS 2004, Digital Research Strategies, equips students with information literacy skills to locate, evaluate, and ethically use information in an evolving digital landscape. Students will apply critical thinking and research techniques to explore traditional and emerging research tools. (1 hr. lecture)

Lecture Hours: 16.000

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications.

Lecture Hours: 48.000

Prerequisite: MAT0022C OR MAT0028 OR MAT0057 or by placement score, or eligible exemption.

Course User Fee: \$18.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PHT1102C Anatomy for the Physical Therapist Assistants 4.000 credits

Regional description of the musculoskeletal landmarks utilized in implementing and documenting assessment and treatment procedures in physical therapy. Prerequisite: Departmental Approval, Corequisites: PHT 1201, PHT 1201L, PHT 1211, PHT 1211L. (3 hr. lecture and 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Departmental Approval, Corequisite: PHT1201 AND PHT1201L AND PHT1211 AND PHT1211L

Course User Fee: \$438.81

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHT1201 Introduction to Physical Therapy 2.000 credits

This course introduces students to the survey and history of the physical therapy profession. The role and responsibilities of the physical therapist assistant as they interact with patients and other health care workers are discussed. It incorporates discussion on legal and ethical issues, levels of supervision, and the medical record. An overview of common pathologies is presented. Prerequisites: BSC 2085, BSC 2085L, PHY 1004, PHY 1004L; Corequisites: PHT 1102C, PHT 1201L, PHT 1211, PHT 1211L. (2 hr. lecture)

Lecture Hours: 32.000

Prerequisite: BSC 2086, BSC 2086L, PHT 1102C, Corequisite: PHT 1201, PHT 1201L, PHT 1211, PHT 1211L.

PHT1201L Introduction to Physical Therapy Laboratory 1.000 credits

Laboratory course for PHT1201 Introduction to Physical Therapy. This course includes laboratory practice for basic patient care skills and treatment procedures including body mechanics, vital signs, transfers, gait training, ROM, flexibility, manual resistance. Case scenarios to identify proper transfer techniques and gait training patterns are utilized. Principles of effective documentation and data collection are introduced.

Lab Hours: 32.000

Prerequisite: BSC 2086, BSC 2086L, PHT 1102C, Corequisite: PHT 1201, PHT 1201L, PHT 1211, PHT 1211L.

Course User Fee: \$20.00

PHT1211 Disabilities and Therapeutic Procedures 1 2.000 credits

This course introduces theory and practical applications of physical therapy biophysical agents. The physiologic effects, indications, contraindications, and intervention parameters of patient care interventions including electrotherapeutic agents, compression therapies, cryotherapy, hydrotherapy, superficial and deep thermal agents, traction, and therapeutic massage are presented.

Lecture Hours: 32.000

Prerequisite: BSC 2086, BSC 2086L, PHT 1102C, Corequisite: PHT 1201, PHT 1201L, PHT 1211, PHT 1211L.

PHT1211L Disabilities and Therapeutic Procedures 1 Lab 2.000 credits

Laboratory course for PHT1211 Disabilities and Therapeutic Procedures 1. This course includes laboratory practice of technical skills relating to practical applications of physical therapy biophysical agents including electrotherapeutic agents, compression therapies, cryotherapy, hydrotherapy, superficial and deep thermal agents, and traction. Students develop basic skills in therapeutic massage. Practical application of each intervention is emphasized.

Lab Hours: 64.000

Prerequisite: BSC 2086, BSC 2086L, PHT 1102C, Corequisite: PHT 1201, PHT 1201L, PHT 1211, PHT 1211L.

Course User Fee: \$25.00

PHT2120 Applied Kinesiology 2.000 credits

Students learn concepts and principles of applied kinesiology and biomechanics with emphasis on the function of the musculoskeletal system as it pertains to human motion. Anatomical structures and movement concepts covered in PHT 1102C Anatomy for PTA are expanded upon. Goniometric measurement, manual muscle testing skills, plumb-line analysis, data collection skills, palpation skills, understanding of special tests, and concepts of reliability and validity as it relates to goniometry are emphasized.

Lecture Hours: 32.000

Prerequisite: BSC 2086, BSC 2086L, PHT 1102C, PHT 1201, PHT 1201L, PHT 1211, PHT 1211L; , Corequisite: PHT 2120L, PHT 2224, PHT 2224L, PHT 2801C

PHT2120L Applied Kinesiology Laboratory 1.000 credits

Laboratory course for PHT 2120 Applied Kinesiology. This course provides laboratory practice of technical skills relating to practical applications of foundational concepts and principles pertaining to Applied Kinesiology. Students learn goniometric measurement, manual muscle testing skills, plumb-line analysis, palpation skills, data collection, and develop an understanding of special tests.

Lab Hours: 32.000

Prerequisite: BSC 2086, BSC 2086L, PHT 1102C, PHT 1201, PHT 1201L, PHT 1211, PHT 1211L , Corequisite: PHT 2120, PHT 2224, PHT 2224L, PHT 2801C

Course User Fee: \$25.00

PHT2224 Disabilities and Therapeutic Procedures II 3.000 credits

This course introduces foundational concepts and principles pertaining to therapeutic exercise prescription and interventions for the upper and lower extremity, spine, and Women's Health across the lifespan and continuum of care. Applied science of exercise and techniques, exercise interventions by body region, peripheral joint mobilization, and medical and surgical procedures and protocols are emphasized. Students engage in active and collaborative learning and utilize case scenarios for practical application.

Lecture Hours: 48.000

Prerequisite: BSC 2086, BSC 2086L, PHT 1102C, PHT 1201, PHT 1201L, PHT 1211, PHT 1211L , Corequisite: PHT 2120, PHT 2120L, PHT 2224L, PHT 2801C

PHT2224L Disabilities and Therapeutic Procedures II Lab 2.000 credits

Laboratory course for PHT 2224 Disabilities and Therapeutic Procedures 2. This course is designed to provide students with technical skill practice and application of foundational concepts and principles pertaining to therapeutic exercise prescription and interventions for the upper and lower extremity, spine, and Women's Health across the lifespan and continuum of care. Students apply exercise and therapeutic interventions by body region, practice documentation, prescribe home exercise programs, and are introduced to peripheral joint mobilization for the upper and lower extremities.

Lab Hours: 64.000

Prerequisite: BSC 2086, BSC 2086L, PHT 1102C, PHT 1201, PHT 1201L, PHT 1211, PHT 1211L, Corequisite: PHT 2120, PHT 2120L, PHT 2224, PHT 2801C

Course User Fee: \$25.00

PHT2801C Clinical Practice and Conference I 2.000 credits

The students will be exposed to clinical experiences in supervised patient care activities in a variety of clinical facilities including general hospitals and physical therapy clinics.

Clinical Hours: 96.000

Prerequisite: BSC 2086, BSC 2086L, PHT 1102C, PHT 1201, PHT 1201L, PHT 1211, PHT 1211L, Corequisite: PHT 2120, PHT 2120L, PHT 2224, PHT 2224L

Course User Fee: \$389.50

PHT2162 Survey of Neurological Deficits 3.000 credits

This course introduces the etiology, pathophysiology, and clinical manifestations of common neurological diseases/conditions treated in physical therapy. Neuroanatomy of the central and peripheral nervous system is reviewed. Reflex integration as well as normal growth and development are discussed. Students have an end of course project-based topic assignment that pertains to commonly seen neurological conditions in physical therapy.

Lecture Hours: 48.000

Prerequisite: PHT 2120, PHT 2120L, PHT 2224, PHT 2224L, PHT 2801C , Corequisite: PHT 2701, PHT 2701L, PHT 2810

PHT2701 Rehabilitation Procedures 3.000 credits

This course presents treatment techniques related to physical therapy interventions and rehabilitation concepts and principles for neurological and other medical conditions across the lifespan and continuum of care.

Lecture Hours: 48.000

Prerequisite: PHT 2120, PHT 2120L, PHT 2224, PHT 2224L, PHT 2801C, Corequisite: PHT 2162, PHT 2701L, PHT 2810

PHT2701L Rehabilitation Procedures Laboratory 2.000 credits

Laboratory course for PHT 2701 Rehabilitation Procedures. This course provides laboratory practice of technical skills relating to physical therapy interventions and rehabilitation concepts and principles for neurological and other medical conditions across the lifespan and continuum of care.

Lab Hours: 64.000

Prerequisite: PHT 2120, PHT 2120L, PHT 2224, PHT 2224L, PHT 2801C, Corequisite: PHT 2162, PHT 2701L, PHT 2810

Course User Fee: \$25.00

PHT2810 Clinical Practice and Conference II 7.000 credits

Intermediate clinical experiences in selected patient care activities under the supervision of a licensed physical therapist.

Clinical Hours: 336.000

Prerequisite: PHT 2120, PHT 2120L, PHT 2224, PHT 2224L, PHT 2801C, Corequisite: PHT 2162, PHT 2701, PHT 2701L

PHT2820 Clinical Practice and Conference III 7.000 credits

Advanced clinical experiences in patient care activities under the direct supervision of a licensed physical therapist.

Clinical Hours: 336.000

Prerequisite: PHT 2162, PHT 2701, PHT 2701L, PHT 2810, Corequisite: PHT 2931

Course User Fee: \$117.00

PHT2931 Seminar for Physical Therapist Assistants 3.000 credits

Recognition of the expected current competency levels, and ethical and legal responsibilities of the physical therapist assistant in the health care system. A comprehensive course designed to enhance students' understanding of the curricular content. It provides a thorough review of the curriculum, ensuring that students consolidate their knowledge and skills. Special topics are presented. The role of the PTA including ethical and legal responsibilities are emphasized. The course prepares students for licensure requirements and preparation for the National Physical Therapy Examination (NPTE-PTA) and the Florida Laws and Rules examination.

Lecture Hours: 48.000

Prerequisite: PHT 2162, PHT 2701, PHT 2701L, PHT 2810, Corequisite: PHT 2820

Course User Fee: \$30.00

Program Description

Professional Pilot Technology

Associate in Science | Code: 26029 | 64 credits

The Professional Pilot Technology program is primarily developed to meet the challenging regional airline requirements for pilots; therefore, graduates of the program will earn the following Federal Aviation Administration (FAA) Certificates: Commercial Pilot with Single and Multi-Engine Ratings. In addition, these certificates can be applied toward a Certified Flight Instructor (CFI) Certificate. Additional Information: Students interested in this program must first pass an FAA Class I medical evaluation prior to beginning classes. Cost of flight training is in addition to normal tuition costs. Contact the Aviation Department at (305) 237-5950 for information and advisement.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: Yes

Semester 1		Units: 12.0
ENC 1101	English Composition 1	3.0
AST 1002	Descriptive Astronomy	3.0
ASC 1210	Aviation Meteorology	3.0
ATT 1100	Private Pilot Theory	3.0
Course Competency Test*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 2		Units: 15.0
MAC 1105	College Algebra	3.0
Social Science		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
ASC 1550	Aerodynamics	3.0
ASC 2320	Aviation Laws and Regulations	3.0
ATF 1100L	Private Pilot Flight Accelerated	3.0

Semester 3	Units: 12.0
------------	-------------

ASC 1610	Aircraft Engines and Structure Theory	3.0
ASC 2470	Physiology-Psychology of Flight	3.0
ATF 2305L	Instrument Pilot Flight Accelerated	3.0
ATT 2820	Air Traffic Control	3.0

Semester 4

Units: 12.0

ATF 2214L	Commercial Pilot Flight Accelerated	3.0
ATT 2110	Commercial Pilot Theory 3	3.0
ATT 2120	Instruments Pilot Theory	4.0
ATT 2133	Multi-Engine Pilot Theory	2.0

Semester 5

Units: 13.0

PHI 2010	Introduction to Philosophy	3.0
<i>Program Elective</i>		10.0
<i>Group A</i>		3.0
ATT 2821	Air Traffic Control (ATC) Radar	3.0
OR

OR		
<i>Group B</i>		3.0-4.0
ASC 1560	Introduction to Unmanned Aerial Vehicles and Systems (UAVs)	3.0
OR		
ASC 1563	UAS Applications in Aerial Photography	3.0
OR		
ATT 2995	Occupational Practicum	4.0

Total: 64.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.

Lecture Hours: 48.000

Course User Fee: \$10.00

ASC1210 Aviation Meteorology 3.000 credits

This is a core aviation course. The student will be prepared to understand weather and environmental issues in commercial aviation. Topics covered will be atmospheric phenomena relating to aircraft operations, the analysis and use of weather data as presented by the U.S. National Weather Service.

Prerequisite: ATT1100 or equivalent; Corequisite: ATT2110 or equivalent.

Lecture Hours: 48.000

ATT1100 Private Pilot Theory 3.000 credits

This course introduces basic subjects pertaining to pilot knowledge including basic aircraft systems, aircraft operation and performance, aerodynamic principles, human factors, and aeronautical decision making. This Course can be instructed as Part 61 or Part 141.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ASC1550 Aerodynamics 3.000 credits

This is a basic course in aerodynamics. Students will analyze the physics of flight and the application of basic aerodynamics to both airframe and power plant as preparation for the requirements of commercial aviation.

Lecture Hours: 48.000

ASC2320 Aviation Laws and Regulations 3.000 credits

Insight pertinent to federal governing bodies, and current local, federal and international laws forming the present structure of aviation law.

Lecture Hours: 48.000

ATF1100L Private Pilot Flight Accelerated 3.000 credits

This course provides flight training in the areas required to safely perform the duties of a private pilot. This course is to be completed in less than 16 weeks using "total immersion" approach to training to help lower the attrition rates for students. It fulfills the requirements for private pilot certification outlined in part 141 of the Federal Aviation Regulations as presented in the Jeppesen Sanderson Private Pilot Syllabus. Upon satisfactory completion of this course and the Federal Aviation Administration (FAA) knowledge and practical exams, the applicant will receive an FAA private pilot certificate. Special Fee. Note: This course is not approved for Veterans seeking to use Veterans Educational Benefits.

Lecture Hours: 48.000

Prerequisite: ATT1100, FAA First Class Medical Certificate.

Course User Fee: \$15094.00

ASC1610 Aircraft Engines and Structure Theory 3.000 credits

This is a foundation course in aircraft engines and structure. Students will learn the elements of aircraft engines, engine theory, construction, systems, operating procedures, performance diagnosis, and aircraft structures.

Lecture Hours: 48.000

ASC2470 Physiology-Psychology of Flight 3.000 credits

This is an introductory course in the physiology and psychology of flight. Students will learn aero-medical facts of significance to pilots, including causes, symptoms, prevention and emergency treatment of ailments common to the aviation environment through a basic understanding of a person's normal functioning. Cabin pressurization, communications, decompression sickness, hyperventilation, hypoxia, self-imposed stresses, spatial disorientation and vision are examined.

Lecture Hours: 48.000

ATF2305L Instrument Pilot Flight Accelerated 3.000 credits

This accelerated course provides the flight training required to safely conduct flights as an instrument rated pilot. This course is to be completed in less than 16-weeks. The training is conducted in accordance with Codes of Federal Regulations (CFR) Part 141 of the Federal Aviation Regulations as outlined in the Jeppesen Sanderson Instrument/Commercial Syllabus. Upon satisfactory completion of this course and the Federal Aviation Administration (FAA) knowledge test and practical test, the applicant will receive an FAA Instrument Rating. Minimum approved FAA CFR Part 141 course hours include 35 hours of flight.
Lecture Hours: 48.000
Prerequisite: FAA Private Pilot Certificate, Corequisite: ATT2120and Current FAA 3rd Class Medical (1st Class preferred)
Course User Fee: \$12686.00

ATT2820 Air Traffic Control 3.000 credits

The basic elements of air traffic control operations, providing the necessary foundation for successful completion of the Air Traffic Control Basic Certification Examination. Prerequisite: sophomore standing in major program.
Lecture Hours: 48.000
Prerequisite: Sophomore standing in major program.

ATF2214L Commercial Pilot Flight Accelerated 3.000 credits

This accelerated course of instruction provides training required to allow the student to safely conduct flight as a Commercial Pilot. This course is expected to be completed in less than 4 months. The training will be conducted in accordance with the Codes of Federal Regulations (CFR) Part 141. This training will be completed utilizing the Jeppesen Sanderson Instrument/Commercial Syllabus. Upon satisfactory completion of this course, the FAA knowledge test, and FAA practical test, the student will be awarded an FAA Commercial Pilot certificate. A 1st Class Medical Certificate with Instrument Rating is required. Minimum approved FAA CFR Part 141 course hours include 120 hours of flight. Special Fee.
Lecture Hours: 48.000
Recommended Preparation: Required: FAA Private Pilot Certificate and FAA 2nd Class Medical Certificate (1st Class preferred).
Course User Fee: \$23990.50

ATT2110 Commercial Pilot Theory 3 3.000 credits

This 35-hour course provides students with the aeronautical knowledge required to act as Commercial Pilot. Students will prepare for the FAA Commercial Written Exam. Private Pilot Certificate with Instrument Rating required.
Lecture Hours: 48.000
Prerequisite: ATF2305

ATT2120 Instruments Pilot Theory 4.000 credits

This 30-hour course introduces basic theories of instrument pilot operations to prepare students for the FAA Instrument Written Exam. Students will acquire aeronautical knowledge required to act as an Instrument Rated Pilot. It will prepare the students for the FAA Instrument Written Exam. Private Pilot Certificate required.
Lecture Hours: 64.000

ATT2133 Multi-Engine Pilot Theory 2.000 credits

This course introduces basic theories of multi-engine pilot operations to prepare students for the FAA Multi-Engine oral and practical exams. Students will acquire the aeronautical knowledge required to act as a multi-engine rated pilot.
Lecture Hours: 32.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.
Lecture Hours: 48.000

ATT2821 Air Traffic Control (ATC) Radar 3.000 credits

This course will provide the student with a fundamental knowledge of air traffic control practices, policies and procedures as they relate to the specifics of the controller function in an air traffic radar operating environment, with air traffic controllers utilizing the radar for traffic separation. The liberal use of the figures and example phraseology assist the student in achieving an overall use of understanding of the air traffic control system. A radar air traffic control simulator is utilized to provide realistic training exercises for the students.

Prerequisite: ASC1210.

Lecture Hours: 48.000

Prerequisite: ASC1210

Course User Fee: \$300.00

ATT2822 VFR Tower Operations 3.000 credits

This course expands the knowledge attained from ATT 2820 and is designed to further develop the aviation students' skills in the ATC environment. Emphasis is placed on the duties and responsibilities of operational positions in local, ground, flight data, and coordination. Students will also learn the FAA regulations which govern flight under visual conditions. Optimum use of the Hughes Virtual Tower incorporated into this course. Prerequisite: ATT2820. Special fee.

Lecture Hours: 48.000

Prerequisite: ATT2820

Course User Fee: \$300.00

ATT2823 Air Traffic Control (ATC) Non-Radar 3.000 credits

In this course, future air traffic controllers will acquire an understanding of air traffic control practices, policies and procedures and their application in a non-radar air traffic environment. Throughout this course, (Non-Radar Procedures) appropriate real-life examples are used to illustrate the reasoning behind procedures used by air traffic controllers utilizing the non-radar methods. The liberal use of figures and example phraseology is used to assist the student in achieving an overall understanding of the air traffic control system. Prerequisites: ATT2820, ASC1210.

