The information contained herein is subject to change without notice.

PURPOSE OF CATALOG

The Miami Dade College Catalog is a guide to the College's academic programs, courses, degree and certificate requirements, student services, and policies. It helps students understand their educational options, plan their studies, and stay informed about College requirements. Students are encouraged to use the Catalog along with academic advising and other support services to make informed decisions and stay on track toward completing their academic and career goals. By becoming familiar with College expectations and requirements, students can take full advantage of the opportunities available at Miami Dade College and prepare for successful graduation.

Accreditations

Miami Dade College is accredited by the [Southern Association of Colleges and Schools Commission on Colleges](http://www.sacscoc.org) to award associate and baccalaureate degrees. Miami Dade College also may offer credentials such as certificates and diplomas at approved degree levels. Questions about the status of Miami Dade College may be directed in writing to the Southern Association of Colleges and Schools Commission on Colleges at 1866 Southern Lane, Decatur, GA 30033-4097, by calling (404) 679-4500, or by using information available on SACSCOC's website (www.sacscoc.org).

In addition to institutional accreditation by SACSCOC, a number of Miami Dade College programs and facilities are accredited by nationally recognized specialized accrediting agencies charged with upholding the standards of the professions they represent. Specialized accreditors of MDC programs include:

Accreditation Commission for Education in Nursing (ACEN)

Accreditation Review Commission on Education for the Physician Assistant (ARC-PA)

Accreditation Review Council on Education in Surgical Technology and Surgical Assisting (ARC/STSA)

American Bar Association (ABA), Standing Committee on Paralegals

American Board of Funeral Service Education, Committee on Accreditation (ABFSE)

American Dental Association, Commission on Dental Accreditation (CODA)

American Veterinary Medical Association, Committee on Veterinary Technician Education and Activities (CVTEA)

Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM)

Commission on Accreditation for Respiratory Care (CoARC)

Commission on Accreditation in Physical Therapy Education (CAPTE)

Commission on Accreditation of Allied Health Education Programs (CAAHEP)

Committee on Accreditation of Educational Programs for the Emergency Medical Services Professions (CoAEMSP)

Commission on Collegiate Nursing Education (CCNE)

Commission on Opticianry Accreditation (COA)

Joint Review Committee on Education in Diagnostic Medical Sonography (JRC-DMS)

Joint Review Committee on Education in Radiologic Technology (JRCERT)

Joint Review Committee on Educational Programs in Nuclear Medicine Technology (JRCNMT)

National Accrediting Agency for Clinical Laboratory Sciences (NAACLS)

National Association for the Education of Young Children (NAEYC)

Society for Simulation in Healthcare (SSH)

Certain programs require approval or certification from governmental oversight agencies, including:

Federal Aviation Administration (FAA)

Florida Board of Nursing

Florida Department of Health, Bureau of Emergency Medical Services

Florida Department of Law Enforcement, Criminal Justice Standards and Training Commission (CJSTC)

Florida Real Estate Commission, Department of Business and Professional Regulation - Division of Real Estate

Professional Organizations and Association Memberships

American Association of Collegiate Registrars and Admissions Officers (AACRAO)

American Association of Community Colleges (AACC)

American Association of Hispanics in Higher Education, Inc. (ACCHHE)

American Association of State Colleges and Universities (AASCU)

American Council on Education (ACE)
 Association of American Colleges and Universities (AAC&U)
 Association of Community College Trustees (ACCT)
 Association of Florida Colleges (AFC)
 Association of Governing Boards of Universities and Colleges (AGB)
 Business-Higher Education Forum (BHEF)
 College Consortium for International Studies (CCIS)
 Council for Higher Education Accreditation (CHEA)
 Council of Foreign Relations (CFR)
 EDUCAUSE -Association of Managing and Using Information Technology in Higher Education
 Florida Association of College Test Administrators (FACTA)
 Florida Association of Colleges and Universities (FACU)
 Florida Campus Compact
 Florida College System Activities Association (FCSAA)
 Florida Consortium for International Education (FCIE)
 Fulbright Association
 Global Community College Leadership Network
 Greater Miami Chamber of Commerce (GMCC)
 Hispanic Association of Colleges & Universities (HACU)
 National Association for Community College Entrepreneurship (NACCE)
 National Association of College and University Attorneys (NACUA)
 National Association of College and University Business Officers (NACUBO)
 National Association of Cuban American Educators (NACAE)
 National Association of Student Financial Aid Administrators (NASFAA)
 National College Testing Association (NCTA)
 National Collegiate Honors Council (NCHC)
 National Community College Hispanic Council (NCCHC)
 National Institute for Staff and Organizational Development (NISOD)
 South Florida Manufacturers Association (SFMA)
 Southern Association of Collegiate Registrars and Admissions Officers (SACRAO)
 The College Board
 The Commission on Colleges and Universities

Requests for review of letters of accreditation may be forwarded to the Office of the Vice Provost for Academic Affairs or Associate Provost for Academic Affairs.

Note: *In addition to the above, Miami Dade College administrators, faculty and staff members participate in numerous other international, national, state and regional organizations. Additional information regarding professional associations may be obtained from the College.*

EQUAL ACCESS/EQUAL OPPORTUNITY

Miami Dade College is committed to providing equal access to education and employment opportunities for students, employees, applicants for admission and employment, and in its activities for the general community. We are an equal access/equal opportunity institution which does not discriminate on the basis of sex, race, color, marital status, age, religion, national origin, disability, veteran's status, ethnicity, pregnancy, sexual orientation, or genetic information. The College's commitment to equal access and equal opportunity is contained in the District Board of Trustees policies and procedures based on the nondiscrimination provisions of federal and state laws and regulations, including the Civil Rights Acts of 1964, as amended; Title IX of the Education Amendments of 1972; Section 504 of the Rehabilitation Act of 1973; the Americans with Disabilities Act Amendments Act of 2008; the Florida Educational Equity Act (§ 1000.05, F.S.); The Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act (The Clery Act) as amended in 2008; and The Violence Against Women Act.

In accordance with these protections, Miami Dade College provides equal access/equal opportunity in admissions, recruitment, financial assistance, access to course offerings, participation in extracurricular programs and activities, access to and use of facilities, counseling, housing referral, guidance, advising, health services, athletics, employment and retention of personnel and students.

Responsibility for the implementation of the College's commitment to equal access and equal opportunity rests with the College president.

ABOUT MIAMI DADE COLLEGE

Miami Dade College (MDC) offers a wide range of programs designed to meet the needs of Greater Miami. The College offers associate and baccalaureate degree options and a wide range of career and technical certificate and specialized programs. MDC currently offers five Bachelor of Applied Science (BAS) degrees and 12 Bachelor of Science (BS) degrees which are academically rigorous and innovative in Business, Education, Entertainment, Health Science, Nursing, Public Safety, and STEM related fields. The Associate in Arts (AA) degree, designed to prepare students for further study at four-year institutions, includes more than 70 pathways leading to the baccalaureate degree. The College also maintains more than 60 transfer agreements with colleges and universities across the state and country, guaranteeing entry for MDC students who meet the entry criteria. With more than 60 areas of study, the Associate in Science (AS) degree, prepares students for direct entry into the workforce. Our graduates take advantage of the College's numerous partnerships with innovative businesses throughout South Florida. In addition to these degrees, the College offers numerous short-term career and technical certificate programs which are stackable career ladders towards and associate in science degree as well as courses of study to enhance career knowledge through continuing education.

The Open-Door Policy

Miami Dade College's open-door admissions policy provides educational opportunities to community residents and to national and international applicants. Anyone seeking to benefit from the degree or short-term certificate programs, or from the College's student and community services, is encouraged to enroll. The College welcomes all students regardless of gender, race, color, marital status, age, religion, national origin, disability, veteran's status, sexual orientation or genetic information.

Mission Statement

As democracy's college, Miami Dade College changes lives through accessible, high-quality teaching and learning experiences. The College embraces its responsibility to serve as an economic, cultural and civic leader for the advancement of our diverse global community.

Vision Statement

To be the recognized leader in student learning, achievement and success while enriching our community.

Core Values

- An exceptional learning environment that challenges students and empowers them to attain their academic goals
- An international perspective that makes our students civically engaged and globally competitive
- A commitment to evidence-informed decision making and accountability
- Innovation and efficiency that ensure affordability while optimizing educational quality
- An exceptional work environment that engages an exemplary and diverse workforce
- Quality community partnerships that serve as the foundation for the development of relevant workforce, cultural and civic programs
- Cultural initiatives that capture the richness of Miami-Dade County's multicultural fabric
- Environmental awareness that results in intentional sustainability practices

MDC History

Miami Dade College PRESIDENTS

 Kenneth R. Williams Tenure: 1959 – 1962	 Peter Masiko Jr. Tenure: 1962 – 1980
 Robert H. McCabe Tenure: 1980 – 1995	 Eduardo J. Padrón Tenure: 1995 – 2019
 Rolando Montoya Interim President Tenure: 2019 – 2020	 Madeline Pumariega Tenure: 2020 – present

Opening Doors

Miami Dade College opened its doors in 1960 with just under 1,400 students. Dade County Junior College (DCJC), as it was known at the time, was founded amid the era of Civil Rights, desegregation and an influx of asylum-seekers from Cuba. The student body included seven black students who made DCJC the first integrated junior college in Florida, along with Cuban refugees seeking a better life in America. The College was open to any Miami-Dade County resident who had graduated from high school. Tuition was free to all county residents. The institution's first graduating class had fewer than 200 students and by 1963 was being referred to as Dade Junior College. By the mid-1960s, nearly 15,000 students were attending the original North Campus, its buildings bursting at the seams. While new construction got underway at the College's first campus, plans were made for a second campus in Kendall and a third in Downtown Miami. South Campus (Kendall) would open in 1964. With more than 23,000 students by 1967, the College was the fastest growing junior college in the U.S. and the largest institution of higher learning in the state of Florida. During this era of tremendous growth, the College enrolled more freshmen than the University of Florida, Florida State University and the University of South Florida combined. In 1968, the Florida Legislature separated community colleges from the public school system and the College was then governed by its own District Board of Trustees.

Access with Excellence

A philosophy of "access with excellence" defined the 1970s for the College. A bold institutional review reaffirmed its open-door policy, set new academic goals and raised the standard for all community colleges across the country. Dr. K. Patricia Cross, 20th century thought leader and then visiting professor at Harvard University's Graduate School of Education, called the College "the most exciting institution of higher education in the country." The campus in Downtown Miami officially opened in 1970 and would later be renamed for one of the College's founders, Mitchell Wolfson. In 1973, the College changed its name to Miami-Dade Community College (MDCC) to reflect its growing prominence in the community college movement, and in keeping with the county's name change, from Dade to Miami-Dade, which took advantage of the international name recognition of Miami. Medical Center Campus opened its doors in 1976 in the heart of Miami's flourishing medical district as the College's fourth campus. Today, this marvel of medical and health technologies is referred to as Medical Campus. Bilingual studies became a full-

fledged division in 1979, with more than 2,000 students enrolled in outreach centers in Little Havana, making it the largest bilingual program in all of higher education.

Unprecedented Achievement

In the 1980s, burgeoning MDCC reflected the greatly expanding diversity of South Florida. During this period, 30% of the College's students were immigrants; English was not the native language for 46%; two-thirds were minorities; and 56% were women. Part-time students were the norm, as those seeking credentials for greater earning potential continued to work to support themselves and their families. A modest College-sponsored book fest, "Books by the Bay," was held in 1983 at Wolfson Campus, and in 1984, the event officially became Miami Book Fair International. The annual eight-day festival would grow into the largest and most comprehensive community-rooted literary gathering in the United States. Today, Miami Book Fair stands as a cultural institution with a lasting and ever-expanding influence. In 1985, the MDCC became the first community college in the U.S. to graduate 100,000 students. That same year, the College celebrated its 25th anniversary and became nationally recognized when the prestigious University of Texas Community College Leadership Program identified the College as the No. 1 community college in America. New World School of the Arts (NWSA) at MDC opened in 1988 and would be recognized as one of the premier arts high school/college programs in the country. NWSA, in further partnership with Miami-Dade County Public Schools and the University of Florida, provides a comprehensive artistic, creative and academic program, conferring high school diplomas, Associate in Arts degrees, and bachelor's degrees in Fine Arts and Music in programs accredited by the National Association of Schools of Dance, Music, Theater and Art & Design.

Advancement and Opportunity

To kick off the 1990s, the College initiated comprehensive reforms to academic programs and administrative operations. Academic core and electives were modernized for a curriculum to meet the needs of a dynamic community. Advancements were not limited to academics; improvements were also made to human resources, maintenance operations and budgeting. In addition, the College's new Technology Master Plan emphasized both academic and administrative computing. Throughout the decade, the College sought to keep pace with the changing economy and workforce, developing strong partnerships in business and industry. More than 50 new degree and short-term certificate training programs were developed, all aimed at emerging industries and South Florida's job market. In 1990, a fifth campus opened in Homestead with just 350 students. Classes were held in the basement of the First Baptist Church. The next year, a modern campus facility would be built to serve the growing student population in southern Miami-Dade County. The College established its Cultural Affairs department in 1990, tasked with producing and presenting the newest, most challenging contemporary and cultural-specific works with an emphasis on creations reflective of Greater Miami's multi-ethnic community. Also in 1990, the College launched the Cultura del Lobo performing arts series along with visual arts programming and campus galleries. What would later become Live Arts Miami, these performing and visual arts programs are celebrated as the most eclectic arts offerings in Miami, presenting artists from across the globe. In 1992, the College became the first community college in the country to establish an Endowed Teaching Chair program. More than 300 faculty have been recognized with the honor since. In 1995, MDC's aviation school was officially renamed the Eig-Watson School of Aviation after Lois Eig-Watson, once a flight student herself and a former faculty member at Kendall Campus. The school had been a pioneer in aviation education since its beginnings in 1961. Jazz at Wolfson Presents started entertaining audiences in 1998 by showcasing renowned musicians to educate jazz students and to offer a cultural experience for the entire college community and the people of Downtown Miami. The College's sixth campus became a reality in 1998 when the InterAmerican Center in Little Havana was granted campus status by the District Board of Trustees. Virtual College began in 1997, allowing students to take classes remotely. Recognition soon followed when Yahoo! Internet Life, proclaimed the College "WIRED" and voted it "second best of all colleges and universities." The College's information technology efforts also gained residence in the Smithsonian's permanent collection with the nomination for the ComputerWorld Smithsonian Award for Technological Innovation in 1998. Remote learning at the College would greatly expand by the 2020s under a new name, MDC Online.

The New Learning Agenda

The College kicked off the new millennium by enrolling its 1 millionth student and obtaining state approval to offer bachelor's degrees. The College also launched its new "Learning Agenda" to advance contemporary learning models and student support programs, as well as campus, faculty and leadership development efforts. In 2002, the City of Miami turned the historic Tower Theater over to the College to operate as a movie theater and cultural center. Originally opened in 1926, the popular neighborhood theater was the first in the county to offer Spanish subtitles for English-language movies, beginning in 1960, in recognition of the rapidly rising Cuban refugee

population. In 2003, the Florida Legislature formally approved the school's name change to Miami Dade College (MDC). That was also the year that the College began offering four-year degrees. The Hialeah Center became the Hialeah Campus in 2004, MDC's seventh campus. Also in 2004, the College acquired Miami Film Festival from Florida International University. This international film event serves as a major film showcase for world cinema and has become renowned for championing films made by the South Florida community, first-time feature filmmakers and International Feature Film submissions to the Academy Awards. In 2005, MDC awarded its first bachelor's degrees. The Honors College opened to academically gifted students in 2005. Students receive the prestigious Honors College Fellow Award, which provides free tuition and fees as well as a generous stipend for books and other expenses. The Honors College prepares students for transfer to many of the most prestigious colleges and universities in the nation, and was once referred to by TIME magazine as an "Ivy Stepladder." Also in 2005, MDC became the proud steward of the historic Freedom Tower and would become home to the College's Museum of Art and Design (MOAD) and MDC Special Collections. Completed in 1925, the building was originally the home of the Miami Daily News, the city's oldest newspaper. The "Ellis Island of the South" served as the Cuban Assistance Center from 1962 through 1974, offering nationally sanctioned relief to the Cuban refugees seeking asylum. One of those refugees was then-teenager Eduardo J. Padrón, who would later become president of the College in 1995. The Freedom Tower was designated a National Historic Landmark in 2008. West Campus, the youngest of MDC's eight campuses, opened in 2006 in Doral with just 150 students. In 2008, MDC's Medical Campus began offering a Bachelor of Science in Nursing in response to workforce needs in that industry. The School of Nursing had been established in the early years of the College and has graduated more than 23,000 nurses since. In 2012, the school would be renamed the Benjamín León School of Nursing. MDC TV debuted in 2008 as the College's own television network. MDC TV is broadcast to millions of cable TV subscribers throughout Miami-Dade County and has won a total of seven Emmys and 14 nominations from the Suncoast Regional Chapter of the National Academy of Television Arts & Sciences. In 2009, The Carnegie Foundation for the Advancement of Teaching named MDC among the select group of institutions granted its prestigious Community Engagement Classification. Also in 2009, MDC took over the Lynn and Louis Wolfson II Florida Moving Image Archive, the nation's largest state archive of video and film. Opened in 2010, the Miami Culinary Institute (MCI) at MDC is at the epicenter of culinary education excellence. Mixing classic skills and innovative techniques used by the world's best chefs, the program is at the forefront of the industry. MCI has won several awards and distinctions, and has also been home to world-renowned chefs. In 2010, Miami Dade College celebrated its 50th anniversary.

Innovation • Expansion • Purpose

Over the next decade, MDC would take higher education innovation to entirely new levels with groundbreaking initiatives and curricula that would evolve in sync with local industry as well as the global workforce. By 2011, the College was offering more than 20 baccalaureate degrees including a new Bachelor of Science in Biological Sciences. MDC was selected for a Bill and Melinda Gates Foundation Completion by Design grant in 2011 to increase student success and boost graduation rates among low-income students. Also in 2011, the College began offering its unprecedented American Dream Scholarship, which pays for in-state tuition and fees for the first two years of college for all newly graduated high school students who could not otherwise afford it. Graduating seniors must have a minimum 3.0 GPA to qualify. The Koubek Center was acquired by MDC in 2011. Built in 1929, the South Florida landmark has a long and rich history as a cultural hub dedicated to building community through the arts with a 200-seat theater, an expansive garden, classrooms and multi-use spaces. In 2012, the College became the first institution of higher learning in Florida to offer a Bachelor of Applied Science in Public Safety Management. In 2013, the College enrolled its 2 millionth student. The President's Higher Education Community Service Honor Roll is the highest federal recognition a college or university can receive for its commitment to volunteering, service learning and civic engagement, and in 2013, MDC received its seventh consecutive accolade. In 2014, the Student Success Award of Excellence was conferred on MDC by the American Association of Community Colleges (AACC) for advancing diversity. In 2015, MDC opened the new 9,000-square-foot, state-of-the-art Miami Animation & Gaming International Complex (MAGIC). The facility is a working animation studio where students prepare for careers as creative directors, graphic artists, illustrators and 2D and 3D animators. MAGIC offers an intensive, hands-on program where students have the opportunity to work with industry powerhouses such as Nickelodeon and Telemundo. They also gain hands-on experience in augmented and virtual reality (AR/VR). Ashoka U designated MDC as a 2015 Changemaker Campus for its role in promoting social innovation, change-making and thought leadership in the Miami community and abroad. MDC launched its cutting-edge Miami Fashion Institute (MFI) in 2016. Located at the Wolfson Campus in the heart of Downtown Miami, it is the only facility of its kind at a public institution of higher education in Florida, and one of only a handful nationally. Real-world experience meets the classroom with faculty that includes renowned artists, designers and business professionals. MFI offers Associate in Science degrees in both Fashion Design and Fashion Merchandising, as well as a College Credit Certificate in Pattern

Making and Construction. The Idea Center at MDC opened in 2016 as an “industry-agnostic ecosystem of creativity, innovation and entrepreneurship for MDC students.” The Idea Center offers classroom education, professional development opportunities and experiential learning programs to MDC students and the community at large. Also in 2016, MDC acquired the historic David W. Dyer building, which is being restored for academic and civic purposes. Built in 1933, the building is on the National Registry of Historic Places and on the City of Miami’s list of historic places. In 2017 MDC was selected to join the exclusive Frontier Set, a group of higher education institutions aiming to eliminate the racial, ethnic and socio-economic barriers that bar students from completing college. MDC’s business school was renamed in 2018 the Miguel B. Fernandez Family School of Global Business, Trade and Transportation in honor of billionaire entrepreneur and philanthropist Miguel “Mike” B. Fernandez, a longtime friend and advocate of the College. MDC’s Cybersecurity Center of the Americas opened in 2018 to address the demand for cybersecurity professionals. MDC is the only institution of higher learning in Florida with a Cyberbit range, a training facility that provides students and working professionals access to hands-on cybersecurity education and simulated training that mirrors real-life cyberattack scenarios. In 2019, Tesla chose MDC as its first partner in the state of Florida for its Tesla START automotive training program. The 15-week Tesla START program trains students to become Tesla automotive technicians at a new state-of-the-art facility at West Campus, fully equipped with Tesla vehicles and equipment and built to Tesla specifications. Building on its outstanding record, MDC once again made The Chronicle of Higher Education’s Great Colleges to Work For in 2019, marking its 11th consecutive year on the list. MDC opened its new Cloud Computing Center in 2019. The state-of-the-art Center is the only one of its kind in Florida, and offers the state’s only College Credit Certificate and Associate in Science in Enterprise Cloud Computing. It also hosts the College’s first Cloud Computing Academy, which provides training for both MDC students and members of the community. In collaboration with Amazon Web Services (AWS), Microsoft, Azure and Google Cloud, among others, the new Center allows technology leaders and industry experts to engage with students who are learning about leading cloud platforms and receiving industry certifications. In 2019, MDC opened the new Center for Learning, Innovation and Simulation (CLIS) at Medical Campus. The five-floor Center features an entire floor dedicated to advanced medical simulation that facilitates the practice of working in real-world clinical environments such as operating and emergency rooms. CLIS is a one-of-a-kind health training venue in the region and rivals those at top medical schools around the nation. MDC was awarded the 2019 Aspen Prize for College Excellence, the nation’s highest recognition of achievement and performance among state colleges across America. The award is considered the highest and most sought after among American colleges. MDC was also awarded the 2019 Lumina Foundation Education Innovation Judges Choice Prize for its adult learner “earn and learn” Tesla START program. Also in 2019, after the College’s fourth president, Eduardo J. Padrón, announced he was stepping down, the InterAmerican Campus was renamed the Padrón Campus in honor of his role in developing the location as a campus. MDC opened its new cutting-edge BIT Center in 2020. The 6,000-square-foot facility is a cross between a Silicon Valley tech company and a futuristic classroom. The BIT Center examines and promotes the role of technology in digital transformation, process automation and analytics in the ever-changing business landscape. In 2020, Madeline Pumariaga was named the first female president to lead Miami Dade College. Adding to the historic nature of this appointment was that Pumariaga is an alumna of MDC. The School of Engineering and Technology (EnTec) at MDC announced two new degrees in 2021: Bachelor of Science in Information Technology and Bachelor of Science in Cybersecurity. The College has developed more than 50 new or revamped degrees and embedded over 30 industry certifications into tech-related courses for these sought-after skills. In 2021, MDC joined the AI4ALL College Pathways program, a nationwide initiative to foster AI-related careers and to embed AI concepts into all associate degree curricula in coming years. MDC launched Rising Black Scholars in 2021. The trailblazing initiative provides a full-ride scholarship and a host of curated services for two years to students of African descent who are graduates of a Miami-Dade County high school. In 2021, MDC’s award-winning newspaper, *The Reporter*, was named the top college student newspaper in Florida for the 10th year in a row by the Florida College System Publications Association (FCSPA). The print publication was launched in 2010 and is a product of three nowdefunct student newspapers at MDC: The Falcon Times launched in 1961, followed by the Catalyst in 1966 and The Downtowner in 1970, which was renamed the Metropolis — a magazine that still exists today. Through the years, the College’s student newspapers have won 21 National Pacemaker Awards and received hundreds of honors from the FCSPA. The Goldman Sachs 10KSB celebrated its 21st cohort at MDC in 2021. The practical education program provides entrepreneurs with valuable skills for growing their businesses at no cost. Since the program’s inception at MDC in 2013, 10KSB has graduated over 500 small-business owners. In 2021, Excelencia in Education, the nation’s premier authority on efforts accelerating Latino student success in higher education, recognized MDC with its Seal of Excelencia. That same year, the College was also recognized by the U.S. Department of Education as one of the leading institutions for Hispanics in the United States. MDC once again ranked No. 1 in the Florida College System (FCS) for reporting the most students earning industry certifications during the 2021 reporting year. In its continuing efforts to provide greater access, MDC launched the Presidential Scholars Program in 2021.

This initiative offers high-performing graduating high school students in Miami-Dade County the opportunity to complete an associate degree at no cost. MDC established a transfer articulation agreement in 2021 with the University of Miami (UM) that allows MDC graduates with a Bachelor of Science in Data Analytics to seamlessly transfer to a Master of Science in Data Science at UM. According to the 2021 rankings released by U.S. News & World Report, MDC's School for Advanced Studies (SAS) was ranked the fifth best high school in the United States and the best high school in Florida. SAS takes pride in its diverse student population, nurturing learning environment, and commitment to providing all students with a rich and rigorous liberal arts education, with many of its students specializing in STEM. In 2021, MDC's women's volleyball team won their 12th state championship in 16 years. The team has won a total of 48 state titles and 11 national titles overall with back-to-back NJCAA National Championships in 2017 and 2016. And, for the first time since 2014, MDC's baseball team was crowned state champions in 2021. Prior to that, MDC baseball won two national titles: in 1964 at Dade North and in 1981 at Dade South. In all, MDC baseball teams have made 13 trips to nationals since first qualifying in 1964. MDC's long history of athletic excellence boasts 35 NJCAA national titles, including 15 in women's sports, and dozens of All-Americans. The College joined the NASA Florida Space Grant Consortium (FSGC) in 2021, a statewide network of colleges and universities supporting the expansion and diversification of Florida's space industry through grants, scholarships and fellowships to students and educators in Florida. By 2021, MDC had conferred more associate degrees than any other community college in the country. And among all large postsecondary Institutions, MDC ranked No. 1 in associate degrees awarded to Hispanics; No. 4 in associate degrees awarded to Black students; No. 1 in associate degrees in Liberal Arts and Sciences, General Studies and Humanities; and No. 5 in associate degrees in Nursing and Health Professions & Related Sciences. As Miami's relevance in the technology and startup landscapes dramatically expands, the College is anticipating and meeting industry needs with a host of high-tech, in-demand career options, including Artificial Intelligence, Cybersecurity, Cloud Computing, Data Analytics, AR/VR, Tesla electric vehicle technology, Animation & Gaming, Business Entrepreneurship and more.

Nearly 14,000 graduates from MDC's eight campuses earned degrees for the 2020-21 academic school year. The College's eight campuses and outreach centers offer more than 300 academic pathways, associate and bachelor's degrees, and career certificates. MDC is among the most diverse institution in the nation with 164 nations and 53 languages represented in its student body.

In 2022, MDC was designated a National Center of Academic Excellence in Cyber Defense (CAE-CD) by the National Security Agency (NSA) for its robust cybersecurity curriculum, the very highest designation of its kind. The College also received validation from the NSA for the Associate of Science in Cybersecurity through 2027. Those developments took place as the College launched and continued expanding MDC Tech, its unified brand and comprehensive strategy that combines all its cutting-edge tech educational offerings with the growing tech community's needs. Also in 2022, MDC inaugurated its Artificial Intelligence (AI) Center at North Campus, a state-of-the-art facility designed to prepare tomorrow's AI workforce, upskill existing professional and elevate AI awareness in Miami through classes, workshops, lectures and other activations. Its conception and vision are the product of a strategic partnership with industry giants like Microsoft, Intel and IBM.

From its earliest beginnings, Miami Dade College has been at the forefront of innovation and cultivating opportunities in an ever-changing career outlook. The College's efforts have created new generations of professionals trained and encouraged to pursue their passions and discover their purpose for a life of career success.

CAMPUSES AND EDUCATIONAL CENTERS

MDC enrolls more than 170,000 students at its eight campuses and multiple outreach centers throughout Miami-Dade County. While each campus has developed its own distinct identity, the entire College is united around a fundamental mission: providing access to high-quality educational opportunities for all residents of the community.

Campuses

North

Located on 245 acres in northern Miami-Dade County, this beautifully landscaped campus was the College's first. It was built in 1960 on land that once hosted a World War II Naval air station. The main academic buildings of the Campus surround a serene lake and lush walking paths. North Campus is a major gateway for students wishing to upgrade skills, complete one-year certificate programs, prepare for licensing exams or complete a bachelor's degree. North Campus is also recognized for its unique programs. The School of Justice, Public Safety, and Law Studies offers the Bachelor of Applied Science with a major in public safety management and provides basic training for all police and correctional officers in Miami-Dade County as well as more than half the private security personnel. The Fire Science Program trains all Miami-Dade County firefighters and provides continuing education for municipalities throughout the county and the East Coast. A live fire training facility is the only one of its kind in South Florida. Additionally, the School offers programs in chemical and watershed management. North Campus also houses the Funeral Services program that trains morticians and funeral service directors, the only program of its kind in southeastern Florida. Those students wishing to pursue careers in film and digital imaging, television, and sound engineering, or in the radio and music business take advantage of the School of Entertainment Technologies. This School operates the cable station MDC-TV, and in 2008 it inaugurated the Televisa Centre for Film and Television Production, a hub for Latin American and Caribbean entertainment industries. North Campus also administers the Carrie P. Meek Entrepreneurial Education Center, which promotes excellence in education, entrepreneurship, and workforce preparation. In January 2010, MDC celebrated the official opening of the College's state-of-the-art science complex at North Campus. The first of its kind in north Miami-Dade County, the facility will create new educational and career-training opportunities for area residents and beyond. The 90,000 square foot complex features 21 laboratories with media stations, a Palmetum, a rooftop observatory, classrooms, lecture hall, faculty and administrative offices, botanical garden, greenhouse, an outdoor plaza and café. The new science complex is an invaluable tool for all MDC students who must meet science requirements to graduate. In particular, it will serve as a hands-on training venue for students interested in biotechnology, chemical technology, green and environmental sciences, and advanced manufacturing careers, among many other science, technology, engineering and mathematics (STEM) professions. Training in these areas can lead to an array of jobs, from research technologist to environmental scientist. Another goal is for the complex to become a top regional research facility. The School of Engineering, Technology, and Design at North Campus launched a Bachelor of Applied Science (B.A.S.) with a major in Film, Television and Digital Production in 2010. Designed to provide students with a seamless, workforce driven baccalaureate degree that will enable them to obtain immediate employment in the field of digital production, thereby meeting South Florida's workforce needs, the B.A.S. also serves those currently in the production workforce who need to update their skills to increase their career opportunities and wages.

Kendall

Kendall Campus, situated on a 185-acre tract of trees and lakes, opened in 1967, and has become home to a wide variety of academic programs and specialized institutes. The campus features 14 buildings equipped with the latest technologies, a wellness center with an Olympic-sized pool and several athletic fields. Kendall Campus offers a comprehensive range of learning opportunities. Kendall provides students with transfer programs designed to facilitate the move to four-year institutions, programs that enhance and modernize professional and technical skills, and preparatory programs for licensing or certification. Kendall Campus provides students with academic support services focused on enhancing student learning in science, mathematics and engineering. The Environmental Center is a 10-acre facility on campus that hosts Eco Tours for more than 10,000 school children each year. The Gourmet Academy is the culinary showpiece of Kendall Campus and offers a variety of non-credit programs and courses to the community. Located west of the main campus, the Landscape Technology Program maintains a large nursery and several greenhouses. One of the additions to the campus is the Earth Sciences Museum and Demonstration Center, which boasts one of the largest collections of geological specimens in the southeastern United States. The Kendall Campus art gallery provides the campus and surrounding community with several exhibitions each year and houses a permanent collection of more than 700 works. Also, award-winning publications such as Miambiance, Kendall's literary magazine, highlight students' literary excellence. Kendall Campus offers a Bachelor of Applied Science (B.A.S.) in Leadership and Management Innovation to prepare graduates for

leadership roles and positions in a variety of industries. The upper-level coursework includes applied management practices, prepares students for supervisory and management opportunities within their technical field, and affords students the opportunity to demonstrate the application of acquired knowledge, skills and competencies through internships and capstone experiences. After graduation, students will be prepared to advance to supervisory and managerial positions in a wide variety of industries, including financial services, retail, hospitality, marketing, aviation management, food service, insurance, real estate, office and administration, and sales.

Wolfson

Wolfson Campus opened in 1970 by holding classes in the storefronts of downtown Miami. With the completion of the campus' first permanent facility in 1973, Wolfson Campus catalyzed a downtown renaissance by hosting all manner of civic and cultural discourse. It is the only comprehensive urban campus in the city. Located within the city's financial, governmental, technological and cultural hubs, Wolfson Campus capitalizes on its unique geographic resource by offering programs in banking/financial services, business, computer technology, paralegal studies, architecture, economics, hospitality management, engineering, the arts, humanities and social sciences. The campus also houses the New World School of the Arts, a comprehensive high school and college program, recognized as one of the best performing and visual arts schools in the country. Each year Wolfson Campus hosts Miami Book Fair. This is the nation's largest and finest literary festival, bringing hundreds of renowned authors, publishing houses and hundreds of thousands of fairgoers to the Campus. The New York Times calls this Wolfson Campus event the model for all other book fairs. The School of Computer and Engineering Technologies at Wolfson Campus offers a Bachelor of Science in Electrical and Computer Engineering Technology. This degree addresses the local workforce need for baccalaureate-level engineers, providing job opportunities for MDC's Associate in Science graduates to earn, at a local institution, a degree that will support higher-paying careers. In the spring of 2011, MDC inaugurated the Miami Culinary Institute at its new, state-of-the-art, green facilities, training students in the latest sustainable food and energy technologies with unparalleled nutrition and culinary knowledge.

Medical

In 1976, Miami Dade College opened its Medical Campus on 4.3 acres within the city's medical/civic center complex. Along with the other members of this complex (the University of Miami Miller School of Medicine, UM/ Jackson Memorial Hospital, Veterans Administration Hospital and Miami-Dade County Public Health Service), Medical Campus forms the backbone of Miami's health care community. The campus offers specialty disciplines in nursing and allied health, and state-of-the-art technologies that help to ensure that students are prepared in these and other challenging medical careers. The Medical Campus continues to be one of the top producers of nurses in the South Florida area. The Bachelor of Science in Nursing was launched in 2008. More than 20 Allied Health programs are offered, including Physician's Assistant, Opticianry, Emergency Medical Technician, Veterinary Technology, Physical Therapist Assistant, Dental Hygiene and more. Quality medical faculty guide students with support from tutors, labs and the Student Success Center. Medical Campus launched a Bachelor of Applied Science (B.A.S.) in Health Sciences in 2010. Designed to provide students with entry-level skills specific to the allied health professions and to supplement the workforce-specific skills that are inherent in Miami Dade College's associate degree program, the B.A.S. in Health Sciences also offers students a Physician Assistant Studies option. The B.A.S. curriculum provides an interdisciplinary approach to health care by equipping practitioners with specialized health delivery system and patient management strategies, including medical knowledge and skills, the teaching of multicultural health care clients, leadership and management strategies, and research approaches that address health care issues, and alternative medicine.

Homestead

In 1990, Homestead became the fifth campus of Miami Dade College. It was opened in the historic downtown district of the city of Homestead with the mission to deliver a full range of higher education programs for the Homestead/Florida City communities. In fulfilling its mission, the campus enhances the community's capacity to meet cultural and social needs, in turn fostering a stronger sense of community. This togetherness was very important following the devastation of Hurricane Andrew and the closing of the Homestead Air Force Base. After Hurricane Andrew, the campus, like the city of Homestead, began to rebuild, adding four new facilities by 1996. In January of 2002, the College opened its Aviation Building, housing a simulator of an airport control tower and runways, as well as classrooms and avionics equipment to support the aviation program. The aviation program also extends to facilities at Miami International Airport and Miami Executive Airport. Today, Homestead Campus is a modern, six-building complex offering an array of academic programs, including aviation, entertainment technologies, arts and sciences, and nursing. The campus' award-winning structures include a computer courtyard, student learning lab, career center and specialized assessment facility. As the community continues to grow, Homestead Campus will also grow, expanding its horizons to meet the needs of the South Dade community.

Padrón

Padrón Campus is located in the heart of Little Havana, a colorful and lively neighborhood in Miami's historic Latin Quarter. The seed for Padrón Campus was planted in 1972 when the College offered two night courses at the Belen Jesuit Prep School. Sixty students enrolled. By 1979, the program had blossomed into the Wolfson Campus' Division of Bilingual Studies, enrolling 2,000 students. In the early 1980s, an influx of students from Latin America and the Caribbean led to the addition of day classes and full-time faculty. By 1986, the division had grown to "center" designation, and it moved into a building in Little Havana purchased by the College Foundation. What was then called InterAmerican Center became the largest bilingual learning environment in all of higher education. With enrollment at 5,500, the College District Board of Trustees petitioned the state of Florida for "campus" status. The request was approved and on March 27, 2001, InterAmerican Campus – its original name – was born. The District Board of Trustees pronounced InterAmerican Campus a full-fledged, full-service campus, the sixth of Miami Dade College. In May 2019, the campus was renamed the Padrón Campus in honor of the longtime College president, who announced he was stepping down effective August 2019. Today, the campus provides service to students in more than 200 programs. It is also home to the College's School of Education, which offers bachelor's degree programs in secondary mathematics education, exceptional student education, and secondary science education in the areas of biology, chemistry, physics and earth/space science.

Hialeah

Hialeah Campus became MDC's seventh campus, accorded official campus status by the Florida State Board of Education in 2005. The campus serves the Greater Hialeah-Miami Lakes area, offering day and evening classes six days a week. Courses leading to the Associate in Arts and Associate in Science degrees are offered. Educational opportunities are also available through career technical education programs, as well as through courses providing career entry in computer technology, office technology, electronics and early childhood development. Hialeah Campus houses a large and comprehensive English-language training program for speakers of other languages in various instructional formats.

West

The West Campus was approved by the Florida State Board of Education in 2005 and became a designated branch campus of Miami Dade College in July 2017, with the approval of the Southern Association of Colleges and Schools Commission on Colleges. Serving one of the fastest-growing locales in Miami-Dade County, including Doral and surrounding areas, the West Campus offers courses toward the Associate in Arts and Associate in Science degrees. Corporate training programs are also offered at the campus, which opened for classes on March 1, 2006, and promises to be the next exciting learning environment for the greater Miami community.

Education Centers

Gibson Education Center

MDC's Gibson Education Center is an outreach center of the Wolfson Campus offering a wide range of traditional credit courses, career readiness programs, workforce training, college preparedness programs and personal enrichment seminars at a location that is assessable to US-1, but especially convenient to the community of Coconut Grove and surrounding neighborhoods. The Gibson Educational Center is nestled in the heart of Coconut Grove just six blocks south from the business district of Coco Walk and equipped with three state of the art classrooms with a fully modern digital classroom. Whether you are a student that is looking to upskill, prepare for industry certifications and exams such as the ACT, SAT, or PERT, or simply get a head start through dual enrollment, the Gibson Education Center is here to help.

The Carrie P. Meek Entrepreneurial Education Center

The Carrie P. Meek Entrepreneurial Education Center is an outreach program of the North Campus. It opened its doors on Oct. 4, 1989, in the heart of Liberty City, a predominantly African-American community within the City of Miami. The mission of the Entrepreneurial Education Center is to implement the broader mission of the College while promoting entrepreneurship, business growth and economic revitalization for the local residents of Liberty City and the surrounding communities. The Entrepreneurial Education Center offers a vast array of college credit and noncredit courses. Students pursue certificate and vocational programs in

a number of fields; they participate in seminars and conferences that promote workforce training and business skills and facilitate entrepreneurship and entry into the labor market.

ADMISSIONS

Admissions Information

Admission is a simple process, requiring a completed application, the admission application fee, and official transcripts of high school or college studies. International applicants have additional entrance requirements based on U.S. immigration rules, and applicants for baccalaureate and limited-access programs may have additional entrance requirements. In accordance with Manual of Procedure 4000 – Admission Criteria and Guidelines <https://www.mdc.edu/procedures/Chapter4/4000.pdf> and section 1007.263 Florida Statutes, the following requirements have been established for college credit and vocational credit admission to Miami Dade College (MDC).

1. Apply and get admitted by completing the MDC admission application (<http://www.mdc.edu/admissions/>).
2. International students must submit the application by the published deadlines. See deadlines at: <https://www.mdc.edu/internationalstudents/admission/default.aspx>.
3. There is a \$30 non-refundable application fee for all new students applying to MDC, except for Dual Enrollment, Early Admission, and School for Advanced Studies. For International students, there is a \$50 non-refundable application fee, and Baccalaureate applicants must pay a \$25 non-refundable application fee. Returning students do not pay the application fee.
4. High school graduates who attended as dual enrollment students need to complete a new application.
5. Applicants who transfer to MDC from other postsecondary institutions must request final, official transcripts from all of those institutions to be sent directly to MDC Transcript Processing Services. Domestic (U.S.) high school and/or college/university transcripts must be sent to Miami Dade College either electronically (by a third party) or by mail directly from the institution(s).

A. College Readiness and Developmental Education

MDC reviews and publishes the Placement Criteria Manual as necessary, which adheres to 1008.30, Florida Statutes, and State Board of Education Rule 6A10-.0315 on common placement testing, alternative methods to common placement tests, and developmental instruction for public postsecondary education. The Placement Criteria Manual details all methods for assessing communication and computation skills and the minimum standards a student must achieve to demonstrate readiness to perform college-level work.

B. Admission Application Fees and Waivers

Students who fall into one of the categories listed below may request an Admission Application Fee Waiver.

1. Student is a U.S. Veteran or active-duty military.
2. The student or family is receiving public assistance.
3. Student is living in federally subsidized public housing or experiencing homelessness.
4. Student is a ward of the state, an orphan, or is in foster care.
5. Student is an MDC Employee or Retiree.

C. Admissions to College Credit Programs for the Associate in Arts, Associate in Science, and College Credit Certificate programs with special admission requirements shall include (some programs have additional admission requirements):

1. Students with a standard high school diploma from any public high school in the United States or territories, per 1007.263, Florida Statutes.
2. Students who are at least 16 years of age and are demonstrating qualification to obtain a higher education per Federal Student Aid eligibility requirements by:
 - Passing an approved ability-to-benefit test, or
 - Completing six credit hours toward a degree or certificate.
3. Students with a Florida public high school withdrawal (completion) code are eligible for college credit admission, as defined by the Florida Department of Education.
4. Students from accredited non-public high schools in the United States and its territories.

5. Students awarded a Department of Education high school equivalent (GED) diploma in the United States and its territories, the High School Equivalency Test (HiSET), Test Assessing Secondary Completion (TASC), or California High School Proficiency Exam.

6. Home-schooled students with a notarized signed affidavit from their parent or legal guardian attesting that they completed a Florida home education program under 1002.41, Florida Statutes. A Florida notary must notarize the signed affidavit. Students must also provide:

- a. A government-issued picture ID for the student and the parent or legal guardian.
- b. Proof of registration with the local secondary school board.

7. Students with the foreign equivalency of a United States high school diploma that meets the admission requirements to a recognized institution of higher education in their home country, with original documentation that shows all the requisite seals and apostilles. The College reserves the right to require a certified official English translation if the language used in the documents is not English. Students who do not have the requisite seals and apostilles on the original foreign high school documentation may opt to obtain an official evaluation of their credentials from a National Association of Credential Evaluation Services (NACES) or Association of International Credential Evaluators, Inc. (AICE) member organization. Students must present this official evaluation to their campus Admissions and Registration Office. MDC reserves the right to require NACES evaluations for any transcripts in which we are unable to verify the authenticity or legitimacy of the documents provided.

D. Cases that Require Additional Validation

Additional Validation for non-public high schools in compliance with 34 CFR 668.16, reasons that the high school diploma may not be accepted or may require additional validation include:

1. The issuance of the high school diploma was based only on a test and/or payment of fees.
2. The curriculum consisted of online/distance education instruction, and the high school is not listed as an accredited institution by the Distance Education Accrediting Commission (DEAC). The DEAC maintains a list of accredited institutions that offer high school via distance education.
3. There is conflicting high school information.
4. The high school was previously questioned as being a diploma mill by MDC or other accredited higher education institutions.
5. The high school is not listed in the U.S. Department of Education's National Center for Education Statistics (NCES). The list of public high schools is accessible at <http://nces.ed.gov/ccd/schoolsearch/>, and the list of private high schools is at <http://nces.ed.gov/surveys/pss/privateschoolsearch/>.
6. The private high school is not listed in the Florida Department of Education's Office of Independent Education and Parental Choice.
7. The high school or its course(s) is identified by the National Collegiate Athletic Association (NCAA) as not accepted for athletic eligibility.
8. Other evidence provides reason to believe that the diploma is not valid or was not earned from an entity that provides secondary school education. A High School Validation Checklist should be utilized to evaluate institutions uniformly. Once MDC renders a decision on the validity of a high school diploma, the decision is final and not subject to appeal.

E. International students who meet the admission requirements specified in section C must provide all of the following supplementary admission documents to the International Students Office to receive an I-20 Certificate of Eligibility, which is needed to apply for the F1 student visa before the beginning of the term for which the students seek admission:

1. Copy of a valid passport.
2. Statement of financial resources available to support their educational expenses.
3. Certificate of health and accident insurance, before enrollment.

F. Transfer Students

Transfer Students Applicants who transfer to MDC from other postsecondary institutions must request final, official transcripts from all of those institutions to be sent directly to MDC Transcript Processing Services. Additional requirements are as follows:

1. Students who transfer with fewer than six (6) college-level credits earned with "C" or higher grades must submit proof of valid high school graduation.
2. Courses taken at an institution accredited by a former regional or national accrediting agency recognized by the United States Department of Education (USDOE) that adheres to the Florida Statewide Course Numbering System will be accepted.
3. Courses taken at an institution accredited by a national accrediting agency recognized by the USDOE will be reviewed through an evaluation process to determine the transferability of courses and credit hours.
4. Students who transfer from foreign postsecondary institutions approved by the country's Ministry of Education who provide original documentation showing all the requisite seals and apostilles must provide a certified official English translation if the language used in the documents is not English. Students with fewer than six (6) college-level credits earned with "C" or higher grades must submit proof of valid high school graduation as listed in Section II.C. MDC reserves the right to require evaluations for any transcripts in which we are unable to verify the authenticity or legitimacy of the documents provided.

G. Dual Enrollment and Early Admission

Student's access to dual enrollment and early admission is authorized pursuant to 1007.271, Florida Statutes. Students in grades 6-12 who are enrolled in Miami-Dade County public schools, participating private and charter schools, or home schools are eligible to participate in the MDC dual enrollment program. Students must have a minimum 3.0 high school unweighted grade point average and demonstrated readiness for college coursework.

H. Admissions to Baccalaureate Degree Programs

Baccalaureate degree applicants must meet all general and program-specific admission requirements and pay a non-refundable \$25 application fee.

I. Admission to Career and Technical Education Certificate Programs

Students who meet the admission requirements may be admitted to Career and Technical Education programs as well as the following (some programs have additional admission requirements):

1. Applicants who are at least 16 years of age and have left high school prior to completion.
2. Applicants who have been awarded a special diploma, as defined in section 1003.438 Florida Statute, or a certificate of completion, as defined in section 1003.428 Florida Statute.
3. International students with a vocational credit student visa (M1) and the supplementary admission documents indicated in II.C.7 above.

J. Recruitment of Students

1. Student recruitment promotes enrollment by presenting the learning options available at MDC. The recruitment team develops and implements activities consistent with the mission of the College. Activities include providing prospective students, parents, and other members of the community with current and accurate information regarding admission and registration, testing requirements, and program offerings, as well as other resources and related opportunities available at the College.
2. MDC refrains from unfair, deceptive, and abusive marketing tactics in the recruitment of all students. In addition, MDC will refrain from using third-party lead generators or marketing firms aimed at service members (veterans/military students). MDC will:
 - Refrain from providing any commission, bonus, or other incentive payment based directly or indirectly on securing enrollments or federal financial aid, including tuition assistance (TA) for members, to any persons or entities engaged in any student recruiting or admission activities, or making decisions regarding the award of student financial assistance.
 - Ban inducements such as gratuity, favor, discount, entertainment, hospitality, transportation, lodging, meals, or other items of monetary value to any individual or entity, or its agents, including third-party lead generators or marketing firms. Only salaries paid to employees or fees paid to contractors in conformity with the applicable laws are allowable for the purpose of securing enrollments of service members (veterans/military students) or obtaining access to TA funds.

K. Other Considerations

1. Certain academic programs have additional program admission requirements. Students need to check with the respective academic department for more information.
2. Applicants who have been convicted of a felony or are the subject of an arrest pertaining to a controlled substance and who wish to apply for a program that leads to licensure should confer with the regulatory/licensing agency to determine eligibility for future credentialing and practice. Applicants who are determined to be not eligible for licensing for any reason may apply for admission to that program, but must recognize that program completion may not result in licensure or employment. Miami Dade College has determined that the presence of students officially designated as Sexual Offenders/Sexual Predators on campus may be disruptive to the College's programs and/or would interfere with the rights and privileges of other students. In accordance with 1001.64, Florida Statutes, the College may consider the past actions of any person applying for admission or enrollment and may deny admission or enrollment because of misconduct if determined to be in the best interest of the College. Therefore, MDC reserves the right to deny admission/enrollment to students who are officially designated as Sexual Offenders/Sexual Predators.
3. MDC reserves the right to deny admission to applicants who have been incarcerated, convicted of a felony, experienced disciplinary problems at another educational institution, or who may pose a threat to the life and/or safety of its students, faculty, staff, community, or guests, as determined by the College administration. In accordance with Section 1001.64, Florida Statutes, the College may consider the past actions of any person applying for admission or enrollment and may deny admission or enrollment because of misconduct if determined to be in the best interest of the College.
4. Applications received by the College will be reviewed. The College may designate any application for further review at any time and for any lawful reason. The College may require that applicants provide supplemental documents or information, participate in enhanced verification protocols, or undergo additional review before an application is approved. The provisions of this section will also apply to previously approved applications. In the event an applicant or student does not respond to the College's requests, whether in full or in part, the College reserves the right to take any appropriate action, including, but not limited to, rejecting an application or reversing an earlier approval.

Transient Student Information

Transient students are enrolled at their "home institution" and are enrolled at MDC for a term.

For Students from Florida Public Institutions

Transient students are advised to use Florida's official online student advising system at www.floridashines.org.

1. To request and submit a Transient Student Form, visit <https://www.floridashines.org>.
2. Under 'Succeed in College,' click on 'Take a Course at Another School.'
3. At the bottom of the page, click on 'Start or check the status of your Transient Student Admission Application now.'
4. 'Select Your School' and enter your 'Student ID' and 'PIN/Password.'
5. Select the college of your major in the first drop-down; then select your major from the second drop-down.
6. Complete the transient application-- be sure the course information is accurate-- and click 'Send.'
7. Check the status of your application and keep in contact with the transient student advisor on the [Florida Shines site](http://www.floridashines.org) until registration is completed.
8. Please contact the [Admissions Office](#) with any questions regarding your application. Contact the [Advisement Office](#) for inquiries related to course approval.

For students from Florida Private Institutions and Out-of-State Institutions

1. [Apply for Admissions](#) and select "Non-Degree Transient" as your program objective. Program code: 39001.
2. If applicable, complete the [Florida Residency for Tuition Purposes Form](#) (in person via [electronic form](#)).
3. Submit the transient form to the [Advisement Office](#) via email or in person. The form may be submitted by either the student or the institution representative.

Non-Degree Applicants

Non-degree applicants are students who wish to take selected college courses without the intent of completing a college credit certificate, associate or baccalaureate degree program. These students must fill out an application for admission and are not required to provide evidence of high school graduation. Many students attend the College to upgrade their job skills, for transfer credit purposes, or for their own personal interest and enjoyment. Non-degree students who wish to enroll in a Math (excluding MTB 1103) or English course, or any course that requires college-level Reading and/or Writing placement, are required to demonstrate college readiness through traditional placement tests or alternate methods. If, at a later time, these students become associate or baccalaureate degree candidates, regular admissions procedures regarding all transcript(s) requirements will apply.

Special Admissions Categories

In each of the following categories, the regular admissions procedures apply:

1. **Dual Enrollment** – The Dual Enrollment program allows eligible high school, middle school, and home education students in grades 6-12 to simultaneously earn college credit and credit toward a high school diploma. The college credit may be applied toward a postsecondary certificate or degree at a Florida public institution. The Dual Enrollment program provides an opportunity to take challenging courses and accelerate education opportunities. Students who complete dual enrollment courses will save time in obtaining their college degree. They will also save money, as these students are exempt from the payment of registration, tuition, and laboratory fees. To enroll in courses through the dual enrollment program, students must demonstrate readiness for college-level coursework. Eligibility criteria include both a GPA requirement and assessment of communication and computational skills. The student's school must grant permission for the student to enroll in these courses, thereby agreeing to accept these college courses to meet high school graduation requirements. Students participating in dual enrollment may begin their studies in any term, provided that they complete the dual enrollment admission, advisement, and registration procedures. Early admission is a form of dual enrollment through which eligible high school seniors enroll at the college on a full-time basis.
2. The courses these students take are creditable toward a postsecondary certificate or associate degree and meet the requirements for the student's senior year and high school graduation. Early admission students are required to enroll in a minimum of 24 college credits (12 credits per semester) during their senior year.
3. **Early Admission** –The Early Admission Program is a form of dual enrollment in which eligible high school students, including home school students, enroll at MDC on a full-time basis during their senior year in courses that are creditable toward the high school diploma and the associate degree. To be considered a full-time dual enrollment early admission student, the student must enroll in a minimum of twelve (12) college credit hours per term beginning in the fall term of their senior year. It is recommended that a student enroll in no more than fifteen (15) college credit hours per term or the equivalent.

Student Eligibility

- Must have a minimum 3.5 high school unweighted GPA.
- Must have completed the 11th grade year successfully.
- Must have provide required common placement test scores or proof of eligibility using alternate methods.
- Must have authorization from their high school principal, counselor, and parent/guardian.
- Must express intent to pursue a postsecondary degree.
- Must enroll in a minimum of college credit courses which meet the requirements for the student's senior year and high school graduation (24 credits).
- Must maintain an unweighted 3.0 high school GPA and a 3.0 college GPA in order to continue participating in the Early Admission Program.

Readmission to the College

Students who have not enrolled within the past 12 months and are not enrolled in a future term are required to submit an application for readmission (<http://www.mdc.edu/admissions/>), along with a new residency form if applicable. Students who completed coursework at another institution must submit official transcripts from each institution attended so that prior coursework can be reviewed and evaluated.

Developmental Education Courses

With the exception of students who meet the criteria for an exemption from common placement testing <https://www.mdc.edu/aet/placement-criteria/default.aspx> and developmental education instruction, the State Board of Education requires demonstration of readiness for degree-seeking students and students who have not met college-level competency either through the completion of developmental education requirements in the Florida College System or have not been awarded credit for college-level coursework in the area of deficiency. Non-exempt students will be placed into developmental education courses in the subjects where scores indicate a need for this instruction, along with a Student Life Skills course (SLS). Enrollment in certain other courses may be restricted until all developmental education courses have been completed.

If scores on one or more of the subtests require developmental education placement, students must enroll in at least one developmental education course during their first term. Students who test into developmental education instruction and subsequently enroll in developmental education instruction must complete the required developmental education studies by the time they have accumulated twelve (12) credits of college credit coursework, or they must maintain continuous enrollment in developmental education coursework each semester until the requirements are completed while performing satisfactorily in the degree.

Florida Board of Education rules limit the number of times a student can take a developmental education or credit courses. Enrollment beyond the 100 percent refund deadline is considered an "attempt," and students can attempt a course only three times. ***Contact the Advisement Office for additional information**

Admissions to Select College Programs and Programs Leading to Licensure

Admissions to specialized programs, such as those offered by Medical Campus, have specific eligibility requirements due to enrollment limitations imposed by physical facilities, state licensure regulations, or other criteria. Students interested in admission to such programs have specific eligibility requirements. Students should visit the program website and the campus for additional information on those requirements.

The academic department will determine final approval for placement into these specific programs. Students are notified of admission into these programs. Students who are not selected for a specific program are encouraged to continue their studies in other courses and programs at the College. Advisement offices will assist all such students to determine alternative educational objectives.

A limited number of programs have supplementary admissions requirements. Applicants who have been convicted of a felony and/or subjected to an arrest pertaining to a controlled substance and are applying to a program that leads to licensure may be ineligible for that license. Applicants in this situation should check with the appropriate regulatory/licensing agency to determine whether this would be the case. These students still can be admitted to the program; however, they should understand that program completion may not result in licensure or employment. Additionally, there are usually other requirements for licensure, such as physical and psychological criteria, completion of unpaid internships, criminal history verification, and other background checks. It is the student's responsibility to understand and meet these requirements.

General Educational Development (GED) Tests and Diploma

An equivalent to a Florida high school diploma may be obtained by completing the General Educational Development (GED) test. A GED holder is eligible for admission to associate degree programs at the College. To qualify to take the test, individuals must be at least 16 years old and reside in the state. A 16 or 17-year-old must meet College criteria to be eligible to prepare for and take the GED test. Preparation for the GED test is available at all MDC campuses with the exception of Medical and West. Individuals should contact campus Continuing Education and Professional Development departments for assistance and further information. The GED test covers writing skills, reading skills, social studies, science and mathematics. A fee is charged to take the test battery, and there is an additional charge, although nominal, to retake subtests.

Teacher Certification Information

Before taking courses to meet Teacher Certification requirements, teachers should confirm from their public school district's certification office or the Florida Department of Education's Office of Teacher Education, Certification and Staff Development, that the courses in which they wish to enroll meet specific certification requirements. College credit courses offered by Miami Dade College may be used for extension, reissuing, other vocational certificates, reinstatement of certificates, and for recency of credit. Additionally, information about courses required for general

and professional preparation certification is available at the School of Education or campus Academic Advisement offices.

Florida Residency for Tuition Purposes

Miami Dade College policy concerning Florida residency requirements complies with the laws of Florida s. 1009.21, F.S., and Rule 6A10.044, F.A.C., which are reprinted as follows: s. 1009.21, F.S., determination of resident status for tuition purposes (<https://www.mdc.edu/admissions-info/tuition/florida-residency.aspx>).

Determination of resident status for tuition purposes: Students shall be classified as residents or nonresidents for the purpose of assessing tuition in post-secondary educational programs offered by charter technical career centers or career centers operated by school districts, in Florida College System institutions, and in state universities.

A. As used in this section, the term:

1. "Dependent child" means any person under the age of 24, whether or not living with his or her parent, who is eligible to be claimed by his or her parent as a dependent under the federal income tax code.
2. "Initial enrollment" means the first day of class at an institution of higher education.
3. "Institution of higher education" means any charter technical career center as defined in s. 1002.34, career center operated by a school district as defined in 1001.44, Florida College System institutions as defined in s. 1000.21(3), or state university as defined in s. 1000.21(4).
4. "Legal resident" or "resident" means a person who has maintained his or her residence in this state for the preceding year, has purchased a home which is occupied by him or her as his or her residence, or has established a domicile in this state pursuant to s. 222.1(5).
5. "Nonresident for tuition purposes" means a person who does not qualify for the instate tuition rate.
6. "Parent" means either or both parents of a student, any guardian of a student, or any person in a parental relationship to a student.
7. "Resident for tuition purposes" means a person who qualifies as provided in this section for the instate tuition rate.

B. To qualify as a resident for tuition purposes:

1. A person or, if that person is a dependent child, his or her parent or parents must have established legal residence in this state and must have maintained legal residence in this state for at least 12 consecutive months immediately prior to his or her initial enrollment in an institution of higher education.
2. Every applicant for admission to an institution of higher education shall be required to make a statement as to his or her length of residence in the state and, further, shall establish that his or her presence or, if the applicant is a dependent child, the presence of his or her parent or parents in the state currently is, and during the requisite 12-month qualifying period was, for the purpose of maintaining a bona fide domicile, rather than for the purpose of maintaining a mere temporary residence or abode incident to enrollment in an institution of higher education. An individual shall not be classified as a resident for tuition purposes and, thus, shall not be eligible to receive the instate tuition rate until he or she has provided such evidence related to legal residence and its duration or, if that individual is a dependent child, evidence of his or her parent's legal residence and its duration, as may be required by law and by officials of the institution of higher education from which he or she seeks the in state tuition rate.
 - However, with respect to a dependent child living with an adult relative other than the child's parent, such child may qualify as a resident for tuition purposes if the adult relative is a legal resident who has maintained legal residence in this state for at least 12 consecutive months immediately before the child's initial enrollment in an institution of higher education, provided the child has resided continuously with such relative for the 3 years immediately before the child's initial enrollment in an institution of higher education, during which time the adult relative has exercised day-to-day care, supervision, and control of the child.
 - The legal residence of a dependent child whose parents are divorced, separated, or otherwise living apart will be deemed to be this state if either parent is a legal resident of this state, regardless of which parent is entitled to claim, and does in fact claim, the minor as a dependent pursuant to federal individual income tax provisions.
 - A dependent child who is a United States citizen may not be denied classification as a resident for tuition purposes based solely upon the immigration status of his or her parent.

3. An individual shall not be classified as a resident for tuition purposes and, thus, shall not be eligible to receive the in-state tuition rate until he or she has provided such evidence related to legal residence and its duration or, if that individual is a dependent child, evidence of his or her parent's legal residence and its duration, as may be required by law and by officials of the institution of higher education from which he or she seeks the in-state tuition rate.
 - Except as otherwise provided in this section, evidence of legal residence and its duration shall include clear and convincing documentation that residency in this state was for a minimum of 12 consecutive months prior to a student's initial enrollment in an institution of higher education.
 - Each institution of higher education shall affirmatively determine that an applicant who has been granted admission to that institution as a Florida resident meets the residency requirements of this section at the time of initial enrollment. The residency determination must be documented by the submission of written or electronic verification that includes two or more of the documents identified in this paragraph, unless the document provided is the homestead exemption in Florida, which is deemed a single, conclusive piece of evidence proving residency.
 - The documents must include at least one of the following:
 - A Florida voter's registration card;
 - A Florida driver's license;
 - A State of Florida identification card;
 - A Florida vehicle registration;
 - Proof of a permanent home in Florida which is occupied as a primary residence by the individual or by the individual's parent if the individual is a dependent child;
 - Proof of a homestead exemption in Florida;
 - Transcripts from a Florida high school for multiple years if the Florida high school diploma or high school equivalency diploma was earned within the last 12 months;
 - Proof of permanent fulltime employment in Florida for at least 30 hours per week for a 12-month period.
 - The documents may include one or more of the following:
 - A declaration of domicile in Florida;
 - A Florida professional or occupational license;
 - Florida incorporation;
 - A document evidencing family ties in Florida;
 - Proof of membership in a Florida-based charitable or professional organization;
 - Any other documentation that supports the student's request for resident status, including, but not limited to, utility bills and proof of 12 consecutive months of payments; a lease agreement and proof of 12 consecutive months of payments; or an official state, federal, or court document evidencing legal ties to Florida.
4. With respect to a dependent child, the legal residence of the dependent child's parent or parents is prima facie evidence of the dependent child's legal residence, which evidence may be reinforced or rebutted, relative to the age and general circumstances of the dependent child, by the other evidence of legal residence required of or presented by the dependent child. However, the legal residence of a dependent child's parent or parents who are domiciled outside this state is not prima facie evidence of the dependent child's legal residence if that dependent child has lived in this state for 5 consecutive years prior to enrolling or reregistering at the institution of higher education at which resident status for tuition purposes is sought.
5. A person who physically resides in this state may be classified as a resident for tuition purposes if he or she marries a person who meets the 12-month residency requirement under subsection (2) and who is a legal resident of this state.
6. Except as otherwise provided in this section, a person who is classified as a nonresident for tuition purposes may become eligible for reclassification as a resident for tuition purposes if that person or, if that person is a dependent child, his or her parent presents clear and convincing documentation that supports permanent legal residency in this state for at least 12 consecutive months rather than temporary residency for the purpose of pursuing an education, such as documentation of fulltime permanent employment for the prior 12 months or the purchase of a home in this state and residence therein for the prior 12 months while not enrolled in an institution of higher education.

- If a person who is a dependent child and his or her parent move to this state while such child is a high school student and the child graduates from a high school in this state, the child may become eligible for reclassification as a resident for tuition purposes when the parent submits evidence that the parent qualifies for permanent residency.
 - If a person who is a dependent child and his or her parent moves to this state after such child graduates from high school, the child may become eligible for reclassification as a resident for tuition purposes after the parent submits evidence that he or she has established legal residence in the state and has maintained legal residence in the state for at least 12 consecutive months.
 - A person who is classified as a nonresident for tuition purposes and who marries a legal resident of the state or marries a person who becomes a legal resident of the state may, upon becoming a legal resident of the state, become eligible for reclassification as a resident for tuition purposes upon submitting evidence of his or her own legal residency in the state, evidence of his or her marriage to a person who is a legal resident of the state, and evidence of the spouse's legal residence in the state for at least 12 consecutive months immediately preceding the application for reclassification.
7. A person shall not lose his or her resident status for tuition purposes solely by reason of serving, or, if such person is a dependent child, by reason of his or her parent's or parents' serving, in the Armed Forces outside this state.
 8. A person who has been properly classified as a resident for tuition purposes but who, while enrolled in an institution of higher education in this state, loses his or her resident tuition status because the person or, if he or she is a dependent child, the person's parent or parents establish domicile or legal residence elsewhere shall continue to enjoy the instate tuition rate for a statutory grace period, which period shall be measured from the date on which the circumstances arose that culminated in the loss of resident tuition status and shall continue for 12 months. However, if the 12 month grace period ends during a semester or academic term for which such former resident is enrolled, such grace period shall be extended to the end of that semester or academic term.
 9. Any person who ceases to be enrolled at or who graduates from an institution of higher education while classified as a resident for tuition purposes and who subsequently abandons his or her domicile in this state shall be permitted to reenroll at an institution of higher education in this state as a resident for tuition purposes without the necessity of meeting the 12 month durational requirement of this section if that person has reestablished his or her domicile in this state within 12 months of such abandonment and continuously maintains the reestablished domicile during the period of enrollment. The benefit of this subsection shall not be accorded more than once to any one person.
 10. The following persons shall be classified as residents for tuition purposes:
 - Active duty members of the Armed Services of the United States residing or stationed in this state, their spouses, and dependent children, and active drilling members of the Florida National Guard;
 - Active duty members of the Armed Services of the United States and their spouses and dependents attending a Florida College System institution or state university within 50 miles of the military establishment where they are stationed, if such military establishment is within a county contiguous to Florida;
 - United States citizens living on the Isthmus of Panama, who have completed 12 consecutive months of college work at the Florida State University Panama Canal Branch, and their spouses and dependent children;
 - Fulltime instructional and administrative personnel employed by state public schools and institutions of higher education and their spouses and dependent children;
 - Students from Latin America and the Caribbean who receive scholarships from the federal or state government. Any student classified pursuant to this paragraph shall attend, on a fulltime basis, a Florida institution of higher education;
 - Southern Regional Education Board's Academic Common Market graduate students attending Florida's state universities;
 - Fulltime employees of state agencies or political subdivisions of the state when the student fees are paid by the state agency or political subdivision for the purpose of job-related law enforcement or corrections training;
 - McKnight Doctoral Fellows and Finalists who are United States citizens;
 - United States citizens living outside the United States who are teaching at a Department of Defense Dependent School or in an American International School and who enroll in a graduate level education program which leads to a Florida teaching certificate;

- Active duty members of the Canadian military residing or stationed in this state under the North American Air Defense (NORAD) agreement, and their spouses and dependent children, attending a Florida College System institution or state university within 50 miles of the military establishment where they are stationed;
 - Active duty members of a foreign nation's military who are serving as liaison officers and are residing or stationed in this state, and their spouses and dependent children, attending a Florida College System institution or state university within 50 miles of the military establishment where the foreign liaison officer is stationed.
11. Once a student has been classified as a resident for tuition purposes, an institution of higher education to which the student transfers is not required to reevaluate the classification unless inconsistent information suggests that an erroneous classification was made or the student's situation has changed. However, the student must have attended the institution making the initial classification within the prior 12 months, and the residency classification must be noted on the student's transcript. The Higher Education Coordinating Council shall consider issues related to residency determinations and make recommendations relating to efficiency and effectiveness of current law.
 12. Each institution of higher education shall establish a residency appeal committee comprised of at least three members to consider student appeals of residency determinations, in accordance with the institution's official appeal process. The residency appeal committee must render to the student the final residency determination in writing. The institution must advise the student of the reasons for the determination.
 13. The State Board of Education and the Board of Governors shall adopt rules to implement this section.

6A - 10.044 Residency for Tuition Purposes

1. The purpose of this rule is to establish consistent policies to determine the residency status for tuition purposes of students who are citizens of the United States or lawfully present in the United States. The determination of residency is to be made in accordance with criteria set forth in Federal law and Section (s.) 1009.21, Florida Statutes (F.S.), after the student has been admitted to a Florida College System institution.
2. Definitions:
 - "Dependent student" has the same meaning as "dependent child" as defined in s. 1009.21, F.S.
 - "Independent student" for the purposes of residency determination shall be defined as a student meeting one of the following criteria:
 1. The student is 24 years old or older by the first day of classes of the term for which residency status is sought at the institution.
 2. The student is married.
 3. The student has dependents that live with him or her, and the student provides more than half of the income to support those dependents.
 4. The student is a graduate student or professional student.
 5. The student is actively serving in the United States Armed Forces, the National Guard, or is a veteran.
 6. The student is not eligible to be claimed as a dependent by his or her parent or legal guardian for federal income tax purposes according to the rules and regulations established by the United States Internal Revenue Service.
 7. The student can demonstrate that he or she pays more than half of his or her tuition and required fees pursuant to s. 1009.23, F.S.
 8. Both parents of the student are deceased.
 - "Resident for tuition purposes" means an admitted or currently enrolled student who meets the residency requirements in s. 1009.21, F.S., and the provisions of this rule, and is therefore eligible to pay the resident tuition and fee rate as described in s. 1009.23, F.S.
 - "Non-resident for tuition purposes" means an admitted or currently enrolled student who does not meet the residency requirements in s. 1009.21, F.S., and the provisions of this rule, and must therefore be charged the non-resident tuition and fee rate as described in s. 1009.23, F.S.
3. Initial Determination of Residency. Each Florida College System institution shall develop policies and procedures for determining each admitted student's Florida residency status for tuition purposes. Policies and procedures shall be consistent with the criteria set forth in s. 1009.21, F.S. Each institution's residency appeal process established pursuant to s. 1009.21(12), F.S., shall be in writing in the institution's catalog and prominently displayed on the institution's website. Such policies and procedures shall, at a minimum, adhere to the following requirements:

- Each admitted student seeking to declare residency for tuition purposes shall submit a residency declaration, as prescribed by the institution, and shall submit the documentation required by the institution to establish Florida residency for tuition purposes.
 - Each Florida College System institution shall establish submission deadlines for all documentation used to determine residency for tuition purposes.
 - Each Florida College System institution shall provide written notice to admitted students that the burden of providing clear and convincing documentation to justify the institution's classification of a student's residency status for tuition purposes rests with the student or, if the student is a dependent, with the student's parent or legal guardian. For documentation to be "clear and convincing," it must be credible, precise, and compelling enough to persuade the institution that the student or, if that student is a dependent, the student's legal guardian has established legal residency in Florida.
 - Each Florida College System institution shall provide written notice requesting additional documentation to affirmatively determine residency for tuition purposes, including documentation required to review an admitted student's citizenship status for the purposes of determining residency in accordance with s. 1009.21 (2)(d), F.S.
 - Each Florida College System institution shall ensure that the student, parent or legal guardian has resided in Florida for at least twelve (12) consecutive months immediately preceding the term in which the student is seeking residency classification, and that their purpose for residence in the State shall not be solely for the purpose of pursuing an education, except as otherwise provided in s. 1009.21, F.S.
 - Each Florida College System institution shall provide written notice disclosing the penalties for intentional fraud or misrepresentation of the student's residency status, or if that student is a dependent, the student's parent or legal guardian's residency status.
4. Residency Determination Documents. If a declaration of domicile, pursuant to s. 222.17, F.S., is being used as one of the documents to establish residency for tuition purposes, the date that an applicant shall be deemed as establishing residency for tuition purposes shall be twelve (12) months after the date that the Clerk of Circuit Court notes the declaration was sworn and subscribed to them. Nothing in this subsection shall prevent the use of additional documentation as evidence that legal residency was established by other means pursuant to s. 1009.21(3)(c), F.S., as of a date earlier than that established by the declaration of domicile.
5. Residency Reclassification Determination. A currently enrolled student who is classified as a non-resident for tuition purposes must be allowed to apply for reclassification as a resident for tuition purposes if the student, or their parent or legal guardian in the case of a dependent student, is able to meet the residency requirements set forth in s. 1009.21, F.S., to be considered a resident of Florida for tuition purposes. Each institution's residency reclassification process established pursuant to s. 1009.21(6), F.S., shall be in writing in the institution's catalog and prominently displayed on the institution's website.
- Reclassified students are not entitled to reimbursement of any non-resident tuition or fees properly assessed prior to reclassification.
 - Reclassified students shall be assessed the resident tuition and fee rate at the start of the next academic term after the reclassification occurs based on the deadlines established by the institution.
 - Nothing in this rule precludes an institution from requesting additional documentation as defined in s. 1009.21(3), F.S., to support a student's request for reclassification of residency status.

Guidelines for Appeal of Florida Residency Classification for Tuition Purposes

- Appeals must be submitted no later than the end of the current term.
- The student shall exhaust all appeals at the campus level prior to submitting a request to the college-wide appeal committee. The student must submit the appeal to the campus Admissions and Registration office and meet with the director or designee prior to requesting an appeal from the college-wide committee.
- The student must complete the College-wide Appeal for Florida Residency Classification for Tuition Purposes Form and state the reason(s) for appealing the campus' decision. The explanation should address any information that was not previously submitted or considered by the campus.
- A copy of all new and previously submitted documents supporting the Florida residency claim must be attached to the form.
- The form must be signed by the student and submitted with required documents to the Campus Admissions and Registration office.
- The Campus director or designee will review the request to explore all the possibilities to assist the student.

- The Campus Admissions and Registration director or designee must initiate the process, sign the appeal form and forward it to the college-wide committee with all attached documents and any necessary comments.
- At its regularly scheduled meetings, the college-wide committee will review the appeals submitted. The committee may request additional information from the student or the campus in order to make its decision.
- Upon review, the college-wide committee will inform the student of its decision in writing.
- The college-wide committee's decision is final and may not be appealed.

International Student Admissions

Admission – Miami Dade College is authorized under United States Federal Law, Immigration and Nationality Act, §(101)(a)(15) (F or M) to enroll nonimmigrant alien students. In addition to following the regular admission procedures, international students are required to provide English language placement test scores, such as TOEFL if a non-native speaker, proof of mandatory health insurance coverage, and official bank letter of financial resources to support education costs. Registration and placement into available courses and programs is dependent on English language proficiency, advisement and counseling, assessment/placement testing and course or program requirements. Academic transcript(s) of secondary school, college, university, technical and other post-secondary schools attended must be certified as official. Transcript(s) in languages other than English must include official certified English translations, authentic verifying statements and signatures.

Deadlines – International applicants should apply at least three months prior to enrollment at the College. International mail, transcript verifications, international money transfers, consular appointments, travel and housing arrangements and advisement/testing requirements all take a great deal of time and may cause delays. Applications for admission, including all admissions credentials English proficiency examinations (if available), must be received at least 45 days prior to the start of the term in which the applicant plans to enroll.

Deadlines for International Student Admissions

Fall Term.....July 1

Spring Term.....November 1

Summer Term.....March 25

Deadlines and additional information for international students can be found on their website (<https://www.mdc.edu/internationalstudents/>).

Readmission – Readmission to the College for the international student requires submitting a new application for admission, new official transcripts of postsecondary education attempted since last attendance at Miami Dade College, and an official bank letter of financial resources to support education costs. Transcript(s) in languages other than English shall include official certified English translations, authentic verifying statements and signatures provided by members of the National Association of Credential Evaluation Services (NACES) <http://www.naces.org>.

English Language Requirements – Miami Dade College courses are taught in the English language. The College will provide English-language training for students who have insufficient English language skills. English-language test scores determine placement into college courses. Students with TOEFL, IELTS, or PTE scores meeting MDC's English proficiency placement test exemption requirements regardless of the test date are eligible to take the Basic Skills Assessment Test to determine placement in courses leading to an associate degree. Other English proficiency examinations may also be used if the Common European Framework of Reference for Languages (CEFR) level is B2 or higher. Students requiring English language training may need to attend additional semesters at the College in order to complete all associate degree requirements.

Financial Requirements – All international students must have sufficient funds to pay full college matriculation and nonresident fees, textbooks, living expenses, transportation expenses, health insurance coverage and other incidental expenses while attending college in the United States. Financial requirements are included with the application for admissions. Documentary evidence of means of financial support must be provided to the College to be issued a Certificate of Eligibility (SEVIS I-20). This evidence is also required by the American Embassy or Consulate when applying for a student visa to enter the United States. Students must have these funds available when they register for classes each term. College financial aid is not available to students on visa. See the "Fees" section in this catalog for details concerning matriculation, non-resident and other fee requirements.

Employment – Visa students in the United States are not allowed to be employed outside the College, unless permission has been granted by the United States Citizenship and Immigration Services (USCIS). On-campus employment may be authorized by the International Student Services advisors.

Health and Accident Insurance Certificate – Prior to registration, international students must purchase the mandatory health insurance policy available in the International Student Services Office. This insurance coverage must continue for the entire period of enrollment at the College.

Duration of Status – International students on a visa are admitted to the United States for the entire time

estimated for them to complete their approved program of study as indicated on the SEVIS I-20. Students must fulfill the following conditions to maintain Duration of Status: pursue a full course of study at the educational institution they are authorized to attend, make normal progress, keep a current passport that is valid for at least six months, maintain a valid SEVIS I-20 and not accept off-campus employment without USCIS approval.

Arrival in Miami – International students should arrive in Miami approximately 30 days before the beginning of the first term of enrollment based upon the program start date on the I-20. Students need the time to obtain housing, provide a local address to the College, participate in new student orientation, take English-language and placement assessment tests, obtain advisement and counseling and register for courses.

Housing in the Community – Miami Dade College does not provide or supervise student housing. International students must bring sufficient funds to pay three months' rent in advance (first and last month's rent, plus a security deposit equal to one month's rent). The estimated expense information provided with the application for admission provides important details.

Transportation – International students must provide their own transportation or use public transportation (buses or rail) to travel between home and the campus(es).

School Transfer – Completion of a degree program at the designated educational institution is recommended. International students who wish to transfer to another school must officially do so by requesting a release of their SEVIS record to the school they wish to transfer to and by providing an admission letter. The institution will notify Immigration of the student's school transfer. A student who transfers to a different school without completing this process is considered to be out of status.

Passport Validity – International students on a visa must have and maintain a current passport valid for a period of not less than six (6) months into the future. It is the student's responsibility to meet this requirement.

Full-Time Enrollment – International students are required by USCIS regulations to be enrolled full-time. Students should make satisfactory progress in their approved program each term, otherwise the continuation of study on an International Student Visa may be jeopardized and the Certificate of Eligibility (SEVIS I-20) rescinded. See Standards of Academic Progress in "Academic Regulations" section.

United States Department of Homeland Security Laws and Regulations – It is the student's responsibility to comply with all non-immigrant alien requirements as stated under the United States statutes I.N.A. 101(a) (15) (F); I.N.A. 214(m); IIRIRA 641. The College is required to report to the Department of Homeland Security international students who:

1. Do not register at the College by the first day of the semester.
2. Do not carry a full course of studies.
3. Do not enroll in the minimum required credits of in-person classes.
4. Do not attend classes to the extent normally required.
5. Become employed without authorization.
6. Terminate their attendance at the College.

Visa Student Advisement – Advisors are available at each campus to advise international students concerning academic programs and course objectives. Students on an International Visa should contact the International Student Services advisor each term for a review of the student's progress and for updates and compliance with immigration regulations.

Admission to Continuing Education (Non-College Credit) Programs and Courses

Miami Dade College, through its Continuing Education Program, offers students opportunities for enrollment in Continuing Workforce Education Training and recreation and leisure courses. Admission requirements are established by the nature of the particular program or course. A student who plans to register only for continuing education non-college credit courses need not apply for regular College admission.

1. Continuing Workforce Education Courses – These courses are for those students who have had prior employment in jobs related to the enrolled course or are presently employed in a career related to the Continuing Workforce Education course. Students enroll in the courses to upgrade their current skills, for re-employment purposes, or to enhance their current employability. For purposes of state certification or registration and updating to meet various professional organization requirements, the College student registration system allows for the award of Continuing Education Units (CEUs) on the student's transcript. These units may be awarded when a Continuing Workforce Education course is completed, and the course has been designated for the award of CEUs. Ten contact hours of classroom instruction equal one CEU.

2. Recreation and Leisure Courses – These non-credit courses are self-supporting with the total program costs being paid by the students who are enrolled. There are no state or College funds provided to support these activities. The College offers these courses on demand from students and the community, as space is available. The range of activities and courses is unlimited and is determined by the students enrolled. For further information, please consult the website at www.mdc.edu/ce.

Fees and Refunds

Fees are contingent upon approval of the District Board of Trustees and are subject to change. Special fees may also apply. Important note: Tuition and fee rates are determined annually by state and Board of Trustee processes. The best way to determine current tuition and fee rates is to check the Miami Dade College website, www.mdc.edu/student-financial-services/tuition-fees/, or to check the fee invoice on MDConnect Student Center. The fees listed below are an example – for planning purposes only – of rates for the 2024-25 year only.

1. Registration Fees 2025-26 – College Credit Courses

- Florida Residents* Matriculation
- Total: \$118.22 per credit
- Non-Florida Residents* Matriculation
- Total: \$402.51 per credit

2. Registration Fees 2025-26 – Baccalaureate Courses

- Florida Residents*
- Total: \$129.89 per credit
- Non-Florida Residents*
- Total: \$535.97 per credit

3. Registration Fees 2025-26 – Career and Technical Education Courses

- Florida Residents* Matriculation
- Total: \$91.08 per vocational credit (Special fees may also apply)
- Non-Florida Residents*
- Total: \$355.31 per vocational credit

◦ **See Florida Residency for Tuition Purposes section for definitions. Note: Fees are subject to change.*

4. Special Fees and Charges Special Registration Fees: Some courses carry special fees in addition to the regular registration fees. Special fees in music courses that offer private lessons range from \$60 to \$300.

- *\$30 Admission Application Processing Fee:* All new college credit students are assessed a \$30 non-refundable admission application processing fee. This fee must be paid when you submit the application.
- *\$25 Bachelor's Degree In-Program Admission Application Processing Fee:* All students admitted to an in-program Bachelor's degree are assessed a \$25 non-refundable admission application processing fee.
- *\$50 International Student Admission Application Processing Fee:* All new international students are assessed a \$50 non-refundable admission application processing fee.
- *\$15 Per Credit - MDC Online Fee:* MDC Online classes have a distance learning fee of \$15 per credit. (i.e., \$45 for a 3-credit course). To comply with federal requirements, MDC Online uses secure login and password to verify the identity of online students. There are no additional student charges associated with verification of student identification.
- *Resident Students/Non-Resident Students:* Review information about Florida Residency for Tuition Purposes online (<https://www.mdc.edu/student-financial-services/tuition-fees/>).
- *Full Cost of Instruction:* Out-of-State fee charged for students repeating courses more than allowed by state law (This is on a third or subsequent attempt).
- *Examination Fee:* A \$30 per credit nonrefundable fee is charged for institutional credit by exam.

5. Registration Fees – Continuing Education & Professional Development and Non-Credit Courses

- Continuing Workforce Education (CWE) – Fees are variable and calculated to cover the cost of the course.
- Recreation and Leisure Courses – Fees are charged to cover all expenses for providing the course.
- Adult Education Courses, which are considered Adult Basic Ed, Adult High School, GED, and VPI course fees:
 - \$30.00 per term for In-State Residency

Note: All fees are subject to change without notice.

Refunds of matriculation and tuition fees are made only if official drop or withdrawal cards are turned in at the campus Admissions and Registration Office by the published deadlines (see Academic Calendar), or if you drop via the web (and the drop is confirmed) by the deadline. If the student withdraws from the College as a result of administrative action or for the convenience of the College, except for disciplinary reasons, the student is entitled to a full refund of matriculation and tuition fees. If the student is dropped from a class due to cancellation of that class, the student is entitled to a full refund of matriculation and tuition fees. If the student is withdrawn from a course or courses for disciplinary reasons, the student is not entitled to a refund of matriculation, tuition or special fees. The admissions application fees (for credit, bachelor's, and international student admissions) are not refundable. Refunds for payments made with cash/checks will be refunded via the MDC One Card. Payments made with Visa/MasterCard/American Express will be refunded to the credit card account.

Fee Policy for Repeated Courses

Sections 1009.28 and 1009.285, Florida Statute require the assessment of fees for community college students who repeat a course due to withdrawal or failure. The fee for a third attempt of the same course is equal to 100 percent of the cost of instruction. Since state law prescribes student fees to equal 25 percent of the cost of instruction, the fee for a repeated course is approximately four times that of an initial attempt. Sections 1009.28 and 1009.285, Florida Statutes, and College policy allow one-time exceptions to the increased fees for courses. Students assessed such a fee should consult an advisor for more information (www.mdc.edu/smart).