Special fee.

Lecture Hours: 48.000

Prerequisite: ASC1210, ATT2820

Course User Fee: \$20.00

AVM1949 Co-Op Work Experience 1: AVI 3.000 credits

This is a course designed to provide training in a student's field of study through work experience. Students are graded on the basis of documentation of learning acquired as reported by student and employer. Students will be assigned specific course prefixes related to their academic major prior to registration. All students must contact the Co-operative Education Office to obtain registration approval. Prerequisite: 2.0 minimum GPA, approval of Co-op Program Director, minimum of 6 credits in field or work approved experience.

Lecture Hours: 48.000

ASC1560 Introduction to Unmanned Aerial Vehicles and Systems (UAVs) 3.000 credits

This course introduces the fundamentals of unmanned aerial vehicles and systems, covering UAV types, components, principles of flight, regulations, and safe operational practices. Students will explore industry applications and gain foundational knowledge for further study in UAV technology.

Lecture Hours: 48.000

Course User Fee: \$59.33

ASC1563 UAS Applications in Aerial Photography 3.000 credits

Students learn techniques and best practices for capturing aerial images using unmanned aerial systems. The course covers camera operation, flight planning for photography missions, image processing, and practical applications in various industries.

Lecture Hours: 48.000

Course User Fee: \$59.33

ATT2995 Occupational Practicum 4.000 credits

This course provides supervised, work-based learning experience in an aviation setting that enables students to apply classroom knowledge in a professional environment. Students gain practical experience in aviation operations, safety procedures, regulatory compliance, communication, and workplace professionalism while developing career readiness and industry-specific skills through guided experiential learning.

Lecture Hours: 64.000

Program Description

Radiation Therapy

Associate in Science | Code: 23058 | 77 credits

The Radiation Therapy program is a comprehensive educational program designed to prepare students for a career as a skilled and knowledgeable Radiation Therapist. As a key member of the healthcare team, Radiation Therapists use various forms of radiation, such as high-energy X-rays and electron beams, to treat cancer patients. The program provides students with extensive knowledge of radiation therapy procedures, treatment planning, and imaging technologies. In addition, students develop cognitive skills such as critical thinking, problem-solving, and effective communication with patients, their families, and other healthcare professionals.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

HIM2472 Medical Terminology 3.000 credits

Analysis of medical terms through learning basic roots, prefixes and suffixes permitting the student to have a working knowledge of the language of medicine. Prerequisite: Permission of department chairperson.

Lecture Hours: 48.000

RAT1001 Introduction to Radiation Oncology 2.000 credits

Introduction to the clinical setting in a radiation therapy department. The course includes radiation protection, mathematical concepts in radiation oncology, and medical terminology in the treatment of patients in a radiation oncology setting.

Lecture Hours: 32.000

RAT1615 Radiation Therapy Medical Imaging 3.000 credits

This course is an introductory study to radiographic processes which includes the processes behind computed tomography, magnetic resonance imaging, nuclear medicine, positron emitting tomography, and ultrasound as it pertains to simulation, detection, and diagnosis of cancer.

Lecture Hours: 48.000

RAT1804 Clinical Education I 5.000 credits

Students will learn radiation therapy procedures in a local radiation therapy department. Students are closely supervised by certified radiation therapy technologists as they are introduced to record-keeping and treatment units.

Clinical Hours: 240.000

Course User Fee: \$10.50

RAT2123 Patient Care in Radiation Therapy 3.000 credits

This course presents patient care procedures relevant to the radio logic health science student. Content includes specific knowledge and skills required for patient care such as pharmacology, vital sign monitoring, recognizing side effects of treatment, nutritional needs of patients and psychological needs of patients.

Lecture Hours: 48.000

RAT1021C Principles and Practices of Radiation Therapy I 2.000 credits

A study of all major radiotherapy equipment such as linear accelerators and superficial ortho- and megavoltage units. Auxiliary equipment such as simulators, immobilization devices, beam directors and modifiers will also be discussed. Patient positioning, treatment planning, patient flow, and quality assurance will be presented in detail.

Lecture Hours: 16.000, Clinical Hours: 48.000

RAT1242 Clinical Oncology & Pathology 2.000 credits

Malignant conditions, etiology, and methods of treatment. Patient management, treatment planning, patient prognosis, treatment results, and the use and effect of combined therapies will be discussed. Contributing factors, growth and biologic behavior of neoplastic diseases as well as specific types of tumors and tumor sites will also be discussed.

Lecture Hours: 32.000

RAT1614C Radiation Therapy Physics 1 2.000 credits

A basic radiation physics course containing fundamental principles and concepts. The course includes radiation production, properties, and characteristics as well as structure of the atom and matter, electrostatics, magnetism, electrodynamics, and the electromagnetic spectrum.

Lecture Hours: 16.000, Clinical Hours: 48.000, Other Hours: 48.000

RAT1814 Clinical Education II 5.000 credits

Continued patient treatment assignments. The responsibilities of the students increase as more complex competencies in patient treatment are mastered under direct supervision

Clinical Hours: 240.000

Prerequisite: RAT1804

Course User Fee: \$10.50

RAT2240C Radiation Oncology Sectional Anatomy 1.000 credits

An introduction to the concept of disease and general pathology. The types of growth, causative factors and biological behavior of neoplastic diseases are stressed. Pharmacology with emphasis on the radiation therapy patient is included in this course. Clinical Hours: 48.000

RAT1657 Radiation Protection/Quality Assurance 1.000 credits

The student will learn to present basic principles of radiation protection and safety in radiation therapy. Radiation health and safety requirements of federal and state regulatory agencies, accreditation agencies and health care organizations are included. Specific responsibilities of the radiation therapist are discussed, examined and evaluated.

Lecture Hours: 16.000

RAT1824L Clinical Education III 8.000 credits

Continuation of advanced patient treatment competencies under the supervision of an ARRT Certified Radiation Therapy Technologist.

Clinical Hours: 384.000

Prerequisite: RAT1814

RAT2022C Principles & Practice of Radiation Therapy 2 2.000 credits

Continued application of radiation therapy and its effectiveness in treatments. Advanced patient positioning, planning and flow, and quality assurance will be discussed.

Lecture Hours: 16.000, Clinical Hours: 48.000

Prerequisite: RAT1021C

RAT2243C Clinical Oncology and Neoplasms 3.000 credits

A continuation of medical oncology and pathology
Lecture Hours: 1.000 - 16.000, Clinical Hours: 96.000

RAT2618C Radiation Therapy Physics II 2.000 credits

Specifics of ionizing radiation such as details of production, interactions, and types of radiation and their application to the patient treatment. Properties of production, photon interactions, beam characteristics, and particle irradiation will be discussed.

Lecture Hours: 16.000, Clinical Hours: 48.000

RAT1619 Elements of Treatment Planning 2.000 credits

Determination of radiation doses in treatment planning using computerized methodology.
Lecture Hours: 32.000

RAT2061 Radiation Therapy Seminar 3.000 credits

This course will provide the opportunity for the radiation therapy student to evaluate their cumulative knowledge through comprehensive testing, refinement of accumulated knowledge, and retention of all aspects of radiation therapy. The course challenges the student to be prepared for the American Registry of Radiologic Technologist (ARRT) comprehensive national examination upon completion of graduation.

Lecture Hours: 48.000

RAT2241 Radiobiology 2.000 credits

Principles of cell response to radiation. Factors influencing the effects of radiation, tissue sensitivity, and environmental factors are discussed.

Lecture Hours: 32.000

RAT2834L Clinical Education IV 6.000 credits

This course includes clinical rotations through the radiation therapy department. Students will be provided the opportunity to apply theory learned from the previous semester in the various areas of the treatment process.

Clinical Hours: 288.000

Prerequisite: RAT1824L

Program Description

Radio & Television Broadcast Programming

Associate in Science | Code: 26043 | 64 credits

The Radio and Television Broadcasting Programming program is designed for students who intend to seek employment in radio, television and production companies, as well as allied fields such as in-house educational and industrial studios. The curriculum provides introductory and advanced courses essential to the professional program. It stresses hands-on equipment use in both the radio and TV laboratories. Students will have access to high-end cameras, editing suites and video graphics animation facilities and will complete portfolio-quality productions.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
FIL 2552C	Editing Level 1: Introduction to Editing	3.0
RTV 1241C	Television Production 1	4.0
RTV 2300	Broadcast Writing	3.0
VIC 1000	Visual Communications	3.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---OR--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 2		Units: 13.0
ENC 1101	English Composition 1	3.0

RTV 2942	Spring Television Practicum	3.0

Total: 61.0

FIL2552C Editing Level 1: Introduction to Editing 3.000 credits

An introductory course in which students will learn the practice of editing digital media.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$35.00

RTV1241C Television Production 1 4.000 credits

An introductory overview of the practices and procedures used in a television studio. Students will learn basic operation of studio and control room equipment and work towards the completion of broadcast standard projects.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

RTV2300 Broadcast Writing 3.000 credits

In this intermediate workshop style class students will learn broadcast writing emphasizing news, documentary, commercials, and long-form programming.

Lecture Hours: 16.000, Lab Hours: 32.000

VIC1000 Visual Communications 3.000 credits

An introductory course in which students will learn the visual aspects of film, video, photography and graphic arts, specifically dealing with design elements and principles.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$10.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

FIL2553C Editing Level 2: Intermediate Editing and Visual Effects 3.000 credits

An intermediate course in which students will learn video editing with an emphasis on sound design and visual effects.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: FIL2552C

Course User Fee: \$35.00

RTV1000 Fundamentals of Broadcasting 3.000 credits

In this introductory course for television and radio broadcasting, students will learn about the foundations of the the American broadcast system.
Lecture Hours: 48.000

RTV1242C Television Production 2 4.000 credits

An intermediate course in television studio production. Students will learn to implement the fundamentals as introduced in Television Production 1 to the production of scripted programs.
Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: RTV1241C
Course User Fee: \$25.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.
Lecture Hours: 48.000
Course User Fee: \$10.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.
Lecture Hours: 48.000
Course User Fee: \$15.00

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.
Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.
Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

FIL2560C Editing Level 3: Advanced Editing: Color Correction and Finishing 3.000 credits

An advanced course in which students will learn the practice of color correcting and finishing fiction and non-fiction projects.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: FIL2553C

Course User Fee: \$35.00

RTV1240C Sound Design 3.000 credits

In this introductory Sound Design course students will learn an overview of sound recording and audio post-production.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

MMC2000 Introduction to Mass Communications 3.000 credits

Development of a critical perception of the mass communications process and its results in both printed and electronic media. Applications of the ethics and codes of journalism to the changing roles and forms of journalistic media. MMC 2000 will transfer for mass communications majors to various universities within the Florida State System.

Lecture Hours: 48.000

RTV2243C Directing 3.000 credits

An introductory overview of television directing. Students will learn the responsibilities of the television director in coordinating production elements and television control room techniques. Lecture Hours: 32.000, Lab Hours: 32.000
Prerequisite: RTV1242C

RTV2245C Electronic Field Production 1 4.000 credits

An introductory course in which students will learn single-camera field production and electronic news-gathering.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: RTV1242C

Course User Fee: \$40.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

RTV2246C Electronic Field Production 2 4.000 credits

In this intermediate workshop style class students will learn about documentary production.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: RTV2245C

Course User Fee: \$40.00

FIL1030 History of Film 3.000 credits

In this introductory course students will learn about the history of motion pictures, with an emphasis on American and European films.

Lecture Hours: 48.000

FIL1100 Screenwriting 1: Introduction to Story Structure 3.000 credits

A workshop-style introductory class covering narrative script writing for film and television. Students will learn to develop a short-format screenplay incorporating three-act story structure, script elements, and standard industry formatting. Lecture Hours: 48.000

RTV2940 Television Internship 3.000 credits

In this lower division internship designed for AS students in Television Production, students will learn to apply skills and knowledge learn in the program at an established television entertainment company (144 hr. Internship).

Other Hours: 144.000

Prerequisite: RTV1242C

RTV2942 Spring Television Practicum 3.000 credits

In this semester long on-site training with MDC Television students will learn from Television Professionals by working on current MDC TV programming (144 hr. Practicum).
Other Hours: 144.000
Prerequisite: RTV1242C

Program Description

Radiography

Associate in Science | Code: 23037 | 77 credits

The Radiography program is an Associate in Applied Science degree, which provides a broad base of education and performance-based clinical experience in all technical aspects of work as a Radiographer. Experience is provided in all routine general and fluoroscopic procedures, special procedures and in the use of the specialized equipment and techniques available in the affiliated clinical education centers. The graduate is eligible to apply to take the Registry Examination of the American Registry of Radiologic Technologists. The application deadline is February 15th for the class beginning the following Summer term. Additional Information: All applicants must attend an Information Session before acceptance into the Radiography program. Applicants must pass a physical, meet physical requirements, must complete an approved CPR course and an approved HIV/AIDS course before beginning the Radiography program. Due to the limited number of students that can be accepted into the Radiography program, it is important that applicants be properly informed. For information, advisement, application forms and deadline dates, interested students should contact the Department of Radiologic Sciences, Medical Center Campus.

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

RTE1000 Orientation to The Imaging Sciences 2.000 credits

This course is an introduction to the overall field of Imaging Sciences, radiography in particular. Students will learn the basic principles of radiation protection as it applies to the various modalities in imaging and treatment, a history of the imaging sciences, ethical/legal issues, professional behavior, medical terminology, and math/physics.

Lecture Hours: 32.000

RTE1503 Radiographic Positioning 1 3.000 credits

Basic routine positioning of the chest, abdomen, upper and lower extremities, digestive and urinary systems.

Lecture Hours: 48.000

Corequisite: RTE1503L

RTE1503L Radiographic Positioning Laboratory 1 1.000 credits

Laboratory for RTE 1503

Lab Hours: 32.000

Corequisite: RTE1503

RTE1613 Radiologic Physics 2.000 credits

Basic principles of physics involving x-radiation equipment, production and control.

Lecture Hours: 32.000

RTE1804 Radiographic Clinic 1 5.000 credits

The first in a series of six clinical courses. Under direct supervision of faculty and clinical staff, performance of basic diagnostic radiographic procedures is carried out.

Clinical Hours: 240.000

Corequisite: RTE1503, RTE1503L

Course User Fee: \$40.00

RTE1418 Radiographic Technology 1 3.000 credits

Introduction to radiographic imaging including the relation of technical factors and accessories. The chemistry of manual and automatic film processing is included.

Lecture Hours: 48.000

Prerequisite: RTE1503, RTE1503L

RTE1513 Radiographic Positioning 2 3.000 credits

Positioning of the bony pelvis, shoulder girdle, bony thorax, spinal column, skull and facial bones.

Lecture Hours: 48.000

Prerequisite: RTE1503, RTE1503L, Corequisite: RTE1513L

RTE1513L Radiographic Positioning Laboratory 2 1.000 credits

Laboratory for RTE 1513

Lab Hours: 32.000

Prerequisite: RTE1503, RTE1503L, Corequisite: RTE1513

Course User Fee: \$25.00

RTE1814 Radiographic Clinic 2 5.000 credits

The student will be evaluated on competency performances in routine fluoroscopic, and in urographic procedures. This is the second of six clinical education courses.

Clinical Hours: 240.000

Prerequisite: RTE1503, RTE1503L, RTE1804

Course User Fee: \$25.00

RTE1814 Radiographic Clinic 2 5.000 credits

The student will be evaluated on competency performances in routine fluoroscopic, and in urographic procedures. This is the second of six clinical education courses.

Clinical Hours: 240.000

Prerequisite: RTE1503, RTE1503L, RTE1804

Course User Fee: \$25.00

RTE2457 Radiologic Technology 2 3.000 credits

A more in-depth study of radiographic exposure factors as they relate to specialized procedures and equipment.

Lecture Hours: 48.000

RTE2563 Radiographic Positioning 3 2.000 credits

Radiographic procedures which utilize contrast media, sterile techniques, and/or specialized equipment and accessories.

Lecture Hours: 32.000

Prerequisite: RTE1513, RTE1513L

RTE2834 Radiographic Clinic 4 5.000 credits

Performance of procedures of increasing levels of complexity and responsibility including specialized diagnostic procedures. At this level the program faculty and clinical supervisor will determine if the student can perform procedures with less supervision.

Clinical Hours: 240.000

Prerequisite: RTE1824

Course User Fee: \$66.00

RTE2010 New Imaging Modalities In Radiology 1.000 credits

This course will enable the students to compare and contrast the current imaging modalities with the emerging technologies available in Radiology departments. Included in this course will be pictorial archiving and communications systems (PACs), digital imaging, and fusion imaging.

Lecture Hours: 16.000

Course User Fee: \$83.00

RTE2385 Radiation Biology 2.000 credits

The biologic effects of the interaction of ionizing radiation with living matter.

Lecture Hours: 32.000

RTE2844 Radiographic Clinic 5 8.000 credits

The fifth in a series of six clinical education courses.

During this clinical course the student will perform standard quality assurance tests on radiographic equipment and accessories. In addition, the student will have competency evaluations to include a gastrointestinal series and either paranasal sinuses or facial bone studies.

Clinical Hours: 384.000

Prerequisite: RTE2834

Course User Fee: \$25.00

RTE2854 Radiographic Clinic 6 3.000 credits

The student will complete the competencies required by the American Registry of Radiologic Technologists to become eligible to apply to sit for the certification exam. The student will socialize into radiography practice by beginning to work more independently of a radiographer. The student will use organizational skills to provide care to patient clients assigned to them during radiographic exams. During this course the student will be assigned to one rotation during hours other than the normal working hours of the radiology department to gain competency in procedures not usually available during the day.

Clinical Hours: 144.000

Prerequisite: RTE2844

Program Description

Respiratory Care

Associate in Science | Code: 23046 | 76 credits

The Respiratory Care program prepares the successful graduates for employment in health agencies where they will work with the physician and other professionals in treating patients with respiratory ailments or injuries affecting the respiratory function. Emphasis will be placed on supervised clinical instruction and practice in local health care facilities. Completion of this two-year accredited program enables the graduate to apply for entry into the Examination Process of the N.B.R.C.A grade of "C" or better is required in each course.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course. Lecture Hours: 48.000

RET1024C Fundamentals of Respiratory Care 3.000 credits

This is an introductory course to the Respiratory Care discipline. Students will learn the history of the profession, essential medical terminology, hospital and patient safety, infection control, patient assessment, accessing and utilizing the patient's medical record, critical thinking, Respiratory Care protocols, and patient education. Lecture Hours: 32.000, Clinical Hours: 48.000
Prerequisite: ENC1101, Corequisite: RET2274C

RET1484 Respiratory Care Pathophysiology 1 2.000 credits

This is an introductory course in the study of pulmonary and cardiovascular anatomy, physiology and pathology. Students will learn terminology, disease classification, diagnostic techniques and related physiological concepts.

Lecture Hours: 32.000

Prerequisite: ENC1101, Corequisite: RET1024C

RET2274C Respiratory Care Equipment & Procedures 3.000 credits

An overview of oxygen and aerosol therapy equipment and procedures normally used for respiratory therapy. Especially emphasized are methods used in medical, surgical, and pediatric patients and their cardiopulmonary physiology as it relates to therapeutic oxygen techniques.

Lecture Hours: 32.000, Clinical Hours: 48.000

Corequisite: RET1024C

RET2350 Respiratory Care Pharmacology 2.000 credits

This course is designed to provide training in the basic principles of the administration of medications including dosage and solutions. The drugs administered by respiratory therapists are covered in-depth, along with an introduction to the general pharmacological classifications of other drugs that may be administered to pulmonary patients. Lecture Hours: 32.000

RET2275C Advanced Respiratory Care Equipment & Procedures 3.000 credits

This course reviews airway equipment and procedures normally used for respiratory therapy. Especially emphasized are methods used in airway management, bronchial hygiene therapies, hyperventilation therapies, and airway clearance techniques.

Lecture Hours: 32.000, Clinical Hours: 48.000

Prerequisite: RET2274C

RET2832 Respiratory Care Clinic 1 2.000 credits

This is an introductory clinical practice course. The student will learn psychomotor skills related to basic respiratory care and patient care procedures including patient charting, vital signs, infection control and non-pressurized oxygen adjuncts. Clinical Hours: 96.000

RET2414 Pulmonary Studies 2.000 credits

In-depth study of diagnostic techniques in the field of pulmonary medicine which includes lung volumes, static and dynamic mechanics of breathing, ventilation, distribution of gases, diffusion and arterial blood gas sampling and handling.

Corequisite: RET 2414L (2 hr. lecture)

Lecture Hours: 32.000

Corequisite: RET2414L

RET2414L Pulmonary Studies Laboratory 1.000 credits

Laboratory for RET 2414. Simulated clinical settings of diagnostic techniques used to evaluate pulmonary functions.

Lab Hours: 32.000

Prerequisite: RET2414

Course User Fee: \$20.00

RET2503 Respiratory Care Pathophysiology 2 3.000 credits

This is a foundation course on cardiopulmonary disease. The student will learn the pathogenesis, diagnosis, treatment and rehabilitation of the diseases included in the course.

Lecture Hours: 48.000

RET2284 Principles of Mechanical Ventilation 2.000 credits

A continuation of RET 2275. A concentrated course of study which focuses on the theoretical operation, application and procedures related to critical care and mechanical ventilation.

Lecture Hours: 32.000

Prerequisite: RET2275C, RET2284L

RET2284L Principles of Mechanical Ventilation Laboratory 2.000 credits

Laboratory for RET 2284. This course will provide an in depth study of the operation of mechanical ventilation devices and associated monitors. Patient safety, troubleshooting and application are stressed.

Lab Hours: 64.000

Corequisite: RET2284

Course User Fee: \$35.00

RET2833 Respiratory Care Clinic 2 5.000 credits

In conjunction with RET 2274, 2274L and RET 1024, 1024L, RET 2832 is designed to allow the student to develop psychomotor skills related to basic respiratory care and patient care procedures (patient charting, vital signs, infection control and non-pressurized oxygen adjuncts). During the rotation, the student is provided with the opportunity to apply and discuss the theory and techniques as presented in corequisite courses.

Clinical Hours: 240.000

RET2264 Advanced Modalities and Monitoring 2.000 credits

This is an advanced course relating to critical care. Students will learn advanced techniques in invasive and non-invasive monitoring, electrocardiographic monitoring and interpretation, alternatives to conventional ventilation and advanced cardiovascular support systems.

Lecture Hours: 32.000

Prerequisite: RET2284, Corequisite: RET2714, RET2714L

RET2714 Perinatal and Pediatric Respiratory Care 2.000 credits

This course is designed to provide training in perinatal and pediatric respiratory care. Students will learn assessment and therapeutic techniques related to critical care.

Lecture Hours: 32.000

Corequisite: RET2264, RET2714L

RET2714L Perinatal & Pediatric Respiratory Care Laboratory 1.000 credits

This is an introductory laboratory course that will explore assessment and Respiratory Care therapeutics of the perinatal and pediatric patient populations. The student will learn to apply physical assessment techniques, oxygen aerosol and humidity therapies, therapeutic procedures, airway management, resuscitation and management of mechanical ventilation.

Lab Hours: 32.000

Corequisite: RET2264, RET2714L

RET2834 Respiratory Care Clinic 3 8.000 credits

This course is a continuation of RET 2833. Training will be provided on the clinical application of procedures and techniques relating to respiratory critical care.

Clinical Hours: 384.000

Prerequisite: RET2284, RET2284L, Corequisite: RET2714, RET2714L

RET2601 Respiratory Care Seminar 2.000 credits

This is an advanced course focuses on clinical and nonclinical issues. Students will learn concepts including, but not limited to, clinical research, legal and ethical concerns, home care, extended care, rehabilitation and management. ACLS and PALS certification obtained.

Lecture Hours: 32.000

Course User Fee: \$90.00

RET2835 Respiratory Care Clinic 4 8.000 credits

This course is designed to provide the student with the clinical application of adult, pediatric, and neonatal intensive respiratory care. Procedures and techniques presented in RET 2280, 2714, 2264 as it relates to their clinical application will be emphasized.

Clinical Hours: 384.000

Prerequisite: RET2834, Corequisite: RET2601

Program Description

Respiratory Care (Accelerated) - CRT to RRT

Associate in Science | Code: 23067 | 76 credits

The Respiratory Care CRT to RRT Completion program prepares the practicing Certified Respiratory Therapist (CRT) to acquire the Registered Respiratory Therapist (RRT) credential, by completing the program requirements in order to meet eligibility for the National Board for Respiratory Care (NBRC) RRT examination. The emphasis of the accelerated CRT to RRT completion program is on teaching the didactic, laboratory, and clinical competencies required of a registered respiratory therapist (RRT). CRT to RRT students will be classified as Advanced Placement in the Respiratory Care Program.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

RET2284 Principles of Mechanical Ventilation 2.000 credits

A continuation of RET 2275. A concentrated course of study which focuses on the theoretical operation, application and procedures related to critical care and mechanical ventilation.

Lecture Hours: 32.000

Prerequisite: RET2275C, RET2284L

RET2284L Principles of Mechanical Ventilation Laboratory 2.000 credits

Laboratory for RET 2284. This course will provide an in depth study of the operation of mechanical ventilation devices and associated monitors. Patient safety, troubleshooting and application are stressed.

Lab Hours: 64.000

Corequisite: RET2284

Course User Fee: \$35.00

RET9995 Respiratory Care 23.000 - 232.000 credits

This course is designed for students who currently hold the Certified Respiratory Therapist (CRT) Credential (TMOP 1100:815732) and provides academic recognition of the knowledge, skills, and competencies acquired through professional credential attainment. The course validates expertise in respiratory care, including patient assessment, airway management, oxygen therapy, mechanical ventilation, diagnostic testing, and therapeutic interventions. Credit awarded through this course supports academic progression and recognizes demonstrated competency in the respiratory care profession.

Lecture Hours: 640.000

RET2264 Advanced Modalities and Monitoring 2.000 credits

This is an advanced course relating to critical care. Students will learn advanced techniques in invasive and non-invasive monitoring, electrocardiographic monitoring and interpretation, alternatives to conventional ventilation and advanced cardiovascular support systems.

Lecture Hours: 32.000

Prerequisite: RET2284, Corequisite: RET2714, RET2714L

RET2714 Perinatal and Pediatric Respiratory Care 2.000 credits

This course is designed to provide training in perinatal and pediatric respiratory care. Students will learn assessment and therapeutic techniques related to critical care.

Lecture Hours: 32.000

Corequisite: RET2264, RET2714L

RET2714L Perinatal & Pediatric Respiratory Care Laboratory 1.000 credits

This is an introductory laboratory course that will explore assessment and Respiratory Care therapeutics of the perinatal and pediatric patient populations. The student will learn to apply physical assessment techniques, oxygen aerosol and humidity therapies, therapeutic procedures, airway management, resuscitation and management of mechanical ventilation.

Lab Hours: 32.000

Corequisite: RET2264, RET2714L

RET2834 Respiratory Care Clinic 3 8.000 credits

This course is a continuation of RET 2833. Training will be provided on the clinical application of procedures and techniques relating to respiratory critical care.

Clinical Hours: 384.000

Prerequisite: RET2284, RET2284L, Corequisite: RET2714, RET2714L

RET2414 Pulmonary Studies 2.000 credits

In-depth study of diagnostic techniques in the field of pulmonary medicine which includes lung volumes, static and dynamic mechanics of breathing, ventilation, distribution of gases, diffusion and arterial blood gas sampling and handling.

Corequisite: RET 2414L. (2 hr. lecture)

Lecture Hours: 32.000

Corequisite: RET2414L

RET2414L Pulmonary Studies Laboratory 1.000 credits

Laboratory for RET 2414. Simulated clinical settings of diagnostic techniques used to evaluate pulmonary functions.

Lab Hours: 32.000

Prerequisite: RET2414

Course User Fee: \$20.00

RET2601 Respiratory Care Seminar 2.000 credits

This is an advanced course focuses on clinical and nonclinical issues. Students will learn concepts including, but not limited to, clinical research, legal and ethical concerns, home care, extended care, rehabilitation and management. ACLS and PALS certification obtained.

Lecture Hours: 32.000

Course User Fee: \$90.00

RET2835 Respiratory Care Clinic 4 8.000 credits

This course is designed to provide the student with the clinical application of adult, pediatric, and neonatal intensive respiratory care. Procedures and techniques presented in RET 2280, 2714, 2264 as it relates to their clinical application will be emphasized.

Clinical Hours: 384.000

Prerequisite: RET2834, Corequisite: RET2601

Program Description

Semiconductor Technology and Nanomanufacturing

Associate in Science | Code: 25085 | 60 credits

The Associate of Science in Semiconductor Technology and Nanomanufacturing program equips students with the skills and knowledge needed to excel in nanomanufacturing, a critical field that drives innovation across diverse industries such as semiconductors, biotechnology, and energy. Combining hands-on training with foundational theory, students gain in-depth knowledge of semiconductor circuits, cleanroom protocols, patterning techniques, and metrology. Graduates are well-prepared to excel in the dynamic field of manufacturing nanoscale materials, meeting the evolving demands of the semiconductor industry.

Program Modality: Both [In-Person (IP) and On-line]

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

EET1015C Direct Current Circuits 4.000 credits

This course is intended for students majoring in electronics engineering technology and related disciplines. Students will learn electrical components, inductance, capacitance, and elementary network analysis. Students will additionally learn to verify and apply basic theories and principles through hands-on, laboratory experiments utilizing modern testing equipment. Pre/corequisite: MAT 1033. Laboratory fee. (2 hr. lecture; 4 hr. lab)

Lecture Hours: 32.000, Lab Hours: 48.000

Pre/Corequisite: MAT1033

Course User Fee: \$63.00

ETS2163C Cleanroom Safety and Introduction to Cleanroom Processing 3.000 credits

Students learn cleanroom protocols focused on safety and contamination control. Semiconductor manufacturing processes are introduced, including photolithography, etching, deposition, and doping. Students explore characterization techniques such as microscopy and ellipsometry through hands-on cleanroom experience, emphasizing process optimization and compliance with industry standards. Recommended: Students are recommended to have completed CHM 1025. (1 hr. lecture 4 hr. lab).

Lecture Hours: 16.000, Lab Hours: 64.000

Recommended Preparation:

CHM1025 Recommended: Students are recommended to have completed CHM 1025.

Course User Fee: \$98.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

PHY2053L Physics (Without Calculus) 1 Lab 1.000 credits

This laboratory course is designed to complement PHY2053. Students will engage in hands-on experiments that reinforce theoretical concepts related to kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Through practical applications of algebra and trigonometry, learners will develop analytical skills while conducting experiments that illustrate key physical principles. The course emphasizes critical thinking and problem-solving as students collect and analyze data, interpret results, and communicate their findings effectively. This lab experience aims to deepen students' understanding of the scientific concepts covered in the parent course and their relevance to real-world situations.

Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053

Course User Fee: \$20.00

CET1110C Digital Circuits 4.000 credits

This is an introductory course in digital circuits for engineering and other technology majors. Students learn how to apply electronic principles to digital computer circuits and systems. Students will also learn how to simplify logic circuits, build digital circuits, and perform other laboratory activities. Pre/Co-requisite: MAC1105. Laboratory fee.

Lecture Hours: 32.000, Lab Hours: 64.000

Pre/Corequisite: MAC1105

Course User Fee: \$63.00

EET1025C Alternating Current Circuits 4.000 credits

This course is intended for students majoring in electronics engineering technology and related disciplines. Students will learn inductance, capacitance, vector notation, AC circuits, impedance, phase shift, networks, transformers, and resonance. Students will apply and verify theories and principles through hands-on, laboratory experiments utilizing modern testing equipment.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1015C AND MAC1114 OR MAC1147

Course User Fee: \$63.00

ETS2114C Lithography Methods in Semiconductor Manufacturing 4.000 credits

This course covers photolithography in semiconductor fabrication, focusing on pattern generation, statistical process control, and process fundamentals. Students gain hands-on experience with photomasks, spin-coating, exposure systems, and chemical development, while exploring various lithography methods and evaluating key process variables for successful pattern transfer.

Prerequisites: ETS 2160C, ETS 2163C. (2 hr. lecture 4 hr. lab).

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ETS2160C AND ETS2163C

Course User Fee: \$98.00

EET1141C Electronics 1 4.000 credits

This course is intended for students majoring in Electronics Engineering Technology or related fields. Students will learn how to apply electronic principles to analog circuits and systems, including semiconductor diodes, applying the fundamental theory of transistors and other solid-state devices; analysis of amplifiers, oscillators, and other applications using a sinusoidal wave. Students also learn basic safety procedures to follow when working in an electronics laboratory and with electronic circuits and systems.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1025C AND MAC1114 OR MAC1147

Course User Fee: \$63.00

ETS2168C Semiconductor Plasma Techniques 4.000 credits

This course introduces students to the principles and applications of plasma in semiconductor manufacturing, with a focus on etching and deposition processes. Students will explore wet and dry etching methods, including reactive ion etching (RIE) and inductively coupled plasma (ICP), while gaining hands-on experience in plasma characterization, process optimization, and plasma-enhanced chemical vapor deposition (PECVD).

Prerequisites: ETS 2160C, ETS 2163C. (2 hr. lecture 4 hr. lab).

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ETS2160C AND ETS2163C

Course User Fee: \$98.00

ETS2673C Programmable Logic Controls 4.000 credits

This course is intended for students majoring in Electronics Engineering Technology and Industrial Engineering Technology. Students will learn the principals of Programmable Logic Controls (PLC) including hardware, programming, and troubleshooting. Students will also develop advanced working programs, and troubleshoot hardware and software communication problems. Prerequisite: CET110C

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET1110C

Course User Fee: \$63.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.
Lecture Hours: 48.000
Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.
Lecture Hours: 48.000
Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.
Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.
Lecture Hours: 48.000

ETS2165C Semiconductor Characterization and Packaging 4.000 credits

This course introduces advanced semiconductor metrology and packaging processes. Students will gain hands-on experience with tools like scanning electron microscope, ellipsometers, and profilometers, focusing on thin-film measurement, wafer probing, and packaging techniques while addressing safety, quality standards, and emerging trends in nanomanufacturing. Prerequisites: ETS 2160C, ETS 2163C. (2 hr. lecture 4 hr. lab).
Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: ETS2160C AND ETS2163C
Course User Fee: \$98.00

Program Description

Sign Language Interpretation

Associate in Science | Code: 23033 | 66 credits

The Sign Language Interpretation program is designed to develop the skills necessary to interpret the communications between deaf or hard of hearing persons and hearing individuals in an accurate and effective

manner. Also developed is a practical understanding of aspects of deaf studies and deaf culture and community. Graduates should be able to interpret at a basic level, and to achieve a minimum of Level 1 on the Quality Assurance (QA) Screening of the Florida Registry of Interpreters for the Deaf, which is traditionally required for employment as an interpreter in the state. In addition, the program will provide a foundation, especially with an accompanying Associate in Arts degree, for those persons who wish to pursue advanced degrees in preparation for careers in special education, vocational rehabilitation or other human service fields.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1101	English Composition 1	3.0
MGF 1130	Mathematical Thinking	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
ASL 1140C	American Sign Language 1	4.0
Semester 2		Units: 13.0
PHI 2010	Introduction to Philosophy	3.0
<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
ASL 1150C	American Sign Language 2	4.0
ASL 2510	Deaf Culture And Community	3.0
Semester 3		Units: 13.0
ASL 2160C	American Sign Language 3	4.0
ASL 2210	ASL Conversational Skills	3.0
ASL 2220	Receptive Skills Development	3.0
INT 1000	Interpreting Ethics and Professionalism	3.0
Semester 4		Units: 13.0
ASL 2200C	American Sign Language 4	4.0
ASL 2400	Linguistics of American Sign Language	3.0
ASL 2430	Manual Alphabet Skills Development	3.0
INT 1400	Educational Interpreting	3.0
Semester 5		Units: 9.0
INT 1202	Sign To Voice Interpreting	3.0
INT 1240	Voice to Sign Interpreting	3.0
INT 1480	Interpreting: Special Settings & Populations	3.0
Semester 6		Units: 5.0

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Total: 66.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ASL1140C American Sign Language 1 4.000 credits

This course provides introductory information on the linguistics of American Sign Language and approximately 500 sign concepts. The course includes lecture, discussion and lab practice.

Lecture Hours: 64.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

ASL1150C American Sign Language 2 4.000 credits

This course provides continued instruction in the linguistic principles of American Sign Language and an additional 500 sign concepts. The course includes lecture, discussion and lab practice which is conducted in ASL. Prerequisite: ASL1140C.

Lecture Hours: 64.000

ASL2510 Deaf Culture And Community 3.000 credits

The course provides an in-depth study of the lives and experiences of deaf and hard of hearing persons and examines perceptions of belonging to a unique cultural group. Cultural characteristics are examined alongside the impact of hearing loss on one's family, friends and employment. Multicultural issues and the impact of hearing loss are examined within various ethnic groups. Societal attitudes regarding disability in general, and hearing loss and communication difficulties in particular, are addressed.

Lecture Hours: 48.000

ASL2160C American Sign Language 3 4.000 credits

This course provides linguistic principles of American Sign Language at the intermediate level and an additional 500 sign concepts. Lecture, discussion and lab practice are included. Students have increased opportunities for interaction with members of the deaf community. Increasingly, class sessions are conducted in ASL. Prerequisite: ASL1150C; Pre/Corequisite: ASL2210.