Excess Hours Advisory

Section 1009.286, Florida Statutes, establishes an "excess hour" surcharge for a student seeking a baccalaureate degree at a state university. It is critical that students, including those entering Florida colleges, are aware of the potential for additional course fees. "Excess hours" are defined as hours that go beyond 120% of the hours required for a baccalaureate degree program. For example, if the length of the program is 120 credit hours, the student may be subject to an excess hour surcharge for any credits attempted beyond 144 credit hours (120% x 120). All students whose educational plan may include earning a baccalaureate degree should make every effort to enroll in and successfully complete those courses that are required for their intended major on their first attempt. Florida college students intending to transfer to a state university should identify a major or "transfer program" early and be advised of admission requirements for that program, including the approved common prerequisites. Course withdrawals and/or repeats, as well as enrollment in courses nonessential to the intended major, may contribute to a potential excess hours surcharge.

Per Section 1009.286(5), Florida Statute, it is recommended that students who intend to earn credit hours at the institution in excess of the credit hours required for baccalaureate degrees in which students are enrolled meet with their academic advisor.

Refund Policy

- Refunds of tuition and fees are made only if official drop or withdrawal cards are turned in at the campus Admissions and Registration Office by the published deadlines (see Academic Calendar), or if you drop via the web (and the drop is confirmed) by the deadline.
- If the student withdraws from the College as a result of administrative action or for the convenience of the College, except for disciplinary reasons, the student is entitled to a full refund of tuition and fees.
- If the student is dropped from a class due to cancellation of that class, the student is entitled to a full refund of tuition and fees.
- If the student is withdrawn from a course or courses for disciplinary reasons, the student is not entitled to a refund of tuition and fees.
- If the student does not utilize the College parking facility and a parking decal is not obtained, the college will refund the term parking fees after the specified term.
- The admissions application fees (for credit, bachelor's, and international student admissions) and late registration fees are not refundable.
- Refunds for payments made with cash/checks/wire transfers will be refunded via Bank Mobile.
- Debit card payment made at the Bursar's office are refunded via check (USPS mail).
- Payments made with Visa/MasterCard/American Express/Discover will be refunded to the credit card account. The Credit Card Service fee 2.0% is nonrefundable.
- Tuition payments made via Third Party agency will be refunded based on the conditions of the Third Party agency*.

Number of Weeks in Term	Number of Class Days Student has to drop class(es) and have all student fees removed
1-3	1
4-5	2
6-10	3
11-14	4
15-16	5
17-20	6
21-23	7
24-26	8
27-29	9
30-32	10

A procedure exists for handling specified exceptions to the refund policy. See the "Petitions Procedure" in the Students' Rights and Responsibilities Handbook (<https://www.mdc.edu/procedures/Chapter4/4018.pdf>).

F. **Refund Deadlines** – Continuing Education & Professional Development Courses

For one-day courses and workshops, the student must have paid in full and must make an official withdrawal at least one day prior to the day of class. For courses meeting for two or more days, the student must have paid in full and must make an official withdrawal at least one day prior to the second class meeting. A procedure exists for handling specified exceptions to the refund policy. Students should see the Continuing Education chairperson on their campus.

Payment Policy

1. All fees are due and payable in full by the due date posted on the fee invoice. Fees and charges are subject to change without notice. Cash is not to be sent by mail.
2. Payment of Fees by Check - Checks may be remitted to Miami Dade College for payment of fees owed. Check payments are also accepted via the MDC Web page. All checks accepted in payment for fees must be drawn on a United States bank and must be payable to the College. If a student submits a check exceeding the amount owed to the College, he or she will not get cash back. The College will issue the refund through Bank Mobile. (<https://www.refundselection.com/refundselection/#/welcome/continue>).
3. Payment by Credit Card - Miami Dade College will accept American Express, Discover, MasterCard and Visa. There is a 2.0% service fee on each credit card transaction made to the college. Credit card payments can be made over the telephone, and via the MDC Web page, <https://www.mdc.edu/student-financial-services/payment-options/online-payments/default.aspx>.
4. Payment by an Employer, Company or Other Agency - Miami Dade College accepts payment for tuition and fees from employers, companies and other agencies.
5. Payment Via Wire Transfer by International Students – Prospective and current international students may utilize the Nelnet Payment Plan as an option for paying tuition and fees. There is a \$40 per semester sign-up fee for using the Nelnet Payment Plan. For more information, please visit MDC's Nelnet Payment page (<https://www.mdc.edu/student-financial-services/payment-options/nelnet-payment-plan/default.aspx>).

6. Payment Via Florida Pre-Paid Tuition Program -The Florida Pre-Paid Tuition Program covers only defined registration, tuition, scholarship, and capital improvement fees. Students are required to pay any special fees and other local service fees, which include student service fees, parking fees, and technology fees. Students may submit a copy of their Florida Prepaid recipient card or letter to the Admissions office to help establish Florida Residency for Tuition Purposes.

For further information, contact Student Financial Services at asksfs@mdc.edu or (305) 237-2141.

Florida Pre-Paid Tuition Program

The Florida Pre-Paid Tuition Program covers only defined matriculation, scholarship and capital improvement fees. Students are required to pay any special fees and other local service fees, which include student service fees and technology fees. Students may submit a copy of their Florida Prepaid recipient card or letter to the Admissions office to help establish Florida Residency for Tuition Purposes.

FINANCIAL AID

Student Financial Aid

Financial aid is any grant, scholarship, loan or employment offered to assist a student to meet college expenses. Funding is usually provided by federal and state agencies, foundations, corporations, private donors and/or the College itself. Most financial aid is based on financial "need" as determined by the federal government's system of needs analysis. The amounts and types of financial aid that a student can receive are determined by federal, state and institutional guidelines. Financial aid is usually offered in "packages," which may consist of a combination of grants, loans, employment and scholarships. Grants and scholarships are regarded as a "gift" and need not be repaid. Loans are usually offered at low interest rates and can be repaid over an extended time period. When aid is offered in the form of employment, the student is paid an hourly rate for work performed (usually minimum wage). Students who wish to be considered for financial assistance offered by or through the College, including scholarships, must complete and submit the FAFSA (Free Application for Federal Student Aid, see "How to Apply"). The availability of certain types of financial aid is dependent upon the student's immigration status. Financial aid is available for approved and/or certified credit and vocational certificate programs of study.

Philosophy of Financial Aid

The objective of the student financial aid program at Miami Dade College is to provide financial assistance to students who need assistance in funding their educational goals. Financial aid officers are trained and available to counsel and assist students and parents seeking additional or alternative sources of aid. Prospective students and parents are strongly encouraged to contact the Financial Aid Office at any one of our campuses to obtain additional information regarding financial aid opportunities.

What is Financial Need?

Financial need is defined as the difference between the cost of education and the amount the student (and parents) can be expected to contribute to offset educational expenses. Financial need is based on federal regulations and information provided by the student and/or student's family on the Free Application for Federal Student Aid (FAFSA, see below).

How to Apply

To be considered for most types of financial assistance, a student must complete the Free Application for Federal Student Aid (FAFSA). The FAFSA is available online at <https://studentaid.gov>. The application process begins Oct. 1 for the academic year that begins in August. The results of the federal analysis are transmitted electronically to the College and are also sent to the student in the form of a Student Aid Report (SAR) via email or regular mail. Students should carefully read all notifications and communications from the U.S. Department of Education, Federal Student Aid offices and in a timely manner, provide information to the College or on the FAFSA, if the information originally submitted has to be corrected. Miami Dade College reserves the right to request supplemental information from parent(s), guardian(s), spouse and/or student as required by the financial aid staff to assess the need of the student. Students who are eligible to receive outside educational assistance such as Veterans Administration benefits and vocational rehabilitation assistance are expected to apply for this assistance through the appropriate agencies.

Verification

The Department of Education selects applicants for verification randomly, to determine the accuracy of the information provided on the FAFSA. If selected for verification, a student will be asked to provide additional information, such as but not limited to federal, tax return transcripts. Student files will not be processed until all required documentation is received, verification is complete and all corrections have been made.

Reapplying

Financial aid is not automatically renewed each year. To be considered for financial assistance from one year to the next, all students must reapply. Since the amount and type of aid are based upon the family's financial situation each year, it is quite possible that financial aid awards may change from one year to the next.

Basis on Which Financial Aid is Granted

The amount of financial assistance a student receives is generally determined by the need of the applicant, the availability of funds from federal, state, institutional and private sources, as well as the order in which the applications were completed (first-come, first-served basis). Students receiving federal financial aid are required to achieve and maintain an acceptable level of academic progress to receive financial aid. Specific eligible categories are posted on the Financial Aid Web page, and information is available in the Financial Aid Office.

Who Qualifies for Financial Aid

To be considered for most need-based assistance, you must meet the following basic eligibility requirements:

- Demonstrate financial need
- Be a U.S. citizen or eligible non-citizen
- Be registered with selective service, if required
- Not be in default on a previous student loan or owe a repayment on previous federal financial aid received at any institution
- Be enrolled at least half-time in an eligible program of study (some aid is available only to full-time students)
- Maintain satisfactory academic progress.
- Additional requirements may apply depending on the financial aid awarded to you.

Refunds and Repayments (Return to Title IV)

Federal regulations mandate that financial aid recipients who drop all courses or officially withdraw from the College before completing 60 percent of their enrollment period for the semester may be liable to repay a portion of the federal aid disbursed. The amount of the return is calculated using a federal formula that depends on the date the student ceased attendance. A student who owes a repayment will not be eligible for additional financial aid until the repayment is made in full.

Miami Dade College Student Assistance Programs

Scholarships and Grants

Scholarships and grants are available annually for students who require additional financial assistance beyond that received from federal and state sources. College funds for scholarships and grants are provided by businesses, clubs and organizations, agencies and from individual friends of the College through the Miami Dade College Foundation Inc. The primary criterion on which grant and scholarship recipients are selected is financial need. However, academic achievement is strongly considered during scholarship recipient selection. A limited number of grants are made available annually for service to the College and to students who may not be eligible for other types of financial assistance. Students who complete the FAFSA will be considered for a College grant. Students must complete an MDC Scholarship Application online at <http://www.mdc.edu/financialaid/scholarships/default.aspx> to be considered for a scholarship. Scholarship candidates may be required to submit additional documentation and/or information.

Tuition Payment Plan

A Tuition Payment Plan may be offered to students who are unable to pay the full amount of their schedule. Students should review their fee invoice for the term to determine the payment due date and to apply for the Tuition Payment Plan.

Tax Help for Educational Expenses

The Taxpayers Relief Act of 1997 offers several tax credits and deductions for educational expenses. For more information regarding these programs, go to the IRS webpage at: www.irs.gov.

Other Sources of Financial Assistance

Benefits for the Disabled – The state of Florida provides funding for the purchase of special equipment and services for all persons with disabilities enrolled in public postsecondary institutions.

Accessing the Financial Aid Office

- Counseling – Financial Aid counselors are available at all MDC campuses, on a walk-in basis, to assist students.
- Online – You can access the Financial Aid Office webpage at www.mdc.edu/financialaid to obtain more detailed information about financial aid programs, procedures and to check the status of your application and financial aid award.
- Email Communications – Regardless of the campus you attend, you can communicate with the Financial Aid Office via email at: finaid@mdc.edu

Student Complaint Procedures

Prospective or current students may voice their concerns about college rules, regulations, procedures or experience. Students must first voice concerns to the department staff and supervisor. Students who are unable to resolve

any concerns on their own, may contact the Federal Student Aid Ombudsman via <https://studentaid.gov/feedback-ombudsman/disputes/prepare>.

VETERAN AND MILITARY SERVICES

Military and Veteran Educational Benefits

Miami Dade College supports eligible veterans, service members, and dependents who use military and veteran educational benefits to pursue their educational goals. The College is approved for training under programs administered by the **U.S. Department of Veterans Affairs (VA)**, the **Department of Defense (DoD)**, and applicable state military education programs.

Through the **Veteran and Military Services (VMS) Office**, Miami Dade College assists students utilizing a variety of education benefits, including **VA education benefits**, **Military Tuition Assistance (TA)** for active service members, the **My Career Advancement Account (MyCAA)** program for eligible military spouses, and the **Educational Dollars for Duty (EDD)** program for members of the Florida National Guard. The College provides assistance with benefit eligibility, required documentation, and enrollment certification. Additional services may include academic advising, tuition deferments when applicable, tutorial assistance, and participation in the **VA Work-Study Program**.

In accordance with **Florida Statute §1004.07**, students who are called to active military service during an academic term may be eligible to withdraw from courses without academic penalty. Students may receive a full refund of tuition and fees or may request an incomplete grade or other appropriate academic accommodation, consistent with institutional policies.

In accordance with **Title 38 U.S. Code § 3679(e)**, this school adopts the following additional provisions for any students using U.S. Department of Veterans Affairs (VA) assistance, to include, **Post-9/11 GI Bill® (CH 33)**, **Veteran Readiness & Employment (CH 31)**, **Survivors' and Dependents' Educational Assistance (DEA - CH 35)**, or **Montgomery GI Bill® Selected Reserve (MGIB-SR - CH 1606)**, of **Title 10**, while payment to the institution is pending from VA. As such, following certification of veteran beneficiary enrollment to VA, and for up to 90 days, this school will **NOT**:

☐	Prevent the student's enrollment;
☐	Assess a late penalty fee to the student;
☐	Require the student to secure alternative or additional funding;
☐	Deny the student access to any resources (access to classes, libraries, or other institutional facilities) available to other students who have satisfied their tuition and fee bills to the institution.

However, to qualify for this provision, such students will be required to:

Provide the enrolling institution with a copy of his/her VA Certification of Eligibility (COE) - A "certificate of eligibility" can also be satisfied by a "Statement of Benefits" obtained from the U.S. Department of Veterans Affairs' (VA) website; eBenefits; or an Electronic Authorization from Veteran Readiness & Employment.

Reserve Officers Training Corps

Miami Dade College, in cooperation with the University of Miami and Florida International University, permits students to enroll in Air Force ROTC (through the University of Miami) and Army ROTC (through Florida International University). An application for admission to the ROTC program, including eligibility information for new and currently enrolled students, may be obtained from the ROTC offices at the University of Miami or Florida

International University. MDC credit is awarded for successful completion of ROTC courses. For further information, see "Military Science" in the Course Description section.

Military Training and Credit for Prior Learning

Miami Dade College may award academic credit toward a degree for eligible military education and training. Credit is evaluated based on recommendations published by the **American Council on Education (ACE)** in the **ACE Military Guide**, which provides standardized evaluations of military training and occupational experiences. Students who have served in the United States Armed Forces should submit an official **Joint Services Transcript (JST)** or **Community College of the Air Force (CCAF)** transcript for evaluation. These transcripts document military coursework and occupational training completed during service. Credit may also be awarded for approved **College Level Examination Program (CLEP)** or **DSST (formerly DANES Subject Standardized Tests)** scores in accordance with College policies for credit by examination. In accordance with **Florida Statute §1004.096**, Miami Dade College evaluates and may award academic credit for college-level training and education acquired during military service. Military training and examination credit that is accepted by the College will be recorded on the student's academic record as transfer or earned credit. Official transcripts must be submitted to the College for evaluation after the student has been admitted. All credit is evaluated in accordance with Miami Dade College policies and applicable state and accreditation guidelines. Students seeking additional information regarding credit for military training should contact the **Veteran and Military Services Office** or the **Admissions Office**.

STUDENT SERVICES

Advisement and Career Services

Advisement and Career Services support all student populations by facilitating an effective decision-making process regarding educational, transfer and career goals, advisors promote appropriate course selection and assist students with referrals to internal and external resources and support services. Advisement and Career Services supports first-time in-college and non-traditional student populations by offering office hours until 7:00pm Monday to Thursday and until 4:30 on Fridays at all of our campuses which facilitates access to the full scope of services provided by advisors even for those students attending classes during non-traditional times. Access to advisors is also available via phone, virtually, and by email.

All degree-seeking students will be assigned an advisor after enrolling in their first semester at the College. At that time, students and their assigned advisors will begin to chart an appropriate choice of courses based on the student's academic pathway, placement scores, transcripts, non-cognitive factors, and transfer institution of choice. In addition, advisors provide students assistance with career exploration, skills assessments, and guidance about how to best match student's skills and abilities with the right career path. Once a career path is chosen, advisors will provide important information regarding required courses, program information, graduation status and much more. All students are encouraged to see an advisor after admission to the College, after assessment testing has been completed (for those who require testing) and before first term registration. During these advisement sessions, the student and the advisor can chart an appropriate choice of courses based on the student's chosen pathway. Conferring of graduation eligibility at this time may be crucial to a student's success in meeting their career goals. During enrollment at Miami Dade College, students are encouraged, and sometimes required, to see an advisor when they encounter academic problems or contemplate a change in educational goals. In addition to helping students chart their educational and professional careers, advisors work with students to resolve problems affecting academic performance. Students may be referred for testing or to community agencies when appropriate, as a means to aid decision-making.

The Advisement and Career Services department also assists students with career planning, resume building and interviewing skills, and other employment needs. Career-related events, including seminars, career exploration workshops, and job and college fairs, are scheduled throughout the academic year. Students are also provided with guidance and information about transfer options and transfer assistance in preparation for the completion of their degree at the College. Transfer resources, including college catalogs, scholarship information and information on the College's Articulation Agreements with local, in-state and out-of-state institutions are available through the Department and on the MDC website. The department offers a variety of online tools that assist students with job placement, through a feedback system on resumes, cover letters, and interviewing skills assessments.

Academic Requirement Report

An Academic Requirements Report is the official record keeper of graduation requirements. This is different than a MAP which is intended to help you organize and schedule your pathway/program courses. An advisor will help you understand both your [Academic Requirements](#) and MAP. Reviewing these documents once per semester is recommended. The catalog and/ or the MDC website should be consulted for program/degree requirements.

My Academic Plan (MAP)

Once you decide on an academic pathway or program of study, you will need a MAP (My Academic Plan). This semester-by-semester plan outlines the courses you need to complete your degree or certificate. Your advisor will help you develop a MAP to stay on track.

Bookstore

The college bookstore is your on-campus resource for everything you need to thrive academically and feel connected to campus life. From textbooks and study materials to technology accessories, testing preparations, nursing supplies and apparel, snacks, graduation supplies, athletic apparel and MDC spirit gear, the bookstore offers a wide range of products and services at all campus locations and online. Students can take advantage of digital textbook options, rental programs, and online ordering for added convenience. For the most up-to-date store hours and location details, visit <https://www.mdc.edu/bookstore/>, as hours vary by term and may be extended during peak periods.

Textbook Affordability and Transparency

Miami Dade College is committed to helping students manage the cost of their education by providing information about required textbooks and instructional materials before registration. In accordance with **Section 1004.085, Florida Statutes**, the College promotes textbook and instructional material affordability and transparency and provides access to lists of required and recommended course materials for the vast majority of courses offered each term. MDC Textbook and Instructional Materials published list for the preceding five (5) academic years: <https://app.smartsheet.com/b/publish?EQBCT=73402d80749748a497083944b53cc41b>

First Year Experience

Associate of Arts degree-seeking students must enroll in a Student Life Skills course, such as SLS1106 (or approved equivalent courses). In this course, students will learn skills which will assist in a successful transition into college. Students will learn to develop the skills required for success in college and beyond.

New Student Center

The New Student Center is the first point of contact for prospective and new students who are attending college for the first time or who are transferring from another institution. Prospective students are encouraged to meet with a college admissions counselor to obtain information about degree and vocational program options, admissions requirements, assistance with the admissions process and the steps a new student will take from admission through course registration. The New Student Center conducts orientation sessions prior to each semester. All new degree-seeking students are required to participate in an orientation program. The objective of the new student orientation sessions is to provide practical information to assist new students in transitioning to college life. The New Student Center at the Medical Campus (MC) also assists students with selection into limited access programs as they transition from other campuses. Staff help guide students with course selection, the development of educational plans, and the application process for the limited access programs at MC.

Services for Students with Disabilities

ACCESS – A Comprehensive Center for Exceptional Students' Services

Federal and state laws and regulations guarantee students with disabilities equal access and equal opportunity in post-secondary education. The College provides auxiliary aids and services to assist students with disabilities in achieving equal opportunity. These services include, but are not limited to, assistance with registration, advisement, financial aid, and sign language interpreting services, note takers, adaptive or assistive technology, testing accommodations and more. The ACCESS department works to promote awareness of disability issues, federal and state regulations, and College procedures that ensure accessible and supportive learning environments. Under certain circumstances, ACCESS can arrange for program modifications, course substitutions, and waivers, in accordance with the College's Manual of Procedures. Students may find out about additional services and eligibility by contacting the ACCESS office or representative in the Division of Student Services at their campus and visiting on line at (www.mdc.edu/ACCESS/).

Student Health Services

Miami Dade College is not legally or financially responsible for medical care and does not provide the services of a physician on any campus. At the time of application, each student should provide, on the appropriate line of the application form, the name of a person to contact in an emergency. If that contact person changes while the student is attending the College, the student should update that information through the Registrar's Office. Students should carry emergency information at all times, as well as any medical insurance card(s).

Single Stop

Single Stop aims to connect students with valuable resources, so they can concentrate on what matters most: their coursework, families, and futures. It is a one-stop source for students and immediate family members to be connected to public benefits and local resources. Single Stop offers students a wide array of services including benefits screening, individual counseling, free tax preparation, financial coaching, food pantry, health insurance assistance, and various other services (<http://www.mdc.edu/singlestop/>).

Student Wellness

Miami Dade College offers a range of resources to help students emotionally and physically navigate the demanding pace of modern life. From food pantries to financial planning to mental health counseling, Miami Dade College can help students get the help they need (<https://www.mdc.edu/student-wellness/>). The College offers the MDC community with the necessary tools and knowledge to make health and fitness part of a successful lifestyle with fitness, aquatics, and wellness centers at the Kendall, North, and Wolfson campuses. Additionally, the College is deeply committed to supporting student mental well-being by offering comprehensive resources that go beyond traditional counseling services. Licensed mental health professionals provide confidential, one-on-one counseling sessions across all campuses, ensuring students have timely access to qualified care. By combining direct counseling, innovative digital services, and preventive community-based supports, the College fosters a campus culture where mental health is prioritized as an essential part of student success.

Information and Policies

Automobiles on Campus

All vehicles parked on College property must be registered with MDC and have a valid parking decal prominently displayed on the rear bumper or left rear window. MDC Staff, On-Campus and Hybrid Students will receive an MDC parking decal in the mail. MDC Online and MDC Live students may obtain a temporary (daily) parking pass by visiting their campus Student Life or Public Safety office. Please visit the [Parking Decals page](#) for further details and to register your vehicle.

Vehicles may only be parked in clearly designated legal parking spaces and should park head-in only; do not back in the space. Areas which are posted with signs or have yellow pavement painting indicating a restriction or prohibition of parking must be observed and complied with. Parking in the roadway, taking more than one parking space, blocking another vehicle or parking on the lawn are all prohibited, except when specifically authorized. Driving or parking on any sidewalks or pedestrian ways is strictly prohibited. Vehicles operated by students and visitors are restricted or prohibited from parking in faculty/staff parking lots and other designated areas. These regulations are in effect during ALL HOURS of parking operation, and they apply equally to all students, faculty, staff, and visitors.

Parking Tickets

Parking tickets may be issued throughout the day to those vehicles parked illegally. They are issued by off-duty Police officers working on campus, or by any other law enforcement agency authorized to issue tickets. The Public Safety Department is not responsible for and cannot resolve any disputes between the owner of a ticketed vehicle and law enforcement officials. Parking violation tickets are issued on a regular basis. Additionally, violators may be towed at their own expense.

Parking Safety

Our parking safety is everyone's concern. Please follow the guidelines, rules and regulations to prevent crime and accidents. Below are some tips to observe for your safety.

- Never leave personal belongings unattended
- Keep your valuables out of sight and reach.
- In order for people not to know where your valuables are, secure them before you park on campus.
- Report any suspicious activity on campus, even if you are not the victim.
- Lock your car and keep your keys in a safe place.
- Report lost or stolen properties immediately. The faster you report, the better the chances to recover them.
- Stay alert and tuned into your surroundings. Be aware who is around and prepared to react accordingly.
- If you are a victim of a crime, please report it immediately to the appropriate Campus Public Safety Department.

Student and faculty parking areas are designated on each campus. The MDCard may be required for access to a lot or a garage. All vehicles must have a valid MDC parking decal prominently displayed on the rear bumper or left

rear window. Parking decals are good for one year. Failing to register a vehicle may result in the denial of parking privileges or other enforcement measures.

Although campus security officers patrol parking areas, the College assumes no responsibility for the care or protection of a vehicle or its contents at any time. If a vehicle must be left on campus overnight, students should notify the Campus Security Office. Visitor parking policies vary by campus, so visitors should phone ahead for information. Visitors parked in unauthorized spaces may be subject to traffic citations and towing at the owner's expense.

Family Educational Rights and Privacy Act (FERPA) - Information Statement

Release of Student Information

Miami Dade College has a longstanding commitment to protect students' rights and privacy of information. This commitment will continue as a matter of College practice. The College complies with the provisions of the federal Family Educational Rights and Privacy Act (FERPA), State of Florida law, and Florida State Department of Education, Florida College System rules. These federal and state requirements concern accessibility and confidentiality of student records. Miami Dade College Procedure 4085, Release of Student Information, provides pertinent details concerning classifications of student records and access and release provisions. The College procedure is available to students, faculty, administration and staff in the Dean of Student Services Office, as well as other offices and departments at each campus. In addition, the complete procedures are published in the Student's Rights and Responsibilities Handbook. In accordance with U.S. Public Law 93380 (FERPA), students at Miami Dade College have the right to inspect their educational records and to correct such records if warranted. All student records are open for inspection and review by the student unless he or she waives this right. These records are protected from release of information without written consent. The parent(s) of a dependent student, as defined in Title 26 U.S.C. §152 of the Internal Revenue Code, also has the right to inspect records which are maintained by the College on behalf of the student. Directory Information, which may be made public, includes:

1. Student name,
2. Major field of study,
3. Participation in officially recognized activities and sports,
4. Weight and height of members of athletic teams,
5. Degrees, honors and awards received,
6. Enrollment status (fulltime, halftime, not enrolled).

The office of the Dean of Student Services or designee will release this information only after the requestor has demonstrated a legitimate need to have such information. Students not wishing the dissemination of Directory Information must complete a statement in the Registrar's Office, otherwise Directory Information may be disclosed for legitimate purposes by the College. Additional details concerning the release of student information, including exceptions, challenges to the content of records and related matters, may be obtained by consulting the Dean of Student Services, the Registrar's Office or designee at any campus. FERPA information can be found on our website at: www.mdc.edu/main/ferpa/.

Grievance Policy

In compliance with federal and state requirements, the College has an institutional grievance policy as outlined in Procedure 4032. Prospective or enrolled students may voice a complaint about a College rule/regulation, procedure, or experience; including but not limited to discriminatory practices or sexual harassment.

Students are encouraged to first voice their complaint to the front-line staff and/or their supervisors. If the complaint cannot be resolved at that level, then supervisors will communicate it to the next leadership level and notify the student(s). Students who are unable to resolve their concerns/issues with the front-line staff and/or their supervisors may file a complaint in writing to the appropriate division head as listed in the table of this procedure. If the complaint is against a first or second-level individual in the chain of command, the student should present the concern to the next level. Students may also submit a complaint at any time by visiting the Student's Rights and Responsibilities website at <http://www.mdc.edu/rightsandresponsibilities/>.

Housing

Miami Dade College does not provide or supervise housing facilities. Out-of-area students should arrive with sufficient time in advance of registration to locate suitable housing.

Identification

The MDID is the official identification card for students and employees. Students are required to wear visibly and present their MDID when requested by authorized College officials. Any misrepresentation, alteration or misuse of identification is prohibited. This card will provide access to Learning Resources, laboratories and parking lots. Students with questions should contact the Student Life Office at any campus for details.

Students' Rights and Responsibilities

The Students' Rights and Responsibilities publication, available to all students, sets forth the rights of students with corresponding responsibilities. This document details the relationship between student and College. The document covers protection in academic pursuits and privacy of records, sets forth the conditions for responsible behavior on the campus and lists the various appeal mechanisms and grievance procedures available to students. The section on student discipline complies with Rule 6A14.56, F.A.C., and §240.132, §240.133 and §877.13, F.S. This section concerns control and discipline of college students. The document complies with relevant federal regulations such as the award of financial aid, protection of privacy of records and equal access/equal opportunity. For more information, visit <https://www.mdc.edu/procedures/Chapter4/4009.pdf> and <http://www.mdc.edu/rightsandresponsibilities/>.

Safety and Security

As required by the Federal Student Right to Know Legislation, the College publishes the annual crime statistics for each campus. These statistics may be obtained at the campus Public Safety Office.

Student Life

Campus Activities, Clubs and Organizations

Student Life at Miami Dade College is where leadership, connection, and campus culture come to life. With each campus offering a unique and vibrant community, there's something for everyone, whether you're looking to join a student organization, attend engaging events, build your leadership skills, or give back through service. Student Life is also your one-stop hub for getting connected on campus!

There are many opportunities for students to get involved in campus activities. Each year, outstanding artists, musicians, singers, dancers, lecturers and other performers share their talents and expertise with students. Student Life committees, composed of representatives from student groups, assist with the establishment of these programs and the policies governing these activities. In addition, there are on-campus art exhibits, dance programs, music concerts and theatrical productions presented by different campus departments. Students have the opportunity to join 85+ clubs chartered on the various campuses. The best time to find out about clubs and organizations on each campus is at the beginning of the semester, when most campuses hold special events to publicize the various clubs. Students may also visit the campus Student Life Department to find out how to get involved. All students are encouraged to participate actively in clubs and organizations.

Intercollegiate Athletics

Miami Dade College teams, all known as The Sharks, compete at the highest level of the National Junior College Athletic Association. Home to 39 national championships, the Sharks travel around the state to compete against other college teams, and they consistently finish in the higher rounds of conference and state events. Sharks also have the opportunity to compete for the National Junior College Championship and have the chance to be selected for NJCAA All American teams and other special awards. MDC offers first-rate athletic facilities, training and conditioning services and a talented coaching staff. For information on trying out for an athletic team, contact the college director of athletics, based at Kendall Campus.

Students with outstanding athletic abilities may try out for one of the following intercollegiate sports teams: men's basketball, baseball, and soccer; women's, basketball, volleyball, soccer, and softball. <https://www.mdcathletics.com/>

Student Government Association

The Student Government Association is the voice of the student body and represents students' interests and concerns to the campus leadership. Through Student Government, students build leadership, organizational and communication skills. They also have the opportunity to represent the student body in campus, college, and statewide meetings.

Student Publications

The award winning student publication, The Reporter, is the student newspaper at Miami Dade College. It was launched on Oct. 4, 2010 and is augmented by a website with video and audio content. The Reporter is distributed collegewide and has newsrooms at the North, Wolfson, Kendall, Hialeah, Homestead, and Padron campuses. These publications serve as the media for student expression on matters involving the curricular and extracurricular activities of the College. These publications also provide training for those interested in journalism. <https://www.mdc.edu/studentlife/publications/>.

The Students' Rights and Responsibilities Handbook provides students on each campus with basic information about collegewide policies and procedures.

MDC Shark Pack Program Overview

Shark Pack – Digital Materials

Miami Dade College complies with Florida Statute (F.S.). Section 1004.085, F.S. and Rule 6A-14.092, Florida Administrative Code (F.A.C.), and has established guidance in the adoption, posting, and reporting requirements related to textbook and course material affordability and transparency. The College strives for transparency in the adoption of textbook and course materials, minimizing cost of instructional materials for students, addressing the need to make required textbooks and course materials available to students who otherwise are unable to afford them, while maintaining the highest quality of education and academic freedom. The Shark Pack program is designed to guarantee that every student has the textbook and course materials they need on day one. In partnership with our bookstore, Follett Higher Education, we have created a textbook savings initiative designed to offer our students high-quality, affordable learning materials with reliable first-day availability. Students are automatically enrolled in the program when registering for participating credit sections and may review the associated digital material fees on MDConnect Student Center. Students will receive direct emails from our bookstore partner before each term with course material access instructions. Course materials are delivered directly through our Learning Management System, Canvas, and are available in digital formats such as ebooks or courseware. In select cases, print materials may be made available when they best support the program's pedagogical needs. If students choose to participate in Shark Pack, they will receive a list of all the courses in which they are enrolled, detailing what materials are required, how to access those materials, as well as access to any digital materials they have been provided as part of the program. Additionally, if students wish to obtain materials another way, the program offers flexibility to opt out by individual class section before the 100% refund deadline. An opt-out option is provided to all students through the posted add/drop date, per [MDC's Academic Calendar](#), for each class section for which they do not want the digital materials. All materials they had access to on the first day of class will be deactivated and the digital material fee removed from their account. If physical prints were received, these will need to be returned to the bookstore once Follett reaches out requesting the return of materials. For more information on the Shark Pack program, visit the website at <https://www.mdc.edu/sharkpack>.

1. Digital Materials Fee: All participating credit courses with textbook adoptions will have a pricing of \$32.50 per credit.
 - Participating Medical Campus course materials have a flat rate per class with an average savings of 25% off the current retail price.
 - English for Academic Programs (EAP) courses have a flat rate per course at \$121.00.

Note: Fees are subject to change without notice.

Shark Pack Resources			
Carmen G. Velasquez	Associate Dean, Academic & Faculty Affairs	cvelasqu@mdc.edu 305.237.3361	College-wide Shark Pack Liaison

Basic Skills Assessment Program

In an effort to provide more effective educational services for students, the College has established a Basic Skills Assessment Program. Through this program, students can demonstrate readiness and the College can identify academic strengths and weaknesses in reading, writing and mathematics. Methods for assessing

communication and computation skills may be through any combination of approved common placement tests or alternate methods. These assessment results are used to advise students on how best to take advantage of their strengths. Regarding weaknesses, assessment results are used to guide a student into courses designed toward improvement in the respective discipline.

MDC administers the ACCUPLACER Next-Generation and the Florida Postsecondary Education Readiness Test (PERT) as placement testing options for students. Both are not timed, and each consists of three sections: reading, writing and mathematics. With the exception of students who meet the criteria for an exemption from common placement testing and develop mental education instruction, the State Board of Education (SBOE) requires demonstration of readiness for degree seeking students and students who have not met college level competency either through the completion of developmental education requirements in the Florida College System or have not been awarded credit for college-level coursework in the area of deficiency. Methods for assessing communication and computation skills may be through any combination of approved common placement tests or alternate methods. Non-exempt students whose assessment results indicate a need for developmental education shall enroll in developmental education in the area of the deficiency. Students whose native language is not English may be required to take another test to measure their English proficiency and subsequently matriculate through EAP to demonstrate readiness. Students with documented disabilities are provided appropriate testing modifications or accommodations.

The SBOE also requires institutions offering Postsecondary Career and Technical Education and Adult Education programs to test students pursuing these programs. Miami Dade College (MDC) may accept official test scores from approved academic institutions and approved regional workforce boards. If a student presents valid test scores or high school course grade criteria that meet or exceed the state minimum score and/or grade requirements, he or she does not have to take the placement test in the related sub test area. All test scores presented must have been obtained within the past two years and course grades are limited to currently enrolled secondary school students and students who graduated from a high school within a two (2) year period. To find out what minimum scores or course grade a student needs to be exempt from taking the placement test, or for other reasons why a student may not be required to take the placement test, students are asked to contact the campus Testing and Assessment Department. This information may also be acquired by visiting the Testing and Assessment website (<https://www.mdc.edu/testing/testing-criteria/>).

Students who have to take the placement test should utilize the 'Test Preparation' resources available on the specific test webpage before they take the placement test. If a non-exempt student's scores on one or more of the subtests of the placement test fall below the minimum passing scores established by the SBOE, he or she must enroll for at least one developmental education course during their first term. Further evaluation may be conducted in classes, and developmental education course placement changed, based on the results of the additional assessment.

The SBOE also requires institutions offering Postsecondary Career and Technical Education and Adult Education programs to test students pursuing these programs. The TABE and CASAS Steps are used for this purpose at MDC. Adult Education students without English proficiency are administered the CASAS Steps for placement into appropriate Adult English for Speakers of Other Languages (ESOL) program courses.

If a student has any questions regarding these assessments, including exemptions, he or she should contact the campus Testing and Assessment Department. This information may also be acquired by visiting the Testing Criteria webpage referenced above in the third paragraph.

Learning Resources

Learning Resources houses the Library, Computer Courtyard, and various multi-disciplinary tutoring centers. Students have access to comfortable study spaces for individual or collaborative learning with librarians and other academic experts within reach. At each campus, students will find an extensive collection of books (both academic and bestsellers), periodicals, videos, and mobile devices such as laptops and headsets. Additionally, students have access to eBooks, streaming videos, and an large selection of journal and magazine articles available online. All Learning Resources computers are equipped with the latest educational software applications required by faculty at MDC. All items within the collection are available to check out at no cost to students and staff. Librarians are available to assist students during the research process both on a one-on-one basis and in the classroom. In addition, Learning Resources works closely with the Academic Disciplines to provide tutoring in a wide variety of subjects. Supplemental instruction sessions from embedded tutors, learning assistants, and educational technologists can also extend the tutoring services into the classroom upon faculty request. Students can take

advantage of hundreds of educational workshops designed to enhance valuable skills while in college, and later in the job place. All library and instructional support services are available on campus and online. For more information, visit <https://www.mdc.edu/learning-resources/>

Registration and Records

Students may register online by going to the College's Homepage (www.mdc.edu/registration). Students may also register for courses in person at each campus Admissions and Registration. The College Registrar's Office is the designated custodian of all official academic records. The College Registrar's Office maintains official student transcripts, processes final grades at the end of each term and updates student records with address, name and approved grade changes. The campus Admissions and Registration offices maintains official student transcripts, processes final grades at the end of each term and updates student records with address, name and approved grade changes. The Collegewide Transcript Processing Services area provides official copies of student transcripts to students, or to institutions or agencies upon request from students. The College also participates in the electronic transmission of student transcripts (to other participating institutions). Students may request academic transcript online at www.mdc.edu/transcripts.

ACADEMIC REGULATIONS

Attendance in Class

Students are expected to attend every class meeting and to arrive on time. Students who expect to miss a class, or those anticipating tardiness, should let the instructor know. In most courses, attendance requirements are listed on the syllabus. It is the responsibility of the student to make up work missed.

Audit

Students desiring to enroll in a course at Miami Dade College, but who do not wish to receive a grade or credit for the class, may elect to audit. Students will not be allowed to change from an audit status to a credit status (or from credit to audit) after the 100 percent refund date for each term. Audit courses will be included in the student's academic record with a non-punitive grade of "Z"; however any audit courses taken prior to fall 2016 will show a grade of "X". Courses and credits enrolled for audit purposes do not count in the computation of a student's full-time or part-time enrollment status. College Preparatory students, who are required to be certified as completing competency-based College Preparatory instruction, cannot be enrolled under audit status. Auditing a class costs the same as enrolling for a credit course.

Course Load

All credit courses carry a specified number of credits. A 3-credit lecture course normally meets three hours per week during the 16-week terms, and eight hours per week during the six-week terms. Lab classes generally meet for two hours per credit. The fall and spring terms are called "major terms" and are approximately 16 weeks long. During a major term, a full course load is considered to be 12 or more credits. The summer term consists of two six-week summer sessions (first six-weeks/second six-weeks). Some courses are scheduled for the combined summer sessions of 12 weeks. During the six-week summer session a full load is considered to be 6 or more credits. It is suggested that students who are employed should reduce their college load as follows:

Work Hours Per Week	# Credits Fall/Spring	# Credits Summer A/B
20	12-15	6-7
25	8-11	5-6
40	6-7	3

Grading System

Students in college credit and vocational credit courses are graded according to the following grade point average (GPA) system:

A. Used in GPA computation:		
Grade	Interpretation	Point Value
A	Excellent	4
B	Good	3
C	Average	2
D	Poor	1
F	Failure	0

B. Not used in GPA computation:	
Code	Interpretation
I	Incomplete
W	Withdrew
Z	Audit
S	Satisfactory
P	Progress - course requirements not completed, student must repeat

U	Unsatisfactory
NC	No Credit
NG	No grade assigned
NR	Grade not recorded by instructor

Final grades are available on the student portal following the end of the term.

Grade Point Average (GPA)

Each letter grade has a point value (see above). To compute the grade points for a course, multiply the grade point value by the number of credits. For example, a "B" in a 3-credit course, is worth 9 points. A "B" in a 4-credit course is worth 12 points. To calculate a GPA, add the total grade point values for all courses and divide that figure by the total number of credits attempted. In order to graduate from any credit program at MDC and/or to qualify for entry into a bachelor's degree program, a student must have a minimum 2.0 GPA.

Course Code	Credits	Grade	Total Points
ENC 1101	3	A	12
HUM 120	3	C	6
ISS 1120	3	F	0
ISS 1161	3	B	9
ART 1300C	3	C	6
DAA 1160	1	B	3
Total	16		36
<i>Divide 36 points by 16 credits = 2.25 GPA</i>			

Repeating Courses

Students may repeat courses taken at MDC if they received a "W," "U," "D," or "F" grade. State rule (F.A.C. 6A-14.0301) limits the number of repeat attempts to three per course. The third and final repeat attempt (i.e., the fourth time a student attempts the course) may be granted only if the student petitions (<https://www.mdc.edu/smart/>) through an appeals process, and if the student has documentation to convey extenuating circumstances. However, a student is not permitted to withdraw during the third or fourth attempt (i.e., a grade must be assigned). Repeated surcharges apply to any third or fourth attempt. All courses originally taken and then repeated will appear on the student's transcript with assigned grades, but the GPA will be recomputed to average the third and subsequent attempts of computable grades. Specific courses, as identified in the course description section, may be repeated multiple times for additional credit. All attempts of these courses will be included within the GPA. Students should note that some state universities and colleges may not accept courses repeated for additional credit. Students should also be aware that some private colleges or universities might not accept the grade of a repeated course, and that some institutions compute the grade originally assigned.

Incomplete "I" Grade

When a student is unable to complete the requirements of a course by the end of the semester, the student may be assigned an "Incomplete" or "I" grade. The "I" grade is recorded by the instructor if the student has valid reasons for not being able to finish the work. The student and instructor complete an "Agreement for Grade of Incomplete" form, which stipulates the work to be completed for a grade. If the student has not completed the required coursework after 180 calendar days, the incomplete grade will be changed to a failing grade.

Grade Appeals

The responsibility for the academic evaluation and assignment of grades is that of the faculty member teaching the course. A student who believes that he or she has been unfairly graded should first appeal the grade to the faculty

member. If satisfaction is not achieved, the student may appeal through administrative channels (Department Chair, Academic Dean or the grade appeals committee <http://www.mdc.edu/procedures/Chapter8/8301.pdf>).

Academic Amnesty

Students with credits more than 10 years old may petition to have these grades excluded from cumulative GPA calculation. This is a one-time privilege. Students may not request specific courses to be removed; it must be the entire prior record. Students may obtain a Request for Academic Amnesty form at any Advisement & Career Services Department. Since academic amnesty does not remove courses from the academic record (it only excludes them from cumulative grade point average calculations at MDC), state/federal regulations concerning course attempts will still apply. Therefore, if a student has three or more attempts in the same course, state regulations mandate that the student be assessed the full cost of instruction and not be permitted to withdraw after the 100 percent refund deadline for the course. Academic amnesty does not apply to federal and state financial aid regulations. The academic record impacted by academic amnesty is not excluded from federal and state financial aid policies. Students should consult an MDC financial aid advisor prior to requesting academic amnesty. Academic amnesty requests that include courses that were used as part of the requirements for a previously awarded program of study will not be processed.