Lecture Hours: 64.000

ASL2210 ASL Conversational Skills 3.000 credits

The course provides opportunities to utilize all previously acquired knowledge and skill in ASL, including vocabulary and all components and linguistics principles of the language. Emphasis is placed on the more difficult aspects of ASL, such as role shifting for relating stories and the use of classifier predicates for providing visual descriptions. Class sessions are conducted entirely without voice. Prerequisites: ASL1150C, ASL2160C. Lecture Hours: 48.000

ASL2220 Receptive Skills Development 3.000 credits

The course will focus on increasing the student's receptive understanding of signed communications. Examples of American Sign Language (ASL) will be presented via videotapes and live interactions with deaf persons. Students will identify all the components and linguistic features of ASL and will provide appropriate English translations either in speech (paraphrasing) or in written form. Prerequisite: ASL 1150C. Lecture Hours: 48.000

INT1000 Interpreting Ethics and Professionalism 3.000 credits

The course provides an overview of the career of sign language interpreter. Included are the interpreter's role and responsibilities, Code of Ethics issues, evaluation systems for determining competency and logistical considerations. Various statutes will be examined with regard to their implications for interpreting and related services. These include The American with Disabilities Act (ADA), the education for all Handicapped Children Act and the Rehabilitation Act. Lecture Hours: 48.000 Prerequisite: ASL1150C

ASL2200C American Sign Language 4 4.000 credits

This course provides linguistic principles of American Sign Language at the advanced level and an additional 500 sign concepts including idioms used in ASL. Lecture, discussion and lab practice are included. Class sessions are conducted predominately in ASL. Prerequisite: ASL 2160C. Lecture Hours: 64.000

ASL2400 Linguistics of American Sign Language 3.000 credits

The course is designed for persons who already have an understanding of ASL principles. Provides an overview of the various systems of manual communication used in the U.S. including PSE, Cued Speech and signed English. Prerequisite: ASL 2160C. Lecture Hours: 48.000

ASL2430 Manual Alphabet Skills Development 3.000 credits

The course content focuses on acquiring both expressive and receptive skill in the manual alphabet of American Sign Language, commonly known as fingerspelling. A performance test is given at the beginning of the course to determine existing competency. Prerequisites: ASL 1140C, ASL1150C. Lecture Hours: 48.000 Prerequisite: ASL1150C, ASL1140C

INT1400 Educational Interpreting 3.000 credits

Provides an overview of the field, including the role and responsibilities of educational interpreters, their working conditions and related issues. Also covered are evaluation systems for educational interpreters and the Florida Educational Code of Ethics. Opportunities for skill building will be included with emphasis placed on signing with conceptual accuracy, mastering various sign systems and developing expertise in the use of technical signs. Lecture Hours: 48.000 Prerequisite: INT1000

INT1202 Sign To Voice Interpreting 3.000 credits

In-depth discussion and application of techniques and principles for interpreting legal, medical, oral and deaf/blind situations. Lecture Hours: 48.000 Prerequisite: ASL2160C, INT1240

INT1240 Voice to Sign Interpreting 3.000 credits

In-depth discussion and application of techniques and principles for interpreting situations in educational, social service, free-lance interpreting and the business aspects of interpreting. Lecture Hours: 48.000 Prerequisite: ASL2160C, INT1000

INT1480 Interpreting: Special Settings & Populations 3.000 credits

The course examines various settings in which interpreters work. These include social service and rehabilitation, employment-related, mental health and substance abuse treatment, religious, performing arts, legal and other settings. Also considered are specific deaf and hard of hearing consumers who present unique challenges for interpreters such as oral deaf persons, people who are both deaf and blind and those who would be classified as having minimal language skills (MLS). The course includes lecture and skill building opportunities. Lecture Hours: 48.000 Prerequisite: ASL2160C, INT1000

INT1941 Interpreting Internship 5.000 credits

The course includes field observation and supervised practical interpreting experience in a one-to-one interpreting situation in the community. The student is assigned to a practicing interpreter who acts as a mentor for the duration of the internship. A minimum of 240 hours is spent in the internship experience. This includes meetings with college staff and the interpreter/mentor. Prerequisites: All courses in the subject major must have been completed prior to enrolling in this course.

Other Hours: 240.000

Prerequisite: INT1000, INT1202, INT1240, INT1400, INT1480

Program Description

Social and Human Services - Addictions Studies

Associate in Science | Code: 25067 | 60 credits

The Social and Human Services program with a specialization in Addiction Studies is designed to prepare students for employment as human services specialists, human services practitioners, chemical dependency practitioners, addiction specialists, mental health and social service practitioners, or to provide supplemental training for persons previously or currently employed in these occupations. The program is also designed to provide most of the general academic and addiction specific requirements of the Certification Board for Addiction Professionals of Florida.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

HUS1001 Introduction to Human Services 3.000 credits

An introduction to an overview of the field of Human Services, including the role of the human services worker as it relates to various agencies, counseling, interviewing and managing.

Lecture Hours: 48.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics.

Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

HUS1302 Basic Counseling Skills 3.000 credits

Development of the skills of observation, recording, reporting, interviewing and counseling. These skills are presented in the context of general counseling theory.

Lecture Hours: 48.000

PSB2442 Psychology of Addiction 3.000 credits

This course will examine psychological, medical, pharmacological, legal, economic and sociological aspects of addiction to and use of various chemicals. The course will take an in-depth look at narcotic sedatives, and stimulants including alcohol, cocaine, heroin, cannabis, caffeine and tobacco.

Lecture Hours: 48.000

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

HUS1318 Domestic Abuse and Family Violence 3.000 credits

This course is designed to educate human services workers for the evaluation, counseling and outreach skills necessary for working with victims of domestic violence. The dynamics of partner violence, child abuse, and elder abuse will all be explored.

Lecture Hours: 48.000

HUS1428 Addiction Treatment Delivery Systems 3.000 credits

This course is designed to survey the modalities of addiction treatment. The course will study federal and state systems as well as private-not-for-profit and private-for-profit programs. All of these will be described using examples drawn from local agencies, the diverse populations they serve, and the politics and economics of the systems. This course will also present a critical exploration of the history and theory defining problems of addiction treatment and the characteristics and career issues of an addiction treatment services worker.

Lecture Hours: 48.000

HUS2303 Counseling Techniques 3.000 credits

Specific counseling techniques are introduced within the various counseling theories. Work involves both group and individual techniques.

Lecture Hours: 48.000

HUS1423 Group Counseling in Substance Abuse 3.000 credits

This course stresses development of effective group counseling leadership skills including organizing, implementing, and evaluating group counseling programs. The course includes actual group experiences.

Prerequisite: PSB2442.

Lecture Hours: 48.000

Prerequisite: PSB2442

HUS1480 HIV/AIDS and the Substance Abuser 3.000 credits

This course is designed to educate prospective addiction counselors for the evaluation, counseling and outreach skills necessary for working with HIV disease and AIDS. The course will explore not only how this disease affects one personally, but also how this pandemic has affected many psychosocial aspects of society.

Lecture Hours: 48.000

HUS2493 Addiction Counseling 3.000 credits

This course is designed to enable students to master the TAP 21 competencies: clinical evaluation, treatment planning, referral, service coordination, counseling, client, family, and community education, documentation and professional and ethical responsibilities. Additionally, the course will teach the student the process of identifying problems, establishing goals and deciding on a client treatment plan. Students will learn how to respond to an individual's needs during acute emotional and physical distress. Prerequisite: PSB2442

Lecture Hours: 48.000

Prerequisite: PSB2442

HUS2500 Issues & Ethics in Human Services 3.000 credits

This course is designed to familiarize students with the ethical problems that emerge from counseling the chemically dependent client. Emphasis will be placed on the following: the history and theory of ethics in health care; professionals' and patients' rights and responsibilities; the relationship between ethics and law; confidentiality and truth-telling in clinical relationships; technology; diagnostic testing and treatment; treatment of terminal illness; distribution of scarce medical resources and access to health care and systems payment. Prerequisite: PSB2442.

Lecture Hours: 48.000

HUS1421 Assessment and Treatment Planning in Addictions 3.000 credits

This course is designed to familiarize students with the core functions of Assessment and Treatment Planning for the chemically dependent client. Emphasis on treatment planning will be accomplished drawing from the Florida Certification Board for addiction professionals and the Department of Children's and Family Services guidelines. Prerequisites: HUS2493, PSB2442.

Lecture Hours: 48.000

Prerequisite: HUS2493, PSB2442

HUS1440 Family Issues in Chemical Dependency 3.000 credits

This course is designed to analyze the effects of chemical abuse on the family system. Emphasis will be placed on family roles and dynamics; characteristics of children (including adult children) of chemical abusers; theories of codependence; and adaptations made individually and socially by family members. Critical issues and strategies in family treatment will be explored.

Lecture Hours: 48.000

HUS1475 Addiction Counseling and the Law 3.000 credits

This course is designed to introduce addiction counseling students to the vocabulary, agencies and processes required to work with clients involved in both the criminal and civil justice systems. This course focuses on the relationship between the law and Human Services institutions, patterns of lawmaking and law-breaking, the legal structures and processes, and law as an instrument of public policy, social control and social change. The roles and functions of police, courts and correctional services will be surveyed. Common civil issues that affect clients in recovery will be explored. In addition, this course will enable students to explain the legal basis for alcohol and other drug services in Florida. State statutes pertaining to alcohol and drugs and their administrative rules will be reviewed. Confidentiality requirements, compliance standards, and professional ethics will be presented. Prerequisite: PSB2442.

Lecture Hours: 48.000

Prerequisite: PSB2442

HUS2820 Field Experience in Human Service 3.000 credits

Volunteer work as counseling paraprofessionals in a community agency under supervision. Students meet regularly with the Field Coordinator. Prerequisites: HUS1001, HUS1302, HUS2303. (120 hrs. per term)

Other Hours: 144.000

Prerequisite: HUS1001, HUS1302, HUS2303

Program Description

[Social and Human Services - Generalist](#)

Associate in Science | Code: 25026 | 60 credits

The Generalist Human Services Associate in Science degree prepares the students for employment in the network of programs and agencies which provide a vast array of human needs. These include areas such as child care, criminal justice, education, health, housing, income maintenance, mental health and retardation, among others. These needs are provided for a variety of settings, such as clinics, hospitals, nursing homes, rehabilitation centers and social agencies.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 12.0

ENC 1101	English Composition 1	3.0
<i>Mathematics</i>		3.0
MGF 1130	Mathematical Thinking	3.0
OR		
MGF 1131	Mathematics in Context	3.0
PSY 1212	Introduction to Psychology	3.0
HUS 1001	Introduction to Human Services	3.0
Semester 2		Units: 12.0
HUM 1020	Humanities	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
HUS 1302	Basic Counseling Skills	3.0
PSB 2442	Psychology of Addiction	3.0
Semester 3		Units: 12.0
EVR 1001	Introduction to Environmental Science	3.0
HUS 1318	Domestic Abuse and Family Violence	3.0
HUS 2303	Counseling Techniques	3.0
SYG 2000	Introduction to Sociology	3.0
Semester 4		Units: 12.0
HUS 1480	HIV/AIDS and the Substance Abuser	3.0
HUS 2500	Issues & Ethics in Human Services	3.0
SOP 2002	Social Psychology	3.0
SYG 2010	Social Problems	3.0
Semester 5		Units: 12.0
CLP 2140	Psychopathology	3.0
DEP 2000	Human Growth and Development	3.0
HUS 2820	Field Experience in Human Service	3.0
SYG 2430	Marriage and The Family	3.0
		Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

HUS1001 Introduction to Human Services 3.000 credits

An introduction to an overview of the field of Human Services, including the role of the human services worker as it relates to various agencies, counseling, interviewing and managing.

Lecture Hours: 48.000

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

HUS1302 Basic Counseling Skills 3.000 credits

Development of the skills of observation, recording, reporting, interviewing and counseling. These skills are presented in the context of general counseling theory.

Lecture Hours: 48.000

PSB2442 Psychology of Addiction 3.000 credits

This course will examine psychological, medical, pharmacological, legal, economic and sociological aspects of addiction to and use of various chemicals. The course will take an in-depth look at narcotic sedatives, and stimulants including alcohol, cocaine, heroin, cannabis, caffeine and tobacco.

Lecture Hours: 48.000

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

HUS1318 Domestic Abuse and Family Violence 3.000 credits

This course is designed to educate human services workers for the evaluation, counseling and outreach skills necessary for working with victims of domestic violence. The dynamics of partner violence, child abuse, and elder abuse will all be explored.

Lecture Hours: 48.000

HUS2303 Counseling Techniques 3.000 credits

Specific counseling techniques are introduced within the various counseling theories. Work involves both group and individual techniques.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

HUS1480 HIV/AIDS and the Substance Abuser 3.000 credits

This course is designed to educate prospective addiction counselors for the evaluation, counseling and outreach skills necessary for working with HIV disease and AIDS. The course will explore not only how this disease affects one personally, but also how this pandemic has affected many psychosocial aspects of society.

Lecture Hours: 48.000

HUS2500 Issues & Ethics in Human Services 3.000 credits

This course is designed to familiarize students with the ethical problems that emerge from counseling the chemically dependent client. Emphasis will be placed on the following: the history and theory of ethics in health care; professionals' and patients' rights and responsibilities; the relationship between ethics and law; confidentiality and truth-telling in clinical relationships; technology; diagnostic testing and treatment; treatment of terminal illness; distribution of scarce medical resources and access to health care and systems payment. Prerequisite: PSB2442.

Lecture Hours: 48.000

SOP2002 Social Psychology 3.000 credits

Combines a knowledge of psychology and sociology, in an interdisciplinary approach to the study of human interaction. Main themes deal with the nature of attitudes, how attitudes may be changed, the processes of interaction and the nature of group structures.

Lecture Hours: 48.000

SYG2010 Social Problems 3.000 credits

An analysis of the major contemporary and recurring social problems, emphasizing scientific search for variables involved and exploring alternative solutions.

Lecture Hours: 48.000

CLP2140 Psychopathology 3.000 credits

This course examines the major categories of mental disorders. Diagnostic criteria, treatment methods, cultural factors, public attitudes, community resources, ethical issues and legislation applicable to individuals with mental disorders are studied. The impact of mental disorders on individuals, families and society are discussed.

Lecture Hours: 48.000

Prerequisite: PSY2012

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

HUS2820 Field Experience in Human Service 3.000 credits

Volunteer work as counseling paraprofessionals in a community agency under supervision. Students meet regularly with the Field Coordinator. Prerequisites: HUS1001, HUS1302, HUS2303. (120 hrs. per term)

Other Hours: 144.000

Prerequisite: HUS1001, HUS1302, HUS2303

SYG2430 Marriage and The Family 3.000 credits

The family as a social institution — its origin and development, its forms and functions, its interrelation with other social institutions, and its role in contemporary civilization. Areas of study include factors contributing to or acting against successful, stable marriage.

Lecture Hours: 48.000

Program Description

Sport Management

Associate in Science | Code: 28010 | 60 credits

The Associate in Science (AS) in Sport Management focuses on learning through practical, hands-on experiences, and bolsters the students' learned knowledge with theory, industry insight gained from professionals with years of experience within sport. Students will experience sporting events through the lens of a manager to better understand the roles and responsibilities that are necessary to operate sports at an amateur and professional level. In addition, AS will help students understand the best practices of business, professional networking, problem-solving, and project and event management. Graduates will be able to gain employment in various athletic, entertainment, and institutional settings.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law. Lecture Hours: 48.000

Course User Fee: \$20.00

PET1170 Fundamentals of Athletic Coaching and Management 3.000 credits

This course will introduce students to the basic principles of athletic coaching and team management. Students will discuss the fundamentals of developing an individual athlete and team, effective athlete training programming, and factors which impact the operations of athletic organizations. Students will develop an understanding of how policy and coaching decisions influence an organization at all levels (Credit hours 3.00).

Lecture Hours: 48.000

Course User Fee: \$55.83

SPM1000 Introduction to Sports Management 3.000 credits

This course will provide students with the fundamental knowledge of the field of sports management. The course will provide an overview of sports across different levels, key events within the sports industry, the stakeholders involved, and jobs within sports. Students will learn skills and competencies that will lend towards a career in sports management.

Lecture Hours: 48.000

Course User Fee: \$64.65

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PET1173 Strategies of Coaching and Competition 3.000 credits

This course will provide students with the tools and resources necessary to effectively evaluate team and athlete performance. In addition, the utilization of strategic thinking, game strategy, and available resources will be applied to coaching scenarios. Students will leverage their aggregate knowledge of coaching and competition to develop and adapt coaching and management plans to fulfill the needs of participants (Credit hours: 3.00).

Course User Fee: \$55.83

SPM2105 Sports Events and Facility Management 3.000 credits

This course examines the different kinds of sporting events and the facilities in which they are hosted. Through the examination of events and facilities, students will learn the basics of event and facility management and apply them in a sports-specific environment. The course will prepare students for event planning, facility and event operations, event management, and other essential competencies for career readiness.

Lecture Hours: 48.000

Course User Fee: \$64.67

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.

Lecture Hours: 48.000

Course User Fee: \$10.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues.

Lecture Hours: 48.000

Course User Fee: \$5.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites:

ACG2001, ACG2021L, ACG2021, ACG2011;

Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite:

MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033 Any Mathematics level higher than MAT 1033 will satisfy this requirement.

MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

MAN2021 Principles of Management 3.000 credits

The student will learn to analyze the major functions of management. Emphasis is placed on learning how to manage organizations for excellence in both performance and employee satisfaction. Major topics include but are not limited to business ethics and social responsibility, strategic and operational planning, decision making, organization structure and behavior, managing groups and teams, communication and information technology.

Lecture Hours: 48.000

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon.

Written analysis of literary works may be required.

Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

GEB1000 Business Career Strategies 3.000 credits

This course is designed to enable students to thrive in a competitive business environment. Students will learn business etiquette, alternative career pathways, personal financial management, and budgets. Additionally, students will learn interviewing, networking, and career development skills.

Lecture Hours: 48.000

Course User Fee: \$24.00

SPM2151 The Business of Sports 3.000 credits

This course is designed to provide an overview of the financial, management, and business components of sports. Students will learn how concepts such as ticket pricing, sales, marketing, media, and sponsorship affect amateur and professional sporting events. By examining past events in sports, best business practices will be identified and discussed.

Lecture Hours: 48.000

Course User Fee: \$64.67

SPM2201 Sports Ethics and Leadership 3.000 credits

This course will provide students with an understanding of effective leadership and help students begin to develop their own ethical framework. Students will examine ethical issues in sport such as the use of performance-enhancing drugs, cheating, match-fixing, etc. Additionally, students will learn how to apply different leadership styles and theories to develop a cohesive team culture and effectively navigate contemporary ethical issues within sport (Credit hours: 3.00).

Lecture Hours: 48.000

Course User Fee: \$55.83

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

GEB1949 General Business Internship 1 3.000 credits

This internship provides students with an opportunity to gain business experience while receiving academic credit. Students will learn to make connections between their internship experiences, academic coursework, and career goals. Students are required to complete 144 hours of internship in an organizational setting.