Petitions Committee

The Petitions Committee (www.mdc.edu/rightsandresponsibilities/) considers exceptions to financial and withdrawal policies as stated in this catalog. Students should submit a written petition to the committee. The committee will make a recommendation to the Dean of Student Services for approval and implementation. The decision of the Dean is final. Petitions should identify the student (complete name and student number), and clearly and concisely state the request (by writing a personal letter and supplying supporting documentation for the reason stated in the letter). Students should address the petition to: Petitions Committee, Dean of Student's Office, and submit the petition at the campus at which they are registered for courses. Petitions must be made by the end of the next major term (fall and spring).

Student Ombudsman

MDC has a student ombudsman who serves as the initial point of contact for students who have concerns, complaints or issues related to College processes, policies and procedures. The Ombudsman listens to student concerns; directs students to the appropriate MDC office, policies and procedures; and, if requested, assists students in completing the forms required to obtain a resolution. The Student Ombudsman has the authority to investigate issues and arrange meetings among the involved parties in order to reach a resolution. MDC has designated the Student Ombudsman as the Assistant Dean of Student Services or designee at each campus (<https://www.mdc.edu/financialaid/how-aid-works/access-consumer-resources.aspx>).

Standards of Academic Progress

The main purpose for the Standards of Academic Progress (SOAP) Procedure is to establish a formal process through which the faculty, staff, and administration at Miami Dade College may identify and provide support to students who experience academic difficulty and fall below a Combined Cumulative Grade Point Average (GPA) of 2.0 (Calculated from the combined graded units for GPA). The combined Cumulative GPA includes computation of grades for both MDC and posted transfer courses. Good Academic Standing is defined as 2.0 or higher for the Combined Cumulative GPA. SOAP is not intended to discourage or penalize students. Rather, SOAP reflects the commitment of the College's faculty, staff, and administration to provide students with assistance and support to ensure success in achieving their educational goals. Students have available to them a variety of means to remedy their cognitive and non-cognitive challenges and to be academically successful. When academic progress has not been satisfactory, SOAP requires students to meet with an academic and career advisor to develop an academic improvement plan and discuss support services that may assist them in achieving good academic standing. Students who are not in Good Academic Standing are ineligible to run for executive board positions in student organizations unless special permission is granted by the Dean of Students at their home campus. The overall objective of SOAP is to improve the performance of students experiencing academic difficulty by connecting them to academic and student support services (<https://www.mdc.edu/procedures/Chapter4/4010.pdf>).

Categories for Standards of Academic Progress

- *Warning:* from 8 to 16.99 combined graded units/credits for GPA with less than 2.0 for the Combined Cumulative GPA.

- *Probation*: from 17 to 45.99 combined graded units/credits for GPA with less than 2.0 for the Combined Cumulative GPA or previously in Probation and Term GPA is less than 2.0.
- *Course Load Reduction Warning*: from 30 to 45.99 combined graded units/credits for GPA less than 1.5 Combined Cumulative GPA and previously in Good Academic Standing or 46 or more combined graded units/credits for GPA less than 2.0 for the Combined Cumulative GPA and previously in Good Academic Standing.
- *Course Load Reduction 1*: from 30 to 45.99 combined graded units/credits for a GPA of less than 1.5 for the Combined Cumulative GPA and previously not in Good Academic Standing.
- *Course Load Reduction 2*: 46 or more combined graded units/credits for GPA with less than 2.0 for the Combined Cumulative GPA and previously not in Good Academic Standing.
- *Extended Course Load Reduction*: 30 or more combined graded units/credits for GPA and previously on Course Load Reduction Warning, 1, 2, or 3 with a Term GPA of 2.0 or higher.
- *Course Load Reduction 3*: 30 or more combined graded units/credits for GPA and failure to meet the minimum requirements of maintaining a Term GPA of 2.0 or higher during Extended Course Load Reduction or Course Load Reduction 1, 2, or 3.

Interventions for each Category of Standard of Academic Progress (SOAP)

- *Warning*: Students in this category are encouraged to meet with College staff to discuss enrollment and academic planning. The College provides support with registration, updating academic plans, and development of educational and career goals as well as connections with academic resources and holistic student support services. In an effort to support student success, course load reductions for the subsequent term may be placed to ensure the student makes adequate progress.
- *Course Load Reduction Warning*: Students in this category must meet with a Student Success Advisor to discuss enrollment and academic planning. This plan may include referrals to academic support services and/or holistic student support services. In an effort to support student success, course load reductions for the subsequent term may be placed to ensure the student makes adequate progress.
- *Probation*: Students in this category may register for up to 12 units/credits per semester and must meet with College staff to discuss enrolling beyond the unit limit. The College provides support with registration, updating academic plans, and development of educational and career goals as well as connections with academic resources and holistic student support services. In an effort to support student success, course load reductions for the subsequent term may be placed to ensure the student makes adequate progress.
- *Extended Course Load Reduction*: Students in this category may register for up to 9 units/credits and must meet with College staff to discuss enrolling beyond the unit/credit limit. The College provides support with registration, updating academic plans, and development of educational and career goals as well as connections with academic resources and holistic student support services. In an effort to support student success, course load reductions for the subsequent term may be placed to ensure the student makes adequate progress.
- *Course Load Reduction 1 or 2*: Students in this category may register for up to 9 units/credits and must meet with the Director of Advisement or their designee to discuss enrolling beyond the unit/credit limit. Students are also encouraged to meet with a Student Success Advisor to develop an academic improvement plan. This plan may include referrals to academic support services and/or holistic student support services. In an effort to support student success, course load reductions for the subsequent term may be placed to ensure the student makes adequate progress.
- *Course Load Reduction 3*: Students in this category may register for up to 7 units/credits and must meet with the Director of Advisement or their designee to discuss enrolling beyond the unit/credit limit. Students are also encouraged to meet with a Student Success Advisor to develop an academic improvement plan. This plan may include referrals to academic support services and/or holistic student support services. In an effort to support student success, course load reductions for the subsequent term may be placed to ensure the student makes adequate progress.

Advisement at their home campus for consideration of continued enrollment:

1. Academic Suspension 1 or 2 Students are required to pause enrollment in credit courses at the College for the next term (fall, spring, or summer).
2. Extended Academic Probation Students who have successfully appealed Academic Suspension or who have met the time conditions for suspension may continue enrollment in credit courses at the College under the category of Extended Academic Probation, provided that they maintain a Combined Cumulative GPA of 2.0 or higher. Students must meet with an academic and career advisor prior to enrolling in courses to develop an

academic improvement plan which may include referrals to academic support /tutoring and/or student support services, career advising, learning style assessment, and/or enrollment in a Student Life Skills (SLS) course. Students may also be required to reduce their course load.

3. Academic Dismissal Students are required to discontinue enrollment in credit courses at the College for at least twelve months. After the twelve-month dismissal period, students are required to meet with the Dean of Students or designee at their home campus to petition for re-admission.

Guidelines for Appeal of Standards of Academic Progress

Students may request an exception to course load reductions according to MDC Procedure 4015 Guidelines for Appeal of the Standards of Academic Progress (<https://www.mdc.edu/procedures/Chapter4/4015.pdf>) as follow:

1. Probation and Extended Course Load Reduction statuses Students in these statuses may meet with college staff to request to exceed course load reductions. Students not approved to exceed course load reductions by college staff may appeal to the Director of Advisement or designee. Students not approved to exceed course load reductions by the Director of Advisement or designee may appeal the decision to their home campus' Dean of Students or designee and their decision is final.
2. Course Load Reduction 1, 2, or 3 statuses Students in these statuses may submit a request to exceed course load reductions to the Director of Advisement or designee at their home campus. Students not approved to exceed course load reduction by the Director of Advisement or designee may appeal the decision to their home campus Dean of Students or designee and their decision is final.
 - Documentation Students will be encouraged to complete the "Exception to Course Load Reduction Questionnaire" form and present evidence/supporting documentation that reflects a change in circumstances in order to enroll beyond course load reduction.
 - Academic Improvement Plan Students must meet with a Student Success Advisor prior to enrolling in courses to develop an academic improvement plan which may include a referral(s) to academic support/tutoring and/or student support services, career advising, learning style assessment, and/or enrollment in a Student Life Skills (SLS) or other prescribed intervention course. Students may also be required to reduce their course load.
 - Decision and Record of the Appeal The decision of the Dean of Students or designee is final on behalf of the College. Students will be informed of the decision in five (5) business days.

Standards of Progress for Students Receiving Financial Aid

A student receiving financial aid must meet "Standards of Academic Progress." Federal regulations state that students are eligible to receive financial aid benefits for up to 150 percent of the number of credits registered to complete the degree or certificate. After the 150-percent mark, benefits will terminate. This applies to all registered credits, including courses that were attempted or withdrawn from, but not including "I" grades or audits. Thirty credits of College Preparatory and AP credits are exempted from this 150-percent rule. Students who meet or exceed the 150 percent are no longer eligible to receive federal/state financial aid. For extenuating circumstances, students may appeal through the Petition for Financial Aid Waiver.

Code of Conduct

By the act of registering at Miami Dade College, a student agrees to abide by the Code of Conduct of the College. A student who violates the Code of Conduct while on College property or while participating at a College sponsored event may be suspended (<http://www.mdc.edu/procedures/Chapter4/4025.pdf>). Refer to Petitions Committee (<https://www.mdc.edu/rightsandresponsibilities/>) for more information.

Transcript of Records

A transcript (<http://www.mdc.edu/transcripts/>) is a printed list of all the courses taken, the number of credits and grade earned. Transcripts summarize the GPA and also indicate the receipt of any certificates or degrees. Students must request their official transcripts via the student portal (<https://www.mdc.edu/transcripts/official.aspx>) or in-person at the Office of the College Registrar.

Drops and Withdrawals

Dropping Courses

Students may drop courses within the drop period indicated on their class schedule. They may do so online using

their MyMDC account, or in person at any campus Admissions and Registration Office. Note that a reduction in course load may impact athletic eligibility, financial aid, scholarships, and veteran benefits.

Administrative Withdrawal from Courses

Miami Dade College reserves the right to cancel courses and/or programs for which there is insufficient enrollment, to close a course when the enrollment limit in that course is reached and to make any schedule changes as necessary, including a change in time, days, credit, location or instructor. In the event of course cancellation, the College will notify each registrant by email and/or by telephone and will issue a full refund for the course. Miami Dade College is not responsible for any other related expenses. Students may see an academic advisor regarding selection of another course. Faculty have the right to withdraw a student from their course for lack of attendance ("no show") or excessive absences as determined by established departmental guidelines. If a student is withdrawn from a course or courses for disciplinary reasons, the student is not entitled to a refund of matriculation, tuition or special fees.

College Withdrawal Policy for Credit and Developmental Education Courses

Students who enroll in the same course for the third time (or subsequent time) will not be permitted to withdraw from (drop) the course. Attempts taken by students prior to the Fall Term 1997 will not be counted as an attempt for the purposes of this policy. An attempt is counted any time students officially enroll, have a paid fee invoice for a course, and do not withdraw from (drop) the course with a refund. For example, a student enrolled in a course in the Fall Term 2015 and received an "F" grade in the course. The student enrolled again in the same course in the Spring Term 2016 and found it necessary to withdraw from (drop) the course with a grade of "W" (Withdrawal). The student enrolled again for the third time in the course for the Summer Term 2016. The student needed to withdraw again from the course. This was not permitted, and the student received a valid grade of A, B, C, D, F, S, P or U at the end of the term.

Cost to Re-Enroll in a Course

Florida Statutes 1009.28 (applies to developmental education courses) and 1009.285 (applies to college credit courses) state that students who enrolled in the same course twice, received a grade of W, D, F, P, U or X and wish to re-enroll for the third time must pay the full cost of instruction for this attempt and any later attempts. This fee is equivalent to the cost of the course for a student paying fees as a nonresident of the state of Florida for tuition purposes. Students who are assessed the higher fee on the third attempt only may appeal to have the fee lowered. Contact the Dean of Student Services Office (<https://www.mdc.edu/remote-learningstudents/student-support-services/dean-of-students>) at the campus where the course is offered for more information. A student cannot re-enroll in a course for credit if the student previously earned a grade of I, S, C or better. This policy is a result of 6A-14.0301 Florida Administrative Code.

Simple Syllabus

Simple Syllabus is Miami Dade College's official syllabus platform. It provides students with easy access to current course information, including learning outcomes, course expectations, required materials, grading policies, and important College resources. By using Simple Syllabus, students can stay informed, understand course requirements, and access key information from any device throughout the term. MDC Syllabus Library: <https://mdc.simplesyllabus.com/>

GRADUATION REQUIREMENTS AND TRANSFER INFORMATION

Graduation Requirements

Miami Dade College offers programs leading to the Associate in Arts (AA), Associate in Science (AS), and baccalaureate degrees, as well as Certificate of Professional Preparation (CPP), Advanced Technical Certificates (ATC), College Credit Certificates (CCC), and Career Technical Certificates (CTC). Students must satisfy general education and/or program requirements to earn a credential. Information about academic offerings is available through the Miami Dade College Academic Programs page: <https://www.mdc.edu/academics/programs/default.aspx>.

Continuous Enrollment for Graduation Requirements

The College graduation requirements are based upon the term of admission or readmission to Miami Dade College. Those requirements apply as long as the student has continuous annual enrollment. If a student does not register for a period exceeding one year, he or she is subject to the graduation requirements in effect for the year and term of re-admission to the College.

Baccalaureate Degree

Required Hours and GPA

Successful completion of a minimum of 120 semester hours or as approved by the State Board of Education, and a minimum GPA of 2.0 is required to earn a baccalaureate degree.

Note: A higher GPA may be required for specific majors.

General Education

Satisfactory completion of General Education courses (36 semester hours) as follows Per 6A-10.030, Florida Administrative Code:

- Area I. English Composition (6 semester hours)
- Area II. Oral Communication (3 semester hours)
- Area III. Humanities/Fine Arts (6 semester hours)
- Area IV. Behavioral/Social Science (6 semester hours)
- Area V. Natural Science (6 semester hours)
- Area VI. Mathematics (6 semester hours)
- Area VII. General Education Elective (3 semester hours)

Civics Literacy Competency

Prior to the award of an associate in arts or baccalaureate degree, new and returning students entering a Florida College System institution in the 2021-22 catalog year, and thereafter must demonstrate competency in civic literacy. This requirement may be satisfied by passing AMH 2010 or AMH 2020 or POS 2041 AND an approved exam (AP, CLEP, or FCLE). For more information regarding the Florida Civic Literacy Requirement, go to [Civic Literacy Competency](#).

Computer Skills Competency

By the 16th earned college-level credit, students must attempt the computer competency requirement OR by the 31st earned college-level credit, students must satisfy the requirement (CGS1060C, an equivalent college credit course or the College's approved computer competency test). For more information, see [Computer Competency](#).

Requirements for Admission to Upper Division

Students should review the Baccalaureate Degree section of this catalog and contact the Academic Department responsible for the specific Baccalaureate admissions criteria.

Foreign Language Requirement

In accordance with Rule 6A-10.02412, Florida Administrative Code and pursuant to Section 1007.262, Florida Statute, all AA and baccalaureate degree seeking students must demonstrate Foreign Language Competence (FLC) by: (a) successfully completing the elementary 2 level (i.e., 2 years of secondary/high school level) or postsecondary/

college level equivalent in one (1) foreign language or American Sign Language OR (b) successfully completing a standardized examination that documents the required FLC. Students who demonstrate proficiency in a native language other than English are exempt. For more information, please visit the MDC Credit-by-Exam website or contact the MDC World Languages department. For more information, refer to [Foreign Language Competency](#).

Associate in Science Degree

Associate in Science degree: Awarded to students who successfully complete a program of career and technical instruction consisting of lower division college credit courses to prepare for entry into employment. The associate in science degree is a transfer degree and a basis for admission to a related bachelor's degree. The associate in science degree shall be awarded upon satisfactory completion of a planned program of instruction comprised of the standard credit hour length established, after demonstration of the attainment of predetermined and specified performance requirements. The standard credit hour length of all associate in science degree programs as defined in Rule 6A-6.0571, F.A.C.

Requirements for Associate in Science Degree

1. Complete an approved program of study with 60 credits or as approved by the State Board of Education.
2. Earn a minimum 2.0 cumulative GPA in the 60 credits or as approved by the State Board of Education required for graduation.
3. Complete a minimum of 15 credits of general education courses.
4. First-time-in-college students must demonstrate competency in civic literacy.
5. Meet MDC Residency for Graduation requirements.

General Education and Miami Dade College Student Learning Outcomes

General Education: Student Learning

General education courses should provide broad foundational knowledge to help students develop intellectual skills and habits that enable them to become more effective and lifelong learners and contain high-level academic and critical thinking skills.

Student Learning Outcomes: A Promise between Students and Faculty

All students who graduate from MDC - regardless of major or degree type - have ten things in common: the college-wide student learning outcomes (CSLO). Developed collaboratively by students, faculty, alumni and industry partners, and adopted in 2007, the outcomes are part of the Miami Dade College learning experience. The Learning Outcomes Committee (LOC) provides oversight of MDC's assessment and student learning improvement activities. The CSLOs summarized below will help students succeed in their chosen field, strengthen critical life skills, and encourage lifelong learning:

1. Communicate effectively using listening, speaking, reading, and writing skills
2. Use quantitative analytical skills to evaluate and process numerical data
3. Solve problems using critical and creative thinking and scientific reasoning
4. Formulate strategies to locate, evaluate, and apply information
5. Demonstrate knowledge of diverse cultures, including global and historical perspectives
6. Create strategies that can be used to fulfill personal, civic, and social responsibilities
7. Demonstrate knowledge of ethical thinking and its application to issues in society
8. Use computer and emerging technologies effectively
9. Demonstrate an appreciation for aesthetics and creative activities
10. Describe how natural systems function and recognize the impact of humans on the environment

General Education Requirements for the Associate in Arts

To receive an Associate in Arts, students must complete 36 Units of General Education courses and 24 Units of Pathway Elective courses. Total credits required for the degree: 60. Students must complete the following pathway/program information located at <https://www.mdc.edu/academics/programs/ps/associate-in-arts-pathway-guide-effective-2026.pdf>:

*Effective term depends on your most recent term of admission to the College. Students admitted to the College prior to Fall 2024 can view their effective term on the Academic Requirements page in MDConnect at mdconnect.mdc.edu.

NATURAL SCIENCES 6 Credits* Select at least 1 course from the 13 State Core options. Lab Credits are not allowed in this area.		GENERAL EDUCATION ELECTIVE 3 Credits Select at least 1 course from the following options.				
State Core 3 Credits 1. AST 1002 - Descriptive Astronomy 2. BSC 1005 - General Education Biology 3. BSC 2010 - Principles of Biology 4. BSC 2085 - Human Anatomy and Physiology I 5. PATHWAY ELECTIVES 24 Credits Elective courses should be selected by pathway and/or specialization. Consult with an advisor. Also refer to information available at your Transfer Institution of choice. General education courses that are not used to meet general education requirements may be used for pathway electives in this block.						
FOREIGN LANGUAGE COMPETENCY May be satisfied by Foreign Language Competency (FLC) standardized examinations. For more information, refer to Foreign Language Competency . OR						
ASL 1150C CHI 1121 FRE 1121		GER 1121 ITA 1121 JPN 1121		POR 1121 RUS 1121 SPN 1121		

COMPUTER COMPETENCY		
By the 16th earned college-level credit, students must attempt the computer competency requirement OR by the 31st earned college-level credit, students must satisfy the requirement (CGS1060C, an equivalent college credit course or the College's approved computer competency test). For more information, see Computer Competency .		
CHM 1025		
The Chemistry Advanced Readiness Test (CART) is an opportunity for eligible students to bypass CHM1025. Review the MDC CART webpage for eligibility.		
CIVIC LITERACY COMPETENCY		
Associate in arts or Baccalaureate degree students who entered a Florida College System (FCS) or State University System (SUS) institution in the 2021-2022 academic school year and thereafter, and associate in science degree students entering a Florida College System (FCS) or State University System (SUS) institution in the 2022-2023 academic school year and thereafter, must demonstrate competency through successful completion of a civic literacy course (AMH 2010 or AMH 2020 or POS 2041) <u>and</u> by achieving a passing score on the Florida Civic Literacy Examination (FCLE). For more information regarding the Florida Civic Literacy Requirement, visit the MDC Civic Literacy Competency resources.		
60 CREDITS REQUIRED FOR GRADUATION		
General Education: 36 Credits		Pathway Electives
State Core: 15 Credits	MDC Core: 21 Credits	24 Credits
For more information regarding General Education Course Options, refer to Rule 6A-14.0303, General Education Course Options .		
GENERAL EDUCATION CORE COURSE STANDARDS		
1. Communication courses must afford students the ability to communicate effectively, including the ability to write clearly and engage in public speaking. 2. Humanities courses must afford students the ability to think critically through the mastering of subjects concerned with human culture, especially literature, history, art, music, and philosophy, and must include selections from the Western canon. 3. Mathematics courses must afford students a mastery of foundational mathematical and computation models and methods by applying such models and methods in problem solving. 4. Natural Science courses must afford students the ability to critically examine and evaluate the principles of the scientific method, model construction, and use the scientific method to explain natural experiences and phenomena. 5. Social Science courses must afford students an understanding of the basic social and behavioral science concepts and principles used in the analysis of behavior and past and present social, political, and economic issues.

Important Information

- The official graduation requirements are on the Academic Requirements page in MDConnect at mdconnect.mdc.edu. You are encouraged to visit Advisement for assistance with your degree requirements.
- Other Assessment Procedures for College-Level Communication and Computation Skills (6A-10.030) (often referenced as Gordon Rule) requires:
 - o **W** = Writing Intensive Course: Six (6) semester hours of English coursework and six (6) semester hours of additional coursework in which the student is required to demonstrate college-level writing skills through multiple assignments.
 - o **C** = Computational Course: Six (6) semester hours of mathematics coursework at the level of college algebra or higher.
- *General education courses require a grade of C or higher to satisfy the requirement.
- W = Writing Intensive Course
- C = Computational Course

Other Assessment Procedures for College-Level Communication and Computation Skills (6A-10.030) (often referenced as Gordon Rule)

1. In addition to assessments that may be adopted by the State Board of Education or Board of Governors to measure student achievement in college-level communication and computation skills, other assessment requirements shall be met by successful completion of coursework in English and mathematics. For the purposes of this rule, a grade of C or higher shall be considered successful completion.
2. Prior to receipt of an Associate in Arts degree from a public community college or university or prior to entry into the upper division of a public university or college, a student shall complete successfully the following:
 - Six (6) semester hours of English coursework and six (6) semester hours of additional coursework in which the student is required to demonstrate college-level writing skills through multiple assignments. Each institution shall designate the courses that fulfill the writing requirements of this section. These course designations shall be submitted to the Statewide Course Numbering System. An institution to which a student transfers shall accept courses so designated by the sending institution as meeting the writing requirements outlined in this section.
 - Six (6) semester hours of mathematics coursework at the level of college algebra or higher. For the purposes of this rule, applied logic, statistics and other such computation coursework which may not be placed within a mathematics department may be used to fulfill three (3) hours of the six (6) hours required by this section.
 - (c) Students awarded college credit in English based on their demonstration of writing skills through dual enrollment, advanced placement, or international baccalaureate instruction pursuant to Rule 6A-10.024, F.A.C., and students awarded college credit based on their demonstration of mathematics skills at the level of college algebra or higher through one (1) or more of the acceleration mechanisms in Rule 6A-10.024, F.A.C., shall be considered to have satisfied the requirements in subsection 6A-10.030(2), F.A.C., to the extent of the college credit awarded.
3. Exemptions and Waivers. Any public community college or university desiring to exempt its students from the requirements of subsection 6A-10.030(2), F.A.C., shall submit an alternative plan to the Department of Education. Upon approval of the plan by the Department, the plan shall be submitted to the State Board of Education or the Board of Governors as appropriate. Upon approval by the State Board of Education or the Board of Governors, said plan shall be deemed effective in lieu of the requirements of subsection 6A-10.030(2), F.A.C.

Note: A list of MDC courses that fulfill this requirement, can be found at http://www.mdc.edu/asa/faculty/gordon_rule_courses.asp.

Advanced Technical Certificate Programs

Awarded to students who successfully complete a program of career and technical instruction consisting of nine (9) hours or more but less than forty-five (45) college credits of lower division and/or upper division courses. Florida College System institutions offering advanced technical certificates with upper division courses must be approved to offer baccalaureate programs containing those courses. An advanced technical certificate may be awarded to students who have already received an associate in science degree or an associate in applied science degree and are seeking an advanced specialized program of instruction to supplement their associate degree (information located at www.mdc.edu/academics/programs/default.aspx).

College Credit Certificate Programs

Awarded to students who successfully complete a program of career and technical instruction consisting of less than sixty (60) college credits which are part of an associate in science degree or an associate in applied science degree program and prepare students for entry into employment. The standard credit hour length of all technical certificate programs as defined in Rule 6A-6.0571, F.A.C. (information located at www.mdc.edu/academics/programs/default.aspx).

Career Technical Certificate Programs

Awarded to students who successfully complete a program of career and technical instruction consisting of clock hour courses to prepare for entry into employment. Upon satisfactory completion of a planned program of instruction, after the demonstration of the attainment of predetermined and specified performance requirements, the career and technical certificate shall be awarded. The standard clock hour length of all career and technical

certificate programs as defined in Rule 6A-6.0571, F.A.C. (updated information located at www.mdc.edu/academics/programs/default.aspx).

Commencement (Graduation Ceremony)

Students who anticipate completing their program during the academic year should meet with an academic advisor to ensure that all graduation requirements will be met. Also, students must apply for graduation by the deadline published in the academic calendar. Students planning to graduate in spring or summer terms should note that the deadline is very early in the spring term. The commencement ceremony is held once a year, at the end of spring term (late April or early May). Caps and gowns are available at campus bookstores for those who have applied for graduation. There is no cost for these items.

Special Recognition for Outstanding Academic Performance (College Credit Students Only)

The College gives special recognition to students who demonstrate outstanding academic performance while working toward a degree. Students are eligible for the following recognition:

- *Dean's List* – recognizes students who have a term combined cumulative GPA of 3.5 or above for 12 or more credits earned in the fall, spring, or summer term.
- *Letter of Congratulations* – the campus dean of faculty or equivalent sends a special letter of congratulations to students who earn a term grade point average of 4.0 for 12 or more credits earned in the fall or spring terms (excluding courses that do not satisfy degree requirements).

In addition, special designations are entered on transcripts of students awarded a degree program as follows:

- *Honors* - A combined cumulative GPA of 3.5–3.69 is required to graduate with Honors.
- *Honors and Distinction* - A combined cumulative GPA of 3.5–3.69 and at least 15 credits earned in honors courses is required to graduate with Honors and Distinction.
- *Highest Honors* - To graduate with Highest Honors, a student must achieve a combined cumulative GPA of 3.7 or higher.
- *Highest Honors and Distinction* - A combined cumulative GPA of 3.7 or higher and at least 15 credits earned in honors courses is required to graduate with Highest Honors and Distinction.
- *Phi Theta Kappa* - To be eligible for induction into Phi Theta Kappa, the International Honor Society of the Two Year College, a student must have completed a minimum of 12 college-level credits leading to an Associate degree, with a minimum 3.5 combined cumulative GPA and the student must be currently enrolled. Upon graduation, initiated students will have the designation noted on their transcript.

Transfer Information

Transfer information and resources, including transfer agreements and transfer tips, can be found at: <https://www.mdc.edu/transfer-information/>. Graduating with an Associate in Arts degree guarantees MDC graduates numerous transfer benefits. Certain Associate in Science degrees are also transferable to related baccalaureate degree programs. Additional information about transfer guarantees and agreements can be found in the Transfer Agreement section. Miami Dade College offers baccalaureate degrees in several areas of study: <http://www.mdc.edu/academics/programs/bachelors.aspx>. Students who meet the admissions criteria for these programs may apply at: <https://mdcwap.mdc.edu/admission/>. Campus Advisement & Career Services Offices offer students a variety of academic advising and career-related services. Students who are undecided about their academic major or career goals, or who are interested in a systematic investigation of the universities best suited for their needs, should visit the Advisement & Career Services Office at their campus.

Articulation

Articulation is a system designed to provide for seamless transfer pathways for students from high school, through the Florida College System and into a baccalaureate degree program at a State University, Florida College System institution, or other postsecondary institution. There are a number of articulation agreements which create special transfer opportunities for students (updated information located at <https://www.mdc.edu/transfer-information/>).

Articulation Agreements with Miami-Dade County Public Schools

Miami Dade College and Miami-Dade County Public Schools have entered into several articulation agreements. These range from the formalized Early College Program agreements with New World School of the Arts and the School for Advanced Studies, to agreements for transfer of specific career pathways and career and technical education credits to Associate in Science degrees and certificate programs.

State of Florida Articulation Agreement

Section 1007.23, Florida Statutes, states the following:

1. The State Board of Education and the Board of Governors shall enter into a statewide articulation agreement which the State Board of Education shall adopt by rule. The agreement must preserve Florida's "2+2" system of articulation, facilitate the seamless articulation of student credit across and among Florida's educational entities, and reinforce the provisions of this chapter by governing:
 - Articulation between secondary and postsecondary education;
 - Admission of Associate in Arts degree graduates from Florida College System institutions and state universities;
 - Admission of applied technology diploma program graduates from Florida College System institutions or career centers;
 - Admission of Associate in Science degree and Associate in Applied Science degree graduates from Florida College System institutions;
 - The use of acceleration mechanisms, including nationally standardized examinations through which students may earn credit;
 - General education requirements and statewide course numbers as provided for in ss. 1007.24 and 1007.25; and
 - Articulation among programs in nursing.
2. The articulation agreement must specifically provide that every associate in arts graduate of a Florida College System institution shall have met all general education requirements and must be granted admission to the upper division of a:
 - State university, except for a limited access or teacher certification program or a major program requiring an audition.
 - Florida College System institution if it offers baccalaureate degree programs, except for a limited access or teacher certification program or a major program requiring an audition. (b) Florida College System institution Associate in Arts graduates shall receive priority for admission to the upper division of a Florida College System institution or to a state university over out-of-state students. Orientation programs, catalogs, and student handbooks provided to freshman enrollees and transfer students at Florida College System institutions and state universities must include an explanation of this provision of the articulation agreement.
3. To improve articulation and reduce excess credit hours, beginning with students initially entering a Florida College System institution in 2013-2014 and thereafter, the articulation agreement must require each student who is seeking an Associate in Arts degree to indicate a baccalaureate degree program offered by an institution of interest by the time the student earns 30 semester hours. The institution in which the student is enrolled shall inform the student of the prerequisites for the baccalaureate degree program.
4. The articulation agreement must guarantee the statewide articulation of appropriate workforce development programs and courses between school districts and Florida College System institutions and specifically provide that every applied technology diploma graduate must be granted the same amount of credit upon admission to an Associate in Science degree or Associate in Applied Science degree program unless it is a limited access program. Preference for admission must be given to graduates who are residents of Florida.
5. The articulation agreement must guarantee the statewide articulation of appropriate courses within Associate in Science degree programs to baccalaureate degree programs. Courses within an Associate in Applied Science degree program may articulate into a baccalaureate degree program on an individual or block basis as authorized in local interinstitutional articulation agreements.
6. The articulation agreement must guarantee the articulation of 9 credit hours toward a postsecondary degree in early childhood education for programs approved by the State Board of Education and the Board of Governors which: (a) Award a child development associate credential issued by the National Credentialing Program of the Council for Professional Recognition or award a credential approved under s.1002.55(3) (c)1.b. or s. 402.305(3) (c) as being equivalent to the child development associate credential; and (b) Include training in emergent literacy which meets or exceeds the minimum standards for training courses for prekindergarten instructors of the Voluntary Prekindergarten Education Program in s. 1002.59.

Independent Colleges and Universities of Florida (ICUF)

There is also an articulation agreement between the Florida College System and the Independent Colleges and Universities of Florida (ICUF). Under the agreement, Florida College System graduates holding an Associate in Arts

degree are guaranteed junior standing in any member institution, recognition of their completed general education core and the application of a minimum of 60 earned credit hours toward a baccalaureate degree.

Additional Agreements

In addition, Miami Dade College has developed several unique arrangements with local and out-of-state colleges and universities that make it possible for a student to apply for admission toward a baccalaureate degree. As a general rule, participating institutions will accept associate degree credits and work out a schedule for the additional bachelor's degree requirements. Miami Dade College also has agreements with universities that facilitate the transfer of MDC baccalaureate graduates to graduate programs. For additional information relating to articulation agreements, contact the Office of Articulation and Academic Pathways or visit <https://www.mdc.edu/transfer-information/transfer-agreements/>.

MIAMI DADE COLLEGE (MDC) GENERAL EDUCATION CORE

DIGITAL BADGES

What is a Digital Badge

A digital badge is an award that is given to students upon completion of general education core courses that demonstrate career readiness. It is intended to help the student translate what they learned in general education courses to knowledge, skills and abilities that employers require.

Who's Eligible

Pursuant to s. 1007.25(4), F.S., all students initially entering a public postsecondary institution in the 2022-23 academic year (fall 2022) and thereafter and enroll in general education core courses are eligible for the awarding of a digital badge. This is inclusive of dual enrollment students who complete core courses while in high school in the 2022-23 academic year and thereafter. Minimally, institutions must award badges to students meeting these criteria.

Digital Badges Offered at MDC

	Fundamentals of Written Communication	Students will demonstrate effective reading, writing, speaking, listening, and nonverbal communication skills.
---	--	--

What is Effective Written Communication?

Effective written communication is the ability to communicate ideas, information, and perspectives clearly, adapting a message to different audiences and situations, and using the appropriate style to convey meaning in various written contexts.

What are you learning by earning this badge?

By completing the college course associated with this badge, you will demonstrate information literacy, comprehension of written material, and conveying information in writing for a variety of rhetorical purposes and audiences. Some of the learning outcomes associated with the college course that results in this badge include:

- Examining and analyzing written material
- Synthesizing information and ideas
- Developing content relevant to the purpose
- Demonstrating the ability to write to a specific audience
- Presenting a perspective informed by research and critical thinking
- Revising written communication based on feedback

Why is Effective Written Communication important in the workplace?

- Enhances an employee's ability to interpret and evaluate a wide variety of written material
- Promotes research, critical thinking, and problem solving
- Advances the development of clearly written material relevant to the intent
- Enhances the use of appropriate language for an intended audience
- Increases the competent, effective, and responsible use of information

PROGRAMS

Bachelor of Applied Sciences (BAS)

Program Description

Film, Television & Digital Production

Bachelor of Applied Science | Code: P9220 | 120 credits

The Bachelor of Applied Science with a major in Film, Television & Digital Production degree is designed to provide the South Florida workforce with a highly skilled applicant pool to fulfill job demands and to provide an affordable opportunity for students completing either an Associate in Science or an Associate in Arts degree to seamlessly continue and complete a baccalaureate degree. Graduates of the Bachelor of Applied Science with a major in Film, Television, and Digital Production degree will be prepared with the abilities and skills needed to succeed in the film and television industry. The Bachelor of Applied Science with a major in Film, Television & Digital Production degree will prepare graduates with the hands-on training and business acumen necessary to meet workforce demands and to operate within the entertainment business environment.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0
DIG 3347C	Advanced Cinematography	3.0
FIL 3602	Production Management	3.0
FIL 4164	Advanced Writing for Film and Television	3.0
RTV 3810C	Broadcast Design & On Air Promotions	3.0
Semester 2		Units: 13.0
DIG 4345C	Digital Effects and Compositing	3.0
ENC 1102	English Composition 2	3.0
FIL 4585C	Production Workshop 1	4.0
Humanities		3.0
ARH 1000	Art Appreciation	3.0
OR		
ARH 2740	Cinema Appreciation	3.0
OR		
MUL 1010	Music Appreciation	3.0
Semester 3		Units: 6.0
DIG 3255C	Advanced Sound Design	3.0
Social Science		3.0
ANT 2000	Introduction to Anthropology	3.0
OR		
PSY 2012	Introduction to Psychology	3.0
Foreign Language Competence*		

*Note: Foreign language is a graduation requirement for the baccalaureate met through 8 credit hours at the elementary 2 level in one foreign language or equivalent. Certain foreign language courses count towards program electives. Students may satisfy equivalence through standardized examinations or successful completion of two credits (two years) in one foreign language at the secondary (high school) level. For additional information, including exemptions for students whose native language is not English, see the Testing and Assessment Department.

Semester 4		Units: 13.0
MGF 1131	Mathematics in Context	3.0
FIL 4586C	Production Workshop 2	4.0
RTV 3277C	Television Studio Production Workshop	3.0
<i>Oral Communication</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0

Semester 5		Units: 12.0
FIL 3651	Business Proposals for Film & Television	3.0
<i>Upper Division Electives</i>		3.0
DIG 3940	Upper Division Internship	3.0
OR		
RTV 3203	The Telemundo Academy	3.0
OR		
RTV 3256C	Advanced Post Production	3.0
OR		
RTV 3408	Ethics & Research for Non-Fiction Scripts	3.0
<i>Natural Science</i>		3.0
AST 1002	Descriptive Astronomy	3.0
OR		
BSC 1005	General Education Biology	3.0
OR		
CHM 1020	General Education Chemistry	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		
GLY 1010	Physical Geology	3.0
OR		
OCE 1001	Introduction to Oceanography	3.0
OR		
PHY 1020	General Education Physics	3.0
<i>General Education Elective*</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
ARH 2740	Cinema Appreciation	3.0
OR		
MUL 1010	Music Appreciation	3.0

*Note: Please see your academic advisor and/or degree audit for appropriate course options.

Total: 56.0

DIG3347C Advanced Cinematography 3.000 credits

In this upper division course for BAS students in Film, Television & Digital Production students will learn the technical and aesthetic principles of advanced cinematography techniques.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: RTV2246C OR FIL2515C

Course User Fee: \$100.00

FIL3602 Production Management 3.000 credits

In this upper division course for BAS students in Film, Television & Digital Production students will learn the theory and practice of managing film and television production with an emphasis on pre-production processes and software.

Lecture Hours: 48.000

Prerequisite: FIL2611 OR MMC2000

FIL4164 Advanced Writing for Film and Television 3.000 credits

In this upper division course in Film, Television & Digital Production students will learn the process of completing a long form motion picture or television script.

Lecture Hours: 48.000

Prerequisite: FIL2131 OR RTV2300

RTV3810C Broadcast Design & On Air Promotions 3.000 credits

In this upper division course in BAS in Film, Television & Digital Production students will learn about on-air promotions with specific emphasis on layout, color, and composition.

Lecture Hours: 32.000, Lab Hours: 32.000

Recommended Preparation: BAS Students ONLY

Course User Fee: \$100.00

DIG4345C Digital Effects and Compositing 3.000 credits

In this upper division course for BAS students in Film, Television & Digital Production students will learn the theory and practice of video compositing and motion graphics.

Lecture Hours: 32.000, Lab Hours: 32.000

Recommended Preparation: BAS Students ONLY

Course User Fee: \$100.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

FIL4585C Production Workshop 1 4.000 credits

In this upper division workshop for BAS students in Film, Television & Digital Production students will learn to apply industry-standard pre-production and production techniques to Production Workshop projects.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: DIG3347C AND FIL3602

Course User Fee: \$200.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARH2740 Cinema Appreciation 3.000 credits

An analysis of the cinema as an important social force and an artistic medium. Significant American, British, and foreign language films will be shown and discussed. Writing intensive course.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: HUM1020

Course User Fee: \$5.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

DIG3255C Advanced Sound Design 3.000 credits

In this upper division course for BAS students in Film, Television & Digital Production students will learn advanced audio production, emphasizing audio recording, mixing, editing, overdubbing, and aesthetics.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: RTV1240C

Course User Fee: \$100.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

FIL4586C Production Workshop 2 4.000 credits

In this upper division workshop for BAS Students in Film, Television & Digital Production students will learn to apply industry-standard post-production techniques to complete Production Workshop 1 projects.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: FIL4585C

Course User Fee: \$200.00

RTV3277C Television Studio Production Workshop 3.000 credits

In this upper division workshop class for BAS students in Film, Television & Digital Production students will learn advanced television studio production techniques for pre-scripted programs.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: FIL2515C OR RTV2246C

Course User Fee: \$75.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

FIL3651 Business Proposals for Film & Television 3.000 credits

In this upper division course for BAS students in Film, Television & Digital Production students will learn the theory and practice of business plans/grant proposals in media production funding.

Lecture Hours: 48.000

Prerequisite: FIL2611 OR MMC2000

DIG3940 Upper Division Internship 3.000 credits

In this upper division internship for BAS students in Film, Television & Digital Production students will learn to apply their knowledge and skills at an established film or television entertainment company (144 hr. Internship).

Other Hours: 144.000

Recommended Preparation: BAS Students ONLY.

Must have at least a 3.0 GPA in order to register.

Must obtain professor permission in order to register.

RTV3203 The Telemundo Academy 3.000 credits

The Telemundo Academy is a project-based learning course that provides students with a fundamental understanding of the concepts and processes of short-form content production for social media and mobile video platforms. The course will be divided into four phases: development, pre-production, production, and post-production. The first portion of the course will focus on pre-production given that the quality of the final projects will be correlated to students' understanding of all elements and practices in this phase. Students will learn how research, script development, and storyboarding are critical to transforming their original concepts into successful productions. The course will cover additional fundamental skills related to: communications, leadership, marketing, and digital and social media best practices.

Lecture Hours: 48.000

Course User Fee: \$80.00

RTV3256C Advanced Post Production 3.000 credits

An advanced course in which students will learn complex digital media post production techniques.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: FIL2553C

RTV3408 Ethics & Research for Non-Fiction Scripts 3.000 credits

In this upper division course students will learn research methods applicable to documentary production.

Lecture Hours: 48.000

Recommended Preparation: Student must be in BAS Program AND Prerequisite: FIL2131 OR RTV2300

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.

Lecture Hours: 48.000

Course User Fee: \$10.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues.

Lecture Hours: 48.000

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARH2740 Cinema Appreciation 3.000 credits

An analysis of the cinema as an important social force and an artistic medium. Significant American, British, and foreign language films will be shown and discussed. Writing intensive course.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: HUM1020

Course User Fee: \$5.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

Program Description

Health Science - Histotechnology Concentration

Bachelor of Applied Science | Code: P9212 | 130 credit

The Bachelor of Applied Science (B.A.S.) in Health Sciences with a concentration in Histotechnology is designed to accommodate the unique demands for entry and advancement within the health science industry.

Histotechnologist process patient samples for the detection of tissue abnormalities in order to determine the best treatment for the diseases causing the abnormalities. In addition to the dyes and chemicals used to prepare and stain tissues for microscopy, immunological and DNA techniques are utilized to determine specific cell types in tumors. Histotechnologist work in conjunction with the pathology department at a variety of hospital, surgical and clinical locations. Upon completion of the program and the attainment of certification and license, Histotechnologist are employed in a variety of health-care settings with the opportunity of upward mobility to supervisory and management positions. Histotechnologist program graduates are eligible for certification by the American Society for Clinical Pathology (ASCP).

MCB 2010L	Microbiology Laboratory	2.0
OCE 1001	Introduction to Oceanography	3.0
PHY 1020	General Education Physics	3.0

Semester 6		Units: 56.0
MLS 3997	Validated Medical Laboratory Technology Course*	27.0
<i>Electives</i>		29.0
Please consult your academic advisor to determine appropriate course selections.		

*(This course awards articulated credit for students who have successfully completed an accredited Associate in Science (AS) degree in Histotechnology. Emphasis is placed on validating skills aligned with program outcomes and professional standards in histotechnology.)

Total: 130.0

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HSC3655 Theoretical Foundations of Health Care Ethics 3.000 credits

This course will cover the Theoretical Foundations of Health Care Ethics. The student will learn how to apply the core principles of bioethics to the medical and health care decision-making process. (3 cr. Lecture)

Lecture Hours: 48.000

MLS4621 Clinical Biochemistry 4.000 credits

This course provides the student with the knowledge and understanding of clinical disorders and how biochemical factors and laboratory methods are used for the investigation, diagnosis and management of patients. (4 hour lecture)

Lecture Hours: 64.000

Course User Fee: \$41.00

MLS4705 Laboratory Operations and Management 3.000 credits

This course provides students with Quality Management skills necessary in the medical laboratory. Students are exposed to organizational structure along with principles for leadership and managerial decision making and process improvement along with different principles used in Laboratory Instrumentation. (3 Hour Lecture)

Lecture Hours: 48.000

Course User Fee: \$74.90

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC1005L General Education Biology Laboratory 1.000 credits

This is an optional one-credit lab to provide students with experience in the scientific process. This course applies the scientific method to critically examine and explain the natural world, including but not limited to cells, organisms, genetics, evolution, ecology, and behavior.

Lab Hours: 32.000

Pre/Corequisite: BSC1005

Course User Fee: \$25.00

BSC1084 Functional Human Anatomy 3.000 credits

This course covers basic human anatomy for students in allied health and mortuary science programs. It includes the dynamics of gross and functional anatomy, terminology, body orientation, and systematic relationships.

Lecture Hours: 48.000

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

**BSC2011L Principles of Biology 2 Laboratory
2.000 credits**

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

BSC2020 Human Biology: Fundamentals of Anatomy/Physiology 3.000 credits

This course provides a basic understanding of the human body, its systems, and their functions. It includes the dynamics of physiology, terminology, and physiological relationships of the body systems.

Lecture Hours: 48.000

Course User Fee: \$10.00

**BSC2085 Human Anatomy and Physiology 1
3.000 credits**

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

**BSC2085L Human Anatomy & Physiology Lab 1
1.000 credits**

In this laboratory course, student will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

**BSC2086L Human Anatomy & Physiology 2 Lab
1.000 credits**

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development, from an experiential approach.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

BSC2426 Biotechnology Methods and Applications 1 3.000 credits

This course addresses the basic principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical, biotechnology and/or research laboratory setting(s). Practical applications of biotechnology are explored.

Lecture Hours: 48.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426L

BSC2426L Biotechnology Methods and Applications 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2426 Biotechnology Methods and Applications 1. This is a hands-on course that emphasizes the basic laboratory principles, techniques, and instrumentation, necessary for effective work in pharmaceutical, biotechnology, and/or research laboratory settings(s).

Lab Hours: 64.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426

Course User Fee: \$50.00

BSC2427 Biotechnology Methods and Applications 2 3.000 credits

This course addresses advanced principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical-biotechnology and/or research-laboratory setting(s). The following areas of contemporary biotechnology are covered: forensics, bioremediation, and animal-, plant-, and marine biotechnology.

Lecture Hours: 48.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427L

BSC2427L Biotechnology Methods and Applications 2 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2427 Biotechnology Methods and Applications 2. This is a hands-on course that emphasizes advanced laboratory principles, techniques, and instrumentation necessary for effective work in a pharmaceutical, biotechnology, and/or research-laboratory setting(s).

Lab Hours: 64.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427

Course User Fee: \$50.00

BSC2943L Bioscience Internship 3.000 - 6.000 credits

This internship course is a capstone for students majoring in bioscience and related programs. Students will learn to apply acquired knowledge and skills to gain experience in the bioscience workplace.

Other Hours: 144.000 - 288.000

Course User Fee: \$21.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan. Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence. Lecture Hours: 48.000

MLS4181C Immunohistochemistry 3.000 credits

This course introduces the various techniques that are used in the preparation and evaluation of immunohistochemistry slides. Procedures and terminology related to immunohistochemistry are also discussed and strategies for troubleshooting problems are presented. (2 hr. lecture, 3 hr. clinical) Lecture Hours: 32.000, Clinical Hours: 48.000
Course User Fee: \$499.15

MLS4195C Enzyme Histochemistry 3.000 credits

Introduction to advanced techniques and special procedures. Students will learn procedures for, muscle enzyme Histochemistry and molecular histology. The course will include tissue preparation, staining technology, quality control and troubleshooting. (2 hr. lecture, 3 hr. clinical) Lecture Hours: 32.000, Clinical Hours: 48.000
Course User Fee: \$499.15

MLS4196C In Situ Hybridization (FISH) 3.000 credits

This course will explore the theoretical concepts used in fluorescence in-situ hybridization (FISH) testing. Commonly used FISH methodologies, necessary equipment, and the enumeration of FISH signals will also be discussed. (2 hr. lecture, 6 hr. clinical) Lecture Hours: 32.000, Clinical Hours: 48.000
Course User Fee: \$499.15

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

HSC3701 Leadership and Management in Healthcare 3.000 credits

This is a leadership and management course that will examine leadership as a process with a tri-fold focus: the leader, the followers, and the situation. The student will learn leadership theories and build leadership skills. (3 hr. lecture)

Lecture Hours: 48.000

MLS4198 Immunohistochemistry Clinical Concentration Capstone 5.000 credits

This clinical capstone course will introduce the students to the basic immunohistochemistry techniques as applied to the routine anatomical pathology laboratory.

Clinical Hours: 240.000

Course User Fee: \$499.15

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

HSC3057 Introduction to Research Methods in Health Care 3.000 credits

This course will provide an overview of research methods used in healthcare. Students will learn the use of effective inquiry through research strategies that address healthcare issues with logical and observational rigor. Students will learn the rudiments relative to the evaluation of research literature, research design and the application of research methods to the clinical setting. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: STA2023

MLS3150 Special Topics in Medical Laboratory Sciences 3.000 credits

This course stresses the importance of evidence based practice in the medical laboratory sciences field. Students will be presenting case studies to the faculty and peers in the program. Instruction will emphasize professional, legal and ethics issues affecting the medical laboratory science field. Students will review the material covered in the program to prepare for the comprehensive assessment. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$191.14

MLS4193 Clinical Molecular Diagnostics 3.000 credits

Clinical molecular diagnostics course provides an introduction to molecular analysis of biological markers in clinical samples to aid in the diagnosis, monitoring and treatment of diseases (3 Hour Lecture).

Lecture Hours: 48.000

Course User Fee: \$41.20

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions. Corequisites: CHM 1033L, MAT 1033 (3 hr. lecture)

Lecture Hours: 48.000

Corequisite: CHM1033L, Prerequisite: MAT1033

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite:

MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

CHM 1045 is the first semester of a two-semester general chemistry course for science, premedical science and engineering students. Students will learn stoichiometry, atomic structure, completing and balancing chemical reactions, nomenclature, bonding, acid-base theories, solutions, gas laws and beginning thermodynamics. Special fee.

Lecture Hours: 48.000

Prerequisite: CHM1025or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

CHM1046 General Chemistry And Qualitative Analysis 3.000 credits

CHM 1046 is the second course in the CHM 1045-1046 sequence. Students will learn major topics in modern chemistry including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria and electrochemistry. Special fee. Prerequisite: CHM1045; Corequisite: CHM1046L (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

CHM2200 Survey of Organic Chemistry 3.000 credits

XXXX This one-semester course briefly examines the structure, synthesis, nomenclature and reactivity of selected mono-and-poly-functional organic compounds. Theories that relate the structure of organic molecules to their chemically reactivity will be presented as a unifying principle. Prerequisite: CHM 1046 and CHM 1046L; Corequisite: CHM 2200L. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2200L

CHM2200L Survey of Organic Chemistry Laboratory 1.000 credits

Experiments and exercises will be conducted to introduce students to the basic laboratory techniques that are used in organic chemistry and that re-enforce and illustrate several important topics in organic chemistry. Prerequisite: CHM 1046 and CHM 1046L; Corequisite: CHM 2200. Special fee. (2 hr. lab)

Lab Hours: 32.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2200

Course User Fee: \$46.00

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds. Prerequisite: CHM1046 and CHM 1046L; Corequisite: CHM2210L

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting. Prerequisites: CHM1046, CHM1046L; Corequisite: CHM2210.

Lab Hours: 64.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

CHM2211 Organic Chemistry 2 3.000 credits

In organic chemistry 2, students will learn about nomenclature, preparation reactions, and electronic and structural features of alcohols, ethers, phenols, aldehydes, ketones, carboxylic acids, acid anhydrides, amides, esters, and other organic compounds. Prerequisite: CHM 2210 and CHM 2210L; Corequisite: CHM 2211L. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: CHM2210, CHM2210L, Corequisite: CHM2211L

Course User Fee: \$15.00

CHM2211L Organic Chemistry 2 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2211. Topics include nomenclature, preparation reactions, and electronic and structural features of alcohols, ethers, phenols, aldehydes, ketones, carboxylic acids, acid anhydrides, amides, esters, and other organic compounds will be performed in a laboratory setting.

Lab Hours: 64.000

Prerequisite: CHM2210, CHM2210L, Corequisite: CHM2211

Course User Fee: \$45.00

MLS4910 Advances in Histotechnology Capstone 7.000 credits

This course will support the educational development of the histotechnology students by providing an opportunity for in-depth learning in one of the following domains Cytopreparatory techniques; Digital pathology; Electron microscopy; Micro-wave (MOHS) pathology; Ocular pathology histotechnology techniques; which will result in a scholarly project underlying its relevance in today's advanced pathology laboratories.

Lecture Hours: 112.000

Course User Fee: \$499.15

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms. Lecture Hours: 48.000

Course User Fee: \$10.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues. Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues. Lecture Hours: 48.000

Course User Fee: \$5.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

OCE1001 Introduction to Oceanography 3.000 credits

Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the ocean system, composed of an atmosphere, hydrosphere, lithosphere, and biosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize oceanic connections with humanity.

Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize oceanographic data to draw scientifically valid conclusions; students will recognize the different time scales associated with different ocean processes; students will describe interactions between humans and the ocean realm; and students will apply their understanding of oceanographic principles to various marine issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

MLS3997 Validated Medical Laboratory Technology Course 27.000 credits

This course awards articulated credit for students who have successfully completed an Associate in Science (AS) degree in Histotechnology. It recognizes prior learning and competencies in histological techniques, including tissue processing, sectioning, staining, and laboratory safety, as applied in clinical practice. Emphasis is placed on validating skills aligned with program outcomes and professional standards in histotechnology.

Program Description

Bachelor of Applied Science | Code: P9210 | 130 credits

The Bachelor of Applied Science in Health Science - Physician Assistant Studies Concentration is designed to address the critical shortage of healthcare professionals by providing graduates a continuance of technical, supervisory, and management skills necessary to meet workforce needs and labor market projections. Students will be provided with opportunities to develop discipline-specific medical skills and to expand their knowledge by participating in structured clinical experiences under the supervision of Physician Assistants and physicians.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1101	English Composition 1	3.0
<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
BSC 2085	Human Anatomy and Physiology 1	3.0
BSC 2085L	Human Anatomy and Physiology 1 Laboratory	1.0
MAC 1105	College Algebra	3.0
Computer Competency*		

*Computer Skills Placement (CSP) Test ---or--- CGS1060C. Departmental Recommendation: Computer Skills Placement (CSP)

Semester 2		Units: 13.0
ENC 1102	English Composition 2	3.0
<i>Oral Communications</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0
BSC 2086	Human Anatomy & Physiology 2	3.0
BSC 2086L	Human Anatomy & Physiology 2 Laboratory	1.0
PHI 2600	Introduction to Ethics	3.0

Semester 3		Units: 11.0
STA 2023	Statistical Methods	3.0
CHM 1045	General Chemistry and Qualitative Analysis	3.0
CHM 1045L	General Chemistry Lab	2.0
<i>Social Science</i>		3.0
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0

Semester 4		Units: 13.0
MCB 2010	Microbiology	3.0
MCB 2010L	Microbiology Laboratory	2.0
PSY 2012	Introduction to Psychology	3.0
CHM 1046	General Chemistry and Qualitative Analysis	3.0
CHM 1046L	General Chemistry and Qualitative Analysis Lab	2.0

Semester 5		Units: 7.0
HSA 2532	Medical Documentation in Health Care	1.0
PAS 1800C	Physical Diagnosis I	2.0
PAS 1803	Clinical Anatomy and Physiology	2.0
PAS 1831	Clinical Diagnostic Imaging	1.0
PAS 2936	Contemporary Issues for the PA	1.0
Semester 6		Units: 16.0
HSA 3533	Medical Documentation in Health Care II	1.0
PAS 1801C	Physical Diagnosis 2	2.0
PAS 1811C	Introduction to Medicine I for PAS	5.0
PAS 1812	Behavioral and Community Medicine	1.0
PAS 1813	Pathophysiological Basis of Disease I	2.0
PAS 1822C	Electrocardiography	1.0
PAS 1823	Pharmacology 1	4.0
Semester 7		Units: 15.0
DEH 2810L	Interprofessional Practice and Education Lab	1.0
HSC 3202	Introduction to Public Health	1.0
PAS 1820C	Clinical Medicine 2 for Physician Assistants	5.0
PAS 1824	Pathophysiological Basis of Disease II	2.0
PAS 3038C	Physical Diagnosis III	2.0
PAS 3075	Pharmacotherapeutics	4.0
Semester 8		Units: 17.0
PAS 3019	Pathophysiological Basis of Disease III	2.0
PAS 3042C	Clinical Medicine III for Physician Assistants	5.0
PAS 3070	Clinical Pharmacotherapeutics	3.0
PAS 3140	Genetics	2.0
PAS 3203C	Surgical Problems and Procedures	5.0
Fall – Summer Semester: Clinical Rotations		Units: 25.0
HSC 4942	Community Service-Learning Practicum	3.0
PAS 4191L	Internal Medicine Clerkship	4.0
PAS 4290	Surgery Clerkship	2.0
PAS 4391	Pediatrics Clerkship	4.0
PAS 4493	Family Medicine Clerkship	4.0
PAS 4590	OBSTETRICS/GYNECOLOGY	2.0
PAS 4690	Emergency Medicine Clerkship	2.0
PAS 4940	Psychiatry Clerkship	2.0
PAS 4943	Selective Clerkship	2.0

Total: 130.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better. Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)
Lecture Hours: 48.000
Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.
Lecture Hours: 48.000
Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."
Course User Fee: \$15.00

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Lecture Hours: 48.000
Prerequisite: BSC2085, Corequisite: BSC2086L
Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites: BSC2085, BSC2085L; Corequisite: BSC2086. Lab Hours: 32.000
Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086
Course User Fee: \$25.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course. Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

HSA2532 Medical Documentation in Health Care 1.000 credits

Medical Documentation in Health Care will introduce the student to documentation in the written patient chart or electronic medical record. Through case discussions and in-class writing assignments, the student will acquire the necessary skills to document in the patient's medical record utilizing medico-legal principles and evaluation and management criteria. Patient confidentiality, billing, and coding will also be discussed.

Lecture Hours: 16.000

PAS1800C Physical Diagnosis I 2.000 credits

This course provides students with the critical basis for and clinical exposure to techniques used in the proper performance and recording of the physical examination of patients. Prerequisites: BSC2085, BSC2085L, BSC2086, BSC2086L, CHM1045, CHM1045L, CHM1046, CHM1046L, MCB2010, and MCB2010L

Lecture Hours: 16.000, Clinical Hours: 96.000

Prerequisite: BSC2085 AND BSC2085L AND BSC2086 AND BSC2086L AND CHM1045 AND CHM1045L AND CHM1046 AND CHM1046L AND MCB2010 AND MCB2010L

Course User Fee: \$560.00

PAS1803 Clinical Anatomy and Physiology 2.000 credits

This course is designed for students accepted into the Physician Assistant Program. The course will review basic Anatomy and Physiology principles, while integrating important clinical concepts.

Students will learn to transition from Anatomy and Physiology to Pathophysiology.

Lecture Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L AND BSC2086 AND BSC2086L AND CHM1045 AND CHM1045L AND CHM1046 AND CHM1046L AND MCB2010 AND MCB2010L

PAS1831 Clinical Diagnostic Imaging 1.000 credits

The course introduces the PA student to principles of diagnostic imaging and a familiarity with the many diagnostic techniques available, their values and limitations, and how they may be best used in the management of the patient in clinical practice.

Lecture Hours: 16.000

Prerequisite: BSC2085 AND BSC2085L AND BSC2086 AND BSC2086L AND CHM1045 AND CHM1045L AND CHM1046 AND CHM1046L AND MCB2010, MCB2010L

Course User Fee: \$280.00

PAS2936 Contemporary Issues for the PA 1.000 credits

In this course the student will examine current issues, challenges, and practices influencing the physician assistant profession. Historical perspectives will be examined and the contributions of physician assistants in the healthcare system will be researched. The student will learn to use evidenced based medicine to research topics including the changing nature of health care delivery system in the United States; demographic, economic, ethical, and political factors influencing the practice of the physician assistant.

Lecture Hours: 16.000

HSA3533 Medical Documentation in Health Care II 1.000 credits

Medical Documentation in Health Care II is a continuation of HSA 2532. This course will teach the student to documentation in the written patient chart or electronic medical record for special populations. Through case discussions and in-class writing assignments, the student will acquire the necessary skills to document in the patient's medical record utilizing medico-legal principles and evaluation and management criteria. Patient confidentiality, billing, and coding will also be discussed. Prerequisite: HSA 2532, PAS 1800C, 1801C, 1811C, 1812, 1813, 1822C, 1823, 1831. (1 hour lecture)

Lecture Hours: 16.000

Prerequisite: HSA2532, PAS1801C, PAS1801C, PAS1811C, PAS1812, PAS1813, PAS1822C, PAS1823, PAS1831

PAS1801C Physical Diagnosis 2 2.000 credits

This course will build upon the skills learned in Physical Diagnosis I and will prepare the physician assistant student with the essential skills for entry into clinical practice. Students will learn to perform medical interviews and physical examinations on live and professional patients, and high-fidelity simulators. Prerequisite: PAS1800C , PAS1803, PAS1831 , PAS2936. (1 hr. lecture, 3 hr. clinical)

Lecture Hours: 16.000, Clinical Hours: 48.000

Prerequisite: PAS1800C, PAS1803, PAS1831, PAS2936

Course User Fee: \$560.00

PAS1811C Introduction to Medicine I for PAS 5.000 credits

Students will learn the signs, symptoms, and pathophysiology of common diseases affecting pediatric, adult, and geriatric patients. In addition, diagnosis, therapeutic interventions, and follow-up will be learned. Patient education and preventative medicine will also be included. 3 hr. lecture, 2 hr. clinical)

Lecture Hours: 48.000, Clinical Hours: 96.000

Prerequisite: PAS 1800C, PAS 1803, PAS 1831, PAS 2936

Course User Fee: \$1400.00

PAS1812 Behavioral and Community Medicine 1.000 credits

This course utilizes a biopsychosocial system approach to identify social determinants within the health care delivery system. Students will participate in outreach projects to implement concepts learned in the classroom within a community environment. Prerequisites:

Lecture Hours: 16.000

Prerequisite: PAS1800C AND PAS1831 AND PAS2936, PAS 2YYY

Course User Fee: \$280.00

PAS1813 Pathophysiological Basis of Disease I 2.000 credits

The clinical pathophysiology course serves as a transition from the basic medical sciences to clinical medicine. Students will learn the study of disease, both congenital and acquired with an emphasis on providing understanding of pathologic physiology in conjunction with information regarding medical history and laboratory data to solve case based clinical problems. Students are taught how pathophysiology translates into patient signs, symptoms. Prerequisites: PAS1800C, 2936. (2 hr. clinical)

Clinical Hours: 96.000

Prerequisite: PAS1800C AND PAS2936

PAS1822C Electrocardiography 1.000 credits

Students will learn the basic knowledge to understand, interpret and utilize an electrocardiogram (EKG) as a diagnostic tool. This course provides the foundation for learning to interpret 12-lead EKG tracings and applying those principles to evaluate the EKG tracings of common cardiac disease.

Lab Hours: 32.000

Prerequisite: PAS 1800C, PAS 1803, PAS 1831, PAS 2936

Course User Fee: \$560.00

PAS1823 Pharmacology 1 4.000 credits

This course will focus on the preparation, uses and action of drugs. Students will learn about Pharmacokinetics and Pharmacodynamics. Students will be introduced to Clinical Pharmacology following an organ system approach, covering the major classes of therapeutically relevant drugs, and how they work at the molecular and cellular levels.

Prerequisites: PAS1800C, PAS1803, PAS1831, and PAS2936 (4 hr. lecture)

Lecture Hours: 64.000

Prerequisite: HSA2532, PAS1801C, PAS1803, PAS1831, PAS2936

Course User Fee: \$560.00

DEH2810L Interprofessional Practice and Education Lab 1.000 credits

Students will learn to examine the Dental Hygiene scope of practice through professional identity by way of interprofessional collaboration. Students will also develop knowledge and skills to serve on health professional teams to improve health outcomes.

Lab Hours: 32.000

Prerequisite: DEH 2603, DEH 2603L, DEH 2701, DEH 2806, DEH 2806L , Corequisite: DEH 2702L, DEH 2808, DEH 2808L, DES 2100, DES 2100L

HSC3202 Introduction to Public Health 1.000 credits

This course is designed to give students a foundation in the core functions of population-based health consisting of assessment, policy development and assurance. Students will gain an understanding of public health as a broad field which applies the benefits of current biomedical, environmental, and behavioral knowledge in ways that maximize the health status of all populations. This course is blended. Prerequisite: HSA 2532, PAS 1800C, 1801C, 1811C, 1812, 1813, 1822C, 1823, 1831. (1 hour lecture)

Lecture Hours: 16.000

Prerequisite: HSA2532, PAS1800C, PAS1801C, PAS1811C, PAS1812, PAS1813, PAS1822C, PAS1823, PAS1831

PAS1820C Clinical Medicine 2 for Physician Assistants 5.000 credits

The second course in the sequence. Students will learn the signs, symptoms, and pathophysiology of common diseases affecting pediatric, adult, and geriatric patients. In addition, diagnosis, therapeutic interventions, and follow-up will be learned. Patient education and preventative medicine will also included. Prerequisite: HSA2532, PAS1801C, PAS1811C, PAS1812, PAS1813, PAS1822C, PAS1823. (4 hr. lecture, 3 hr. clinical)

Lecture Hours: 64.000, Clinical Hours: 48.000

Prerequisite: HSA2532, PAS1801C, PAS1811C, PAS1812, PAS1813, PAS1822C, PAS1823

PAS1824 Pathophysiological Basis of Disease II 2.000 credits

This course is a continuation of PAS 1813 Pathophysiological Basis of Disease I. This course establishes scientific core knowledge and bridges the basic medical sciences with clinical medicine. The course covers the pathophysiology of human diseases that appear as a result of structural and functional alterations of the human body systems. The course begins with the study of human anatomy and physiology pertinent to the pathological conditions presented and progresses to the pathophysiological topics needed by physician assistant students. The course will enhance decision-making ability when working as a PA in clinical practice. Prerequisite: HSA 2532, PAS 1800C, 1801C, 1811C, 1812, 1813, 1822L, 1823, 1831. (2 hr. lecture)

Lecture Hours: 32.000

Prerequisite: HSA2532, PAS1800C, PAS1801C, PAS1811C, PAS1812, PAS1813, PAS1822C, PAS1823, PAS1831

Course User Fee: \$560.00

PAS3038C Physical Diagnosis III 2.000 credits

This course will build upon skills learned in Physical Diagnosis I and II and will prepare the physician assistant student with the essential skills for entry into clinical practice. Students will learn to perform medical interviews and physical examinations on professional patients and high-fidelity simulators. Prerequisite: HSA 2532, PAS 1800C, 1801C, 1811C, 1812, 1813, 1822C, 1823, 1831. (1 hour lecture; 3 hour clinical)

Lecture Hours: 16.000, Clinical Hours: 48.000

Prerequisite: HSA2532, PAS1800C, PAS1801C, PAS1811C, PAS1812, PAS1813, PAS1822C, PAS1823, PAS1831

PAS3075 Pharmacotherapeutics 4.000 credits

The second course in the sequence pas 1823, 3070. The study of the use of drugs to treat disease, including contraindication and incompatibilities; drug interactions; side effects and their treatment, and dosages and calculations. Prerequisite: HSA 2532, PAS 1800C, 1801C, 1811C, 1812, 1813, 1822C, 1823, 1831. (4 hr. lecture)

Lecture Hours: 64.000

Prerequisite: HSA2532, PAS1800C, PAS1801C, PAS1811C, PAS1812, PAS1813, PAS1822C, PAS1823, PAS1831

Course User Fee: \$1120.00

PAS3019 Pathophysiological Basis of Disease III 2.000 credits

This course establishes scientific core knowledge and bridges the basic medical sciences with clinical medicine. The course covers the pathophysiology of human diseases that appear as a result of structural and functional alterations of the human body systems. The course begins with the study of human anatomy and physiology pertinent to the pathological conditions presented and progresses to the pathophysiological topics needed by physician assistant students. The course will enhance decision-making ability when working as a Physician Assistant (PA) in clinical practice. Prerequisite: PAS 1821, 1824, 3038C, 3075. (2 hour lecture)

Lecture Hours: 32.000

Prerequisite: DEH2810L, HSA3533, HSC3202, PAS1820C, PAS1824, PAS3038C, PAS3075

PAS3042C Clinical Medicine III for Physician Assistants 5.000 credits

Students will learn the signs and symptoms, diagnosis, therapeutic and non-therapeutic interventions of common diseases affecting pediatric, adult, and geriatric patients. Patient education and preventive medicine will also be included.

Prerequisites: DEH 2801L, HSA 3533, HSC 3202, PAS 1824, 1820C, 3038C, 3075. (4 hour lecture; 3 hour clinical)

Lecture Hours: 64.000, Clinical Hours: 48.000

Prerequisite: DEH2810L, HSA3533, HSC3202, PAS1820C, PAS1824, PAS3038C, PAS3075

PAS3070 Clinical Pharmacotherapeutics 3.000 credits

This course will provide a team-based, active, and applied learning environment to solve patient cases related to the management of pharmacotherapy.

Students will work within specified learning groups to solve patient cases. Students will learn from their future colleagues by working together to develop treatment plans and answer questions which are designed to promote active learning and critical thinking skills. Following each case, facilitated discussion will occur to promote student learning and retention of material. Real world examples will be incorporated into discussions and explanations of patient cases. Prerequisites: DEH 2801L, HSA 3533, HSC 3202, PAS 1824, 1820C, 3038C, 3075. (3 hour lecture)

Lecture Hours: 48.000

Prerequisite: PAS1824, DEH2810L, HSA3533, PAS3038C, PAS3075, HSC3202, PAS1820C

PAS3140 Genetics 2.000 credits

This course will prepare the PA student for human genetics and medical genomics, including Mendelian and complex diseases, chromosomal abnormalities, heritability, genetic variations and methods for investigating associations with diseases, gene-environment interactions, population genetics, cancer genetics, and epigenetics. Prerequisites: DEH 2801L, HSA 3533, HSC 3202, PAS 1824, 1820C, 3038C, 3075. (2 hour lecture)

Lecture Hours: 32.000

Prerequisite: DEH2810L, HSA3533, HSC3202, PAS1820C, PAS1824, PAS3038C, PAS3075

PAS3203C Surgical Problems and Procedures 5.000 credits

During this course the student will be exposed to the various aspects of general, orthopedic, cardiovascular, thoracic, ENT, neurologic, urologic, and pediatric surgical problems, their diagnosis and treatment. Laboratory components of this course will include learning fundamental techniques necessary in preoperative and postoperative care, including nasogastric intubation, central venous line placement, arterial and venous punctures and sterile techniques. Prerequisites: DEH 2801L, HSA 3533, HSC 3202, PAS 1824, 1820C, 3038C, 3075. (4 hr. lecture; 3 hr. clinical)

Lecture Hours: 64.000, Clinical Hours: 48.000

Prerequisite: DEH2810L, HSA3533, HSC3202, PAS1820C, PAS1824, PAS3038C, PAS3075

Course User Fee: \$1400.00

HSC4942 Community Service-Learning Practicum 3.000 credits

This course is designed to engage students in meaningful healthcare related community service learning activities. Students will learn to explore new collaborations in service-learning, cultural diversity and community healthcare development. These experiences will help to and prepare them for lives as civically-engaged local, national, and global citizens. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: HSC3057, HSC 3231

PAS4191L Internal Medicine Clerkship 4.000 credits

The clinical course focuses on basic medical practice. The student is exposed to common medical problems encountered on in-patient and out-patient medical services. Emphasis is placed on the history and physical examination and the process required in the proper work-up and management of the patient. Patient care experience in the various subdivisions of internal medicine including oncology, hematology, neurology, nephrology, gastroenterology, rheumatology, pulmonology, cardiology, and infectious diseases may be required. Prerequisites: PAS 3019, 3042C, 3070, 3140, and 3203C. (192 hr. Clinical)

Clinical Hours: 192.000

Prerequisite: PAS3019, PAS3042C, PAS3070, PAS3140, PAS3203C

PAS4290 Surgery Clerkship 2.000 credits

During the clinical course the student will be exposed to a variety of clinical problems routinely seen on the surgical service. Emphases will be placed on preoperative, intraoperative and postoperative management of the patient. In the operating room the student will practice aseptic technique, operating room principles, and assist in surgery. Prerequisites: PAS 3019, 3042C, 3070, 3140, and 3203C. (96 hr. Clinical)

Clinical Hours: 96.000

Prerequisite: PAS3019, PAS3042C, PAS3070, PAS3140, PAS3203C

Course User Fee: \$560.00

PAS4391 Pediatrics Clerkship 4.000 credits

This clinical course in pediatric care settings will introduce students to childhood illnesses and normal variations of growth and development. Students will perform histories and physical examinations and manage patients in the newborn nursery, pediatric out-patient clinic and emergency room.

Prerequisites: PAS 3019, 3042C, 3070, 3140, and 3203C. (192 hr. Clinical)

Clinical Hours: 192.000

Prerequisite: PAS3019, PAS3042C, PAS3070, PAS3140, PAS3203C

Course User Fee: \$1120.00

PAS4493 Family Medicine Clerkship 4.000 credits

This clinical course introduces the student to the family practice setting where emphasis is placed on the common diseases treated by primary care practitioners in conjunction with other members of the health care team. The student is exposed to rural epidemiology, cultural diversity, and problems that affect delivery of health care in rural and under-served areas. Prerequisites: PAS 3019, 3042C, 3070, 3140, and 3203C. (192 hr. clinical)

Clinical Hours: 192.000

Prerequisite: PAS3019, PAS3042C, PAS3070, PAS3140, PAS3203C

Course User Fee: \$1120.00

PAS4590 OBSTETRICS/GYNECOLOGY 2.000 credits

During this clinical course the student will participate on the obstetrical service managing pregnancy, labor and delivery and be introduced to pre-and postnatal complications. The student will also participate in the management of common gynecologic problems.

Prerequisites: PAS 3019, 3042C, 3070, 3140, and 3203C. (96 hr. clinical)

Clinical Hours: 96.000

Prerequisite: PAS3019, PAS3042C, PAS3070, PAS3140, PAS3203C

Course User Fee: \$560.00

PAS4690 Emergency Medicine Clerkship 2.000 credits

This clinical course in an emergency care setting will provide opportunities for the student to manage the acutely ill and traumatized patient. The student will learn to perform history and physical examination on the acutely ill patient with emphasis being placed on the management and support measures necessary in situations which are life threatening. Prerequisites: PAS 3019, 3042C, 3070, 3140, 3203C.

Clinical Hours: 96.000

Prerequisite: PAS3019, PAS3042C, PAS3070, PAS3140, PAS3203C

Course User Fee: \$560.00

PAS4940 Psychiatry Clerkship 2.000 credits

This clinical course in a psychiatric care setting will allow students to participate in daily rounds and become knowledgeable of the use of psychotropic medications for psychiatric disorders. Group therapy sessions will be a major part of the learning experience. Prerequisites: PAS 3019, 3042C, 3070, 3140, 3203C.

Clinical Hours: 96.000

Prerequisite: PAS3019, PAS3042C, PAS3070, PAS3140, PAS3203C

Course User Fee: \$560.00

PAS4943 Selective Clerkship 2.000 credits

This clinical course provides the opportunity for students to become familiar with a medical specialty of their choice. The student will have the opportunity to familiarize with the role of the physician assistant in that specialty and reinforce the most common examination techniques, diagnoses and treatments within the selected specialty. Prerequisites: PAS 3019, 3042C, 3070, 3140, and 3203C

Clinical Hours: 96.000

Prerequisite: PAS3019, PAS3042C, PAS3070, PAS3140, PAS3203C

Course User Fee: \$560.00

Program Description

Leadership and Management Innovation

Bachelor of Applied Science | Code: P9200 | 120 credit

The Bachelor of Applied Science (BAS) in Leadership and Management Innovation prepares associate degree graduates from a variety of disciplines for work as a supervisor or manager. The programs prepare students with the hands-on training necessary to meet the workforce demands of today and tomorrow while providing the skills needed to compete for advancement.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0
MAN 3025	Organization Management	3.0
MAN 3065	Business Ethics	3.0
MAN 3301	Human Resource Management	3.0
Upper Division Elective*		3.0

Select 3 credits from the following course options: ACG3, ACG4*, BUL4*, FIN3*, FIN4*, GEB3*, GEB4*, HFT3*, HFT4*, ISM4*, MAN3*, MAN4*, MAR3*, MAR4*, TAX4*, TRA3*, TRA4*

Semester 2		Units: 12.0
MAN 3240	Organizational Behavior	3.0
MAR 3803	Marketing for Managers	3.0
Upper Division Elective*		3.0
Elective**		3.0

Select 3 credits from the following course options: ACG3, ACG4*, BUL4*, FIN3*, FIN4*, GEB3*, GEB4*, HFT3*, HFT4*, ISM4*, MAN3*, MAN4*, MAR3*, MAR4*, TAX4*, TRA3*, TRA4*

**Select 3 credits from the following course options: ACG*, BUL*, CGS 1060C, ECO*, FIN*, GEB*, HFT*, ISM*, MAN*, MAR*, MKA*, MNA*, OST*, PET*, PUR*, QMB*, SBM*, SCM*, SPM*, TAX*, TRA*

Semester 3		Units: 12.0
MAN 4113	Managing in a Multifaceted Environment	3.0
MAN 4120	Leadership Challenges and Supervision	3.0
Elective*		6.0

Semester 5		Units: 12.0
MAN 4900	Capstone Project in Supervision and Management	3.0
MAN 4941	Management Internship	3.0

Select 3 credits from the following course options: ACG, BUL*, CGS 1060C, ECO*, FIN*, GEB*, HFT*, ISM*, MAN*, MAR*, MKA*, MNA*, OST*, PET*, PUR*, QMB*, SBM*, SCM*, SPM*, TAX*, TRA*

Total: 60.0

MAN3025 Organization Management 3.000 credits

The student will learn the major functions of supervision and management including the functions of planning, organizing, leading and controlling. Emphasis is placed on learning how to communicate more effectively with employees and how to increase leadership effectiveness. Major topics include goal setting and attainment, organizational structure, decision-making, strategic planning, managing stress, and ethical behavior and ethical role modeling. Cases that present the student with opportunities to make supervisory and management decisions, along with timely feedback on their effectiveness, will be used. Must pass this course with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN3065 Business Ethics 3.000 credits

In this course the student will learn how personal values and ethics influence the decision-making capacity of the manager within an organization. The student will learn about ethical theories and the roles they play in the social and corporate behavior of an organization. Issues such as diversity in the workplace, intuition, technology, and the global environment of business, will be included in case examples. The student will acquire an understanding of how an organization can institutionalize its ethical system. This course must be met with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN3301 Human Resource Management 3.000 credits

The student will learn the functions of Human Resource Management including human resource planning, strategic development of human resources, recruitment techniques, selection and hiring processes, compensation systems, development of policy and procedures for effective and ethical human resource management, performance review and evaluation systems, working effectively with organized labor, retention of employees, and current issues in human resource management. The course will also include an exploration of human resources within the global business environment of a boundless organization. This course must be met with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN3240 Organizational Behavior 3.000 credits

The students will learn about social behavioral sciences that can be applied to supervision and management through major topics include motivation, conflict, corrective actions and rewards, job related stress, organizational dynamics, the evolving global environment, and the responsibility to stakeholders and the planetary environment. The student will examine organizational behavior and how to integrate behavioral concepts in an effective managerial decision-making process. Must pass course with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAR3803 Marketing for Managers 3.000 credits

Students will learn how managers implement the marketing elements within a strategic planning framework. Emphasis is on decision-making, and the development and execution of marketing strategies related to product and brand development, channels of distribution, pricing, and promotional efforts under varying marketplace conditions. This course incorporates the use of case studies. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$45.00

MAN4113 Managing in a Multifaceted Environment 3.000 credits

Managing in a Multifaceted Environment is a thorough course that offers a management perspective on making the most of the various qualities of today's workforce. This course explores the value that comes from human capital and other distinguishing factors in the modern workplace. Furthermore, it delves into new leadership styles as solutions for effectively managing and leading people. Students will gain insights into utilizing the strengths of the workforce and creating a dynamic work environment.

Lecture Hours: 48.000

Course User Fee: \$35.00

MAN4120 Leadership Challenges and Supervision 3.000 credits

The student will learn to analyze leadership theories and will acquire an awareness of the dynamics of supervisory and managerial decision-making. Emphasis will be placed on team building, crisis management, social and environmental responsibility, developing and communicating a vision, developing a full set of managerial and leadership skills. This course must be met with a grade of "C" or higher.

Lecture Hours: 48.000

Prerequisite: Senior status or permission of department chair, MAN4894

Course User Fee: \$70.00

FIN3400 Finance for Non-Financial Managers 3.000 credits

The students will learn to apply their financial skills and decision-making abilities to address financial issues in a business environment. They will learn how financial markets influence their decisions and the role of financial intermediaries in these markets. Emphasis will be placed on financial and capital budgeting, working capital management, short and long term financing, valuation of the firm, and overall capital structure. The course will require the student to apply the time value of money through the use of present and future value scenarios. This course must be met with a grade of "C" or higher. (3 hour lecture)

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN4720 Strategic Management Decision Making 3.000 credits

The student will learn the designing, planning, and implementation of strategic decision making in a business organization by identifying problems and designing possible solutions, formulating plans, goals, and feedback mechanisms. Through case studies, the student will conduct internal and external assessments to analyze effective strategic choices for companies.

Lecture Hours: 48.000

Course User Fee: \$70.00

MAN4900 Capstone Project in Supervision and Management 3.000 credits

Students will apply and integrate the knowledge and skills learned throughout the program by completing a capstone project. Student will identify a business opportunity; conduct an industry feasibility assessment and operational mapping; evaluate market condition; construct a marketing plan, and formulate a financial plan for implementing and managing an existing or new business venture; and evaluate the role of ethic, social, and environmental responsibility within a business. Must pass course with a grade of "C" or higher. Prerequisite: Senior Status or Departmental Permission.

Lecture Hours: 48.000

Prerequisite: Senior Status or Departmental Permission.(3 hr. lecture)

Course User Fee: \$90.00

MAN4941 Management Internship 3.000 credits

The student will learn management techniques by becoming an employee or intern (on a paid or unpaid basis) at either a not-for-profit or for-profit organization. The student will be required to work at least 144 hours required by the state to earn the credit for the internship. The student will work with their MDC Faculty and Supervising Employer to establish a set of assignments / learning goals that will be achieved during the semester. This course must be met with a grade of "C" or higher. Prerequisite: Senior Status or Departmental Permission.

Other Hours: 144.000

Prerequisite: Senior status and permission of department chair., Pre/Corequisite: MAN4900

Course User Fee: \$45.00

Program Description

Leadership and Management Innovation - Accounting Concentration

Bachelor of Applied Science | Code: P9203 | 120 credit

The Bachelor in Applied Science (BAS) in Leadership and Management Innovation prepares associate degree graduates from a variety of disciplines for work as a supervisor or manager. The programs prepares students with the hands-on training necessary to meet the workforce demands of today and tomorrow while providing the skills needed to compete for advancement. In addition, students may complete the general degree or one of three concentrations in Accounting, Digital Marketing, Hospitality Management, or Human Resource Management.

Total: 60.0

ACG3103 Intermediate Accounting I 3.000 credits

Theory and methodology underlying financial reporting, including the FASB's conceptual framework, the accounting process, financial statements, accounting changes, present value applications, and current assets. Prerequisites: ACG2071, MAC2233, QMB2100

Lecture Hours: 48.000

Course User Fee: \$98.00

MAN3025 Organization Management 3.000 credits

The student will learn the major functions of supervision and management including the functions of planning, organizing, leading and controlling. Emphasis is placed on learning how to communicate more effectively with employees and how to increase leadership effectiveness. Major topics include goal setting and attainment, organizational structure, decision-making, strategic planning, managing stress, and ethical behavior and ethical role modeling. Cases that present the student with opportunities to make supervisory and management decisions, along with timely feedback on their effectiveness, will be used. Must pass this course with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN3065 Business Ethics 3.000 credits

In this course the student will learn how personal values and ethics influence the decision-making capacity of the manager within an organization. The student will learn about ethical theories and the roles they play in the social and corporate behavior of an organization. Issues such as diversity in the workplace, intuition, technology, and the global environment of business, will be included in case examples. The student will acquire an understanding of how an organization can institutionalize its ethical system. This course must be met with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN3301 Human Resource Management 3.000 credits

The student will learn the functions of Human Resource Management including human resource planning, strategic development of human resources, recruitment techniques, selection and hiring processes, compensation systems, development of policy and procedures for effective and ethical human resource management, performance review and evaluation systems, working effectively with organized labor, retention of employees, and current issues in human resource management. The course will also include an exploration of human resources within the global business environment of a boundless organization. This course must be met with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

ACG3113 Intermediate Financial Accounting II 3.000 credits

Continuation of ACG3103. Particular emphasis on analysis of balance sheet accounts through problem solving. Provides students with a more in-depth knowledge of Generally Accepted Accounting Principles (GAAP), including the advanced study of long-term assets, current and long-term liabilities and equities. Prerequisite: ACG3103.

Lecture Hours: 48.000

Prerequisite: ACG3103

MAN3240 Organizational Behavior 3.000 credits

The students will learn about social behavioral sciences that can be applied to supervision and management through major topics include motivation, conflict, corrective actions and rewards, job related stress, organizational dynamics, the evolving global environment, and the responsibility to stakeholders and the planetary environment. The student will examine organizational behavior and how to integrate behavioral concepts in an effective managerial decision-making process. Must pass course with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAR3803 Marketing for Managers 3.000 credits

Students will learn how managers implement the marketing elements within a strategic planning framework. Emphasis is on decision-making, and the development and execution of marketing strategies related to product and brand development, channels of distribution, pricing, and promotional efforts under varying marketplace conditions. This course incorporates the use of case studies. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$45.00

TAX2000 Income Tax 3.000 credits

Federal income tax fundamentals with emphasis on individual returns. Topics considered include gross income, capital gains and losses, deductions and exemptions, and tax credits.