Other Hours: 144.000

Program Description

Surgical Technology

Associate in Science | Code: 23077 | 64 credits

The Associate in Science degree in Surgical Technology is designed to educate and prepare graduates with skills required for entry-level employment as a member of the healthcare team. In addition, students will acquire extensive knowledge of legal and ethical responsibilities, anatomy, physiology, pathophysiology, microbiology, aseptic techniques, patient care procedures, surgical technology procedures, patient safety, and use and care of equipment and supplies.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 10.0
ENC 1101	English Composition 1	3.0
BSC 2085	Human Anatomy and Physiology 1	3.0
BSC 2085L	Human Anatomy and Physiology 1 Laboratory	1.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
Semester 2		Units: 10.0
MGF 1130	Mathematical Thinking	3.0
BSC 2086	Human Anatomy & Physiology 2	3.0
BSC 2086L	Human Anatomy & Physiology 2 Laboratory	1.0
PHI 2010	Introduction to Philosophy	3.0
Semester 3 (In Milestone)		Units: 11.0
HIM 2472	Medical Terminology	3.0
STS 1302	Introduction to Surgical Technology	2.0
STS 1303	Fundamentals of Surgical Technology	3.0
STS 1307	Surgical Equipment and Instrumentation	3.0
Semester 4 (In Milestone)		Units: 13.0
STS 1308	Perioperative Patient Care Concepts	2.0
STS 1323	Surgical Procedures I	3.0
STS 1327L	Principles and Practices of Surgical Technology Laboratory	2.0
STS 2179	Surgical Biomedical Fundamentals	3.0
STS 2944	Surgical Clinical I	3.0
Semester 5 (In Milestone)		Units: 12.0
STS 1304L	Operating Room Techniques Laboratory	3.0
STS 2324	Surgical Procedures II	3.0
STS 2340	Surgical Pharmacology	3.0
STS 2945	Surgical Clinical II	3.0
Semester 6 (In Milestone)		Units: 8.0
STS 1931	Surgical Technology Special Topics Seminar	3.0
STS 2360	Professional Skills for the Surgical Technologist	2.0
STS 2946	Surgical Clinical III	3.0
		Total: 64.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

HIM2472 Medical Terminology 3.000 credits

Analysis of medical terms through learning basic roots, prefixes and suffixes permitting the student to have a working knowledge of the language of medicine. Prerequisite: Permission of department chairperson.

Lecture Hours: 48.000

STS1302 Introduction to Surgical Technology 2.000 credits

This course is intended to teach the role of the surgical technologist and central sterile supply technician in the operating room, delivery room and related areas will be covered. The student will learn the basic knowledge of equipment, supplies and instrumentation including the physical environment of the surgical suite. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$28.65

STS1303 Fundamentals of Surgical Technology 3.000 credits

This course introduces the discipline of surgical technology and the role of the surgical technologist in preventing perioperative disease transmission and microbiology to include the characteristics and activities of microorganisms. It surveys the various microbial groups, especially the bacteria, viruses and fungi with emphasis on pathogenic forms. Various significant aspects of infectious disease that occur in humans are also covered. The course will also include an introduction to principles of perioperative care, asepsis/infection control, proper disinfection, assembly, and sterilization processes for instrumentation following surgical procedures. (2 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$28.65

STS1307 Surgical Equipment and Instrumentation 3.000 credits

This course prepares the student for the scrub role during surgical procedures, identification of basic surgical instrumentation, passing of the instruments, proper care, reprocessing of instruments following a surgical procedure, and utilizing equipment in the operating room. Students will also learn about surgical wounds, proper tissue handling techniques, wound closure, wound healing, suture material, and stapling devices.

Lecture Hours: 48.000

Course User Fee: \$46.83

STS1308 Perioperative Patient Care Concepts 2.000 credits

This course will introduce the student to the needs of the surgical patient, with a focus on the special needs patient care concept, which includes adult, pediatric, geriatric, and bariatric patients. Discussion will also include types of consents, transportation and transfer of the surgical patient, preoperative patient routines, positioning, safety issues, and death and dying will be included. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$28.65

STS1323 Surgical Procedures I 3.000 credits

This course is designed to prepare students for surgical procedures by providing instruction on diagnostic procedures and relevant equipment, supplies, and techniques. The course will also include the review of surgical anatomy, physiology, and pathophysiology in relation to general surgery, endoscopic surgery, gynecological and obstetrical surgery, genitourinary surgery, orthopedic surgery, and ophthalmic surgery.

Lecture Hours: 48.000

Course User Fee: \$46.83

STS1327L Principles and Practices of Surgical Technology Laboratory 2.000 credits

This course is an introduction to surgical instrumentation, to include identification, classifications, selection, passing, proper care, and handling equipment and supplies. The course will include proper care, disinfection, assembly, and sterilization processes for instrumentation following surgical procedures. The decontamination of the operating room will be covered. Hands-on-experience in the Sterile Processing Department at local hospitals will be included in the course.

Lab Hours: 64.000, Clinical Hours: 4.000

Course User Fee: \$46.83

STS2179 Surgical Biomedical Fundamentals 3.000 credits

This course teaches the skills necessary to function as a surgical technologist in the operating room, including principles of aseptic technique, and a basic understanding of robotics and their use in the operating room setting. In addition, an understanding of the principles of physics and electricity as it relates to the operating room environment will be covered.

Lecture Hours: 48.000

Course User Fee: \$28.65

STS2944 Surgical Clinical I 3.000 credits

This course is the first in a series of three clinical courses. The course will introduce the student to the surgical clinical environment, provide the ability to begin utilizing skills acquired during previous lab courses, and implement the principles of aseptic technique while participating in the role of a surgical technologist.

Clinical Hours: 144.000

Course User Fee: \$46.83

STS1304L Operating Room Techniques Laboratory 3.000 credits

This course will provide the student with information on operating room furniture, equipment, and supplies used during surgery. The preparation of the operating room, surgical scrub, gowning and gloving, development of the sterile field, patient positioning, surgical skin prep, and draping will be included and will be part of the lab practical exam. Students will be required to simulate a surgical procedure from start to finish. Students must complete this course with a grade of "C" or higher in order to start the clinical rotations.

Lab Hours: 96.000

Course User Fee: \$46.83

STS2324 Surgical Procedures II 3.000 credits

This course is designed to prepare students for specialty surgical procedures including the review of surgical anatomy, physiology, pathophysiology, relevant equipment, supplies, and techniques regarding otorhinolaryngological surgery (ear, nose, and throat/ENT), oral and maxillofacial surgery, plastic and reconstructive surgery, cardiothoracic surgery, peripheral vascular surgery, neurosurgery, transplant and trauma surgery. The depth of coverage is determined by the current edition of the core curriculum for surgical technologists published by the Association of Surgical Technologists.

Lecture Hours: 48.000

Course User Fee: \$46.83

STS2340 Surgical Pharmacology 3.000 credits

This course introduces general pharmacological concepts and principles in the management of patient care. Effective administration of therapeutic drugs, indications, and contraindications are discussed, including effects of medication on body systems, drug classifications and their principle action. Correct drug and dose identification is emphasized, including medications handled by the surgical technologist on the sterile field.

Lecture Hours: 48.000

Course User Fee: \$28.65

STS2945 Surgical Clinical II 3.000 credits

This course is the second in a series of three clinical courses. In this course students will concentrate their clinical experience on circulating and scrubbing in on all phases of specialty surgical cases, assisting in the use of special instruments, procedures, and surgical equipment. The student will also focus on obtaining the required surgical cases in the appropriate role as a surgical technologist. (96 hr. clinical)

Clinical Hours: 144.000

Course User Fee: \$46.83

STS1931 Surgical Technology Special Topics Seminar 3.000 credits

This course provides a review of all materials covered throughout the five-semester program. Certification examination process are covered. Employability skills are also covered.

Lecture Hours: 48.000

Course User Fee: \$332.05

STS2360 Professional Skills for the Surgical Technologist 2.000 credits

This course will cover professional management, communication skills and teamwork, ethical and moral issues in the healthcare setting, and legal issues and risk management. (2 hr. lecture)

Lecture Hours: 32.000

Course User Fee: \$46.83

STS2946 Surgical Clinical III 3.000 credits

This course is the third in a series of three clinical courses. In this course students will concentrate their clinical experience on scrubbing in on general and specialty surgical cases, assisting in the use of special instruments, procedures, and surgical equipment. The student will also focus on obtaining the required surgical cases in the appropriate role as a surgical technologist.

Clinical Hours: 144.000

Course User Fee: \$46.83

Program Description

Teaching and Learning: Early Childhood Education

Associate in Science | Code: 27014 | 60 credits

The Associate in Science (A.S.) in Teaching and Learning: Early Childhood Education prepares students for careers working with young children from birth through age eight in educational and childcare settings. The program provides a strong foundation in child growth and development, curriculum planning, classroom management, literacy development, family engagement, and developmentally appropriate teaching practices. Through a combination of academic coursework and field-based experiences, students develop the knowledge and skills needed to support the learning, development, and well-being of young children. Graduates are prepared for employment in early childhood education settings and may pursue further education in related teaching and education degree programs.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

EDF1005 Introduction to the Education Profession 3.000 credits

This course provides an overview of Florida's educator certification pathways and career options in education in accordance with Florida statutes. Topics include: key educational philosophies; professional ethics; legal responsibilities, including mandatory reporting for child abuse and neglect; the Florida educator accomplished practices (FEAP); key instructional practices associated with effective teaching of students with exceptionalities; Florida's state academic standards; and historical, legal and financial foundations of the Florida education systems. Students will explore effective teaching strategies in classroom management, educational technology and the foundations of all student learning needs. A minimum of 15 hours of required clinical experience in a variety of school settings is included.

Lecture Hours: 48.000

Course User Fee: \$18.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PHI2680 Artificial Intelligence and Ethics 3.000 credits

This course acquaints students with ethics as relevant to the design, implementation, and administration of artificial intelligence and emerging technologies. It will explore issues such as the biases of algorithms, autonomous warfare, the risks of surveillance technologies, and the effects of technologies on employment. In addition, this course will also delve into the critical examination of the Western Canon's influence on the development and ethical implications of artificial intelligence and emerging technologies.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

EEC1000 Introduction to Early Childhood Education 3.000 credits

Students will be introduced to the field of early childhood education with a focus on infants, toddlers, and preschool-aged children from birth through age five, highlighting play as a developmentally appropriate and research-supported approach to early learning. The course examines the purpose and scope of early childhood education and the roles of children, families, and educators. Students gain an overview of foundational theories and philosophies, family and societal influences, learning environments, classroom routines, and guidance practices that support development across domains. Common early childhood program types and curriculum models serving birth-five settings are also explored. Ten hours of service learning in an early childhood setting are required. Fingerprinting through MDC's school of education must be completed before starting this course. See the MDC SOE Work-Force handbook.

Lecture Hours: 48.000

EEC1200 Early Childhood Curriculum 1 (Birth - Age 5) 3.000 credits

Students will design and implement developmentally appropriate curriculum for children from birth to age five using the NAEYC Professional Standards as a guiding framework. Emphasis is placed on foundational curriculum planning grounded in children's interests, with focus on development, social studies, language and literacy, and creative expression through the arts. Course content includes observation-based planning, learning centers, classroom and outdoor environments, daily routines, and play-based experiences. Key early learning concepts, including play, cause and effect, and communication, are integrated to support developmentally appropriate practice, early learning, and school readiness. This course is paired with EEC1311, which extends curriculum planning through integrated and inquiry-based applications. Ten (10) hours of service learning in an approved early childhood setting are required.

Lecture Hours: 48.000

Pre/Corequisite: EEC1000

EEC1311 Curriculum II: Integrated, Inquiry-Based Curriculum (Birth to Age 5) 3.000 credits

Students will design and implement integrated, developmentally appropriate curriculum for children from birth to age five, building on foundational curriculum planning introduced in EEC 1200. Emphasis is placed on arts-integrated STEM learning through inquiry-based curriculum planning, with focus on scientific inquiry, mathematical thinking, building and engineering, technology, and maker spaces for creative and artistic expression. Course content includes inquiry-based planning, learning centers, enriching classroom and outdoor environments, and play-based investigations that extend children's thinking across domains. Key early learning concepts, including play, cause and effect, and communication, are integrated to support developmentally appropriate practice, early learning, and school readiness. Ten (10) hours of service learning in an approved early childhood setting are required.

Lecture Hours: 48.000

Pre/Corequisite: EEC1000 AND EEC1200

Course User Fee: \$10.00

EEC2407 Foundations of Learning and Executive Function in Early Childhood (Birth - 5) 3.000 credits

Students will build foundational knowledge of executive-function life skills, including focus and self-control, perspective taking, communication, making connections, critical thinking, taking on challenges, and self-directed learning, as the basis for learning in early childhood (Birth–5). The course examines how these skills interact with interpersonal development and cognitive growth, drawing on neuroscience and research on child development. Reciprocal family partnerships, observation-based reflection, and ethical considerations guide the analysis of young children's interactions and abilities. Emphasis is placed on research-based inhibitory control strategies that support neurocognitive development. Students will connect these executive-function skills and regulation strategies to developmentally appropriate teaching methods across home and early education settings. Ten hours of service learning in an approved early childhood setting are required. See the School of Education workforce handbook.

Lecture Hours: 48.000

EEC2002 Operation of an Early Childhood Facility 3.000 credits

This introductory course provides an overview for early childhood administrators to develop and enhance their leadership role in designing and implementing quality early care and education programs. The student will study the following topics: organizational leadership and management, programming, and financial and legal issues. This course meets the requirements for the Education Program Administrator Foundational Level Credential.

Lecture Hours: 48.000

EEC2520 Early Childhood Organization Leadership 3.000 credits

The student will develop skills needed by early childhood program administrators to manage a high-quality center. The student will learn about organizational structure of a center; ethics and professionalism; leadership strategies, skills, and competencies; self-reflection and work environment; quality improvement; staff recruitment, evaluation, and retention. This course meets the requirements for the Florida Advanced Level Child Care and Education Administrator Credential. (Requires employment at an early childhood center.)

Lecture Hours: 48.000

Prerequisite: EEC2002

Course User Fee: \$10.00

EEC2523 Programming & Management for Early Childhood Admin 3.000 credits

The student will learn about developmentally and culturally appropriate environments, curriculum, and professional standards for early childhood care program administrators. The student will develop an understanding of child observation, assessment, documentation, and referrals and their importance. The student will learn about program evaluation, health, safety, healthy nutrition practices, and the importance of partnerships with families. This course meets the requirements for the Florida Advanced Level Child Care and Education Administrator Credential. (Requires employment at an early childhood center.).

Lecture Hours: 48.000

Course User Fee: \$10.00

EEC2527 Legal and Financial Issues in Childcare 3.000 credits

The student will learn about the legal and financial issues related to operating a successful early childhood center. The student learns about financial planning, personnel cost and allocation, budgeting and accounting. The student will develop knowledge about compensation and benefit, risk management, marketing and public relations, regulatory requirements, and legal issues related to childcare management. This course meets the requirements for the Florida Advanced Level Child Care and Education Administrator Credential.

Lecture Hours: 48.000

Prerequisite: EEC2002

EDF2144 Maximizing Student Potential in the School Context 3.000 credits

The student will explore various aspects of learning and brain development in schools. Students will be introduced to the latest neuroscience education strategies used in schools to optimize their learning potential from infancy through adolescence.

Lecture Hours: 48.000

EDG2943 Educational Service Field Work 1.000 - 3.000 credits

The student will learn to compile the necessary documents and complete the process of obtaining a state and/or national early childhood credential. The student must complete the four courses in either the Infant/Toddler Specialization or the Preschool Specialization in order to take this course.

Lecture Hours: 16.000 - 48.000

Prerequisite: EEC1000, EEC1200, EEC1311, EEC2202, or EEC2002, EEC2520, EEC2523, EEC2527

EME2040 Creativity, Innovation, and Technology 3.000 credits

The student will learn to manage a productive & safe technology environment by promoting creativity and innovation in the classroom. The student will gain 21st century knowledge, skills, and attitudes for applying technology across multiple disciplines and grade levels.

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Prerequisite: CGS1060 OR Passing Score on the Computer Competency Exam

Course User Fee: \$190.03

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

ECW2010 Teaching with AI: Designing Human-Centered Classrooms 3.000 credits

This course invites learners to explore the integration of artificial intelligence through a pedagogical lens, where technology serves as a tool for reimagining teaching and learning. Learners will critically engage with AI tools by grounding their use in learning theory and evidence-based design practices.

Through inquiry, collaboration, and hands-on experimentation, learners will examine how AI can amplify creativity, personalize learning, and promote human-centeredness.

Lecture Hours: 48.000

Program Description

[Translation/Interpretation Studies](#)

Associate in Science | Code: 24050 | 60 credits

This program is designed to provide bilingual students with the knowledge and skills necessary to carry out the work associated with areas of translation (written) and interpretation (oral) in the workplace. Graduates are prepared for positions as court translators/ interpreters, in-house translators/interpreters for the private sector (including translation/interpretation agencies), translators for government agencies, hospital interpreters/ translators, freelance translators/interpreters and telephone interpreters. Graduates will have the basic foundation to establish their own translation/interpretation business.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
FOT 2802	Introduction to Translation	3.0
FOT 2821	Introduction to Interpretation	3.0
SPT 2842	Contrastive Analysis Spanish/English	3.0
Semester 2		Units: 12.0
ENC 1101	English Composition 1	3.0
FOT 2823	Consecutive Interpretation	3.0
FOT 2825	Computer Assisted Translation 1	3.0
LIN 2011	Introduction to Linguistics	3.0
Semester 3		Units: 6.0
<i>Humanities</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
HUM 1020	Humanities	3.0

POS 2041	American Federal Government	3.0

Total: 61.0

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

FOT2802 Introduction to Translation 3.000 credits

Develops the ability to do accurate written translations in general. Includes the application of contrastive structures and grammar rules of source and target languages; translation of idiomatic expressions and an introduction to legal and technical vocabulary; the use of bilingual dictionaries and glossaries. The demands of translation as a profession and its code of ethics are stressed.

Lecture Hours: 48.000

Course User Fee: \$15.00

FOT2821 Introduction to Interpretation 3.000 credits

The acquisition and development of skills to sight translate a text from the source to the target language. Training in the conceptualization and analysis of an oral message to transfer its content to another language consecutively. Preparatory exercises for the development of simultaneous interpretation skills.

Lecture Hours: 48.000

Course User Fee: \$15.00

SPT2842 Contrastive Analysis Spanish/English 3.000 credits

Comparison/Contrastive study of the phonology, morphology and syntax of Spanish and English. Recommended for students of translation and interpretation.

Lecture Hours: 48.000

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

FOT2823 Consecutive Interpretation 3.000 credits

This course builds on the foundation established in Introduction to Interpretation (FOT2810) and acquaints the students with the practice and application of consecutive interpretation (English/Spanish). Development of active listening, concentration and retention skills as well as the ability to perceive essential meaning for subsequent recall is emphasized. This course also explores basic note taking techniques and provides practice in monolateral and bilateral consecutive interpretation.