Lecture Hours: 48.000

Course User Fee: \$15.00

ACG3343 Cost Accounting and Controls 3.000 credits

This course covers the preparation of accounting information for use in management decision making process. It contains information on budgeting, standard costing, direct costing, performance evaluation, and use of accounting information.

Prerequisite: ACG2701

Lecture Hours: 48.000

Prerequisite: ACG2071

Course User Fee: \$98.00

BUL4320 Business Law 3.000 credits

This course covers the basics of business law for accountants which include the topics of business organizations, securities law and corporate governance, agency and employment, sales and lease contracts, creditors' rights and bankruptcy, professional liability, government regulation, and property. The students will learn about social behavioral sciences that can be applied to supervision and management through major topics include motivation, conflict, corrective actions and rewards, job related stress, organizational dynamics, the evolving global environment, and the responsibility to stakeholders and the planetary environment. The student will examine organizational behavior and how to integrate behavioral concepts in an effective managerial decision-making process. Must pass course with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAR3325 Digital Advertising 3.000 credits

In this course students learn about the principles and practices of digital advertising, as well as hands-on experience with the tools and platforms used in the industry. Students will learn about search engine advertising, social media advertising, e-commerce advertising, video advertising and effective implementation of advertising campaigns.

Prerequisite: MAR 3803.

Lecture Hours: 48.000

Prerequisite: MAR3803

Course User Fee: \$61.40

MAR4233 Social Media Marketing Application 3.000 credits

This course introduces students to social media and marketing functions and strategies that are essential to consumer involvement, community engagement, and customer relationship management. Students will learn about the dynamics of social marketing, trends in new technology, and integrated marketing through online platforms. Prerequisite: MAR 3803.

Lecture Hours: 48.000

Prerequisite: MAR3803

Course User Fee: \$61.40

MAN4113 Managing in a Multifaceted Environment 3.000 credits

Managing in a Multifaceted Environment is a thorough course that offers a management perspective on making the most of the various qualities of today's workforce. This course explores the value that comes from human capital and other distinguishing factors in the modern workplace. Furthermore, it delves into new leadership styles as solutions for effectively managing and leading people. Students will gain insights into utilizing the strengths of the workforce and creating a dynamic work environment.

Lecture Hours: 48.000

Course User Fee: \$35.00

MAN4120 Leadership Challenges and Supervision 3.000 credits

The student will learn to analyze leadership theories and will acquire an awareness of the dynamics of supervisory and managerial decision-making. Emphasis will be placed on team building, crisis management, social and environmental responsibility, developing and communicating a vision, developing a full set of managerial and leadership skills. This course must be met with a grade of "C" or higher.

Lecture Hours: 48.000

Prerequisite: Senior status or permission of department chair, MAN4894

Course User Fee: \$70.00

MAR4327 Search Engine Optimization (SEO) and Search Engine Marketing (SEM) 3.000 credits

In this course students will learn how to optimize websites for search engines and search engine ranking. Students will learn how to use social media to complement and enhance traditional SEO strategies. Students will apply their knowledge of search and search optimization tools and technics using leading industry certification. Prerequisite: MAR 3803.

Lecture Hours: 48.000

Prerequisite: MAR3803

Course User Fee: \$61.40

FIN3400 Finance for Non-Financial Managers 3.000 credits

The students will learn to apply their financial skills and decision-making abilities to address financial issues in a business environment. They will learn how financial markets influence their decisions and the role of financial intermediaries in these markets.

Emphasis will be placed on financial and capital budgeting, working capital management, short and long term financing, valuation of the firm, and overall capital structure. The course will require the student to apply the time value of money through the use of present and future value scenarios. This course must be met with a grade of "C" or higher. (3 hour lecture)

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN4720 Strategic Management Decision Making 3.000 credits

The student will learn the designing, planning, and implementation of strategic decision making in a business organization by identifying problems and designing possible solutions, formulating plans, goals, and feedback mechanisms. Through case studies, the student will conduct internal and external assessments to analyze effective strategic choices for companies.

Lecture Hours: 48.000

Course User Fee: \$70.00

MAR4674 Marketing Analytics 3.000 credits

A study of the metrics and systems needed to receive a return on every sale and marketing investment made. This course focuses on common calculations used in business to determine market share, penetration, brand/category development, awareness, margin, price per unit, break-even. The focus of this course is to enable students to take the vast amount of "data" available within companies and turn that data into "information" making them that much more valuable to potential employers.

Prerequisite: MAR 3803.

Lecture Hours: 48.000

Prerequisite: MAR3803

Course User Fee: \$61.40

MAR4721 Digital Marketing Strategy 3.000 credits

Students will learn the process of creating a plan and developing a strategy for promoting a business or organization using digital channels. Students will learn how to apply their knowledge and skills in a marketing campaign project. Students will plan, implement and evaluate a digital marketing campaign using case studies and collaborative projects. Prerequisite: MAR 3803.

Lecture Hours: 48.000

Prerequisite: MAR3803

Course User Fee: \$61.40

MAR4860 Customer Relationship Management 3.000 credits

In this course students will learn how to effectively manage relationships with customers to increase customer satisfaction, loyalty, and retention. They will learn about customer behavior, communication strategies, data analysis techniques and CRM tools and technics to better understand and meet the needs of their customers. Prerequisite: MAR 3803.

Lecture Hours: 48.000

Prerequisite: MAR3803

Course User Fee: \$61.40

MAN4900 Capstone Project in Supervision and Management 3.000 credits

Student will apply and integrate the knowledge and skills learned throughout the program by completing a capstone project. Student will identify a business opportunity; conduct an industry feasibility assessment and operational mapping; evaluate market condition; construct a marketing plan, and formulate a financial plan for implementing and managing an existing or new business venture; and evaluate the role of ethic, social, and environmental responsibility within a business.

Lecture Hours: 48.000

Total: 60.0

MAN3025 Organization Management 3.000 credits

The student will learn the major functions of supervision and management including the functions of planning, organizing, leading and controlling. Emphasis is placed on learning how to communicate more effectively with employees and how to increase leadership effectiveness. Major topics include goal setting and attainment, organizational structure, decision-making, strategic planning, managing stress, and ethical behavior and ethical role modeling. Cases that present the student with opportunities to make supervisory and management decisions, along with timely feedback on their effectiveness, will be used. Must pass this course with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN3065 Business Ethics 3.000 credits

In this course the student will learn how personal values and ethics influence the decision-making capacity of the manager within an organization. The student will learn about ethical theories and the roles they play in the social and corporate behavior of an organization. Issues such as diversity in the workplace, intuition, technology, and the global environment of business, will be included in case examples. The student will acquire an understanding of how an organization can institutionalize its ethical system. This course must be met with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN3301 Human Resource Management 3.000 credits

The student will learn the functions of Human Resource Management including human resource planning, strategic development of human resources, recruitment techniques, selection and hiring processes, compensation systems, development of policy and procedures for effective and ethical human resource management, performance review and evaluation systems, working effectively with organized labor, retention of employees, and current issues in human resource management. The course will also include an exploration of human resources within the global business environment of a boundless organization. This course must be met with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN3240 Organizational Behavior 3.000 credits

The students will learn about social behavioral sciences that can be applied to supervision and management through major topics include motivation, conflict, corrective actions and rewards, job related stress, organizational dynamics, the evolving global environment, and the responsibility to stakeholders and the planetary environment. The student will examine organizational behavior and how to integrate behavioral concepts in an effective managerial decision-making process. Must pass course with a grade of "C" or higher.

Lecture Hours: 48.000

Course User Fee: \$60.00

MAN4361 Organizational Staffing 3.000 credits

This course provides the student with an overview of the staffing function in organizations, including the topics of job analysis, forecasting, recruitment, selection, retention and turnover. It serves as an introductory course for the prospective human resources manager and as a survey of responsibility and activities of any manager with supervisory responsibilities. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4402 Employment Law and Regulation 3.000 credits

This course analyzes the federal and state regulation of the employment relationship, including wage and hour laws, EEO, and Affirmative Action programs. The student will address human resource issues such as employee benefits, insurance, workers' compensation, safety, health, employees' personal rights and collective bargaining legislation.

Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAR3803 Marketing for Managers 3.000 credits

Students will learn how managers implement the marketing elements within a strategic planning framework. Emphasis is on decision-making, and the development and execution of marketing strategies related to product and brand development, channels of distribution, pricing, and promotional efforts under varying marketplace conditions. This course incorporates the use of case studies. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$45.00

**MAN4120 Leadership Challenges and Supervision
3.000 credits**

The student will learn to analyze leadership theories and will acquire an awareness of the dynamics of supervisory and managerial decision-making. Emphasis will be placed on team building, crisis management, social and environmental responsibility, developing and communicating a vision, developing a full set of managerial and leadership skills. This course must be met with a grade of "C" or higher.

Lecture Hours: 48.000

Prerequisite: Senior status or permission of department chair, MAN4894

Course User Fee: \$70.00

MAN4330 Compensation Management 3.000 credits

This course is a study of the strategic use of compensation system for the purposes of attracting, retaining, and motivating a competitive workforce. The student will address topics such as designing compensation systems, bases for pay, employee benefit programs, laws affecting compensation practices, and compensation challenges for various employee groups. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4335 Employee Benefit Planning 3.000 credits

This course focuses on the both wage and nonwage related benefits made available to employees by the firm and various related social and governmental programs. The student will examine various state and federal laws regarding employee benefits planning.

Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4720 Strategic Management Decision Making 3.000 credits

The student will learn the designing, planning, and implementation of strategic decision making in a business organization by identifying problems and designing possible solutions, formulating plans, goals, and feedback mechanisms. Through case studies, the student will conduct internal and external assessments to analyze effective strategic choices for companies.

Lecture Hours: 48.000

Course User Fee: \$70.00

**FIN3400 Finance for Non-Financial Managers
3.000 credits**

The students will learn to apply their financial skills and decision-making abilities to address financial issues in a business environment. They will learn how financial markets influence their decisions and the role of financial intermediaries in these markets.

Emphasis will be placed on financial and capital budgeting, working capital management, short and long term financing, valuation of the firm, and overall capital structure. The course will require the student to apply the time value of money through the use of present and future value scenarios. This course must be met with a grade of "C" or higher. (3 hour lecture)

Lecture Hours: 48.000

Course User Fee: \$60.00

**MAN3322 Human Resources Information Systems
3.000 credits**

This course examines the role of human resources information system (HRIS) in today's organizations and human resources departments. The student will address topics such as human resource information systems design, acquisition, and implementation. The role of these systems in talent acquisition and management is also examined. Prerequisites: MAN3025, MAN3301.

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4113 Managing in a Multifaceted Environment 3.000 credits

Managing in a Multifaceted Environment is a thorough course that offers a management perspective on making the most of the various qualities of today's workforce. This course explores the value that comes from human capital and other distinguishing factors in the modern workplace. Furthermore, it delves into new leadership styles as solutions for effectively managing and leading people. Students will gain insights into utilizing the strengths of the workforce and creating a dynamic work environment.

Lecture Hours: 48.000

Course User Fee: \$35.00

MAN4352 Effective Employee Training 3.000 credits

This course focuses on professional development activities as performed by human resources specialists or organizational specialists. The student will analyze the benefits of employee training, establish employee development programs, and address the theories, issues, practices and problems regarding employee training and development.

Prerequisites: MAN3025, MAN3301

Lecture Hours: 48.000

Prerequisite: MAN3025, MAN3301

Course User Fee: \$35.00

MAN4900 Capstone Project in Supervision and Management 3.000 credits

Student will apply and integrate the knowledge and skills learned throughout the program by completing a capstone project. Student will identify a business opportunity; conduct an industry feasibility assessment and operational mapping; evaluate market condition; construct a marketing plan, and formulate a financial plan for implementing and managing an existing or new business venture; and evaluate the role of ethic, social, and environmental responsibility within a business.

Lecture Hours: 48.000

Course User Fee: \$90.00

MAN4941 Management Internship 3.000 credits

The student will learn management techniques by becoming an employee or intern (on a paid or unpaid basis) at either a not-for-profit or for-profit organization. The student will be required to work at least 144 hours required by the state to earn the credit for the internship. The student will work with their MDC Faculty and Supervising Employer to establish a set of assignments / learning goals that will be achieved during the semester. This course must be met with a grade of "C" or higher.

Prerequisite: Senior Status or Departmental Permission.

Other Hours: 144.000

Prerequisite: Senior status and permission of department chair., Pre/Corequisite: MAN4900

Course User Fee: \$45.00

Program Description

Public Safety Management - Crime Scene Investigation Concentration

Bachelor of Applied Science | Code: P9106 | 120 credits

The four-year Bachelor of Applied Science degree is a workforce-driven baccalaureate degree in Public Safety Management designed to provide education and training, resulting in immediate employment possibilities for students in numerous careers in Public Safety. This comprehensive curriculum emphasizes critical thinking, analytical, written and oral communications, as well as research skills designed to prepare today's learners for entry-level, mid-management, and upper level supervisory positions within Public Safety agencies such as the FBI, DEA, ICE, U.S. Marshals Service, U.S. Secret Service and others.

Program Modality: Both [In-Person (IP) and On-line]

CJE 4668	Computer Crime	3.0

Total: 60.0

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

CCJ3032 Crime and the Media 3.000 credits

An examination of the inter-relationship among the mass media, crime, and criminal justice. Includes media and the social construction of crime and criminal justice; media effects on attitudes toward crime and justice; and media as a cause of crime. Lecture Hours: 48.000

CJL4133 Criminal Evidence 3.000 credits

A study of evidentiary principles and rules of evidence, and their application in a courtroom setting.-

Lecture Hours: 48.000

CCJ3663 Female Crime and Delinquency 3.000 credits

A study of females in society and the criminal justice system. Includes the female delinquent, females as criminals, females as victims, and the impact of females as professionals in the Criminal Justice System. Prerequisites: CCJ1191, CJJ2002.

Lecture Hours: 48.000

Prerequisite: CCJ1191, CJJ2002

CCJ3666 Victimology 3.000 credits

A comprehensive study of victimization; analysis of contemporary victim-assistance and victim compensation programs and related research; review of the historical importance of victim restitution as a basis for punitive criminal law.

Lecture Hours: 48.000

CJE4648 Crime Scene Safety 3.000 credits

A study of how to properly handle crime scenes and hazardous crime scenes relative to various hazardous materials, to include chemical and biological.

Lecture Hours: 48.000

Course User Fee: \$71.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

CCJ3700 Methods of Research in Criminal Justice 3.000 credits

Evaluates the application of research methodologies as applied to the study of Public Safety Management.

Prerequisite: STA2023

Lecture Hours: 48.000

Prerequisite: STA2023

CJE4647 Advanced Crime Scene Investigations 3.000 credits

A study of advanced search techniques, crime scenes reconstruction, computer sketching, laser mapping. DNA evidence, trajectory, and blood spatter evidence.

Lecture Hours: 48.000

Prerequisite: CJE2600

Course User Fee: \$59.00

CJE4650 Advanced Crime Scene Investigations 3.000 credits

A study of advanced search techniques, crime scenes reconstruction, computer sketching, laser mapping. DNA evidence, trajectory, and blood spatter evidence.

Lecture Hours: 48.000

Course User Fee: \$105.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

CCJ4054 Ethics in The Criminal Justice System 3.000 credits

An in depth study of moral, ethical, legal, and professional issues and dilemmas facing individuals and organizations within the Criminal Justice systems. Prerequisites: CCJ2053 or PHI2600.

Lecture Hours: 48.000

Prerequisite: CCJ2053, PHI2600

CCJ4450 Criminal Justice Administration 3.000 credits

An analysis of leadership styles, management principles, supervisory techniques, policies and procedures within Law Enforcement agencies.

Prerequisite: CCJ1020.

Lecture Hours: 48.000

Prerequisite: CCJ1020

CCJ4641 Organized Crime 3.000 credits

An analysis of organized crime in today's society, as well as, past, present, and future perspectives of the topic.

Lecture Hours: 48.000

CJE4675 Modern Fingerprint Technology 3.000 credits

A study of the detection, preservation, and removal of fingerprint evidence pertaining to latent, patent, and plastic prints.

Lecture Hours: 48.000

Prerequisite: CJE2600

Course User Fee: \$32.00

CCJ4651 Drugs and Crime 3.000 credits

An analysis of the interrelationship among drug usage, crime and the criminal justice system.

Lecture Hours: 48.000

CJE3110 Law Enforcement Systems 3.000 credits

An analysis of the different law enforcement systems in Criminal Justice. Focuses on the different law agencies and their mission at the local, state, and federal levels.

Lecture Hours: 48.000

CJE4615 Advanced Criminal Investigations 3.000 credits

The understanding, interpretation, and application of criminal investigative procedures in the U.S., based upon constitutional issues and legal precedent. (3 hr. Lecture)

Lecture Hours: 48.000

Prerequisite: CJT 2100

CJE4668 Computer Crime 3.000 credits

Synthesizes knowledge of crime elements, legal issues, investigative techniques, and computer skills used in the prevention and investigation of computer-generated crime.

Lecture Hours: 48.000

CJE4668 Computer Crime 3.000 credits

Synthesizes knowledge of crime elements, legal issues, investigative techniques, and computer skills used in the prevention and investigation of computer-generated crime.

Lecture Hours: 48.000

Program Description

Supply Chain Management

Bachelor of Applied Science | Code: P9300 | 120 credits

Supply chain management is an interdisciplinary field that emphasizes cross-functional integration of diverse business functions, facilities, and activities and seeks to manage those activities to enhance a company's competitive advantage. The Bachelor of Applied Science with a major in Supply Chain Management (BAS-SCM) is designed to provide knowledge of the supply chain while exploring the risks, operations, logistics, economics, regulatory issues, change management, forecasting, resource allocation, production planning, inventory management, customer delivery, after-sales support and service and other functions basic to business.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0
ENC 1102	English Composition 2	3.0
GEB 3358	International Negotiations and Transactions	3.0
MAN 3506	Operations Management	3.0
MAN 3562	Purchasing, Inventory and Warehouse Management	3.0
Semester 2		Units: 12.0
FIN 3403	Financial Management	3.0
MAN 3583	Project Management	3.0
SPC 2608	Introduction to Public Speaking	3.0
<i>Humanities (GE)</i>		3.0

Select 3 credits from the following course options: ECO, MAC*, MET*, STA 2023 or Consult with an advisor for appropriate selection

Total: 60.0

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

GEB3358 International Negotiations and Transactions 3.000 credits

This course presents business negotiations in selected regions of the world. Students will learn the skills of negotiation by analyzing international business cases and developing solutions to situations. Topics include overseas market research using both domestic and international sources and the application of theoretical and practical business knowledge to foreign situations and trade negotiations. The importance of culture, language, and values in international negotiations is emphasized.

Lecture Hours: 48.000

Prerequisite: TRA1154

Course User Fee: \$69.00

MAN3506 Operations Management 3.000 credits

The course emphasizes the application of operational decision-making techniques to improve process, productivity, and the effective utilization of resources within organizations. Students will learn to recognize the trade-offs associated with operations management decisions and their effect on resource allocation. Topics include production processes, operations strategies, quantitative techniques, quality, performance, capacity planning, efficiency, forecasting, resource management, statistical process control, project management, and supply chains.

Prerequisite: QMB2100 or STA2023.

Lecture Hours: 48.000

Prerequisite: QMB2100 OR STA2023

MAN3562 Purchasing, Inventory and Warehouse Management 3.000 credits

This course explores the integration of production operations and logistics management. It will also examine purchasing, Inventory and Warehouse Management concepts and theory. Special emphasis is placed on the relationships that exist between operations and the supply chain to include operations and supply chain strategies, business processes, project management, product design and development, inventory management and effective warehouse and stores management.

Lecture Hours: 48.000

Course User Fee: \$62.76

FIN3403 Financial Management 3.000 credits

Students will learn the sources and uses of funds as they relate to financial decision making in the corporate form of enterprise. Emphasis is placed on working capital management, capital budgeting techniques, short and long term financing, and capital structure and the value of the firm. This course emphasizes the use of formulas and spreadsheets through Excel.

Lecture Hours: 48.000

Prerequisite: ACG2071, ACG2071L, QMB2100

MAN3583 Project Management 3.000 credits

Students will learn project management concepts and theory, including attributes for a project life cycle, global project management, benefits of project management, project management environments, planning and managing risk, project planning controls, and terminating a project.

Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

BUL4461 Law of International Trade 3.000 credits

Students will learn to interpret laws of international trade, licensing, and customer's regulation. This course also addresses U.S. customs regulations, classification of merchandise, application of tariff rules, duty free treatment, importing and exporting, liquidation inspection, search and seizure, and fines and penalties. In addition, the course will review the general rules and how to interpret the harmonized tariff schedule. Prerequisites: MAN2021 and GEB3358.

Lecture Hours: 48.000

Prerequisite: GEB3358

MAN4597 Global Supply Chain Management 3.000 credits

This course presents an overview of the management of sourcing, operations, and distribution processes along a supply chain in domestic and international markets. Students will learn how firms gain a competitive advantage through supply chain activities. Topics include: supply chain network design, purchasing, forecasting, inventory management, globalization and outsourcing, logistics, and information technology.

Lecture Hours: 48.000

Prerequisite: MAN2021, MAN3506

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues.

Lecture Hours: 48.000

Course User Fee: \$5.00

MET1010 Introduction to Weather 3.000 credits

An introduction to fundamentals of weather and their impact on human activities. Topics include temperature, humidity, clouds, precipitation, air masses, fronts, and storms. Emphasis is on understanding how these processes take place and their results.

Lecture Hours: 48.000

Pre/Corequisite: PSC1515

Course User Fee: \$10.00

GEB4363 Import Export Management 3.000 credits

Students will learn the functions and range of traffic management services performed by freight forwarders, including changes in governmental restrictions, rules, and regulations applicable to different countries, ports, and trade routes. Students will also learn the documentation needed to facilitate and coordinate the movement of goods in international trade and supply chain management systems. Prerequisites: MAN 2021 and TRA 2010.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA2010

Course User Fee: \$69.00

MAN3504 Production Operations and Logistics Management 3.000 credits

This course examines the integration of production operations and logistics management and how they enable an organization to compete successfully in business. Students will learn the relationships that exist between operations and the supply chain, including operations and supply chain strategies, business processes, project management, product design and development, and inventory management. This course uses case study methodology. Prerequisite: TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA1154 with a minimum grade of C

MAN3786 Sustainable Enterprise Planning 3.000 credits

Students will learn the assessment tools, design and construction considerations, and operating planning requirements for sustainable enterprises. Students will also learn the ecological and economic benefits of sustainability practices, including construction, operations, supply chain decisions, recycling, reusing, and reconditioning to preserve the environment by increasing revenues. Best practices, case studies, evolving trends and experimental efforts are also covered.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4593 Supply Chain Management Theory & Methodology 2.000 credits

This course presents a range of advanced topics in integrated logistics and supply chain management. Students will learn new theoretical and methodological developments in the field of supply chain. Specific topics vary depending upon current industry developments and will incorporate the use of speakers in the classroom. Prerequisites:

MAN2021, MAN3583, MAN4523.

Lecture Hours: 32.000

Prerequisite: MAN2021, MAN3583, MAN4523

TRA3034 Transportation and Traffic Management 3.000 credits

This course covers developments leading to national and federal regulations, division of territories, official descriptions, etc. Students will learn the scope of authority of territorial associations, factors controlling traffic flows, basic governing classification rules, principals of freight rates and tariffs, and elements of rate making. Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA3132 Purchasing and Inventory Management 3.000 credits

This course provides a comprehensive introduction to the purchasing/procurement and supply chain management field. Students will learn purchasing and supply chain issues in a variety of settings, from process industries to high-tech manufacturing and services as well as public institutions. Emphasis is on the purchasing process as it relates to such topics as inventory control procedures, price/cost analysis, laws and ethics, negotiations, vendor selection and the development of vendor relationships.

Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA4234 Warehouse Management 3.000 credits

Students will learn warehousing functions, facility operations, and operational productivity improvements and measurements with the inclusion of concepts from marketing, finance, statistics, operations management, and human resources. The course presents an integrated business approach to the detailed operational aspects of logistics facilities such as warehouse and distribution centers. The course will use real-world warehouse data to design the layout and operations requirements for a local warehousing facility and to identify the operational equipment used in warehousing. Prerequisites: MAN2021, MAN3065, QMB2100.

Lecture Hours: 48.000

Prerequisite: MAN2021 AND MAN3065 AND QMB2100

MAN4520 Quality Management 3.000 credits

This course provides an understanding of various theories of quality management (QM). Students will learn how organizations can develop excellence through the adoption of continuous improvement and process management. The course analyzes and uses various process management techniques, continuous improvement tools, and strategies to improve quality. The conceptual and analytical skills acquired in this course enable students to provide leadership in shaping a culture for quality within an organization and determining the effectiveness of quality initiatives such as Total QM, Six Sigma, Process Capability, Process Control, and Customer Relationships.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4523 Production Information Systems 3.000 credits

This course presents the fundamental aspects of computer technology required by the systems that provide data to, and derive information from, production in manufacturing. Students will learn the techniques to organize, store, manipulate data, report, derive and analyze production information, basics networking used in production, as well as various forms of information systems.

Lecture Hours: 48.000

MAR4203 Supply Chain Marketing 3.000 credits

Students will learn the management of traditional and emerging marketing channels, with emphasis on legal, economic, and ethical considerations in wholesale and retail inventory control, raw goods, finished product transportation and relationship management. Prerequisite: MAN3506. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: MAN3506

GEB4363 Import Export Management 3.000 credits

Students will learn the functions and range of traffic management services performed by freight forwarders, including changes in governmental restrictions, rules, and regulations applicable to different countries, ports, and trade routes. Students will also learn the documentation needed to facilitate and coordinate the movement of goods in international trade and supply chain management systems. Prerequisites: MAN 2021 and TRA 2010.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA2010

Course User Fee: \$69.00

MAN3504 Production Operations and Logistics Management 3.000 credits

This course examines the integration of production operations and logistics management and how they enable an organization to compete successfully in business. Students will learn the relationships that exist between operations and the supply chain, including operations and supply chain strategies, business processes, project management, product design and development, and inventory management. This course uses case study methodology. Prerequisite: TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA1154 with a minimum grade of C

MAN3786 Sustainable Enterprise Planning 3.000 credits

Students will learn the assessment tools, design and construction considerations, and operating planning requirements for sustainable enterprises. Students will also learn the ecological and economic benefits of sustainability practices, including construction, operations, supply chain decisions, recycling, reusing, and reconditioning to preserve the environment by increasing revenues. Best practices, case studies, evolving trends and experimental efforts are also covered.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4593 Supply Chain Management Theory & Methodology 2.000 credits

This course presents a range of advanced topics in integrated logistics and supply chain management. Students will learn new theoretical and methodological developments in the field of supply chain. Specific topics vary depending upon current industry developments and will incorporate the use of speakers in the classroom. Prerequisites:

MAN2021, MAN3583, MAN4523.

Lecture Hours: 32.000

Prerequisite: MAN2021, MAN3583, MAN4523

TRA3034 Transportation and Traffic Management 3.000 credits

This course covers developments leading to national and federal regulations, division of territories, official descriptions, etc. Students will learn the scope of authority of territorial associations, factors controlling traffic flows, basic governing classification rules, principals of freight rates and tariffs, and elements of rate making. Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA3132 Purchasing and Inventory Management 3.000 credits

This course provides a comprehensive introduction to the purchasing/procurement and supply chain management field. Students will learn purchasing and supply chain issues in a variety of settings, from process industries to high-tech manufacturing and services as well as public institutions. Emphasis is on the purchasing process as it relates to such topics as inventory control procedures, price/cost analysis, laws and ethics, negotiations, vendor selection and the development of vendor relationships.

Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA4234 Warehouse Management 3.000 credits

Students will learn warehousing functions, facility operations, and operational productivity improvements and measurements with the inclusion of concepts from marketing, finance, statistics, operations management, and human resources. The course presents an integrated business approach to the detailed operational aspects of logistics facilities such as warehouse and distribution centers. The course will use real-world warehouse data to design the layout and operations requirements for a local warehousing facility and to identify the operational equipment used in warehousing. Prerequisites: MAN2021, MAN3065, QMB2100.

Lecture Hours: 48.000

Prerequisite: MAN2021 AND MAN3065 AND QMB2100

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

MAN3554 Safety and Risk Management 1.000 credits

This course will focus on safety and risk management with emphasis on how it applies to supply chain management. Students will learn the processes used to characterize and manage risk, as well as maintain a safe operating environment with the protection of personnel, assets, and services. Hazard characteristics of products, appropriate modes of transport, carrier selection and qualifications, packaging and container specifications, driver training requirements, financial issues, security precautions, warehousing risk, OSHA, hazardous materials handling, and customer assessment will be addressed in this course.

Lecture Hours: 16.000

MAN4940 Field Study and Research 2.000 credits

Students will learn to apply information and skills studied in core and concentration program courses through various special projects, field research, or internships designed for cogitative learning in a student-centered manner which requires the command, analysis, and synthesis of knowledge and skills.

Lecture Hours: 32.000

Prerequisite: MAN3583, TRA1154

GEB4363 Import Export Management 3.000 credits

Students will learn the functions and range of traffic management services performed by freight forwarders, including changes in governmental restrictions, rules, and regulations applicable to different countries, ports, and trade routes. Students will also learn the documentation needed to facilitate and coordinate the movement of goods in international trade and supply chain management systems. Prerequisites: MAN 2021 and TRA 2010.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA2010

Course User Fee: \$69.00

MAN3504 Production Operations and Logistics Management 3.000 credits

This course examines the integration of production operations and logistics management and how they enable an organization to compete successfully in business. Students will learn the relationships that exist between operations and the supply chain, including operations and supply chain strategies, business processes, project management, product design and development, and inventory management. This course uses case study methodology. Prerequisite: TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA1154 with a minimum grade of C

MAN3786 Sustainable Enterprise Planning 3.000 credits

Students will learn the assessment tools, design and construction considerations, and operating planning requirements for sustainable enterprises. Students will also learn the ecological and economic benefits of sustainability practices, including construction, operations, supply chain decisions, recycling, reusing, and reconditioning to preserve the environment by increasing revenues. Best practices, case studies, evolving trends and experimental efforts are also covered.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4552 Supply Chain Analytics & Decision Making 3.000 credits

Through this course students will focus on the science of learning from data to support decision making. The objective of this course is to explore and apply basic statistical concepts and procedures that are used to collect, analyze, summarize, and report data in a supply chain management role. Course topics covered include methods for: collecting, analyzing, summarizing data; making statistical inferences about populations and exploring the relationship between variables. The course introduces analytical tools and techniques that provide a cause and effect understanding linking operational plans with corporate objectives.

Lecture Hours: 48.000

Course User Fee: \$62.76

TRA3034 Transportation and Traffic Management 3.000 credits

This course covers developments leading to national and federal regulations, division of territories, official descriptions, etc. Students will learn the scope of authority of territorial associations, factors controlling traffic flows, basic governing classification rules, principals of freight rates and tariffs, and elements of rate making. Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA3132 Purchasing and Inventory Management 3.000 credits

This course provides a comprehensive introduction to the purchasing/procurement and supply chain management field. Students will learn purchasing and supply chain issues in a variety of settings, from process industries to high-tech manufacturing and services as well as public institutions. Emphasis is on the purchasing process as it relates to such topics as inventory control procedures, price/cost analysis, laws and ethics, negotiations, vendor selection and the development of vendor relationships.

Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA4234 Warehouse Management 3.000 credits

Students will learn warehousing functions, facility operations, and operational productivity improvements and measurements with the inclusion of concepts from marketing, finance, statistics, operations management, and human resources. The course presents an integrated business approach to the detailed operational aspects of logistics facilities such as warehouse and distribution centers. The course will use real-world warehouse data to design the layout and operations requirements for a local warehousing facility and to identify the operational equipment used in warehousing. Prerequisites: MAN2021, MAN3065, QMB2100.

Lecture Hours: 48.000

Prerequisite: MAN2021 AND MAN3065 AND QMB2100

Program Description

Supply Chain Management – Procurement Management Concentration

Bachelor of Applied Science | Code: P9301 | 120 credits

Supply chain management is an interdisciplinary field that emphasizes cross-functional integration of diverse business functions, facilities, and activities and seeks to manage those activities to enhance a company's competitive advantage. The Bachelor of Applied Science in Supply Chain Management (BAS-SCM) is designed to provide knowledge of the supply chain while exploring the risks, operations, logistics, economics, regulatory issues, change management, forecasting, resource allocation, production planning, inventory management, customer delivery, after-sales support and service and other functions basic to business.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 12.0

MAN 3506	Operations Management	3.0
MAN 3562	Purchasing, Inventory and Warehouse Management	3.0
MAN 4520	Quality Management	3.0
MAN 4523	Production Information Systems	3.0

Semester 2		Units: 12.0
FIN 3403	Financial Management	3.0
MAN 3583	Project Management	3.0
MAN 4570	Purchasing for Industry	3.0
Elective*		3.0

Select 3 credits from the following course options: ACG, BAN*, BUL*, CHI*, FIN*, FRE*, FRW*, GEB*, GER*, HBR*, ISM*, ITA*, JPN*, MAC*, MAN*, MAR*, PET*, POR*, PUR*, QMB*, SPM*, SPN*, STA*, TAX*, TRA*

Semester 3		Units: 12.0
BUL 4461	Law of International Trade	3.0
MAN 3504	Production Operations and Logistics Management	3.0
MAN 4597	Global Supply Chain Management	3.0
<i>Upper Division Elective</i>		3.0

Total: 60.0

MAN3506 Operations Management 3.000 credits

The course emphasizes the application of operational decision-making techniques to improve process, productivity, and the effective utilization of resources within organizations. Students will learn to recognize the trade-offs associated with operations management decisions and their effect on resource allocation. Topics include production processes, operations strategies, quantitative techniques, quality, performance, capacity planning, efficiency, forecasting, resource management, statistical process control, project management, and supply chains. Prerequisite: QMB2100 or STA2023.

Lecture Hours: 48.000

Prerequisite: QMB2100 OR STA2023

MAN3562 Purchasing, Inventory and Warehouse Management 3.000 credits

This course explores the integration of production operations and logistics management. It will also examine purchasing, Inventory and Warehouse Management concepts and theory. Special emphasis is placed on the relationships that exist between operations and the supply chain to include operations and supply chain strategies, business processes, project management, product design and development, inventory management and effective warehouse and stores management.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN4520 Quality Management 3.000 credits

This course provides an understanding of various theories of quality management (QM). Students will learn how organizations can develop excellence through the adoption of continuous improvement and process management. The course analyzes and uses various process management techniques, continuous improvement tools, and strategies to improve quality. The conceptual and analytical skills acquired in this course enable students to provide leadership in shaping a culture for quality within an organization and determining the effectiveness of quality initiatives such as Total QM, Six Sigma, Process Capability, Process Control, and Customer Relationships.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4523 Production Information Systems 3.000 credits

This course presents the fundamental aspects of computer technology required by the systems that provide data to, and derive information from, production in manufacturing. Students will learn the techniques to organize, store, manipulate data, report, derive and analyze production information, basics networking used in production, as well as various forms of information systems.

Lecture Hours: 48.000

FIN3403 Financial Management 3.000 credits

Students will learn the sources and uses of funds as they relate to financial decision making in the corporate form of enterprise. Emphasis is placed on working capital management, capital budgeting techniques, short and long term financing, and capital structure and the value of the firm. This course emphasizes the use of formulas and spreadsheets through Excel.

Lecture Hours: 48.000

Prerequisite: ACG2071, ACG2071L, QMB2100

MAN3583 Project Management 3.000 credits

Students will learn project management concepts and theory, including attributes for a project life cycle, global project management, benefits of project management, project management environments, planning and managing risk, project planning controls, and terminating a project.

Lecture Hours: 48.000

MAN4570 Purchasing for Industry 3.000 credits

Students will learn purchasing for industry concepts and theory, including negotiation skills: mastering the art of deal making strategies, contracts: bidding, evaluation, negotiation and award, purchasing management, tendering and supplier selection, vendor qualification: managing performance and contract compliance.

Lecture Hours: 48.000

Course User Fee: \$62.76

BUL4461 Law of International Trade 3.000 credits

Students will learn to interpret laws of international trade, licensing, and customer's regulation. This course also addresses U.S. customs regulations, classification of merchandise, application of tariff rules, duty free treatment, importing and exporting, liquidation inspection, search and seizure, and fines and penalties. In addition, the course will review the general rules and how to interpret the harmonized tariff schedule. Prerequisites: MAN2021 and GEB3358.

Lecture Hours: 48.000

Prerequisite: GEB3358

MAN3504 Production Operations and Logistics Management 3.000 credits

This course examines the integration of production operations and logistics management and how they enable an organization to compete successfully in business. Students will learn the relationships that exist between operations and the supply chain, including operations and supply chain strategies, business processes, project management, product design and development, and inventory management. This course uses case study methodology. Prerequisite: TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA1154 with a minimum grade of C

MAN4597 Global Supply Chain Management 3.000 credits

This course presents an overview of the management of sourcing, operations, and distribution processes along a supply chain in domestic and international markets. Students will learn how firms gain a competitive advantage through supply chain activities. Topics include: supply chain network design, purchasing, forecasting, inventory management, globalization and outsourcing, logistics, and information technology.

Lecture Hours: 48.000

Prerequisite: MAN2021, MAN3506

GEB4363 Import Export Management 3.000 credits

Students will learn the functions and range of traffic management services performed by freight forwarders, including changes in governmental restrictions, rules, and regulations applicable to different countries, ports, and trade routes. Students will also learn the documentation needed to facilitate and coordinate the movement of goods in international trade and supply chain management systems. Prerequisites: MAN 2021 and TRA 2010.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA2010

Course User Fee: \$69.00

MAN3786 Sustainable Enterprise Planning 3.000 credits

Students will learn the assessment tools, design and construction considerations, and operating planning requirements for sustainable enterprises. Students will also learn the ecological and economic benefits of sustainability practices, including construction, operations, supply chain decisions, recycling, reusing, and reconditioning to preserve the environment by increasing revenues. Best practices, case studies, evolving trends and experimental efforts are also covered.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4593 Supply Chain Management Theory & Methodology 2.000 credits

This course presents a range of advanced topics in integrated logistics and supply chain management. Students will learn new theoretical and methodological developments in the field of supply chain. Specific topics vary depending upon current industry developments and will incorporate the use of speakers in the classroom. Prerequisites: MAN2021, MAN3583, MAN4523.

Lecture Hours: 32.000

Prerequisite: MAN2021, MAN3583, MAN4523

TRA3034 Transportation and Traffic Management 3.000 credits

This course covers developments leading to national and federal regulations, division of territories, official descriptions, etc. Students will learn the scope of authority of territorial associations, factors controlling traffic flows, basic governing classification rules, principals of freight rates and tariffs, and elements of rate making. Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA3132 Purchasing and Inventory Management 3.000 credits

This course provides a comprehensive introduction to the purchasing/procurement and supply chain management field. Students will learn purchasing and supply chain issues in a variety of settings, from process industries to high-tech manufacturing and services as well as public institutions. Emphasis is on the purchasing process as it relates to such topics as inventory control procedures, price/cost analysis, laws and ethics, negotiations, vendor selection and the development of vendor relationships.

Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA4234 Warehouse Management 3.000 credits

Students will learn warehousing functions, facility operations, and operational productivity improvements and measurements with the inclusion of concepts from marketing, finance, statistics, operations management, and human resources. The course presents an integrated business approach to the detailed operational aspects of logistics facilities such as warehouse and distribution centers. The course will use real-world warehouse data to design the layout and operations requirements for a local warehousing facility and to identify the operational equipment used in warehousing. Prerequisites: MAN2021, MAN3065, QMB2100.

Lecture Hours: 48.000

Prerequisite: MAN2021 AND MAN3065 AND QMB2100

GEB3358 International Negotiations and Transactions 3.000 credits

This course presents business negotiations in selected regions of the world. Students will learn the skills of negotiation by analyzing international business cases and developing solutions to situations. Topics include overseas market research using both domestic and international sources and the application of theoretical and practical business knowledge to foreign situations and trade negotiations. The importance of culture, language, and values in international negotiations is emphasized.

Lecture Hours: 48.000

Prerequisite: TRA1154

Course User Fee: \$69.00

MAN3577 Procurement for Major Projects 3.000 credits

Students will learn the principles of procurement for major projects concepts and theory, including advanced purchasing and cost savings techniques, contracts administration from award to completion, strategic procurement management.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN3578 Global Procurement Management 3.000 credits

Students will learn Global Procurement Management concepts and theory, including a good understanding in the differences in cultures, law, currency, communications and buying from foreign suppliers, international procurement is a challenge, buying internationally and to help support international procurement efforts.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN3554 Safety and Risk Management 1.000 credits

This course will focus on safety and risk management with emphasis on how it applies to supply chain management. Students will learn the processes used to characterize and manage risk, as well as maintain a safe operating environment with the protection of personnel, assets, and services. Hazard characteristics of products, appropriate modes of transport, carrier selection and qualifications, packaging and container specifications, driver training requirements, financial issues, security precautions, warehousing risk, OSHA, hazardous materials handling, and customer assessment will be addressed in this course.

Lecture Hours: 16.000

MAN4940 Field Study and Research 2.000 credits

Students will learn to apply information and skills studied in core and concentration program courses through various special projects, field research, or internships designed for cogitative learning in a student-centered manner which requires the command, analysis, and synthesis of knowledge and skills.

Lecture Hours: 32.000

Prerequisite: MAN3583, TRA1154

MAR4203 Supply Chain Marketing 3.000 credits

Students will learn the management of traditional and emerging marketing channels, with emphasis on legal, economic, and ethical considerations in wholesale and retail inventory control, raw goods, finished product transportation and relationship management. Prerequisite: MAN3506. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: MAN3506

GEB4363 Import Export Management 3.000 credits

Students will learn the functions and range of traffic management services performed by freight forwarders, including changes in governmental restrictions, rules, and regulations applicable to different countries, ports, and trade routes. Students will also learn the documentation needed to facilitate and coordinate the movement of goods in international trade and supply chain management systems. Prerequisites: MAN 2021 and TRA 2010.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA2010

Course User Fee: \$69.00

MAN3786 Sustainable Enterprise Planning 3.000 credits

Students will learn the assessment tools, design and construction considerations, and operating planning requirements for sustainable enterprises. Students will also learn the ecological and economic benefits of sustainability practices, including construction, operations, supply chain decisions, recycling, reusing, and reconditioning to preserve the environment by increasing revenues. Best practices, case studies, evolving trends and experimental efforts are also covered.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4593 Supply Chain Management Theory & Methodology 2.000 credits

This course presents a range of advanced topics in integrated logistics and supply chain management. Students will learn new theoretical and methodological developments in the field of supply chain. Specific topics vary depending upon current industry developments and will incorporate the use of speakers in the classroom. Prerequisites: MAN2021, MAN3583, MAN4523.

Lecture Hours: 32.000

Prerequisite: MAN2021, MAN3583, MAN4523

TRA3034 Transportation and Traffic Management 3.000 credits

This course covers developments leading to national and federal regulations, division of territories, official descriptions, etc. Students will learn the scope of authority of territorial associations, factors controlling traffic flows, basic governing classification rules, principals of freight rates and tariffs, and elements of rate making. Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA3132 Purchasing and Inventory Management 3.000 credits

This course provides a comprehensive introduction to the purchasing/procurement and supply chain management field. Students will learn purchasing and supply chain issues in a variety of settings, from process industries to high-tech manufacturing and services as well as public institutions. Emphasis is on the purchasing process as it relates to such topics as inventory control procedures, price/cost analysis, laws and ethics, negotiations, vendor selection and the development of vendor relationships.

Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA4234 Warehouse Management 3.000 credits

Students will learn warehousing functions, facility operations, and operational productivity improvements and measurements with the inclusion of concepts from marketing, finance, statistics, operations management, and human resources. The course presents an integrated business approach to the detailed operational aspects of logistics facilities such as warehouse and distribution centers. The course will use real-world warehouse data to design the layout and operations requirements for a local warehousing facility and to identify the operational equipment used in warehousing. Prerequisites: MAN2021, MAN3065, QMB2100.

Lecture Hours: 48.000

Prerequisite: MAN2021 AND MAN3065 AND QMB2100

Program Description

Supply Chain Management – Project Management Concentration

Bachelor of Applied Science | Code: P9302 | 120 credits

Supply chain management is an interdisciplinary field that emphasizes cross-functional integration of diverse business functions, facilities, and activities and seeks to manage those activities to enhance a company's competitive advantage. The Bachelor of Applied Science in Supply Chain Management (BAS-SCM) with a concentration in Project Management, is designed to provide knowledge of the supply chain while exploring the risks, operations, logistics, economics, regulatory issues, change management, forecasting, resource allocation, production planning, inventory management, customer delivery, after-sales support and service and other functions basic to business with particular emphasis in Project Management.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0
MAN 3506	Operations Management	3.0
MAN 4520	Quality Management	3.0
MAN 4523	Production Information Systems	3.0
Elective*		3.0

Select 3 credits from the following course options: ACG, BAN*, BUL*, CHI*, FIN*, FRE*, FRW*, GEB*, GER*, HBR*, ISM*, ITA*, JPN*, MAC*, MAN*, MAR*, PET*, POR*, PUR*, QMB*, SPM*, SPN*, STA*, TAX*, TRA*

Semester 2		Units: 12.0
FIN 3403	Financial Management	3.0
MAN 3583	Project Management	3.0
MAN 4887	Project Planning and Control Systems for Supply Chain Management	3.0
Elective*		3.0

Select 3 credits from the following course options: ACG, BAN*, BUL*, CHI*, FIN*, FRE*, FRW*, GEB*, GER*, HBR*, ISM*, ITA*, JPN*, MAC*, MAN*, MAR*, PET*, POR*, PUR*, QMB*, SPM*, SPN*, STA*, TAX*, TRA*

Semester 3		Units: 12.0
BUL 4461	Law of International Trade	3.0
MAN 3504	Production Operations and Logistics Management	3.0
MAN 4597	Global Supply Chain Management	3.0
<i>Upper Division Elective</i>		3.0
GEB 4363	Import Export Management	3.0
OR		
MAN 3786	Sustainable Enterprise Planning	3.0
OR		
MAN 4593	Supply Chain Management Theory & Methodology	2.0
OR

OR		
TRA 3132	Purchasing and Inventory Management	3.0
OR		
TRA 4234	Warehouse Management	3.0

Semester 4		Units: 12.0
GEB 3358	International Negotiations and Transactions	3.0
MAN 3562	Purchasing, Inventory and Warehouse Management	3.0
MAN 3888	Project Leadership	3.0
Upper Division Elective*		3.0

*Select 3 credits from the following course options: GEB 4363, MAN 3786, MAN 4593, TRA 3034, TRA 3132, TRA 4234

Semester 5		Units: 12.0
MAN 3554	Safety and Risk Management	1.0
MAN 3731	Assessing and Managing Project Risk	3.0
MAN 4940	Field Study and Research	2.0

MAR 4203	Supply Chain Marketing	3.0
Upper Division Elective*		3.0

*Select 3 credits from the following course options: GEB 4363, MAN 3786, MAN 4593, TRA 3034, TRA 3132, TRA 4234

Total: 60.0

MAN3506 Operations Management 3.000 credits

The course emphasizes the application of operational decision-making techniques to improve process, productivity, and the effective utilization of resources within organizations. Students will learn to recognize the trade-offs associated with operations management decisions and their effect on resource allocation. Topics include production processes, operations strategies, quantitative techniques, quality, performance, capacity planning, efficiency, forecasting, resource management, statistical process control, project management, and supply chains. Prerequisite: QMB2100 or STA2023.

Lecture Hours: 48.000

Prerequisite: QMB2100 OR STA2023

MAN4520 Quality Management 3.000 credits

This course provides an understanding of various theories of quality management (QM). Students will learn how organizations can develop excellence through the adoption of continuous improvement and process management. The course analyzes and uses various process management techniques, continuous improvement tools, and strategies to improve quality. The conceptual and analytical skills acquired in this course enable students to provide leadership in shaping a culture for quality within an organization and determining the effectiveness of quality initiatives such as Total QM, Six Sigma, Process Capability, Process Control, and Customer Relationships.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4523 Production Information Systems 3.000 credits

This course presents the fundamental aspects of computer technology required by the systems that provide data to, and derive information from, production in manufacturing. Students will learn the techniques to organize, store, manipulate data, report, derive and analyze production information, basics networking used in production, as well as various forms of information systems.

Lecture Hours: 48.000

FIN3403 Financial Management 3.000 credits

Students will learn the sources and uses of funds as they relate to financial decision making in the corporate form of enterprise. Emphasis is placed on working capital management, capital budgeting techniques, short and long term financing, and capital structure and the value of the firm. This course emphasizes the use of formulas and spreadsheets through Excel.

Lecture Hours: 48.000

Prerequisite: ACG2071, ACG2071L, QMB2100

MAN3583 Project Management 3.000 credits

Students will learn project management concepts and theory, including attributes for a project life cycle, global project management, benefits of project management, project management environments, planning and managing risk, project planning controls, and terminating a project.

Lecture Hours: 48.000

MAN4887 Project Planning and Control Systems for Supply Chain Management 3.000 credits

Students will learn about the complex supply-chain transformation that is required to manage resources from many different departments. Additionally, an exploration of how supply-chain project managers ensure internal and external stakeholder alignment, mitigate large amounts of risk, and implement communication, risk mitigation, and change management plans to ensure a successful project. Finally, the student will gain an integrated view of supply-chain transformation that incorporates elements of change management, test plan development, project management techniques, and establishing effective project management teams.

Lecture Hours: 48.000

Course User Fee: \$62.76

BUL4461 Law of International Trade 3.000 credits

Students will learn to interpret laws of international trade, licensing, and customer's regulation. This course also addresses U.S. customs regulations, classification of merchandise, application of tariff rules, duty free treatment, importing and exporting, liquidation inspection, search and seizure, and fines and penalties. In addition, the course will review the general rules and how to interpret the harmonized tariff schedule. Prerequisites: MAN2021 and GEB3358.

Lecture Hours: 48.000

Prerequisite: GEB3358

MAN3504 Production Operations and Logistics Management 3.000 credits

This course examines the integration of production operations and logistics management and how they enable an organization to compete successfully in business. Students will learn the relationships that exist between operations and the supply chain, including operations and supply chain strategies, business processes, project management, product design and development, and inventory management. This course uses case study methodology. Prerequisite: TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA1154 with a minimum grade of C

MAN4597 Global Supply Chain Management 3.000 credits

This course presents an overview of the management of sourcing, operations, and distribution processes along a supply chain in domestic and international markets. Students will learn how firms gain a competitive advantage through supply chain activities. Topics include: supply chain network design, purchasing, forecasting, inventory management, globalization and outsourcing, logistics, and information technology.

Lecture Hours: 48.000

Prerequisite: MAN2021, MAN3506

GEB4363 Import Export Management 3.000 credits

Students will learn the functions and range of traffic management services performed by freight forwarders, including changes in governmental restrictions, rules, and regulations applicable to different countries, ports, and trade routes. Students will also learn the documentation needed to facilitate and coordinate the movement of goods in international trade and supply chain management systems. Prerequisites: MAN 2021 and TRA 2010.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA2010

Course User Fee: \$69.00

MAN3786 Sustainable Enterprise Planning 3.000 credits

Students will learn the assessment tools, design and construction considerations, and operating planning requirements for sustainable enterprises. Students will also learn the ecological and economic benefits of sustainability practices, including construction, operations, supply chain decisions, recycling, reusing, and reconditioning to preserve the environment by increasing revenues. Best practices, case studies, evolving trends and experimental efforts are also covered.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4593 Supply Chain Management Theory & Methodology 2.000 credits

This course presents a range of advanced topics in integrated logistics and supply chain management. Students will learn new theoretical and methodological developments in the field of supply chain. Specific topics vary depending upon current industry developments and will incorporate the use of speakers in the classroom. Prerequisites: MAN2021, MAN3583, MAN4523.

Lecture Hours: 32.000

Prerequisite: MAN2021, MAN3583, MAN4523

TRA3034 Transportation and Traffic Management 3.000 credits

This course covers developments leading to national and federal regulations, division of territories, official descriptions, etc. Students will learn the scope of authority of territorial associations, factors controlling traffic flows, basic governing classification rules, principals of freight rates and tariffs, and elements of rate making. Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA3132 Purchasing and Inventory Management 3.000 credits

This course provides a comprehensive introduction to the purchasing/procurement and supply chain management field. Students will learn purchasing and supply chain issues in a variety of settings, from process industries to high-tech manufacturing and services as well as public institutions. Emphasis is on the purchasing process as it relates to such topics as inventory control procedures, price/cost analysis, laws and ethics, negotiations, vendor selection and the development of vendor relationships.

Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA4234 Warehouse Management 3.000 credits

Students will learn warehousing functions, facility operations, and operational productivity improvements and measurements with the inclusion of concepts from marketing, finance, statistics, operations management, and human resources. The course presents an integrated business approach to the detailed operational aspects of logistics facilities such as warehouse and distribution centers. The course will use real-world warehouse data to design the layout and operations requirements for a local warehousing facility and to identify the operational equipment used in warehousing. Prerequisites: MAN2021, MAN3065, QMB2100.

Lecture Hours: 48.000

Prerequisite: MAN2021 AND MAN3065 AND QMB2100

GEB3358 International Negotiations and Transactions 3.000 credits

This course presents business negotiations in selected regions of the world. Students will learn the skills of negotiation by analyzing international business cases and developing solutions to situations. Topics include overseas market research using both domestic and international sources and the application of theoretical and practical business knowledge to foreign situations and trade negotiations. The importance of culture, language, and values in international negotiations is emphasized.

Lecture Hours: 48.000

Prerequisite: TRA1154

Course User Fee: \$69.00

MAN3562 Purchasing, Inventory and Warehouse Management 3.000 credits

This course explores the integration of production operations and logistics management. It will also examine purchasing, Inventory and Warehouse Management concepts and theory. Special emphasis is placed on the relationships that exist between operations and the supply chain to include operations and supply chain strategies, business processes, project management, product design and development, inventory management and effective warehouse and stores management.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN3888 Project Leadership 3.000 credits

Students will learn the fundamentals of management vs. leadership, monitoring/controlling, delegation, personal traits, communication, and people management when in a leadership role. The specifics include techniques and strategies using the company's vision and project charter needed to effectively manage, lead and direct a team to ensure reaching project objectives. As part of this process students will determine their personal leadership traits and approach.

Lecture Hours: 48.000, Lab Hours: 3.000

Course User Fee: \$62.76

MAN3554 Safety and Risk Management 1.000 credits

This course will focus on safety and risk management with emphasis on how it applies to supply chain management. Students will learn the processes used to characterize and manage risk, as well as maintain a safe operating environment with the protection of personnel, assets, and services. Hazard characteristics of products, appropriate modes of transport, carrier selection and qualifications, packaging and container specifications, driver training requirements, financial issues, security precautions, warehousing risk, OSHA, hazardous materials handling, and customer assessment will be addressed in this course.

Lecture Hours: 16.000

MAN3731 Assessing and Managing Project Risk 3.000 credits

This course explores project uncertainty, and how to manage risk to keep the project on track and meet project goals. Project risk management is a vital part of all projects, which requires a purposeful strategy to avoid any setbacks. In this course there will be an examination of what the risk management process involves through the identification, assessment, and response to project risks.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN4940 Field Study and Research 2.000 credits

Students will learn to apply information and skills studied in core and concentration program courses through various special projects, field research, or internships designed for cogitative learning in a student-centered manner which requires the command, analysis, and synthesis of knowledge and skills.

Lecture Hours: 32.000

Prerequisite: MAN3583, TRA1154

MAR4203 Supply Chain Marketing 3.000 credits

Students will learn the management of traditional and emerging marketing channels, with emphasis on legal, economic, and ethical considerations in wholesale and retail inventory control, raw goods, finished product transportation and relationship management. Prerequisite: MAN3506. (3 hr. lecture)
 Lecture Hours: 48.000
 Prerequisite: MAN3506

The course emphasizes the application of operational decision-making techniques to improve process, productivity, and the effective utilization of resources within organizations. Students will learn to recognize the trade-offs associated with operations management decisions and their effect on resource allocation. Topics include production processes, operations strategies, quantitative techniques, quality, performance, capacity planning, efficiency, forecasting, resource management, statistical process control, project management, and supply chains.

Prerequisite: QMB2100 or STA2023.

Lecture Hours: 48.000

Prerequisite: QMB2100 OR STA2023

MAN4520 Quality Management 3.000 credits

This course provides an understanding of various theories of quality management (QM). Students will learn how organizations can develop excellence through the adoption of continuous improvement and process management. The course analyzes and uses various process management techniques, continuous improvement tools, and strategies to improve quality. The conceptual and analytical skills acquired in this course enable students to provide leadership in shaping a culture for quality within an organization and determining the effectiveness of quality initiatives such as Total QM, Six Sigma, Process Capability, Process Control, and Customer Relationships.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4523 Production Information Systems 3.000 credits

This course presents the fundamental aspects of computer technology required by the systems that provide data to, and derive information from, production in manufacturing. Students will learn the techniques to organize, store, manipulate data, report, derive and analyze production information, basics networking used in production, as well as various forms of information systems.

Lecture Hours: 48.000

FIN3403 Financial Management 3.000 credits

Students will learn the sources and uses of funds as they relate to financial decision making in the corporate form of enterprise. Emphasis is placed on working capital management, capital budgeting techniques, short and long term financing, and capital structure and the value of the firm. This course emphasizes the use of formulas and spreadsheets through Excel.

Lecture Hours: 48.000

Prerequisite: ACG2071, ACG2071L, QMB2100

MAN3583 Project Management 3.000 credits

Students will learn project management concepts and theory, including attributes for a project life cycle, global project management, benefits of project management, project management environments, planning and managing risk, project planning controls, and terminating a project.

Lecture Hours: 48.000

MAN4552 Supply Chain Analytics & Decision Making 3.000 credits

Through this course students will focus on the science of learning from data to support decision making. The objective of this course is to explore and apply basic statistical concepts and procedures that are used to collect, analyze, summarize, and report data in a supply chain management role. Course topics covered include methods for: collecting, analyzing, summarizing data; making statistical inferences about populations and exploring the relationship between variables. The course introduces analytical tools and techniques that provide a cause and effect understanding linking operational plans with corporate objectives.

Lecture Hours: 48.000

Course User Fee: \$62.76

BUL4461 Law of International Trade 3.000 credits

Students will learn to interpret laws of international trade, licensing, and customer's regulation. This course also addresses U.S. customs regulations, classification of merchandise, application of tariff rules, duty free treatment, importing and exporting, liquidation inspection, search and seizure, and fines and penalties. In addition, the course will review the general rules and how to interpret the harmonized tariff schedule. Prerequisites: MAN2021 and GEB3358.

Lecture Hours: 48.000

Prerequisite: GEB3358

MAN3504 Production Operations and Logistics Management 3.000 credits

This course examines the integration of production operations and logistics management and how they enable an organization to compete successfully in business. Students will learn the relationships that exist between operations and the supply chain, including operations and supply chain strategies, business processes, project management, product design and development, and inventory management. This course uses case study methodology. Prerequisite: TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA1154 with a minimum grade of C

MAN4597 Global Supply Chain Management 3.000 credits

This course presents an overview of the management of sourcing, operations, and distribution processes along a supply chain in domestic and international markets. Students will learn how firms gain a competitive advantage through supply chain activities. Topics include: supply chain network design, purchasing, forecasting, inventory management, globalization and outsourcing, logistics, and information technology.

Lecture Hours: 48.000

Prerequisite: MAN2021, MAN3506

GEB4363 Import Export Management 3.000 credits

Students will learn the functions and range of traffic management services performed by freight forwarders, including changes in governmental restrictions, rules, and regulations applicable to different countries, ports, and trade routes. Students will also learn the documentation needed to facilitate and coordinate the movement of goods in international trade and supply chain management systems. Prerequisites: MAN 2021 and TRA 2010.

Lecture Hours: 48.000

Prerequisite: MAN2021, TRA2010

Course User Fee: \$69.00

MAN3786 Sustainable Enterprise Planning 3.000 credits

Students will learn the assessment tools, design and construction considerations, and operating planning requirements for sustainable enterprises. Students will also learn the ecological and economic benefits of sustainability practices, including construction, operations, supply chain decisions, recycling, reusing, and reconditioning to preserve the environment by increasing revenues. Best practices, case studies, evolving trends and experimental efforts are also covered.

Lecture Hours: 48.000

Prerequisite: MAN2021

MAN4593 Supply Chain Management Theory & Methodology 2.000 credits

This course presents a range of advanced topics in integrated logistics and supply chain management. Students will learn new theoretical and methodological developments in the field of supply chain. Specific topics vary depending upon current industry developments and will incorporate the use of speakers in the classroom. Prerequisites: MAN2021, MAN3583, MAN4523.

Lecture Hours: 32.000

Prerequisite: MAN2021, MAN3583, MAN4523

TRA3034 Transportation and Traffic Management 3.000 credits

This course covers developments leading to national and federal regulations, division of territories, official descriptions, etc. Students will learn the scope of authority of territorial associations, factors controlling traffic flows, basic governing classification rules, principals of freight rates and tariffs, and elements of rate making. Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA3132 Purchasing and Inventory Management 3.000 credits

This course provides a comprehensive introduction to the purchasing/procurement and supply chain management field. Students will learn purchasing and supply chain issues in a variety of settings, from process industries to high-tech manufacturing and services as well as public institutions. Emphasis is on the purchasing process as it relates to such topics as inventory control procedures, price/cost analysis, laws and ethics, negotiations, vendor selection and the development of vendor relationships.

Prerequisites: MAN2021, TRA1154.

Lecture Hours: 48.000

Prerequisite: MAN2021TRA1154

TRA4234 Warehouse Management 3.000 credits

Students will learn warehousing functions, facility operations, and operational productivity improvements and measurements with the inclusion of concepts from marketing, finance, statistics, operations management, and human resources. The course presents an integrated business approach to the detailed operational aspects of logistics facilities such as warehouse and distribution centers. The course will use real-world warehouse data to design the layout and operations requirements for a local warehousing facility and to identify the operational equipment used in warehousing. Prerequisites: MAN2021, MAN3065, QMB2100.

Lecture Hours: 48.000

Prerequisite: MAN2021 AND MAN3065 AND QMB2100

GEB3358 International Negotiations and Transactions 3.000 credits

This course presents business negotiations in selected regions of the world. Students will learn the skills of negotiation by analyzing international business cases and developing solutions to situations. Topics include overseas market research using both domestic and international sources and the application of theoretical and practical business knowledge to foreign situations and trade negotiations. The importance of culture, language, and values in international negotiations is emphasized.

Lecture Hours: 48.000

Prerequisite: TRA1154

Course User Fee: \$69.00

MAN3562 Purchasing, Inventory and Warehouse Management 3.000 credits

This course explores the integration of production operations and logistics management. It will also examine purchasing, Inventory and Warehouse Management concepts and theory. Special emphasis is placed on the relationships that exist between operations and the supply chain to include operations and supply chain strategies, business processes, project management, product design and development, inventory management and effective warehouse and stores management.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN4732 Business Intelligence for Supply Chain 3.000 credits

This course will enable students to synthesize their learning from program coursework. The global context within which firms operate will provide the foundation for understanding global supply chain strategy, from market entry through to the integration of demand management and supply management processes to meet corporate objectives. The course will utilize exercises and a simulation to allow students to analyze and synthesize program coursework. The course will help students understand how to best use program knowledge to maximize value creation for employers and in their own career.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN3554 Safety and Risk Management 1.000 credits

This course will focus on safety and risk management with emphasis on how it applies to supply chain management. Students will learn the processes used to characterize and manage risk, as well as maintain a safe operating environment with the protection of personnel, assets, and services. Hazard characteristics of products, appropriate modes of transport, carrier selection and qualifications, packaging and container specifications, driver training requirements, financial issues, security precautions, warehousing risk, OSHA, hazardous materials handling, and customer assessment will be addressed in this course.

Lecture Hours: 16.000

MAN4719 Challenges in the Digital Supply Chain 3.000 credits

Through this course, students will analyze the social, ethical, and legal issues in supply chain management. Students will examine the importance of fairness, accountability, and transparency of data policies in various supply chain operations. Various issues governing the collection, storage, access, use, and sharing of data will also be explored. Prerequisites: MAN3506, QMB2100 or STA2023.

Lecture Hours: 48.000

Course User Fee: \$62.76

MAN4940 Field Study and Research 2.000 credits

Students will learn to apply information and skills studied in core and concentration program courses through various special projects, field research, or internships designed for cogitative learning in a student-centered manner which requires the command, analysis, and synthesis of knowledge and skills.

Lecture Hours: 32.000

Prerequisite: MAN3583, TRA1154

MAR4203 Supply Chain Marketing 3.000 credits

Students will learn the management of traditional and emerging marketing channels, with emphasis on legal, economic, and ethical considerations in wholesale and retail inventory control, raw goods, finished product transportation and relationship management. Prerequisite: MAN3506. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: MAN3506

Bachelor of Sciences (BS)

Program Description

Applied Artificial Intelligence

Bachelor of Science | Code: S9520 | 120 credits

The Bachelor of Science (BS) degree in Applied Artificial Intelligence (AI) offers a practical approach to using complex fields such as computer vision, natural language processing, and machine learning to transform large datasets into actionable outputs that can be used to increase productivity and operational efficiencies. The program is well-rounded and tailored to meet employers' needs, offering in-depth knowledge of artificial intelligence (AI) tools and their applications, as well as AI process automation and optimization. In addition, students learn to use ethical standards and socially responsible practices in the design and implementation of AI systems.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 13.0

CAI 3303C	Natural Language Processing	3.0
.....		

CAI 3821C	Computational Methods and Applications for Artificial Intelligence I	3.0
COP 2800	Java Programming	4.0
ENC 1102	English Composition 2	3.0

Semester 2

Units: 13.0

CAI 3822C	Computational Methods and Applications for Artificial Intelligence II	3.0
COP 3530	Data Structures	4.0
<i>Oral Communications (GE)</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0
<i>Social Science (GE)</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
ECO 2013	Principles of Economics (Macro)	3.0
OR		
POS 2041	American Federal Government	3.0
OR		
PSY 2012	Introduction to Psychology	3.0

Semester 3

Units: 10.0

CAI 4505C	Artificial Intelligence	3.0
<i>Statistics Option</i>		4.0
CAP 3330	Programming R for Statistics	4.0
OR		
STA 3164	Statistical Methods II	4.0
General Education Elective *		3.0
Foreign Language Competence **		

*Students are encouraged to consult with an academic advisor to select approved courses that align with their interests and fulfill remaining graduation requirements.

**Foreign language is a graduation requirement for the baccalaureate met through 8 credit hours at the elementary 2 level in one foreign language or equivalent. Certain foreign language courses count towards program electives. Students may satisfy equivalence through standardized examinations or successful completion of two credits (two years) in one foreign language at the secondary (high school) level. For additional information, including exemptions for students whose native language is not English, see the Testing and Assessment Department.

Semester 4

Units: 12.0

CAI 4420C	Applied Decision and Optimization Theory	3.0
CAI 4510C	Machine Intelligence	3.0
CAI 4830C	Simulation for Applied Artificial Intelligence	3.0
<i>Humanities (GE)</i>		3.0
HUM 1020	Humanities	3.0
OR		

MUL 1010	Music Appreciation	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
OR		
PHI 2600	Introduction to Ethics	3.0

Semester 5

Units: 12.0

CAI 4525C	Artificial Intelligence Systems Automation	3.0
CAI 4950C	Artificial Intelligence Capstone	3.0
<i>Natural Science (GE)</i>		3.0
PHY 1025	Basic Physics	3.0
OR		
PHY 2048	Physics with Calculus 1	4.0
OR		
PHY 2053	Physics (without Calculus) 1	3.0
<i>Program Elective</i>		3.0
<i>Business</i>		3.0
GE 1432	Applied Artificial Intelligence (AI) in Business	3.0
OR		
<i>Computingg</i>		4.0
CAP 1788	Introduction to Data Analytics	4.0
OR		
CAP 2761C	Intermediate Analytics	4.0
OR		
CAP 3321C	Data Wrangling	4.0
OR		
CAP 4767	Data Mining	4.0
OR		
CAP 4936	Special Topics in Data Analytics	4.0
OR		
CEN 2211	C/C++ Programming for Embedded Devices	4.0
OR		
CET 3383C	Software Engineering I	4.0
OR		
CGS 1540C	Database Concepts Design	4.0
OR		
CIS 2010C	Introduction to Internet of Things Networking and Security	4.0
OR		
CIS 2012C	Introduction to Data Analytics and AI for the Internet of Things	4.0
OR		
CIS 3360	Principles of Information Security	4.0
OR		
COP 2041C	Python Programming 2	4.0
OR		
COT 3100C	Discrete Structures	4.0
OR		
COT 4400	Design and Analysis of Algorithms	4.0
OR		
CTS 1145	Cloud Essentials	4.0
OR		

CTS 2192C	Microsoft Azure Administration	4.0
OR		
<i>Mathematics</i>		3.0-5.0
MAC 1114	Trigonometry	3.0
OR		
MAC 1140	Pre-Calculus Algebra	3.0
OR		
MAC 1147	Pre-Calculus Algebra and Trigonometry	5.0
OR		
MAC 2311	Calculus and Analytical Geometry 1	5.0
OR		
MAC 2312	Calculus and Analytical Geometry 2	4.0
OR		
MAS 3105	Linear Algebra	3.0
OR		
<i>Robotics</i>		4.0
ETS 1603C	Introduction to Robotics	4.0
OR		
ETI 4480C	Applied Robotics	4.0

Total: 60.0

CAI3303C Natural Language Processing 3.000 credits

Students will further explore Natural Language Processing domains. Focus on deep learning application and use of the latest pre-trained models on real world applications. Prerequisite: CAI2300C. Lecture Hours: 32.000, Lab Hours: 32.000
Prerequisite: CAI2300C
Course User Fee: \$63.00

CAI3821C Computational Methods and Applications for Artificial Intelligence I 3.000 credits

Computational data analysis is an essential part of artificial intelligence (AI). This course is designed to help students develop programming skills for AI applications. Students will learn core concepts of computational methods to solve data analysis problems, AI algorithmic methodologies, and how to test AI models. Prerequisites: CAI2100C, COP1047C, MAC1105, and STA2023. Lecture Hours: 32.000, Lab Hours: 32.000
Prerequisite: CAI2100C AND COP1047C AND STA2023 AND MAC1105
Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles. Lecture Hours: 48.000, Lab Hours: 32.000
Corequisite: COP1047C OR COP1334 OR COP2270
Course User Fee: \$63.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better. Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

CAI3822C Computational Methods and Applications for Artificial Intelligence II 3.000 credits

This course is designed for students to acquire a deeper understanding of computational methods used in the applications of artificial intelligence (AI) with programming. The topics of this course will be a continuation of those covered in Computational Methods and Applications for Artificial Intelligence I, with added emphasis on case studies using machine learning. Prerequisite: CAI3821C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI3821C

Course User Fee: \$63.00

COP3530 Data Structures 4.000 credits

This upper division course is for students majoring in B.S. in Information Systems Technology. Students will learn the fundamentals of data structures using the Java programming language. The students will learn to design, implement and use data structures to organize and store data in a computer so that it can be accessed and modified efficiently.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800

Course User Fee: \$63.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

CAI4505C Artificial Intelligence 3.000 credits

The course provides an in-depth survey of important concepts, problems, and techniques in artificial intelligence, including heuristic and adversarial search, constraint satisfaction problems, logical reasoning, reasoning with uncertainty, and machine learning. A particular focus and a unifying theme of the course will be the notion of intelligent agents and their implementation. Prerequisites: COP3530 and CAI3822C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: COP3530 AND CAI3822C

Course User Fee: \$63.00

CAP3330 Programming R for Statistics 4.000 credits

This upper division course is for students majoring in data analytics. Students will learn the R programming language and use it to perform intermediate-level statistical analysis. Techniques used in data analysis, such as analysis of variance and regression, will be emphasized. Prerequisite: STA2023.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: STA2023

Course User Fee: \$63.00

STA3164 Statistical Methods II 4.000 credits

This course is for students majoring in Data Analytics, Systems Engineering, and related disciplines which require advanced skills in statistical analysis. Students will learn how to perform tests of variance, analysis of variance, analysis of covariance, regression, correlation, and non-parametric statistics.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: STA2023

Course User Fee: \$50.00

CAI4420C Applied Decision and Optimization Theory 3.000 credits

Students will learn how to formulate and optimize queuing, linear and nonlinear programming models. Students will understand how to apply decision-making logic and optimization techniques to artificial intelligence models and conduct decision analysis of real-world problems. Prerequisite: CAI4505C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI4505C

Course User Fee: \$63.00

CAI4510C Machine Intelligence 3.000 credits

The course will cover advanced modeling techniques, including ensemble learning, extended linear models and kernel methods (PCA, support vector machines), probabilistic graphical models, Bayesian networks, mixture and latent variable models, biologically inspired computing (neural networks), feature selection and feature engineering techniques, Markov models, and temporal modeling to find patterns over time. Prerequisites: COP3530 and CAI3822C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: COP3530 AND CAI3822C

Course User Fee: \$63.00

CAI4830C Simulation for Applied Artificial Intelligence 3.000 credits

Students will learn how to choose the right constructs of the modeling language to create a representation of a real-world system that is suitable for risk-free dynamic experiments. In addition, the students will learn how to build and deploy simulation models using the three major paradigms in simulation modeling for AI: agent-based, system dynamics, and discrete-event. Prerequisite: CAI4505C.

Lecture Hours: 32.000, Lab Hours: 32.000

Pre/Corequisite: CAI4505C

Course User Fee: \$63.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

CAI4525C Artificial Intelligence Systems Automation 3.000 credits

Students will learn how to use automated tools to develop enterprise automation projects. Students will understand how to create variables, arguments, workflows, build and publish automated processes and effective user interface automations.

Prerequisites: CAI4505C and CAI4510C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI4505C AND CAI4510C

Course User Fee: \$63.00

CAI4950C Artificial Intelligence Capstone 3.000 credits

Students will demonstrate competence to scope, acquire/explore data, model, evaluate, and deploy an AI/Machine Learning solution in a team environment. Students will create and present an AI solution.

Course must be taken during the last semester

before graduation. Prerequisites: CAI4510C,

CAI4830C, and CAI4420C; Pre/Corequisite: CAI4525C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI4510C AND CAI4830C AND

CAI4420C AND Pre/Corequisite: CAI4525C

Course User Fee: \$63.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves.

Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course. Lecture Hours: 48.000
Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L
Course User Fee: \$10.00

GEB1432 Applied Artificial Intelligence (AI) in Business 3.000 credits

This course illustrates how Artificial Intelligence (AI) is currently applied in industries and across business functions to support business strategy formulation, implementation and evaluation. This course introduces the data-driven outcomes and ethical issues to be considered when implementing responsible AI in business and industry. (3 hr. lecture)
Lecture Hours: 48.000
Course User Fee: \$35.20

CAP1788 Introduction to Data Analytics 4.000 credits

This course offers a broad introduction to data analytics and the role it plays in modern organizations. Students will use Excel and Tableau to import, clean, transform, and visualize data. Students will also learn how to effectively communicate findings to decision makers.
Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$63.00

CAP2761C Intermediate Analytics 4.000 credits

This course offers an introduction to the SQL language and how it can be used by data analysts to query databases and gain valuable insights. Students will also gain extensive hands-on experience with Microsoft SQL Server, Azure, and GitHub.
Prerequisites: CAP1788, CGS1540C.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CGS1540C
Course User Fee: \$63.00

CAP3321C Data Wrangling 4.000 credits

This course offers a broad introduction to data wrangling, data retrieval, and the use of Python in data analytics. Students will use Python and other business intelligence tools to retrieve data from various sources, clean the dataset, and prepare it for data analysis tasks. Prerequisites: CAP1788 and CAP2704.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CAP1788 AND IDC2132
Course User Fee: \$63.00

CAP4767 Data Mining 4.000 credits

Students will learn how to extract useful data from an organization's data warehouse and analyze it to uncover hidden patterns and relationships. An emphasis will be placed on unsupervised data mining techniques, as well as the use of the RapidMiner software. Prerequisites: CAP1788 and CAP2761C.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CAP1788 AND CAP2761C
Course User Fee: \$63.00

CAP4936 Special Topics in Data Analytics 4.000 credits

This upper division course is for students majoring in data analytics. The course centers around topics of current interest or of special interest to students or instructors. Topics or focus may vary from semester to semester. Prerequisites: CAP1788, CAP2761C.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CAP1788, CAP2761C
Course User Fee: \$63.00

CEN2211 C/C++ Programming for Embedded Devices 4.000 credits

This course teaches the principles of programming in the C/C++ language for embedded devices. The student will learn how to create programs to control open-source hardware for building digital devices that can sense and control the physical world around them and communicate with the Internet.
Prerequisite: COP 1334; Corequisite: EET 1033C. (2 hr. lecture 4 hr. lab).
Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: COP1334 AND Corequisite: EET1033C

CET3383C Software Engineering I 4.000 credits

This upper division course is for students majoring in B.S. in Information Systems Technology or B.S. in Electrical and Computer Engineering Technology. The student will learn the basic principles and concepts of software engineering; system requirements; modeling and testing; object oriented analysis and design; testing and validation; configuration management; and the analysis, design and programming of extensible software systems. Prerequisite: CET2369C or COP2800.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET2369C, COP2800

Course User Fee: \$63.00

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement. Lecture Hours: 48.000, Lab Hours: 32.000 Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

CIS2010C Introduction to Internet of Things Networking and Security 4.000 credits

This course explores Internet of Things (IoT) networks' design, implementation, and security, providing a well-rounded understanding of protocols and standards governing the Internet and IoT. Students gain experience performing security assessments and vulnerability testing of IoT systems using industry-standard tools, focusing on identifying and mitigating risks to build secure and resilient IoT solutions.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS2012C Introduction to Data Analytics and AI for the Internet of Things 4.000 credits

This course equips students with the knowledge and skills necessary to navigate the complex landscape of data analytics and artificial intelligence within the context of the Internet of Things (IoT), empowering them to contribute to the development of smart, data-driven IoT solutions. Prerequisites: CIS 2010C, CIS 2011C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS2010C AND CIS2011C

Course User Fee: \$63.00

CIS3360 Principles of Information Security 4.000 credits

This upper division course provides an overview of information systems security principles, practices, methods, and tools. Students will learn about the threats against an organization's digital assets, as well as the tools and methods to mitigate those threats. Topics include cryptography, authentication and access control systems, infrastructure security, and ethical issues. Prerequisite: CTS1134 or CTS1650

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

COP2041C Python Programming 2 4.000 credits

This is an advanced level programming course using Python. Students will learn how to code, compile, and execute programs. Topics include problem solving, object-oriented programming, database programming, data visualization, and secure software development. Prerequisite: COP1047C; (3hr. lecture; 2hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1047C

Course User Fee: \$63.00

COT3100C Discrete Structures 4.000 credits

This course delves into discrete structures with a strong focus on applications in computer science. It covers a range of topics including sets, functions and relations, propositional and predicate logic, basic proof techniques, logic, recursion and induction, graphs, Big-O notation, and various specific applications relevant to computer science.

Prerequisite: COP 2800; Corequisite: COP 3530 (3 lecture, 2 lab hours)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800 AND Corequisite: COP3530

Course User Fee: \$63.00

COT4400 Design and Analysis of Algorithms 4.000 credits

This upper division course is for students majoring in the B.S. in Information Systems Technology or the B.S. in Electrical and Computer Engineering Technology programs. This course covers general techniques in algorithm design (such as divide-and-conquer, greedy method, dynamic programming, search and traversal techniques, branch-and-bound) in the context of problem domains like graph, sorting and optimization problems. Prerequisite(s): COP1334 or COP2270. (3 hr. lecture, 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800 AND Pre/Corequisite: COP3530

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS2192C Microsoft Azure Administration 4.000 credits

This course is intended for students preparing for IT careers as cloud administrators, as well as candidates for industry certification. Students will learn the administration skills and knowledge required to implement, manage, and monitor identity, governance, storage, and compute virtual networks in the Microsoft Azure cloud environment.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: CTS1145 or equivalent knowledge in Microsoft Azure Fundamentals

Course User Fee: \$63.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics.

Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

MAS3105 Linear Algebra 3.000 credits

This course is designed for students who are majoring in secondary mathematics education. Major topics include systems of linear equations, matrices, determinants, vector spaces, linear transformations, eigenvectors and eigenvalues, inner-product spaces and orthogonality.

Lecture Hours: 48.000

Prerequisite: MAC2312

ETS1603C Introduction to Robotics 4.000 credits

This is an introductory level course designed as an introduction to robotics and robotic applications. Students learn topics related to robotic design including robotic terminology, robotic programming, sensing and sensors, actuators, modeling and sensing, robotic platforms, and the application of artificial intelligence in robotics. Laboratory activities provide hands-on application of concepts and theories.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$63.00

ETI4480C Applied Robotics 4.000 credits

This is an upper division level course designed as an introduction to robotics programming and includes robotic applications for multifunction part manipulation and motion with stepper and servo-motors. Students learn topics related to robotic design including robotic vision, motion planning, sensing and sensors, actuators, navigation systems, mobility, forward and inverse kinematics, and path planning. Laboratory activities provide hands-on application of concepts and theories. Prerequisite: CET2123C or CET3383C.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET2123C OR CET 3383C

Course User Fee: \$63.00

Program Description

Biological Sciences - Biopharmaceutical Sciences Concentration

Bachelor of Science | Code: S9121 | 120 credit

The Bachelor in Science (B.S.) in Biological Sciences is designed to provide students with a broad foundation in biology. Miami Dade College students will explore structure, function, genetics, and evolution of cells and organisms, while being provided the hands-on skills necessary to obtain jobs in the Biological/Life Science fields. Students take the core courses in biology, chemistry, physics and mathematics, and must meet the same General Education Requirements of all students seeking an AA degree. Students may choose from a variety of electives in science and general education to complete their degree requirements.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1**Units: 13.0**

MAC 2311	Calculus and Analytical Geometry 1	5.0
PHY 2053	Physics (without Calculus) 1	3.0
PHY 2053L	Physics (Without Calculus) 1 Lab	1.0
BOT 3015	Survey of Plant Diversity	3.0
BOT 3015L	Survey of Plant Diversity Laboratory	1.0

Semester 2**Units: 13.0**

PHY 2054	Physics (Without Calculus) 2	3.0
----------	------------------------------	-----

PHY 2054L	Physics (Without Calculus) 2 Lab	1.0
STA 2023	Statistical Methods	3.0
BSC 3930	Biological Sciences Seminar	1.0
PCB 3060	Principles of Genetics	3.0
PCB 3060L	Principles of Genetics Laboratory	2.0

Semester 3

Units: 9.0

PCB 3043	Fundamentals of Ecology	3.0
PCB 4023	Molecular and Cell Biology	3.0
ZOO 3021	Survey of Animal Diversity	3.0

Semester 4

Units: 13.0

BCH 3023	Introductory Biochemistry	3.0
BCH 3023L	Introductory Biochemistry Laboratory	2.0
MCB 3023	Principles of Microbiology	3.0
MCB 3023L	Principles of Microbiology Lab	2.0
PCB 4674	Evolution	3.0

Semester 5

Units: 13.0

BSC 4940	Senior Specialty Internship	3.0
MCB 4503	Virology	3.0
PCB 4097	Human Physiology	3.0
PCB 4233C	Fundamentals of Immunology	4.0

Total: 61.0

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

PHY2053L Physics (Without Calculus) 1 Lab 1.000 credits

This laboratory course is designed to complement PHY2053. Students will engage in hands-on experiments that reinforce theoretical concepts related to kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Through practical applications of algebra and trigonometry, learners will develop analytical skills while conducting experiments that illustrate key physical principles. The course emphasizes critical thinking and problem-solving as students collect and analyze data, interpret results, and communicate their findings effectively. This lab experience aims to deepen students' understanding of the scientific concepts covered in the parent course and their relevance to real-world situations.

Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053

Course User Fee: \$20.00

BOT3015 Survey of Plant Diversity 3.000 credits

This course explores the plant kingdom and emphasizes structure, function and genetics of plants. Students will learn the evolutionary relationships, natural history, ecological adaptations, physiology, morphology and reproductive biology of gymnosperms and angiosperms.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, Corequisite: BOT3015L

Course User Fee: \$10.00

BOT3015L Survey of Plant Diversity Laboratory 1.000 credits

This course is designed to provide the necessary laboratory experiments and dissection exercises to supplement/accompany the BOT3015 Survey of Plant Diversity lecture course. Students will learn about the plant kingdom and with emphasis on structure, function and genetics of plants. Dissections and laboratory exercises are designed to explore the fundamental cell and tissue structures of both vascular and non-vascular plants.

Lab Hours: 32.000

Prerequisite: BSC2011, BSC2011L, Corequisite: BOT3015

Course User Fee: \$40.00

PHY2054 Physics (Without Calculus) 2 3.000 credits

An introduction to the basic principles of physics. PHY 2053 covers mechanics, sound and thermodynamics. PHY 2054 includes electricity, magnetism and optics.

Lecture Hours: 48.000

Prerequisite: PHY2053, PHY2053L, Corequisite: PHY2054L

Course User Fee: \$10.00

PHY2054L Physics (Without Calculus) 2 Lab 1.000 credits

The physics lab courses are one-credit courses designed to be taken in conjunction with a physics lecture. A different experiment is performed each week with topics chosen to correspond with the material being studied in the lecture. Each experiment is designed to be completed in about 2 contact hours.

Lab Hours: 32.000

Prerequisite: PHY2053, PHY2053L, Corequisite: PHY2054

Course User Fee: \$20.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

BSC3930 Biological Sciences Seminar 1.000 credits

This course is designed for biological science majors. Students will gain an understanding of the broad range of career options within the biological sciences. Additionally, students will learn how to read, interpret, discuss, and cite selected examples of scientific literature in different areas of biology.