Lecture Hours: 48.000

Prerequisite: FOT2821

Course User Fee: \$15.00

FOT2825 Computer Assisted Translation 1 3.000 credits

Examines the types of translation software currently used in the translation/interpretation profession as well as the commercial use and business application of these. Description and application of tools such as translation memory, electronic dictionaries, desktop-publishing systems, and website translation technologies are covered.

Lecture Hours: 48.000

Prerequisite: FOT2802

Course User Fee: \$25.00

LIN2011 Introduction to Linguistics 3.000 credits

The course provides an exploration of basic linguistic concepts including phonology, morphology, syntax, pragmatics and semantics, how a language is organized and functions, and will establish a connection between Linguistics and Translation Theory. The course will also introduce students to the study of how cultural and social factors affect human communication.

Lecture Hours: 48.000

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

**FOT2220 Localization and Project Management
3.000 credits**

Software and website localization is a new and growing area of translation and is closely linked to the concepts of globalization and internationalization in electronic communications. In this introductory course students will learn how to adapt software for international markets as well as to how to translate websites. Students will also be introduced to basic concepts in localization project management.

Lecture Hours: 48.000

Prerequisite: FOT2802 AND FOT2825

Course User Fee: \$25.00

FOT2822 Court Interpreting Skills 3.000 credits

Continuation of FOT 2821 including deepening and broadening the type of exercise of FOT 2821 and gradual introduction to simultaneous interpretation. Oral translation with notes and conversations, ratio or tape passages. Extensive practice in the process of hearing, understanding, remembering and speaking for simultaneous oral interpretation. Participation in an internship or practical training program.

Lecture Hours: 48.000

**FOT2824 Simultaneous Interpretation Strategies
3.000 credits**

This course builds on the foundation established in previous interpretation courses while introducing the students to simultaneous interpretation (English/Spanish) by providing preparatory exercises such as shadowing, lagging, paraphrasing etc. Through a variety of recorded materials, students practice the simultaneous interpretation mode so as to acquire smooth delivery techniques while forming good professional habits.

Lecture Hours: 48.000

Prerequisite: FOT2821, FOT2823

Course User Fee: \$15.00

FOT2828 Medical Interpretation 3.000 credits

This course develops the techniques, practices and knowledge needed to function as interpreters in a medical environment. Interpreting models such as sight, consecutive and simultaneous — as they apply to the medical setting — are revisited. Medical vocabulary/terminology in English and foreign language as well as code of ethics will also be introduced.

Lecture Hours: 48.000

Prerequisite: FOT2821, FOT2823, FOT2824

**FOT2701 Simultaneous Conference Interpretation
3.000 credits**

This course builds on the foundation established in the previous Simultaneous Interpretation Strategies course. Students will continue developing their simultaneous interpretation skills through exercises such as shadowing, decálage, paraphrasing, etc. Through a variety of authentic recording materials, students will practice the simultaneous interpretation mode in the context of international organizations and conferences so as to acquire smooth delivery techniques while forming professional habits both in conference booths. Extensive practice in simultaneous interpretation will be provided both in class and online.

Lecture Hours: 48.000

Prerequisite: FOT2824

Course User Fee: \$25.00

FOT2826 Legal Translation 3.000 credits

Continuation of FOT 2802. Written translations of multi-page documents and/or articles containing legal, technical and other specialized vocabulary from the source language into the target language. Firsthand translation experience by participating in a "translator's bureau," or an "internship" or practical training program.

Lecture Hours: 48.000

FOT2827 Medical Translation 3.000 credits

This course further develops translation strategies while familiarizing the student with the characteristics of medical and health-related discourse in both English and Spanish. Included is the acquisition of medical and hospital/clinic terminology and the analysis of related linguistic structures so students can engage in translating texts from English into foreign language and vice versa.

Lecture Hours: 48.000

Prerequisite: FOT2802

FOT2829 Financial and Business Translation 3.000 credits

This course further develops translation strategies while familiarizing the students with the characteristics of financial and business discourse in both English and Spanish. Included is the learning of special terminology and related linguistic structures so students can engage in the translation of texts containing financial/business or economic discourse from English into Spanish and vice versa. As in legal translation, students engage in terminology research and glossary development through the use of specialized bilingual financial and business dictionaries and other pertinent sources.

Prerequisites: FOT 2802, 2803. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$15.00

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.

Lecture Hours: 48.000

Course User Fee: \$10.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

Program Description

Transportation and Logistics

Associate in Science | Code: 28000 | 64 credits

This Transportation and Logistics A.S. degree program provides core courses in transportation policy, law, safety, security, management and marketing, and an integrated understanding of the intermodal relationship between the various modes of transportation. In addition, college credit certificates will be offered in Intermodal Freight Transportation and Surface Transportation.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
TRA 1154	Introduction to Supply Chain Management	3.0
Program Elective*		4.0
Computer Competency Test**		

Select 4 credits from the following course options: ACG, BUL*, CGS 1060C, ECO*, FIN1*, FIN2*, GEB*, HFT*, MAN1*, MAN2*, MAR*, OST*, PET*, PUR*, QMB*, SBM*, SCM*, SPM*, TAX*, TRA*

**Computer Competency Test (CCT) ---OR--- CGS1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 2		Units: 13.0
<i>Humanities</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
HUM 1020	Humanities	3.0
OR		
LIT 2000	Introduction to Literature	3.0
OR		
MUL 1010	Music Appreciation	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
OR		
THE 2000	Theatre Appreciation	3.0
ACG 2021	Financial Accounting	3.0
ACG 2021L	Financial Accounting Lab	1.0
ECO 2013	Principles of Economics (Macro)	3.0
TRA 2010	Introduction to Transportation and Logistics	3.0

Semester 3		Units: 13.0
<i>Natural Science</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
CHM 1020	General Education Chemistry	3.0
OR		
ESC 1000	General Education Earth Science	3.0

OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		
PHY 1020	General Education Physics	3.0

Semester 5	Units: 13.0
-------------------	--------------------

SCM 1114	Applied Advanced Technologies & AI in Supply Chain Management	3.0
TRA 2402	Intermodal Transportation Operations and Project Management	3.0
TRA 2702	International Logistics and Transportation	3.0
Program Elective		4.0

Total: 64.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

TRA1154 Introduction to Supply Chain Management 3.000 credits

This course is an introduction to the concepts, principles and techniques in the field of supply chain management (SCM) with particular emphasis on the economic significance of distribution to business and the U.S. economy. Students will learn the interrelationship between logistics and other areas of business, noting how the SCM pipeline can significantly impact customer loyalty by adding value. Lecture Hours: 48.000

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context. Lecture Hours: 48.000
Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course. Lecture Hours: 48.000
Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

TRA2010 Introduction to Transportation and Logistics 3.000 credits

This course surveys the organization and operations of the commercial transportation industry and its impact on the bottom line of today's modern businesses. Students will learn to review regulations and processes affecting transportation and logistics functions as well as explore the industry job market and look at technologies and current issues shaping transportation and logistics. A.S. degree only.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite: MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033 Any Mathematics level higher than MAT 1033 will satisfy this requirement.

MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

TRA2156 Operations Management for Transportation 3.000 credits

This course includes the skills necessary for a supervisory role in logistics. Students will learn the roles and responsibilities in managing different types of transportation operations. Topics include human resources, design and management of production operations, productivity, capacity planning, resource management, just-in-time systems, hazardous materials management, planning and project management. Prerequisite: MAN2021.

Lecture Hours: 48.000

Prerequisite: MAN2021

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAN2021 Principles of Management 3.000 credits

The student will learn to analyze the major functions of management. Emphasis is placed on learning how to manage organizations for excellence in both performance and employee satisfaction. Major topics include but are not limited to business ethics and social responsibility, strategic and operational planning, decision making, organization structure and behavior, managing groups and teams, communication and information technology.

Lecture Hours: 48.000

Course User Fee: \$15.00

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

TRA2321 Transportation Public Policy, Law, and Regulations 3.000 credits

Students will learn the transportation regulatory environment, including the various levels of government regulations. Review of security, environmental requirements, regulatory research and labor laws are also covered. Prerequisite: TRA 2010.

Lecture Hours: 48.000

Prerequisite: TRA2010

SCM1114 Applied Advanced Technologies & AI in Supply Chain Management 3.000 credits

This course provides an in-depth exploration of Industry 4.0 and Artificial Intelligence (AI) applications within the supply chain industry, focusing on strategic support, optimization, data-driven decision-making, and organizational readiness. Students will discover how AI technologies enhance operational efficiency, reduce costs, and improve overall supply chain performance while ensuring responsible and ethical implementation. Through case studies and practical exercises, learners will gain the skills needed to leverage AI for innovative solutions and competitive advantage in supply chain management.

Lecture Hours: 48.000

TRA2402 Intermodal Transportation Operations and Project Management 3.000 credits

Students will learn the fundamental elements necessary to plan, implement and control efficient and market-responsive integrated transportation systems. Topics include strategic, operational, and project management roles of transportation in supply chains. Emphasis is placed on services pricing, carrier selection, equipment and shipment planning, intermodal operations, financial/budgetary constraints, security and distribution services.

Prerequisite: AVM2120, TRA2010; Corequisites: TRA1410, TRA1420, TRA1430.

Lecture Hours: 48.000

Prerequisite: AVM2120 AND TRA2010, Corequisite: TRA1430 AND TRA1410 AND TRA1420

TRA2702 International Logistics and Transportation 3.000 credits

International logistics concerns the flow of materials into, through and out of an international corporation as it relates to materials management, storage, inventory locations, physical distribution and documentation. This course will emphasize international transportation infrastructure and modes such as ocean, airfreight, intermodal movement, truck and rail. Choices among these modes will be explored considering such factors as transit time, packaging, risks, predictability and cost. The roles of freight forwarders and custom brokers in moving international cargo and operation of foreign trade zones will be discussed. Prerequisites: TRA2010, TRA2321.

Lecture Hours: 48.000

Prerequisite: TRA2010, TRA2321

Program Description

Veterinary Technology

Associate in Science | Code: 23065 | 73 credits

The Veterinary Technology program prepares students to assist veterinarians in their daily practice, working with all types of animals and in various disciplines within the realm of veterinary medicine. Tasks include providing total nursing care to the sick or injured patient, handling and restraint, assisting during examinations and surgical procedures, performing dental hygiene and radiographic exams and collection and analysis of diagnostic specimens. Graduates are eligible to apply to take the Veterinary Technician National Examination (VTNE) and the Florida Practical Exam (FPE).

Program Modality: Both [In-Person (IP) and On-line]

Total: 73.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC1005L General Education Biology Laboratory 1.000 credits

This is an optional one-credit lab to provide students with experience in the scientific process. This course applies the scientific method to critically examine and explain the natural world, including but not limited to cells, organisms, genetics, evolution, ecology, and behavior.

Lab Hours: 32.000

Pre/Corequisite: BSC1005

Course User Fee: \$25.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ATE1110 Animal Anatomy 3.000 credits

This course explores the physical and functional phenomena that interact to sustain life in animals. The student will learn the relationships of all of the systems in domestic animals, such as the osseous apparatus, the respiratory, digestive, genitourinary, endocrine, and nervous systems. The student will also be introduced to the descriptive and topographical terms needed to communicate with the professional staff.

Lecture Hours: 48.000

Prerequisite: BSC1005, BSC1005L, ENC1101,

Corequisite: ATE1110L, ATE1211, ATE1650L

ATE1110L Animal Anatomy and Physiology Lab 1.000 credits

This course will complete the coverage and understanding of the physiological and anatomical relationships required for further development as a veterinary technician. This course will correlate with lecture material learned in the Animal anatomy and Animal Physiology lecture courses. Anatomical dissection, necropsy, examination of live animals will be used as well as the study of radiographs, skeleton models and histological sections.

Lab Hours: 32.000

Corequisite: ATE1110, ATE1211, ATE1650L

Course User Fee: \$50.00

ATE1211 Animal Physiology 3.000 credits

This course is designed to explore the terminology related to animal physiology, in addition to all aspects of the functions of systems in small and large animals.

Lecture Hours: 48.000

Corequisite: ATE1110, ATE1110L, ATE1650L

ATE1650L Introduction to Clinical Practice 1 1.000 credits

This introductory course is designed to acquaint the student with skills associated with veterinary clinical practice. Students will learn basic office, laboratory and nursing skills, including hospital/office management, restraint, history taking, examination room techniques, administration of medication, basic parasitology, and basic clinical pathology procedures.

Lab Hours: 32.000

Corequisite: ATE1110, ATE1110L, ATE1211

ATE2636 Large Animal Clinic and Nursing Skills 2.000 credits

This course is designed to acquaint the student with the fundamentals of large animal herd management, reproductive physiology and lactation physiology. Aspects of equine, bovine, ovine and porcine husbandry will be included.

Lecture Hours: 32.000

Prerequisite: ATE1110, ATE1110L, ATE1211,

Corequisite: ATE2636L

ATE2636L Large Animal Clinic and Nursing Skills Laboratory 1.000 credits

This course is designed to acquaint the student with the fundamentals of large animal husbandry, herd health management, preventive medicine, animal restraint and nutrition as it relates to the bovine, equine, porcine and caprine species. Techniques discussed in the Large Animal Clinic and Nursing skills course such as venipuncture, injections and administration of other oral medications will be reviewed and demonstrated. One laboratory session will be devoted to poultry science.

Lab Hours: 32.000

Corequisite: ATE2636

Course User Fee: \$50.00

ATE2638 Animal Lab Procedures 1 3.000 credits

This course is designed to introduce the veterinary technician to common parasites and their life cycles seen in routine veterinary practice. Also, hematology and the kinetics of the hematopoietic system are discussed with emphasis on normal blood smears and common changes seen during disease stages of domestic animals.

Lecture Hours: 48.000

Prerequisite: ATE1110, ATE1110L, ATE1211,

Corequisite: ATE2638L

ATE2638L Animal Lab Procedures 1 Laboratory 2.000 credits

This course is designed to acquaint the student with clinical laboratory procedures covered in the Animal Laboratory Procedures 1 course. Areas of emphasis include hematology, coagulation and parasitology as well as general laboratory etiquette.

Lab Hours: 64.000

Corequisite: ATE2638

Course User Fee: \$100.00

ATE2652L Introduction to Clinical Practice 2 1.000 credits

The clinical application of basic veterinary radiology and surgical nursing skills will be the primary focus of this practicum. The student will demonstrate skills under supervised instruction.

Lab Hours: 32.000

Prerequisite: ATE1110, ATE1110L, ATE1650L

ATE2671C Lab Animal Medicine 2.000 credits

This foundation course provides instruction on laboratory animal care. Students will learn the technical aspects of laboratory animal care, including restraint and handling, common diseases and nutrition. The animals studied include rabbits, rats, mice, guinea pigs, hamsters and primates.

Lecture Hours: 16.000, Lab Hours: 32.000

ATE1630 Pharmacology for Veterinary Technicians 2.000 credits

This introductory course reviews drug classification and office procedures/management. Students will learn methods of calculating appropriate drug dosage, routes of administration, and evaluation of drug efficacy as well as office procedures used in veterinary hospital management.

Lecture Hours: 32.000

ATE2639 Animal Lab Procedures 2 3.000 credits

This course serves as a continuation of Animal Laboratory Procedures 1 and covers immunology, liver function and diagnostic testing for liver abnormalities, kidney function and testing used in disease states, urinalysis, pancreatic evaluation; normal and abnormal exfoliative cytology; and the evaluation of endocrine disorders. It also will include principles of serological testing and microbiological methods and protocols. Prerequisites: ATE2638, ATE2638L; Corequisite: ATE2639L.

Lecture Hours: 48.000

Prerequisite: ATE2638, ATE2638L, Corequisite: ATE2639L

ATE2639L Animal Lab Procedures 2 Laboratory 2.000 credits

This course provides experience in the practical applications discussed in Animal Laboratory procedures 2. It will also include principles of serological testing and microbiological methods and protocols as well as dentistry for the veterinary technician. Prerequisites: ATE2638, ATE2638L; Corequisite: ATE2639.

Lab Hours: 64.000

Prerequisite: ATE2638, ATE2638L, Corequisite: ATE2639

Course User Fee: \$75.00

ATE2722C Avian and Exotic Pet Medicine 2.000 credits

This course is designed to acquaint students with the medical care associated with exotic animals and avians. Students will learn types of species that may be encountered in a practice and their associated care techniques.

Lecture Hours: 16.000, Lab Hours: 32.000

ATE1940 Veterinary Clinical Experience 1 3.000 credits

This entry clinical course provides supervised clinical experience in a veterinary facility. Students will learn and reinforce competencies in clinical laboratory procedures, venipuncture techniques, physical examination of patients, administration of intramuscular and subcutaneous injections and exam room protocol.

Clinical Hours: 144.000

Course User Fee: \$28.00

ATE2611 Animal Medicine 1 3.000 credits

This course is designed to acquaint the student with anesthesiology, asepsis and general surgical nursing care, essentials in pharmacy and pharmacology, and concepts in microbiology, virology and immunology.

Prerequisites: ATE1110, ATE1211; Corequisites:

ATE2661, ATE2942, ATE2631, ATE2655L.

Lecture Hours: 48.000

ATE2631 Small Animal Nursing 1 3.000 credits

The student will master the technical skills of medicating animals and the taking and processing of radiographs. This course also covers general care, including grooming and bathing, feeding and watering, nail trimming, ear cleaning, anal sac expression, and determination of vital signs.

Prerequisites: ATE1110, ATE1211; Corequisites:

ATE2611, ATE2655L.

Lecture Hours: 48.000

Prerequisite: ATE1110, ATE1211, Corequisite:

ATE2611, ATE2655L

ATE2655L Animal Nursing and Medicine Laboratory 1 2.000 credits

This course is designed to acquaint the student with exam room and restraining techniques, anesthesia and surgical protocols and diagnostic imaging procedures used in veterinary hospitals.

Lab Hours: 64.000

Course User Fee: \$75.00

ATE2661 Large Animal Diseases 1.000 credits

This course is designed to acquaint the student with the fundamentals of preventative medicine and with the common disease seen in the large animal species. Aspects of equine, bovine, ovine and porcine diseases and common treatments will be emphasized. Prerequisites: ATE1110, ATE2636, ATE2636L; Corequisite: ATE2611.

Lecture Hours: 16.000

Prerequisite: ATE1110, ATE2636, ATE2636L,

Corequisite: ATE2611

ATE1941 Veterinary Clinical Experience 2 3.000 credits

This course consists of supervised clinical experience in the veterinary workplace. Students will learn to enhance the competencies from ATE 1940 Veterinary Clinical Experience 1 while adding application of classroom knowledge in pharmacology, clinical laboratory procedures, and radiology.

Clinical Hours: 144.000

ATE2050L Animal Nursing and Medicine Laboratory 2 2.000 credits

The student will practice training a dog, and applying corrections for common behavioral problems. Clinical training in a small animal necropsy is also presented.

Prerequisites: ATE1110, ATE2631, ATE2655L;

Corequisite: ATE2612.

Lab Hours: 64.000

Prerequisite: ATE1110, ATE2631, ATE2655L,

Corequisite: ATE2612

Course User Fee: \$50.00

ATE2612 Small Animal Nursing 3.000 credits

A study of the basic concepts of nutrition, obstetrics, and pediatric care, as well as the important aspects regarding zoonotic diseases, public health, and animal behavior. The student will also be introduced to alternative medicine, including holistic concepts, homeopathic, acupuncture, chiropractic and other emerging specialties. Prerequisites: ATE1110, ATE2611, ATE2631, ATE2655L; Corequisite: ATE2050L.

Lecture Hours: 48.000

Prerequisite: ATE1110, ATE2611, ATE2631, ATE2655L,

Corequisite: ATE2050L

ATE2614 Animal Medicine 2 3.000 credits

This course will explore general pathology, causes and nature of disease, toxicology, and an overview of the pathologies of the major systems, as well as immunity, disease prevention, common vaccinations and diseases relating to small animals. Prerequisites: ATE1110, ATE2611.

Lecture Hours: 48.000

Prerequisite: ATE1110, ATE2611

ATE2710 Animal Emergency Medicine 2.000 credits

This course is designed to acquaint the student with fundamentals of emergency veterinary medicine, including veterinary first aid, toxicology and specialized medical techniques and procedures.

Prerequisites: ATE1110, ATE1211; Corequisites:

ATE2611, ATE2631, ATE2655L.

Lecture Hours: 32.000

Prerequisite: ATE1110, ATE1211, Corequisite:

ATE2611, ATE2631, ATE2655L

ATE2942 Veterinary Clinical Experience 3 4.000 credits

This course provides clinical experience to the student, under the supervision of a veterinarian. Students will enhance the competencies learned in ATE1940 - Clinical Experience 1 and ATE1941 - Veterinary Clinical Experience 2 and master skills associated with advanced veterinary technology practice. Prerequisite ATE1941.

Clinical Hours: 192.000

Prerequisite: ATE1941

Course User Fee: \$35.00

Advanced Technical Certificate (ATC)

Program Description

Biotechnology

Advanced Technical Certificate | Code: C6028 | 33 credits

A fast-track certification program in Biotechnology is available for students with bachelor's degrees, or having at least an associate degree and a strong background in college-level math and science courses. This background, combined with selected courses in the biotechnology program, will provide students with the necessary skills to seek employment in Biotechnology and related industries.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 13.0

BSC 2426	Biotechnology Methods and Applications 1	3.0
BSC 2426L	Biotechnology Methods and Applications 1 Laboratory	2.0
BSC 2427	Biotechnology Methods and Applications 2	3.0
BSC 2427L	Biotechnology Methods and Applications 2 Laboratory	2.0
BSC 2943L	BIOSCIENCE INTRNSHIP	3.0

Semester 2

Units: 19.0-21.0

CHM 2200	Survey of Organic Chemistry	3.0
CHM 2200L	Survey of Organic Chemistry Laboratory	1.0
EGS 1010	Applied Research Methods	1.0-3.0
ETI 1040	Introduction to Bioscience Manufacturing	3.0
ETI 1172	Introduction to Quality Assurance	3.0
ETI 1622	Concepts of Lean and Six Sigma	3.0
MCB 2010	Microbiology	3.0
MCB 2010L	Microbiology Laboratory	2.0

Total: 32.0-34.0

BSC2426 Biotechnology Methods and Applications 1 3.000 credits

This course addresses the basic principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical, biotechnology and/or research laboratory setting(s). Practical applications of biotechnology are explored.

Lecture Hours: 48.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426L

BSC2426L Biotechnology Methods and Applications 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2426 Biotechnology Methods and Applications 1. This is a hands-on course that emphasizes the basic laboratory principles, techniques, and instrumentation, necessary for effective work in pharmaceutical, biotechnology, and/or research laboratory settings(s).

Lab Hours: 64.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426

Course User Fee: \$50.00

BSC2427 Biotechnology Methods and Applications 2 3.000 credits

This course addresses advanced principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical-biotechnology and/or research-laboratory setting(s). The following areas of contemporary biotechnology are covered: forensics, bioremediation, and animal-, plant-, and marine biotechnology.

Lecture Hours: 48.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427L

BSC2427L Biotechnology Methods and Applications 2 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2427 Biotechnology Methods and Applications 2. This is a hands-on course that emphasizes advanced laboratory principles, techniques, and instrumentation necessary for effective work in a pharmaceutical, biotechnology, and/or research-laboratory setting(s).

Lab Hours: 64.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427

Course User Fee: \$50.00

BSC2943L BIOSCIENCE INTRNSHIP 3.000 - 6.000 credits

Lab Hours: 144.000 - 288.000

Course User Fee: \$21.00

CHM2200 Survey of Organic Chemistry 3.000 credits

XXXX This one-semester course briefly examines the structure, synthesis, nomenclature and reactivity of selected mono-and-poly-functional organic compounds. Theories that relate the structure of organic molecules to their chemical reactivity will be presented as a unifying principle. Prerequisite: CHM 1046 and CHM 1046L; Corequisite: CHM 2200L. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2200L

CHM2200L Survey of Organic Chemistry Laboratory 1.000 credits

Experiments and exercises will be conducted to introduce students to the basic laboratory techniques that are used in organic chemistry and that re-enforce and illustrate several important topics in organic chemistry.

Prerequisite: CHM 1046 and CHM 1046L; Corequisite: CHM 2200. Special fee. (2 hr. lab)

Lab Hours: 32.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2200

Course User Fee: \$46.00

EGS1010 Applied Research Methods 1.000 - 3.000 credits

This course is designed for STEM majors. Students will learn basic research practices: research methods, experimentation, validation, technical writing, and presentations. Using the Affinity Research Group model, students will work in groups to conduct theory-based STEM research, develop poster presentations, and write conference and journal publications.

Lecture Hours: 16.000 - 48.000

ETI1040 Introduction to Bioscience Manufacturing 3.000 credits

This course introduces students to the field of bioscience manufacturing. Topics will include basic principles of the industry, large-scale process development and the future of the bioscience industry. Current Good Manufacturing Practices (cGMPs), and the nature and delivery system of products will also be discussed.

Lecture Hours: 48.000

ETI1172 Introduction to Quality Assurance 3.000 credits

This course describes the role and aspects of quality systems and Regulatory affairs in research laboratories, regulated companies, and firms that comply with voluntary standards. Topics include stages in development and submission of drugs and medical devices, patents legislation, and quality systems such as auditing, standard procedures, good manufacturing and laboratory practices.

Lecture Hours: 48.000

ETI1622 Concepts of Lean and Six Sigma 3.000 credits

This course is designed for students who are preparing for careers in the manufacturing industry. Students will learn the basic concepts, frameworks, and techniques used in six sigma, including total quality philosophies, the calculation of six sigma and other vital statistics, tools of lean six sigma, and knowledge of various methodologies.

Lecture Hours: 48.000

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L. Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L
Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

Units: 12.0

CGS 1540C	Database Concepts Design	
CGS 1700	Introduction to Operating Systems	4.0
CIS 1321	INTRO SYS ANAL&DESGN	4.0
CIS 1531	Introduction to Secure Scripting	
COP 1334	Introduction to C++ Programming	4.0

Total: 25.0

BSC2426 Biotechnology Methods and Applications 1 3.000 credits

This course addresses the basic principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical, biotechnology and/or research laboratory setting(s). Practical applications of biotechnology are explored.

Lecture Hours: 48.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426L

BSC2426L Biotechnology Methods and Applications 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2426 Biotechnology Methods and Applications 1. This is a hands-on course that emphasizes the basic laboratory principles, techniques, and instrumentation, necessary for effective work in pharmaceutical, biotechnology, and/or research laboratory settings(s).

Lab Hours: 64.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426

Course User Fee: \$50.00

BSC2427 Biotechnology Methods and Applications 2 3.000 credits

This course addresses advanced principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical-biotechnology and/or research-laboratory setting(s). The following areas of contemporary biotechnology are covered: forensics, bioremediation, and animal-, plant-, and marine biotechnology.

Lecture Hours: 48.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427L

BSC2427L Biotechnology Methods and Applications 2 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2427 Biotechnology Methods and Applications 2. This is a hands-on course that emphasizes advanced laboratory principles, techniques, and instrumentation necessary for effective work in a pharmaceutical, biotechnology, and/or research-laboratory setting(s).

Lab Hours: 64.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427

Course User Fee: \$50.00

BSC2943L Bioscience Internship 3.000 - 6.000 credits

This internship course is a capstone for students majoring in bioscience and related programs. Students will learn to apply acquired knowledge and skills to gain experience in the bioscience workplace.

Other Hours: 144.000 - 288.000

Course User Fee: \$21.00

CGS1540C Database Concepts Design credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

**CGS1700 Introduction to Operating Systems
4.000 credits**

This course examines the role of operating systems as the interface between the hardware, the software and the users of a computer system. It explores the concepts such as processes and threads, file systems, virtual memory, interrupt handling, virtualization and security.

Lecture Hours: 48.000, Lab Hours: 32.000

CIS1321 INTRO SYS ANAL&DESGN 4.000 credits

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS1531 Introduction to Secure Scripting credits

This course provides students with the knowledge and skills to: create secure scripts and programs using system shells and programming languages; implement and debug algorithms to solve problems; automate and perform administrative tasks; manage data handling, and backup and storage. (3 hr. lecture; 2 hr. lab)

Course User Fee: \$63.00

**COP1334 Introduction to C++ Programming
4.000 credits**

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

Program Description

Certified Flight Instructor

Advanced Technical Certificate | Code: C6027 | 13 credits

Semester 1

Units: 13.0

ATF 2501	Flight Instructor-Flight Training	3.0
ATF 2501L	Flight Instructor Laboratory	1.0
ATT 2131	Flight Instructor Theory	3.0
AVM 1949	Co-Op Work Experience 1: AVI	3.0
AVM 2949	Co-Op Work Experience 2: AVI	3.0

Total: 13.0

ATF2501 Flight Instructor-Flight Training 3.000 credits

This course provides flight training for the student to develop the ability to analyze the performance of private and commercial flight maneuvers from the right seat of a training aircraft, in compliance with the Federal Aviation Administration Certified Flight Instructor Certificate. Prerequisite: ATF2300; Corequisites: ATT2131, ATF2501L. Special fee.

Lecture Hours: 48.000

Prerequisite: FAA Commercial Certificate with an Instrument Rating or ATP, ATT2133

ATF2501L Flight Instructor Laboratory 1.000 credits

Provides the student with internship teaching experience based upon the principles of flight instruction learned in ATT2131 and ATF 2501. Students will learn to develop lesson plans and how to communicate effectively using instructional materials Prerequisite: ATF2300; Corequisites: ATT2131, ATF2501.

Lab Hours: 32.000

Prerequisite: ATF2300 AND Corequisite: ATF2501 AND ATT2131

Course User Fee: \$8703.50

ATT2131 Flight Instructor Theory 3.000 credits

Provides the student ground instruction to obtain the necessary aeronautical knowledge, to meet the FAA written standards for the Certified Flight Instructors Certificate. Preparation for the written exam is included in the course content. Prerequisite: ATF2305.

Lecture Hours: 48.000

AVM1949 Co-Op Work Experience 1: AVI 3.000 credits

This is a course designed to provide training in a student's field of study through work experience. Students are graded on the basis of documentation of learning acquired as reported by student and employer. Students will be assigned specific course prefixes related to their academic major prior to registration. All students must contact the Co-operative Education Office to obtain registration approval. Prerequisite: 2.0 minimum GPA, approval of Co-op Program Director, minimum of 6 credits in field or work approved experience.

Lecture Hours: 48.000

AVM2949 Co-Op Work Experience 2: AVI 3.000 credits

This is a course designed to continue training in a student's field of study through work experience. Students are graded on the basis of documentation of learning acquired as reported by student and employer. Students will be assigned specific course prefixes related to their academic major prior to registration. All students must contact the Co-operative Education Office to obtain registration approval. Prerequisite: 2.0 minimum GPA, approval of Co-Op Program Director, completion of AVM1949.

Lecture Hours: 48.000

Program Description

Compensation and Benefits

Advanced Technical Certificate | Code: C6002 | 18 credits

Semester 1		Units: 6.0
MAN 3025	Organization Management	3.0
MAN 3301	Human Resource Management	3.0
Semester 2		Units: 6.0
MAN 4330	Compensation Management	3.0
MAN 4335	Employee Benefit Planning	3.0
Semester 3		Units: 6.0
MAN 4361	Organizational Staffing	3.0
MAN 4402	Employment Law and Regulation	3.0

Total: 18.0

MAN3025 Organization Management 3.000 credits

The student will learn the major functions of supervision and management including the functions of planning, staffing, directing and controlling. Emphasis is placed on learning how to communicate more effectively with employees and how to increase leadership effectiveness. Major topics include goal setting and attainment, organizational structure, decision-making, strategic planning, managing stress, and ethical behavior and ethical role modeling. Cases that present the student with opportunities to make supervisory and management decisions, along with timely feedback on their effectiveness, will be used. Must pass this course with a grade of C or higher.

Lecture Hours: 48.000

Prerequisite: MAN2021

Course User Fee: \$60.00

MAN3301 Human Resource Management 3.000 credits

The student will learn the functions of Human Resource Management including human resource planning, strategic development of human resources, recruitment techniques, selection and hiring processes, compensation systems, development of policy and procedures for effective and ethical human resource management, performance review and evaluation systems, working effectively with organized labor, retention of employees, and current issues in human resource management. The course will also include an exploration of human resources within the global business environment of a boundless organization. Must pass course with a grade of "C" or higher.

Lecture Hours: 48.000

Prerequisite: MAN2021

Course User Fee: \$60.00

MAN4330 Compensation Management 3.000 credits

This course is a study of the strategic use of compensation system for the purposes of attracting, retaining, and motivating a competitive workforce. The student will address topics such as designing compensation systems, bases for pay, employee benefit programs, laws affecting compensation practices, and compensation challenges for various employee groups. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4335 Employee Benefit Planning 3.000 credits

This course focuses on the both wage and nonwage related benefits made available to employees by the firm and various related social and governmental programs. The student will examine various state and federal laws regarding employee benefits planning. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4361 Organizational Staffing 3.000 credits

This course provides the student with an overview of the staffing function in organizations, including the topics of job analysis, forecasting, recruitment, selection, retention and turnover. It serves as an introductory course for the prospective human resources manager and as a survey of responsibility and activities of any manager with supervisory responsibilities. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4402 Employment Law and Regulation 3.000 credits

This course analyzes the federal and state regulation of the employment relationship, including wage and hour laws, EEO, and Affirmative Action programs. The student will address human resource issues such as employee benefits, insurance, workers' compensation, safety, health, employees' personal rights and collective bargaining legislation. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

Program Description

Computed Tomography

Advanced Technical Certificate | Code: C6037 | 9 credits

Semester 1		Units: 9.0
RTE 2571	Principles of Computed Tomography	3.0
RTE 2762	Cross Sectional Anatomy	3.0
RTE 2940C	Computed Tomography Clinical Education	3.0
		Total: 9.0

RTE2571 Principles of Computed Tomography 3.000 credits

This course provides the radiologic technologist advanced imaging techniques of computed tomography. This introduction to the CT scanning technology will include history and development, equipment, terminology, patient preparation and care, and the principles of image formation, acquisition, and production. Corequisite: RTE2762.

Lecture Hours: 48.000

Corequisite: RTE2762

RTE2762 Cross Sectional Anatomy 3.000 credits

This course is designed to provide the students a thorough knowledge of Axial, coronal, and sagittal imaging planes of our body. Students will also learn to identify various anatomical structures in axial, coronal, and sagittal images of our body.

Lecture Hours: 48.000

RTE2940C Computed Tomography Clinical Education 3.000 credits

The course provides the radiologic technologist practical, first-hand experience of scanning procedures and techniques at a supervised clinical site; theories learned in RTE 2571 will be applied. Students will observe, assist, and perform Computed Tomography under the supervision and guidance of a qualified CT Technologist. Prerequisites: RTE2571, RTE2762.

Clinical Hours: 144.000

Prerequisite: RTE2571 AND RTE2762

Course User Fee: \$29.36

Program Description

Hospitality Management

Advanced Technical Certificate | Code: C6000 | 18 credits

Semester 1		Units: 9.0
HFT 3263	Restaurant Management	3.0
HFT 3603	Hospitality Law	3.0
HFT 4064	Bar and Beverage Management	3.0
Semester 2		Units: 9.0
HFT 4253	Hotel Management	3.0
HFT 4809	Food Service Management	3.0
HFT 4468	Revenue Management in the Hospitality Industry	3.0
		Total: 18.0

HFT3263 Restaurant Management 3.000 credits

Students will examine restaurant management and operations. Topics include operational issues, customer satisfaction, restaurant trends and challenges, new technologies, financial accountability, cost controls, service issues, regulatory and safety compliance, leadership, training and staff development. Upon completion, students will be able to articulate knowledge of all aspects of a restaurant operation.

Lecture Hours: 48.000

Course User Fee: \$35.00

HFT3603 Hospitality Law 3.000 credits

Students will examine the legal rights and responsibilities related to the hospitality industry. Topics include federal and state regulations, historical and current practices, safety and security, risk management, loss prevention, liability, relevant torts and contracts. Upon completion, students will be able to articulate knowledge of the legal issues in the hospitality industry, and methods of preventing or minimizing organizational liability.

Lecture Hours: 48.000

Course User Fee: \$35.00

HFT4064 Bar and Beverage Management 3.000 credits

Students will examine the management of beverages served in hospitality operations. Topics include history and trends; service, procurement and storage; knowledge and control of wines and fermented/distilled beverages; and non-alcoholic beverages, coffees, and teas. Upon completion, students will be able to articulate knowledge of responsible alcohol service and knowledge of beverages consumed in a hospitality operation.

Lecture Hours: 48.000

Course User Fee: \$35.00

HFT4253 Hotel Management 3.000 credits

Students will examine the working components of a hotel and their interrelationships. Topics include hotel organization, management and leadership, human resources, food and beverage service, meeting industry, marketing and selling, communications, management companies, and ethics in hospitality management. Upon completion, students will be able to articulate knowledge of the responsibilities of each hotel department and how they interact to provide the overall guest experience.

Lecture Hours: 48.000

Course User Fee: \$35.00

HFT4809 Food Service Management 3.000 credits

Students will examine food service management and operations. Topics include the management process, marketing, sales techniques, cost and pricing strategies, food purchase controls, production and service, sanitation and safety, management of bar and beverage design and financial management. Upon completion, students will be able to articulate knowledge of the financial relationship of the food and beverage aspect of the hotel industry.

Lecture Hours: 48.000

Course User Fee: \$35.00

HFT4468 Revenue Management in the Hospitality Industry 3.000 credits

Students will examine the basics of revenue management in the hotel industry. Topics include pricing and length-of-stay tools, revenue management performance measures, capacity management, demand and revenue forecasting, discounting, reservation systems, and pricing execution. Upon completion, students will be able to articulate knowledge of how to accurately forecast hotel guest arrivals, examine pricing models in accordance with revenue management principles, and how to manage overbooking. Prerequisite: ACG2021 , ACG2021L, or HFT2421.

Lecture Hours: 48.000

Pre/Corequisite: HFT2421, Prerequisite: ACG2021, ACG2021L

Course User Fee: \$35.00

Program Description

Semester 1		Units: 6.0
MAN 3025	Organization Management	3.0
MAN 3301	Human Resource Management	3.0
Semester 2		Units: 9.0
MAN 3322	Human Resources Information Systems	3.0
MAN 4330	Compensation Management	3.0
MAN 4335	Employee Benefit Planning	3.0
Semester 3		Units: 9.0
MAN 4352	Effective Employee Training	3.0
MAN 4361	Organizational Staffing	3.0
MAN 4402	Employment Law and Regulation	3.0
		Total: 24.0

MAN3025 Organization Management 3.000 credits

The student will learn the major functions of supervision and management including the functions of planning, staffing, directing and controlling. Emphasis is placed on learning how to communicate more effectively with employees and how to increase leadership effectiveness. Major topics include goal setting and attainment, organizational structure, decision-making, strategic planning, managing stress, and ethical behavior and ethical role modeling. Cases that present the student with opportunities to make supervisory and management decisions, along with timely feedback on their effectiveness, will be used. Must pass this course with a grade of C or higher.

Lecture Hours: 48.000

Prerequisite: MAN2021

Course User Fee: \$60.00

MAN3301 Human Resource Management 3.000 credits

The student will learn the functions of Human Resource Management including human resource planning, strategic development of human resources, recruitment techniques, selection and hiring processes, compensation systems, development of policy and procedures for effective and ethical human resource management, performance review and evaluation systems, working effectively with organized labor, retention of employees, and current issues in human resource management. The course will also include an exploration of human resources within the global business environment of a boundless organization. Must pass course with a grade of "C" or higher.

Lecture Hours: 48.000

Prerequisite: MAN2021

Course User Fee: \$60.00

MAN3322 Human Resources Information Systems 3.000 credits

This course examines the role of human resources information system (HRIS) in today's organizations and human resources departments. The student will address topics such as human resource information systems design, acquisition, and implementation. The role of these systems in talent acquisition and management is also examined. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4330 Compensation Management 3.000 credits

This course is a study of the strategic use of compensation system for the purposes of attracting, retaining, and motivating a competitive workforce. The student will address topics such as designing compensation systems, bases for pay, employee benefit programs, laws affecting compensation practices, and compensation challenges for various employee groups. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4335 Employee Benefit Planning 3.000 credits

This course focuses on the both wage and nonwage related benefits made available to employees by the firm and various related social and governmental programs. The student will examine various state and federal laws regarding employee benefits planning. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4352 Effective Employee Training 3.000 credits

This course focuses on professional development activities as performed by human resources specialists or organizational specialists. The student will analyze the benefits of employee training, establish employee development programs, and address the theories, issues, practices and problems regarding employee training and development. Prerequisites: MAN3025, MAN3301

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4361 Organizational Staffing 3.000 credits

This course provides the student with an overview of the staffing function in organizations, including the topics of job analysis, forecasting, recruitment, selection, retention and turnover. It serves as an introductory course for the prospective human resources manager and as a survey of responsibility and activities of any manager with supervisory responsibilities. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4402 Employment Law and Regulation 3.000 credits

This course analyzes the federal and state regulation of the employment relationship, including wage and hour laws, EEO, and Affirmative Action programs. The student will address human resource issues such as employee benefits, insurance, workers' compensation, safety, health, employees' personal rights and collective bargaining legislation. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

Program Description

Magnetic Resonance Imaging

Advanced Technical Certificate | Code: C6036 | 15 credits

Semester 1

Units: 15.0

RTE 2762	Cross Sectional Anatomy	3.0
RTE 2575	MRI Principles and MR Safety	3.0
RTE 2576	MRI Procedures & Patient Care	3.0
RTE 2577C	Magnetic Resonance Imaging (MRI) Practicum	6.0

Total: 15.0

RTE2762 Cross Sectional Anatomy 3.000 credits

This course is designed to provide the students a thorough knowledge of Axial, coronal, and sagittal imaging planes of our body. Students will also learn to identify various anatomical structures in axial, coronal, and sagittal images of our body.

Lecture Hours: 48.000

RTE2575 MRI Principles and MR Safety 3.000 credits

This course is an introduction to the basic principles of MRI, including signal production, basic concepts in image formation and image contrast and resolution. It is intended to provide a solid foundation in MRI technology as well as an understanding of the MRI equipment and its appropriate and safe use. A practical approach to using the correct imaging sequences and parameters will be discussed. Emphasis will be placed in MRI Screening and MRI Safety. Corequisites: RTE2762, RTE2576.

Lecture Hours: 48.000

Corequisite: RTE2762, RTE2576

RTE2576 MRI Procedures & Patient Care 3.000 credits

This course is designed to introduce the student to the different image acquisition techniques and common scan sequences used in MRI imaging to describe normal and abnormal anatomy. Emphasis will be placed on basic patient care skills and safe use of equipment used in MRI. Corequisites: RTE2762, RTE2575.

Lecture Hours: 48.000

Corequisite: RTE2762, RTE2575

RTE2577C Magnetic Resonance Imaging (MRI) Practicum 6.000 credits

This course is designed to provide the students with hands-on experience for body imaging. Students will learn to position the patients correctly inside the Magnetic Resonance Imaging (MRI) machine and program the machine to create axial, coronal, and sagittal images of the brain and spinal column. Prerequisites: RTE2762, RTE2575, RTE 2576.

Practicum Hours: 288.000

Prerequisite: RTE2762 AND RTE2575 AND RTE2576

Program Description

Museum Studies

Advanced Technical Certificate | Code: C6050 | 16 credits

The Advanced Technical Certificate (ATC) in Museum Studies offers a dynamic and interdisciplinary education that prepares students for impactful careers at the intersection of museum work and interactive media production. This innovative program equips learners with critical skills enabling them to craft engaging traditional and interactive experiences. Simultaneously, students will explore the field of museum studies, gaining in-depth training in the analysis, interpretation, and curation of museum artifacts, while developing a profound appreciation for their historical and cultural contexts. Through hands-on learning opportunities, participants will apply ethical standards and professional practices in the responsible management and preservation of collections. With a strong focus on research, documentation, and exhibition design, graduates will emerge as versatile professionals prepared to navigate the evolving media and museum landscapes, effectively engaging various audiences and fostering a deeper understanding of cultural heritage and storytelling across multiple platforms.

Program Modality: Resident [In-Person (IP)]

Contracted: No

Semester 1

Units: 9.0

ENC 1101	English Composition 1	3.0
ARH 2051	Art History 2	3.0
ARH 2857	Introduction to Museum Studies	3.0

Semester 2

Units: 7.0

ARH 2833	Museum and Gallery Exhibition Design	3.0
ARH 2990	Museum and Gallery Co-Op Work Experience	3.0
LIS 2004	Digital Research Strategies	1.0

Total: 16.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARH2051 Art History 2 3.000 credits

In this course, students will embark on a world survey of the visual arts from 800 to 1850 A.D., exploring various artistic movements, styles, and cultural contexts. The course will delve into the rich and diverse artistic traditions from different regions, including works from the Western canon. Writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$5.00

ARH2857 Introduction to Museum Studies 3.000 credits

This is a foundation course that offers a practical introduction to the nature, context, and operations of museums with the intention of providing practical examples and indicators of good practices. This course introduces students to the history and theory of museums and museum practices, museum administration, exhibition planning, museum education, and museum careers. In addition to the comprehensive overview of museum studies, this course also delves into the influence of the Western canon on museum curation and interpretation, providing students with a well-rounded understanding of the cultural and historical significance of the artifacts and artworks displayed in museums.

Lecture Hours: 48.000

ARH2833 Museum and Gallery Exhibition Design 3.000 credits

The course examines the historical context of museum exhibitions, tracing their evolution from traditional displays to contemporary immersive experiences. Students will explore the key milestones and influential figures that have shaped the field, gaining insights into the changing trends and philosophies that guide exhibition practices today.

Lecture Hours: 32.000, Lab Hours: 32.000

ARH2990 Museum and Gallery Co-Op Work Experience 3.000 credits

This course offers an exceptional opportunity for students to further enhance their skills and knowledge in the field of Art and related studies through practical work experience. The primary focus of this course is to provide students with hands-on training that complements their academic studies.

Internship Hours: 144.000

LIS2004 Digital Research Strategies 1.000 credits

LIS 2004, Digital Research Strategies, equips students with information literacy skills to locate, evaluate, and ethically use information in an evolving digital landscape. Students will apply critical thinking and research techniques to explore traditional and emerging research tools. (1 hr. lecture)
Lecture Hours: 16.000

Program Description

Procurement Management

Advanced Technical Certificate | Code: C6003 | 18 credits

Semester 1		Units: 9.0
QMB 2100	Basic Business Statistics	3.0
OR		3.0
STA 2023	Statistical Methods	3.0
MAN 3562	Purchasing, Inventory and Warehouse Management	3.0
MAN 3577	Procurement for Major Projects	3.0
Semester 2		Units: 9.0
MAN 3506	Operations Management	3.0
MAN 3578	Global Procurement Management	3.0
MAN 4570	Purchasing for Industry	3.0
		Total: 18.0

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

MAN3562 Purchasing, Inventory and Warehouse Management 3.000 credits

This course explores the integration of production operations and logistics management. It will also examine purchasing, Inventory and Warehouse Management concepts and theory. Special emphasis is placed on the relationships that exist between operations and the supply chain to include operations and supply chain strategies, business processes, project management, product design and development, inventory management and effective warehouse and stores management.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN3577 Procurement for Major Projects 3.000 credits

Students will learn the principles of procurement for major projects concepts and theory, including advanced purchasing and cost savings techniques, contracts administration from award to completion, strategic procurement management.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN3506 Operations Management 3.000 credits

The course emphasizes the application of operational decision-making techniques to improve process, productivity, and the effective utilization of resources within organizations. Students will learn to recognize the trade-offs associated with operations management decisions and their effect on resource allocation. Topics include production processes, operations strategies, quantitative techniques, quality, performance, capacity planning, efficiency, forecasting, resource management, statistical process control, project management, and supply chains. Prerequisite: QMB2100 or STA2023.

Lecture Hours: 48.000

Prerequisite: QMB2100 OR STA2023

MAN3578 Global Procurement Management 3.000 credits

Students will learn Global Procurement Management concepts and theory, including a good understanding in the differences in cultures, law, currency, communications and buying from foreign suppliers, international procurement is a challenge, buying internationally and to help support international procurement efforts.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN4570 Purchasing for Industry 3.000 credits

Students will learn purchasing for industry concepts and theory, including negotiation skills: mastering the art of deal making strategies, contracts: bidding, evaluation, negotiation and award, purchasing management, tendering and supplier selection, vendor qualification: managing performance and contract compliance.

Lecture Hours: 48.000

Course User Fee: \$62.76

Program Description

Project Management

Advanced Technical Certificate | Code: C6004 | 18 credits

Semester 1

Units: 9.0

		3.0
QMB 2100	Basic Business Statistics	3.0
OR		
STA 2023	Statistical Methods	3.0
MAN 3583	Project Management	3.0
MAN 3731	Assessing and Managing Project Risk	3.0

Semester 2

Units: 9.0

MAN 3506	Operations Management	3.0
MAN 3888	Project Leadership	3.0
MAN 4887	Project Planning and Control Systems for Supply Chain Management	3.0

Total: 18.0

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

MAN3583 Project Management 3.000 credits

Students will learn project management concepts and theory, including attributes for a project life cycle, global project management, benefits of project management, project management environments, planning and managing risk, project planning controls, and terminating a project.

Lecture Hours: 48.000

MAN3731 Assessing and Managing Project Risk 3.000 credits

This course explores project uncertainty, and how to manage risk to keep the project on track and meet project goals. Project risk management is a vital part of all projects, which requires a purposeful strategy to avoid any setbacks. In this course there will be an examination of what the risk management process involves through the identification, assessment, and response to project risks.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN3506 Operations Management 3.000 credits

The course emphasizes the application of operational decision-making techniques to improve process, productivity, and the effective utilization of resources within organizations. Students will learn to recognize the trade-offs associated with operations management decisions and their effect on resource allocation. Topics include production processes, operations strategies, quantitative techniques, quality, performance, capacity planning, efficiency, forecasting, resource management, statistical process control, project management, and supply chains. Prerequisite: QMB2100 or STA2023.

Lecture Hours: 48.000

Prerequisite: QMB2100 OR STA2023

MAN3888 Project Leadership 3.000 credits

Students will learn the fundamentals of management vs. leadership, monitoring/controlling, delegation, personal traits, communication, and people management when in a leadership role. The specifics include techniques and strategies using the company's vision and project charter needed to effectively manage, lead and direct a team to ensure reaching project objectives. As part of this process students will determine their personal leadership traits and approach.

Lecture Hours: 48.000, Lab Hours: 3.000

Course User Fee: \$62.76

MAN4887 Project Planning and Control Systems for Supply Chain Management 3.000 credits

Students will learn about the complex supply-chain transformation that is required to manage resources from many different departments. Additionally, an exploration of how supply-chain project managers ensure internal and external stakeholder alignment, mitigate large amounts of risk, and implement communication, risk mitigation, and change management plans to ensure a successful project. Finally, the student will gain an integrated view of supply-chain transformation that incorporates elements of change management, test plan development, project management techniques, and establishing effective project management teams.

Lecture Hours: 48.000

Course User Fee: \$62.76

Program Description

Supply Chain Analytics

Advanced Technical Certificate | Code: C6005 | 18 credits

Semester 1		Units: 9.0
QMB 2100	Basic Business Statistics	3.0
OR		3.0
STA 2023	Statistical Methods	3.0
MAN 4523	Production Information Systems	3.0
MAN 4552	Supply Chain Analytics & Decision Making	3.0
Semester 2		Units: 9.0
MAN 3506	Operations Management	3.0
MAN 4719	Challenges in the Digital Supply Chain	3.0
MAN 4732	Business Intelligence for Supply Chain	3.0
		Total: 18.0

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

MAN4523 Production Information Systems 3.000 credits

This course presents the fundamental aspects of computer technology required by the systems that provide data to, and derive information from, production in manufacturing. Students will learn the techniques to organize, store, manipulate data, report, derive and analyze production information, basics networking used in production, as well as various forms of information systems.

Lecture Hours: 48.000

MAN4552 Supply Chain Analytics & Decision Making 3.000 credits

Through this course students will focus on the science of learning from data to support decision making. The objective of this course is to explore and apply basic statistical concepts and procedures that are used to collect, analyze, summarize, and report data in a supply chain management role. Course topics covered include methods for: collecting, analyzing, summarizing data; making statistical inferences about populations and exploring the relationship between variables. The course introduces analytical tools and techniques that provide a cause and effect understanding linking operational plans with corporate objectives.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN3506 Operations Management 3.000 credits

The course emphasizes the application of operational decision-making techniques to improve process, productivity, and the effective utilization of resources within organizations. Students will learn to recognize the trade-offs associated with operations management decisions and their effect on resource allocation. Topics include production processes, operations strategies, quantitative techniques, quality, performance, capacity planning, efficiency, forecasting, resource management, statistical process control, project management, and supply chains. Prerequisite: QMB2100 or STA2023.

Lecture Hours: 48.000

Prerequisite: QMB2100 OR STA2023

MAN4719 Challenges in the Digital Supply Chain 3.000 credits

Through this course, students will analyze the social, ethical, and legal issues in supply chain management. Students will examine the importance of fairness, accountability, and transparency of data policies in various supply chain operations. Various issues governing the collection, storage, access, use, and sharing of data will also be explored. Prerequisites: MAN3506, QMB2100 or STA2023.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN4732 Business Intelligence for Supply Chain 3.000 credits

This course will enable students to synthesize their learning from program coursework. The global context within which firms operate will provide the foundation for understanding global supply chain strategy, from market entry through to the integration of demand management and supply management processes to meet corporate objectives. The course will utilize exercises and a simulation to allow students to analyze and synthesize program coursework. The course will help students understand how to best use program knowledge to maximize value creation for employers and in their own career.

Lecture Hours: 48.000

Course User Fee: \$62.76

College Credit Certificate (CCC)

Program Description

Accounting and Budgeting

College Credit Certificate | Code: 65075 | 18 credits

Semester 1		Units: 8.0
ACG 1403	Excel for Business	1.0
ACG 2021	Financial Accounting	3.0
ACG 2021L	Financial Accounting Lab	1.0
TAX 2000	Income Tax	3.0
Semester 2		Units: 10.0
ACG 2071	Managerial Accounting	3.0
ACG 2071L	Managerial Accounting Lab	1.0
ACG 2450	Microcomputers in Accounting	3.0
TAX 2021	Taxation of Business Organizations	3.0
		Total: 18.0

ACG1403 Excel for Business 1.000 - 3.000 credits

This course will cover Excel topics relevant to the field of accounting and finance including, but not limited to, VLOOKUP, HLOOKUP, INDEX, MATCH, IF, AND, OR, Pivot Tables, Named Ranges, Array Formulas, Custom Number Formats, Conditional Formatting, Absolute References and Keyboard Shortcuts.

Lecture Hours: 16.000 - 48.000

Course User Fee: \$22.00

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

TAX2000 Income Tax 3.000 credits

Federal income tax fundamentals with emphasis on individual returns. Topics considered include gross income, capital gains and losses, deductions and exemptions, and tax credits.

Lecture Hours: 48.000

Course User Fee: \$15.00

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision- making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

ACG2450 Microcomputers in Accounting 3.000 credits

Accounting application of electronic data processing including the preparation, interpretation and use of computer information in financial decision-making. Pre/Corequisite: ACG2021. Special fee.

Lecture Hours: 48.000

Pre/Corequisite: ACG2021

Course User Fee: \$22.00

TAX2021 Taxation of Business Organizations 3.000 credits

This course will cover federal income taxation of corporations, S Corporations, limited liability companies and partnerships. Topics covered include determining the tax consequences of income, expenses, distributions, redemptions and liquidations for business entities. Practical application of the tax law will be emphasized along with analysis of tax procedures.

Lecture Hours: 48.000

Course User Fee: \$22.00

Program Description

Accounting Technology Management

College Credit Certificate | Code: 65077 | 27 credits |

Semester 1		Units: 13.0
ACG 2021	Financial Accounting	3.0
ACG 2021L	Financial Accounting Lab	1.0
GEB 1011	Principles of Business	3.0
MTB 1103	Business Mathematics	3.0
OST 2335	Business Writing	3.0
Semester		Units: 14.0
ACG 2071	Managerial Accounting	3.0
ACG 2071L	Managerial Accounting Lab	1.0
ACG 2450	Microcomputers in Accounting	3.0
TAX 2000	Income Tax	3.0
TAX 2021	Taxation of Business Organizations	3.0
Major Course Elective	ACG*, BAN*, FIN*, GEB*, QMB*, TAX*	1.0
		Total: 27.0

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

MTB1103 Business Mathematics 3.000 credits