Lecture Hours: 16.000

Prerequisite: BSC2011, BSC2011L

Course User Fee: \$10.00

PCB3060 Principles of Genetics 3.000 credits

This course is an introduction to the mechanisms of transmission of hereditary information. Students will learn the classical Mendelian principles of heredity, deviation of Mendelian principles, genetic analysis, linkage and mapping, genetics of populations, gene regulation, mutation, the genetic bases of cancer and other genetic disorders will also be studied.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, Corequisite: PCB3060L

PCB3060L Principles of Genetics Laboratory 2.000 credits

This laboratory course is designed to complement PCB 3060 Principles of Genetics. Students will learn hands-on skills with emphasis on laboratory principles, techniques, and instrumentation within the field of genetics.

Lab Hours: 64.000

Prerequisite: BSC2011, BSC2011L, Corequisite: PCB3060

Course User Fee: \$110.00

PCB3043 Fundamentals of Ecology 3.000 credits

This is a foundations course in ecology. In this course, students will learn the basic principles of ecology at organismal, population, community, and ecosystem levels, including consideration of Florida's ecosystems and human impact on those systems.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L

PCB4023 Molecular and Cell Biology 3.000 credits

Students will learn the structure and function of cells and biological membranes, signal transduction pathways, cell cycle and cell division, the flow of genetic information and the regulation of gene expression. Exploration of laboratory techniques and discussion of the cellular basis of human diseases will also occur.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L

Course User Fee: \$25.00

ZOO3021 Survey of Animal Diversity 3.000 credits

This course presents zoology as a scientific discipline. Students will learn the basic principles of zoological nomenclature, taxonomy, systematic, and the basic understanding of the relationships of animals to one another, to humans, their environment and to society.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L

Course User Fee: \$10.00

BCH3023 Introductory Biochemistry 3.000 credits

This course surveys the fundamental components of biochemistry. In this course, students will learn concepts such as the structure and function of amino acids, proteins, carbohydrates, lipids, and nucleic acids, together with discussions of oxidative metabolism and regulation. Prerequisites: BSC2010, BSC2010L, BSC2011, BSC2011L, CHM2200 or CHM2211, CHM2211L; Corequisite: BCH3023L.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, Corequisite: BCH3023L

Course User Fee: \$25.00

BCH3023L Introductory Biochemistry Laboratory 2.000 credits

This laboratory course complements the lecture corequisite BCH 3023, which involves the study of the fundamental components of biochemistry. In this laboratory course, students will learn and will be provided with hands-on experiences with the concepts addressed in the lecture course.

Prerequisites: BSC2010, BSC2010L, BSC2011, BSC2011L, CHM2200 or CHM2211, CHM2211L;

Corequisite: BCH3023.

Lab Hours: 64.000

Prerequisite: BSC2011, BSC2011L, Corequisite: BCH3023L

Course User Fee: \$110.00

MCB3023 Principles of Microbiology 3.000 credits

This course offers an introduction to the principles of microbiology. Students will learn the taxonomy, biochemistry, genetics, and ecology of microorganisms and will have an understanding of the impact of microorganisms on the advancement of the biological sciences.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, CHM2211, CHM2211L, Corequisite: MCB3023L

Course User Fee: \$25.00

MCB3023L Principles of Microbiology Lab 2.000 credits

This Laboratory course accompanies MCB3023.

Students will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, enumeration, biochemistry, identification, genetics, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2011, BSC2011L, CHM2211, CHM2211L, Corequisite: MCB3023

Course User Fee: \$110.00

PCB4674 Evolution 3.000 credits

Students will learn the theory of evolution as it pertains to different fields of modern biology including the theory of natural selection, the evidence for evolution, microevolution, speciation, macroevolution, the origin of life on Earth, major evolutionary trends, and the evolution of humans.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, PCB3060, PCB3060L

Course User Fee: \$25.00

BSC4940 Senior Specialty Internship 3.000 credits

This course will provide students with hands-on experience in the biological science workplace by conducting an internship. The experience readies the individual for their first position in-field.

Other Hours: 144.000

Prerequisite: Departmental Approval

Course User Fee: \$181.00

MCB4503 Virology 3.000 credits

This course will cover general virology, including virus structure, replication cycles, infection and mode of transmission of human diseases. Student will learn the major families of the bacterial (bacteriophages), plant and animal viruses and how they influence infection.

Lecture Hours: 48.000

Prerequisite: MCB3023, MCB3023L

Course User Fee: \$25.00

PCB4097 Human Physiology 3.000 credits

The student studies the physiology of organisms major organ systems with emphasis on humans. Students will learn the principles of physics, cell biology, and anatomy in order to explain how the different organs systems work individually and in the context of the whole organism.

Lecture Hours: 48.000

Prerequisite: PHY2054, PHY2054L, BCH3023, BCH3023L

Course User Fee: \$25.00

PCB4233C Fundamentals of Immunology 4.000 credits

Students will learn the immunological processes and concepts as they pertain to human health, disease prevention, development, and treatment. Its primary emphasis is on the cellular and non-cellular components of the immune system, and the ways in which these components interact to provide immunity. This is a combination lecture and lab course.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: MCB3023, MCB3023L

Course User Fee: \$55.00

Program Description

Biological Sciences - Biotechnology Concentration

Bachelor of Science | Code: S9120 | 120 credit

The Bachelor in Science (B.S.) in Biological Sciences is designed to provide students with a broad foundation in biology. Miami Dade College students will explore structure, function, genetics, and evolution of cells and organisms, while being provided the hands-on skills necessary to obtain jobs in the Biological/Life Science fields. Students take the core courses in biology, chemistry, physics and mathematics, and must meet the same General Education Requirements of all students seeking an AA degree. Students may choose from a variety of electives in science and general education to complete their degree requirements.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1102	English Composition 2	3.0
MAC 1147	Pre-Calculus Algebra and Trigonometry	5.0
PCB 3060	Principles of Genetics	3.0
PCB 3060L	Principles of Genetics Laboratory	2.0
Semester 2		Units: 14.0
MAC 2311	Calculus and Analytical Geometry 1	5.0
PHY 2053	Physics (without Calculus) 1	3.0
PHY 2053L	Physics (Without Calculus) 1 Lab	1.0
MCB 3023	Principles of Microbiology	3.0
MCB 3023L	Principles of Microbiology Lab	2.0
Semester 3		Units: 10.0
Oral Communications (GE)		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0
PHI 2600	Introduction to Ethics	3.0
PHY 2054	Physics (Without Calculus) 2	3.0
PHY 2054L	Physics (Without Calculus) 2 Lab	1.0
Semester 4		Units: 12.0

DEP 2000	Human Growth and Development	3.0
BCH 3023	Introductory Biochemistry	3.0
BCH 3023L	Introductory Biochemistry Laboratory	2.0
BSC 3930	Biological Sciences Seminar	1.0
PCB 4674	Evolution	3.0
Foreign Language Competence*		

*Foreign language is a graduation requirement for the baccalaureate met through 8 credit hours at the elementary 2 level in one foreign language or equivalent. Certain foreign language courses count towards program electives. Students may satisfy equivalence through standardized examinations or successful completion of two credits (two years) in one foreign language at the secondary (high school) level. For additional information, including exemptions for students whose native language is not English, see the Testing and Assessment Department.

Semester 5

Units: 12.0

BSC 4422	Biotechnology Methods and Applications III	3.0
BSC 4422L	Biotechnology Methods and Applications III Lab	2.0
BSC 4940	Senior Specialty Internship	3.0
PCB 4233C	Fundamentals of Immunology	4.0

Total: 61.0

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

PCB3060 Principles of Genetics 3.000 credits

This course is an introduction to the mechanisms of transmission of hereditary information. Students will learn the classical Mendelian principles of heredity, deviation of Mendelian principles, genetic analysis, linkage and mapping, genetics of populations, gene regulation, mutation, the genetic bases of cancer and other genetic disorders will also be studied.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, Corequisite: PCB3060L

PCB3060L Principles of Genetics Laboratory 2.000 credits

This laboratory course is designed to complement PCB 3060 Principles of Genetics. Students will learn hands-on skills with emphasis on laboratory principles, techniques, and instrumentation within the field of genetics.

Lab Hours: 64.000

Prerequisite: BSC2011, BSC2011L, Corequisite: PCB3060

Course User Fee: \$110.00

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications.

Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

PHY2053L Physics (Without Calculus) 1 Lab 1.000 credits

This laboratory course is designed to complement PHY2053. Students will engage in hands-on experiments that reinforce theoretical concepts related to kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Through practical applications of algebra and trigonometry, learners will develop analytical skills while conducting experiments that illustrate key physical principles. The course emphasizes critical thinking and problem-solving as students collect and analyze data, interpret results, and communicate their findings effectively. This lab experience aims to deepen students' understanding of the scientific concepts covered in the parent course and their relevance to real-world situations.

Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053

Course User Fee: \$20.00

MCB3023 Principles of Microbiology 3.000 credits

This course offers an introduction to the principles of microbiology. Students will learn the taxonomy, biochemistry, genetics, and ecology of microorganisms and will have an understanding of the impact of microorganisms on the advancement of the biological sciences.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, CHM2211, CHM2211L, Corequisite: MCB3023L

Course User Fee: \$25.00

MCB3023L Principles of Microbiology Lab 2.000 credits

This Laboratory course accompanies MCB3023. Students will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, enumeration, biochemistry, identification, genetics, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2011, BSC2011L, CHM2211, CHM2211L, Corequisite: MCB3023

Course User Fee: \$110.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2054 Physics (Without Calculus) 2 3.000 credits

An introduction to the basic principles of physics. PHY 2053 covers mechanics, sound and thermodynamics.

PHY 2054 includes electricity, magnetism and optics.

Lecture Hours: 48.000

Prerequisite: PHY2053, PHY2053L, Corequisite: PHY2054L

Course User Fee: \$10.00

PHY2054L Physics (Without Calculus) 2 Lab 1.000 credits

The physics lab courses are one-credit courses designed to be taken in conjunction with a physics lecture. A different experiment is performed each week with topics chosen to correspond with the material being studied in the lecture. Each experiment is designed to be completed in about 2 contact hours.

Lab Hours: 32.000

Prerequisite: PHY2053, PHY2053L, Corequisite: PHY2054

Course User Fee: \$20.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

BCH3023 Introductory Biochemistry 3.000 credits

This course surveys the fundamental components of biochemistry. In this course, students will learn concepts such as the structure and function of amino acids, proteins, carbohydrates, lipids, and nucleic acids, together with discussions of oxidative metabolism and regulation. Prerequisites: BSC2010, BSC2010L, BSC2011, BSC2011L, CHM2200 or CHM2211, CHM2211L; Corequisite: BCH3023L.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, Corequisite: BCH3023L

Course User Fee: \$25.00

BCH3023L Introductory Biochemistry Laboratory 2.000 credits

This laboratory course complements the lecture corequisite BCH 3023, which involves the study of the fundamental components of biochemistry. In this laboratory course, students will learn and will be provided with hands-on experiences with the concepts addressed in the lecture course. Prerequisites: BSC2010, BSC2010L, BSC2011, BSC 2011L, CHM2200 or CHM2211, CHM2211L; Corequisite: BCH3023.

Lab Hours: 64.000

Prerequisite: BSC2011, BSC2011L, Corequisite: BCH3023L

Course User Fee: \$110.00

BSC3930 Biological Sciences Seminar 1.000 credits

This course is designed for biological science majors. Students will gain an understanding of the broad range of career options within the biological sciences. Additionally, students will learn how to read, interpret, discuss, and cite selected examples of scientific literature in different areas of biology.

Lecture Hours: 16.000

Prerequisite: BSC2011, BSC2011L

Course User Fee: \$10.00

PCB4674 Evolution 3.000 credits

Students will learn the theory of evolution as it pertains to different fields of modern biology including the theory of natural selection, the evidence for evolution, microevolution, speciation, macroevolution, the origin of life on Earth, major evolutionary trends, and the evolution of humans.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, PCB3060, PCB3060L

Course User Fee: \$25.00

BSC4422 Biotechnology Methods and Applications III 3.000 credits

This course will explore biotechnology as a science and its implications in modern society. Students will learn how to make well-designed and controlled experiments. Students will also demonstrate knowledge of data acquisition and interpretation.

Lecture Hours: 48.000

Prerequisite: BSC2427, BSC2427L, BCH3023, BCH3023L, PCB3060, PCB3060L, Corequisite: BSC4422L

Course User Fee: \$25.00

BSC4422L Biotechnology Methods and Applications III Lab 2.000 credits

This course provides students with hands-on laboratory experiences to supplement the BSC4422 lecture course. Students will learn how to perform advanced molecular biotechniques that build on previous knowledge. They will perform diagnostic assays, western blots, purifications, etc. and determine how to correlate findings with the basic research or clinical data.

Lab Hours: 64.000

Prerequisite: BSC2427, BSC2427L, BCH3023, BCH3023L, PCB3060, PCB3060L, Corequisite: BSC4422

Course User Fee: \$110.00

BSC4940 Senior Specialty Internship 3.000 credits

This course will provide students with hands-on experience in the biological science workplace by conducting an internship. The experience readies the individual for their first position in-field.

Other Hours: 144.000

Prerequisite: Departmental Approval

Course User Fee: \$181.00

PCB4233C Fundamentals of Immunology 4.000 credits

Students will learn the immunological processes and concepts as they pertain to human health, disease prevention, development, and treatment. Its primary emphasis is on the cellular and non-cellular components of the immune system, and the ways in which these components interact to provide immunity. This is a combination lecture and lab course.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: MCB3023, MCB3023L

Course User Fee: \$55.00

Program Description**Clinical Laboratory Science**

Bachelor of Science | Code: P9211 | 130 credits

The Bachelor of Science (BS) in Clinical Laboratory Science is designed to accommodate the unique demands for entry and advancement within the health science industry. Clinical Laboratory Scientists work with pathologists and other laboratory professionals in performing and analyzing laboratory testing used for diagnosis, treatment, and prevention of disease. Medical Laboratory Sciences program graduates are eligible for certification by the American Association of Bioanalysts (AAB), American Society for Clinical Pathology (ASCP), and American Medical Technologist (AMT). Upon completion of the program and the attainment of certification and license, medical laboratory scientists are employed in a variety of health-care settings as laboratory technologists with the opportunity of upward mobility to supervisory and management positions.

Total: 83.0

HSC3655 Theoretical Foundations of Health Care Ethics 3.000 credits

This course will cover the Theoretical Foundations of Health Care Ethics. The student will learn how to apply the core principles of bioethics to the medical and health care decision-making process. (3 cr. Lecture)

Lecture Hours: 48.000

MLS4621 Clinical Biochemistry 4.000 credits

This course provides the student with the knowledge and understanding of clinical disorders and how biochemical factors and laboratory methods are used for the investigation, diagnosis and management of patients. (4 hour lecture)

Lecture Hours: 64.000

Course User Fee: \$41.00

MLS4705 Laboratory Operations and Management 3.000 credits

This course provides students with Quality Management skills necessary in the medical laboratory. Students are exposed to organizational structure along with principles for leadership and managerial decision making and process improvement along with different principles used in Laboratory Instrumentation. (3 Hour Lecture)

Lecture Hours: 48.000

Course User Fee: \$74.90

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions.

Corequisites: CHM 1033L, MAT 1033 (3 hr. lecture)

Lecture Hours: 48.000

Corequisite: CHM1033L, Prerequisite: MAT1033

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite: MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

CHM 1045 is the first semester of a two-semester general chemistry course for science, premedical science and engineering students. Students will learn stoichiometry, atomic structure, completing and balancing chemical reactions, nomenclature, bonding, acid-base theories, solutions, gas laws and beginning thermodynamics. Special fee.

Lecture Hours: 48.000

Prerequisite: CHM1025or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

CHM1046 General Chemistry And Qualitative Analysis 3.000 credits

CHM 1046 is the second course in the CHM 1045-1046 sequence. Students will learn major topics in modern chemistry including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria and electrochemistry. Special fee. Prerequisite: CHM1045; Corequisite: CHM1046L (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

CHM2200 Survey of Organic Chemistry 3.000 credits

XXXX This one-semester course briefly examines the structure, synthesis, nomenclature and reactivity of selected mono-and-poly-functional organic compounds. Theories that relate the structure of organic molecules to their chemically reactivity will be presented as a unifying principle. Prerequisite: CHM 1046 and CHM 1046L; Corequisite: CHM 2200L. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2200L

CHM2200L Survey of Organic Chemistry Laboratory 1.000 credits

Experiments and exercises will be conducted to introduce students to the basic laboratory techniques that are used in organic chemistry and that re-enforce and illustrate several important topics in organic chemistry. Prerequisite: CHM 1046 and CHM 1046L; Corequisite: CHM 2200. Special fee. (2 hr. lab)

Lab Hours: 32.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2200

Course User Fee: \$46.00

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds. Prerequisite: CHM1046 and CHM 1046L; Corequisite: CHM2210L

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting. Prerequisites: CHM1046, CHM1046L; Corequisite: CHM2210.

Lab Hours: 64.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

CHM2211 Organic Chemistry 2 3.000 credits

In organic chemistry 2, students will learn about nomenclature, preparation reactions, and electronic and structural features of alcohols, ethers, phenols, aldehydes, ketones, carboxylic acids, acid anhydrides, amides, esters, and other organic compounds. Prerequisite: CHM 2210 and CHM 2210L; Corequisite: CHM 2211L. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: CHM2210, CHM2210L, Corequisite: CHM2211L

Course User Fee: \$15.00

CHM2211L Organic Chemistry 2 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2211. Topics include nomenclature, preparation reactions, and electronic and structural features of alcohols, ethers, phenols, aldehydes, ketones, carboxylic acids, acid anhydrides, amides, esters, and other organic compounds will be performed in a laboratory setting.

Lab Hours: 64.000

Prerequisite: CHM2210, CHM2210L, Corequisite: CHM2211

Course User Fee: \$45.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MLS4306 Clinical Hematology 3.000 credits

This course is the study of the composition and function of blood; diseases related to blood disorders. Students will receive the necessary skills in the application of hematology diagnostic procedures, interpretation, problem solving and correlation of laboratory findings with disease states (3 Hour Lecture).

Lecture Hours: 48.000

Course User Fee: \$74.90

MLS4335 Clinical Hemostasis 3.000 credits

This course Provides an overview application of hemostasis (coagulation), as it relates to the medical laboratory. Presents coagulation laboratory principles with hemostasis diagnostic procedures, interpretation, problem solving and correlation of laboratory findings and results in accordance to the disease states. (3 Hour Lecture)

Lecture Hours: 48.000

Course User Fee: \$74.90

MLS4506 Clinical Immunology 3.000 credits

Clinical Immunology will provide an overview of immunology concepts and the theory of some immunologic procedures. The immunologic manifestation of infectious disease and immune disorders will also be covered. (3 Hour Lecture)

Lecture Hours: 48.000

Course User Fee: \$74.90

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC1005L General Education Biology Laboratory 1.000 credits

This is an optional one-credit lab to provide students with experience in the scientific process. This course applies the scientific method to critically examine and explain the natural world, including but not limited to cells, organisms, genetics, evolution, ecology, and behavior.

Lab Hours: 32.000

Pre/Corequisite: BSC1005

Course User Fee: \$25.00

BSC1084 Functional Human Anatomy 3.000 credits

This course covers basic human anatomy for students in allied health and mortuary science programs. It includes the dynamics of gross and functional anatomy, terminology, body orientation, and systematic relationships.

Lecture Hours: 48.000

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

BSC2020 Human Biology: Fundamentals of Anatomy/Physiology 3.000 credits

This course provides a basic understanding of the human body, its systems, and their functions. It includes the dynamics of physiology, terminology, and physiological relationships of the body systems.

Lecture Hours: 48.000

Course User Fee: \$10.00

BSC2085 Human Anatomy and Physiology 1 3.000 credits

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

BSC2085L Human Anatomy and Physiology 1 Laboratory 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Lab 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development, from an experiential approach.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

BSC2426 Biotechnology Methods and Applications 1 3.000 credits

This course addresses the basic principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical, biotechnology and/or research laboratory setting(s). Practical applications of biotechnology are explored.

Lecture Hours: 48.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426L

BSC2426L Biotechnology Methods and Applications 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2426 Biotechnology Methods and Applications 1. This is a hands-on course that emphasizes the basic laboratory principles, techniques, and instrumentation, necessary for effective work in pharmaceutical, biotechnology, and/or research laboratory settings(s).

Lab Hours: 64.000

Prerequisite: Previous knowledge of chemistry and biology strongly recommended, Corequisite: BSC2426

Course User Fee: \$50.00

BSC2427 Biotechnology Methods and Applications 2 3.000 credits

This course addresses advanced principles, concepts and techniques of biotechnology necessary for an understanding of the field, and effective work in a pharmaceutical-biotechnology and/or research-laboratory setting(s). The following areas of contemporary biotechnology are covered: forensics, bioremediation, and animal-, plant-, and marine biotechnology.

Lecture Hours: 48.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427L

BSC2427L Biotechnology Methods and Applications 2 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2427 Biotechnology Methods and Applications 2. This is a hands-on course that emphasizes advanced laboratory principles, techniques, and instrumentation necessary for effective work in a pharmaceutical, biotechnology, and/or research-laboratory setting(s).

Lab Hours: 64.000

Prerequisite: BSC2426, BSC2426L, Corequisite: BSC2427

Course User Fee: \$50.00

BSC2943L Bioscience Internship 3.000 - 6.000 credits

This internship course is a capstone for students majoring in bioscience and related programs. Students will learn to apply acquired knowledge and skills to gain experience in the bioscience workplace.

Other Hours: 144.000 - 288.000

Course User Fee: \$21.00

HSC3701 Leadership and Management in Healthcare 3.000 credits

This is a leadership and management course that will examine leadership as a process with a tri-fold focus: the leader, the followers, and the situation. The student will learn leadership theories and build leadership skills. (3 hr. lecture)

Lecture Hours: 48.000

MLS4221 Clinical Urinalysis 3.000 credits

The study of body fluids for physical health and identification of abnormalities in relation to disease states. (3 hour Lecture)

Lecture Hours: 48.000

Course User Fee: \$74.90

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

MLS4193 Clinical Molecular Diagnostics 3.000 credits

Clinical molecular diagnostics course provides an introduction to molecular analysis of biological markers in clinical samples to aid in the diagnosis, monitoring and treatment of diseases (3 Hour Lecture).

Lecture Hours: 48.000

Course User Fee: \$41.20

MLS4461C Clinical Diagnostic Microbiology 3.000 credits

Clinical Diagnostic Microbiology provides concepts in bacteriology identification methods, rapid identification methods for parasites and fungi and an overview of virology methodology.

Lecture Hours: 48.000

Course User Fee: \$74.90

MLS4630 Clinical Chemistry 3.000 credits

The study of the concepts and principles of Clinical Chemistry. Analytes and lab values are correlated to normal homeostasis and disease states. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$74.90

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

HSC3057 Introduction to Research Methods in Health Care 3.000 credits

This course will provide an overview of research methods used in healthcare. Students will learn the use of effective inquiry through research strategies that address healthcare issues with logical and observational rigor. Students will learn the rudiments relative to the evaluation of research literature, research design and the application of research methods to the clinical setting. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: STA2023

MLS3150 Special Topics in Medical Laboratory Sciences 3.000 credits

This course stresses the importance of evidence-based practice in the medical laboratory sciences field. Students will be presenting case studies to the faculty and peers in the program. Instruction will emphasize professional, legal and ethics issues affecting the medical laboratory science field. Students will review the material covered in the program to prepare for the comprehensive assessment. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$191.14

MLS4552 Clinical Immunohematology 3.000 credits

The study of concepts related to the blood group systems, blood antigens and antibodies. The student will analyze the principles, procedures and clinical significance of testing in genetics, pre-transfusion testing, adverse effects of transfusions, donor selection and components, and hemolytic disease of the newborn. (3 hour lecture)

Lecture Hours: 48.000

Course User Fee: \$74.90

Program Description

Cybersecurity

Bachelor of Science | Code: S9515 | 120 credits

The Bachelor of Science (BS) in Cybersecurity degree is designed to help meet the local need for cyber security professionals. Students in this program gain detailed understanding and hands-on skills regarding the tools and protocols needed to use and manage cybersecurity infrastructure, risks, and vulnerabilities in real-world situations. The program curriculum includes courses in network defense, penetration testing, computer and network forensics, risk management and ethics, among others. These courses prepare students for multiple industry certifications such as Certified Ethical Hacker, Computer Hacking Forensics Investigator and Certified Information Security Manager.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 14.0

ENC 1102	English Composition 2	3.0
<i>Mathematics (GE)</i>		3.0
MAC 1105	College Algebra *	3.0
OR		
STA 2023	Statistical Methods	3.0
CIS 3215	Ethics in CyberSecurity	4.0
CIS 3360	Principles of Information Security	4.0

Note: MAC 1105 may be replaced by higher-level mathematics with prefix MAC, MAD*, MAS*, or MAP*.

Semester 2

Units: 12.0

CIS 3361	Information Security Management	4.0
CIS 4204	Ethical Hacking I	4.0
CIS 4366	Computer Forensics	4.0

Semester 3 **Units: 8.0**

CIS 4378	Ethical Hacking II	4.0
CIS 4388	Advanced Computer Forensics	4.0
Foreign Language Competence*		

*Foreign language is a graduation requirement for the baccalaureate met through 8 credit hours at the elementary 2 level in one foreign language or equivalent. Certain foreign language courses count towards program electives. Students may satisfy equivalence through standardized examinations or successful completion of two credits (two years) in one foreign language at the secondary (high school) level. For additional information, including exemptions for students whose native language is not English, see the Testing and Assessment Department.

Semester 4 **Units: 14.0**

CIS 4364	Intrusion Detection and Incident Response	4.0
CNT 3409C	Network Security	4.0
<i>Oral Communications (GE)</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0
<i>Social Science (GE)</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
ECO 2013	Principles of Economics (Macro)	3.0
OR		
POS 2041	American Federal Government	3.0
OR		
PSY 2012	Introduction to Psychology	3.0

Semester 5 **Units: 13.0**

CIS 4891	Cyber Security Capstone	4.0
<i>Humanities (GE)</i>		3.0
PHI 2010	Introduction to Philosophy	3.0
OR		
PHI 2600	Introduction to Ethics	3.0
<i>Natural Science (GE)</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		

*Students are encouraged to consult with an academic advisor to select approved courses that align with their interests and fulfill remaining graduation requirements.

Total: 61.0

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

CIS3215 Ethics in CyberSecurity 4.000 credits

This course provides the study of the risk factors for digital and ethical misconduct, and it explores ethics, relevant laws, regulations, policies, standards, moral, and social issues and responsibilities faced by CyberSecurity professionals. Coverage includes examination of CyberSecurity policies; Federal Laws and Authorities and International Standards; ethical and legal compliance and enforcement; business issues; contractual management of assets and liabilities; and issues involving privacy, disclosure, free speech and individual rights.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS3360 Principles of Information Security 4.000 credits

This upper division course provides an overview of information systems security principles, practices, methods, and tools. Students will learn about the threats against an organization's digital assets, as well as the tools and methods to mitigate those threats. Topics include cryptography, authentication and access control systems, infrastructure security, and ethical issues. Prerequisite: CTS1134 or CTS1650
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CTS1134 OR CTS1650
Course User Fee: \$63.00

CIS3361 Information Security Management 4.000 credits

This course covers how to manage, design, oversee and assess an organization's information security. Students will learn how to develop an information security strategy, how to write information security policies, and how to manage information risk. Other topics include security program development and management, business continuity planning and disaster recovery planning. Prerequisite(s): CIS 3360 or CTS 1120. Laboratory fee. (3 hr. lecture; 2 hr. lab)
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CIS3360 OR CTS1120
Course User Fee: \$63.00

CIS4204 Ethical Hacking I 4.000 credits

This upper division course introduces students to penetration testing techniques. Students will learn how to footprint, scan, sniff, enumerate networks, and hack systems. Other topics include denial of service attacks, social engineering, malware, vulnerability analysis and relevant laws. Prerequisites: CIS3360
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CIS3360
Course User Fee: \$63.00

CIS4366 Computer Forensics 4.000 credits

This upper division course provides the student with knowledge and skills to conduct formal incident investigations. Students will learn how to collect and analyze evidence from Windows and Linux computer systems. Other topics include legal issues, evidence analysis, and report writing. Prerequisite(s): CIS 3360 or CET 2880C. Laboratory fee. (3 hr. lecture; 2 hr. lab)
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CIS3360 OR CET2880C
Course User Fee: \$63.00

CIS4378 Ethical Hacking II 4.000 credits

This upper division course is a continuation of Ethical Hacking I. Students will focus on how web applications, wireless networks, and mobile platforms can be hacked, and how intrusion detection systems (IDS), firewalls, and honeypots can be evaded. Other topics include cloud computing security, Internet of Things (IoT) security, and cryptography. Prerequisite: CIS4204.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CIS4204
Course User Fee: \$63.00

CIS4388 Advanced Computer Forensics 4.000 credits

This upper division course is a continuation of Computer Forensics. The course examines forensics techniques necessary to investigate and analyze network traffic. The course covers packet capture and analysis, log file analysis, and flow analysis. Other topics include mobile forensics, cloud forensics, malware forensics, database forensics, and investigating email crimes and web attacks. Prerequisite: CIS 4366 (3 hr. lecture, 2 hr. lab).
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CIS4366
Course User Fee: \$63.00

CIS4364 Intrusion Detection and Incident Response 4.000 credits

This upper division course addresses the underlying principles and techniques for detecting and responding to current and emerging cybersecurity threats. Students will learn how to handle various types of malware, email, web, network, cloud and internal network incidents, as well as risk assessment methodologies, and policies related to incident handling. Prerequisite: CIS 3360.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CIS3360
Course User Fee: \$63.00

CNT3409C Network Security 4.000 credits

This upper division course introduces students to current and emerging threats to the security of computer networks, as well as tools and techniques for the prevention, detection and recovery from such attacks. Topics include firewalls, intrusion detection and intrusion prevention systems, virtual private networks, remote authentication and authorization systems, and security protocols. Prerequisite(s): CIS 3360. Laboratory fee. (3 hr. lecture; 2 hr. lab)
Lecture Hours: 48.000, Lab Hours: 27.000 - 32.000
Prerequisite: CIS3360
Course User Fee: \$63.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

CIS4891 Cyber Security Capstone 4.000 credits

This upper-division course requires students to apply the knowledge and skills acquired for a cyber security project. Students will assess risk and define the cyber security requirements for a real-world scenario. Then they will design, implement and test the necessary cyber defenses to reduce the risk to an acceptable level in an emulated IT environment. Must be taken during the last semester before graduation and with a departmental permission. Prerequisite(s): Senior status. Department approval required. Laboratory fee. (3 hr. lecture; 2 hr. lab). Lecture Hours: 48.000, Lab Hours: 32.000 Prerequisite: Departmental approval required. *Course User Fee: \$63.00*

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

Program Description

Data Analytics

Bachelor of Science | Code: S9510 | 120 credit

The Bachelor of Science (BS) in Data Analytics program is designed to train and supply a workforce of skilled graduates in data manipulation and analysis across a spectrum of industries. Through the cross-disciplinary curriculum, students will learn to clean, organize, analyze, and interpret unstructured data, to derive knowledge and communicate discoveries using sophisticated visualization techniques. Students will demonstrate competence with fundamental algorithmic approaches to analyzing large data sets.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 14.0

ENC 1102	English Composition 2	3.0
Oral Communications (GE)		3.0

SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0
CAP 3321C	Data Wrangling	4.0
CAP 4767	Data Mining	4.0

Semester 2

Units: 12.0

CAP 4744	Data Visualization	4.0
CAP 4784	Big Data	4.0
<i>Statistics Selection</i>		4.0
CAP 3330	Programming R for Statistics	4.0
OR		
STA 3164	Statistical Methods II	4.0

Semester 3

Units: 7.0

<i>Humanities (GE)</i>		3.0
PHI 2010	Introduction to Philosophy	3.0
OR		
PHI 2600	Introduction to Ethics	3.0
<i>Data Analytics Options</i>		4.0
CAP 4936	Special Topics in Data Analytics	4.0
OR		
CIS 3368	Data Security & Governance	4.0

Foreign Language Competence *

*Foreign language is a graduation requirement for the baccalaureate met through 8 credit hours at the elementary 2 level in one foreign language or equivalent. Certain foreign language courses count towards program electives. Students may satisfy equivalence through standardized examinations or successful completion of two credits (two years) in one foreign language at the secondary (high school) level. For additional information, including exemptions for students whose native language is not English, see the Testing and Assessment Department.

Semester 4

Units: 14.0

CAP 4631C	Machine Learning for Data Analytics I	4.0
CAP 4633C	Machine Learning for Data Analytics II	4.0
<i>Social Science (GE)</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
ECO 2013	Principles of Economics (Macro)	3.0
OR		
POS 2041	American Federal Government	3.0
OR		
PSY 2012	Introduction to Psychology	3.0
General Education Elective (GE)*		3.0

*Students are encouraged to consult with an academic advisor to select approved courses that align with their interests and fulfill remaining graduation requirements.

Semester 5

Units: 13.0

<i>Natural Science (GE)</i>		3.0
BSC 1005	General Education Biology	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		
PHY 1025	Basic Physics	3.0
CAP 4910	Data Analytics Capstone	4.0
Data Analytics Options*		4.0
Program Electives**		2.0

*Select 4 credits from the following course options: CAP 4936 or CIS 3368. Students may take CAP 4936 up to two times to fill the Topics in Data Analytics Upper Division Requirements (eight credits), just as long as the Topics are different. This course may additionally be taken under the Program Electives Block.

**Select 1-4 credits from the following course options: ACG 1403, ACG 2450, CAI 1001C, CAI 1320C, CAI 2100C, CAI 2300C, CAI 2840C, CAP 2743C, CAP 2791C, CAP 3794C, CAP 4936, COP 2041C, CIS 1949, CIS 2900, COP 3530, CTS 1145, CTS 2192C, FIN 3400, GEB 1011, GEB 1432, MAC 1114, MAC 1140, MAC 1147, MAC 2311, MAC 2312, MAN 3025, MAN 4720, MAS 3105, QMB 2100

Total: 60.0

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

CAP3321C Data Wrangling 4.000 credits

This course offers a broad introduction to data wrangling, data retrieval, and the use of Python in data analytics. Students will use Python and other business intelligence tools to retrieve data from various sources, clean the dataset, and prepare it for data analysis tasks. Prerequisites: CAP1788 and CAP2704.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CAP1788 AND IDC2132

Course User Fee: \$63.00

CAP4767 Data Mining 4.000 credits

Students will learn how to extract useful data from an organization's data warehouse and analyze it to uncover hidden patterns and relationships. An emphasis will be placed on unsupervised data mining techniques, as well as the use of the RapidMiner software. Prerequisites: CAP1788 and CAP2761C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CAP1788 AND CAP2761C

Course User Fee: \$63.00

CAP4744 Data Visualization 4.000 credits

This course focuses on creating complex and informative visualizations using Tableau. Students will learn how to formulate business questions, organize complex and large datasets, analyze and interpret data, deliver actionable insights, and publish the results. Coverage includes preparation for intermediate-level Tableau certifications.

Prerequisites: CAP1788 and CAP2761C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CAP1788 AND IDC2132

Course User Fee: \$63.00

CAP4784 Big Data 4.000 credits

Course Description: This course focuses on the processing of massive datasets, both structured and unstructured. Students will learn how to use Databricks and Spark to manage and analyze large datasets from a variety of sources. In addition, student will gain an understanding of how Databricks supports the end-to-end data science workflows that allow users to extract and share business insights.

Prerequisites: CAP1788, CAP2761C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CAP1788 AND IDC2132

Course User Fee: \$63.00

CAP3330 Programming R for Statistics 4.000 credits

This upper division course is for students majoring in data analytics. Students will learn the R programming language and use it to perform intermediate-level statistical analysis. Techniques used in data analysis, such as analysis of variance and regression, will be emphasized. Prerequisite: STA2023.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: STA2023

Course User Fee: \$63.00

STA3164 Statistical Methods II 4.000 credits

This course is for students majoring in Data Analytics, Systems Engineering, and related disciplines which require advanced skills in statistical analysis. Students will learn how to perform tests of variance, analysis of variance, analysis of covariance, regression, correlation, and non-parametric statistics.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: STA2023

Course User Fee: \$50.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy.

Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

CAP4936 Special Topics in Data Analytics 4.000 credits

This upper division course is for students majoring in data analytics. The course centers around topics of current interest or of special interest to students or instructors. Topics or focus may vary from semester to semester. Prerequisites: CAP1788, CAP2761C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CAP1788, CAP2761C

Course User Fee: \$63.00

CIS3368 Data Security & Governance 4.000 credits

This upper division course is for students majoring in Data Analytics. Students will gain an understanding of how analytics can be applied to a variety of security-related problems across organizations. In addition, students will explore various ethical, legal, and data governance issues that affect data analysts. (3 hr. lecture; 1 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

CAP4631C Machine Learning for Data Analytics I 4.000 credits

This upper division course is for students majoring in data analytics. Students will learn why machine learning is crucial for data analytics and why regression analysis is a foundation of supervised machine learning. Using Python programming, students will use a variety of packages to create regression models that make predictions.

Prerequisites: COP1047C, STA3164 or CAP3330.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1047C AND STA3164 OR CAP3330

Course User Fee: \$63.00

CAP4633C Machine Learning for Data Analytics II 4.000 credits

This upper division course is for students majoring in data analytics. In this second-level course, students will use the Python programming language to create additional machine learning models for classification. In addition, students will explore various applications of multi-layer neural networks. Prerequisites: CAP4631C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CAP4631C

Course User Fee: \$63.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

CAP4910 Data Analytics Capstone 4.000 credits

This upper division course is for students majoring in data analytics. Students will initiate a business-driven data analytics solution to a real-world problem utilizing acquired skills in statistical analysis, machine learning, data mining, and data visualization. Must be taken during the last semester before graduation.

Prerequisite: CAP4631C.

Lecture Hours: 48.000, Lab Hours: 32.000 - 28.000

Prerequisite: CAP4631C

Course User Fee: \$63.00

Program Description

Dental Hygiene

Bachelor of Science | Code: S9300 | 120 credits

The Bachelor of Science (B.S.) in Dental Hygiene is designed to accommodate the unique demands for entry and advancement within the health science industry. Upon completion of the program and the attainment of licensure, dental hygienists are employed in a variety of health-care settings with the opportunity of upward mobility to supervisory and management positions.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 17.0
ENC 1102	English Composition 2	3.0
<i>Humanities</i>		3.0

Total: 67.0

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

DEH3703 Oral Health Care: Determinants and Directions 3.000 credits

This course introduces theoretical frameworks for understanding how social, economic, environmental, and political factors influence oral health outcomes and dental hygiene practice. Students will examine the relationship between these determinants and oral health, as well as their impact on access to care and community health status. The course emphasizes the development of policy at the community, state, and national levels, and includes analysis of current research and case studies relevant to dental hygiene and public health. Students will gain skills in assessing social issues affecting oral health and in understanding how to advocate for effective dental public health policies.

Lecture Hours: 48.000

DEH3814 Dental Hygiene and Population Health Considerations 3.000 credits

This course provides an in-depth exploration of the health and healthcare needs specific to groups at elevated risk for oral health challenges. Students will examine the unique circumstances affecting these groups at the psychosocial and physiological levels and their impact on oral health. Through analysis of current trends, students will identify factors contributing to compromised oral health and explore strategies aimed at reducing risk and supporting health promotion, maintenance, and restoration within the context of dental hygiene practice.

Lecture Hours: 48.000

DEH4740 Introduction to Health Concepts in Dental Hygiene 3.000 credits

This foundation course introduces the study of dental global health and its theories, perspectives, methods, and evidence. The course offers a basic overview of the methods for measuring population health, analytic tools for decision-making, and the evidence base for the effectiveness, risks, and efficiency of interventions, programs, and policies. The course focuses on challenges, diseases, and conditions of major public health importance, their patterns of global mortality and morbidity, their social, economic, and political determinants and consequences, their inequalities and inequities, and the population-based interventions as well as social and institutional responses to these challenges structured through communities, national health systems as well as international agencies, consortia, and alliances.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

DEH4730 Dental Hygiene Educational Concepts 3.000 credits

This course is designed to introduce the principles of learning and teaching, especially as they apply to allied health professions such as staff training and patient education. Topics include understanding various learning theories, learning styles, motivational strategies, collaborative learning, the influence of diversity, and using technology to support learning. The course introduces students to the career option of education as a profession and provides a foundation for understanding the relationship between planning, implementing, and assessing student learning. Dental hygiene and adult education theory and concepts are the major components of this specialization.

Lecture Hours: 48.000

DEH4851 Dental Hygiene Practice Management 3.000 credits

This course is designed to assist the dental hygienist in understanding and applying the principles of management related to a dental hygiene practice. The concepts of patient, business office, and dental team management will be explored. Strategies will be presented on the marketing and promoting of dental services and products to the general public.

Lecture Hours: 48.000

DEH4892 Principles of Professionalism in Dental Hygiene 3.000 credits

The student will be able to demonstrate knowledge of the dental hygiene code of ethics with emphasis on cultural competence as related to all professional encounters.

Lecture Hours: 48.000

HSC3057 Introduction to Research Methods in Health Care 3.000 credits

This course will provide an overview of research methods used in healthcare. Students will learn the use of effective inquiry through research strategies that address healthcare issues with logical and observational rigor. Students will learn the rudiments relative to the evaluation of research literature, research design and the application of research methods to the clinical setting. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: STA2023

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

DEH4813 Dental Hygiene: Emerging Topics and Techniques 3.000 credits

This course examines current societal and professional issues and their impact on dental hygiene practice. Students will examine the roles of the dental hygienist and discuss the dental hygienists' role in increasing access to dental care. Students will research and compare traditional and alternative practice models and propose changes to improve dental care delivery. It also discusses changing technology in dentistry and dental hygiene; political advocacy; demographic shifts; ethics and professionalism; interprofessional education; and global perspectives of dental hygiene.

Lecture Hours: 48.000

DEH4930 Dental Hygiene Special Topics 3.000 credits

This online course is designed to help the dental hygiene student identify and explore current issues and topics related to dentistry and specifically to dental hygiene. The course will take the format of a study club and will involve student participation in the identification and discussion of the topic selected.

Lecture Hours: 48.000

HSC3701 Leadership and Management in Healthcare 3.000 credits

This is a leadership and management course that will examine leadership as a process with a tri-fold focus: the leader, the followers, and the situation. The student will learn leadership theories and build leadership skills. (3 hr. lecture)

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

DEH4854 Leadership in Dental Hygiene 3.000 credits

This course focuses on the theories, concepts and principles of leadership. Emphasis will be on the development of leadership skills related to personal behavior, communication, organization and self-evaluation. This course explores opportunity to develop leadership roles appropriate to the dental hygiene profession.

Lecture Hours: 48.000

DEH4947 Dental Hygiene Capstone 5.000 credits

This course is designed to provide the student with an opportunity to apply their knowledge of a chosen professional role through teaching, internship, observation or work experience. This course will use selected sites on and off campus to develop the expanding role of the dental hygienist in the health care system.

Lecture Hours: 48.000

Program Description

Early Childhood Education

Bachelor of Science | Code: S9270 | 120 credit

Upon completion of the Bachelor of Science Degree with a major in Early Childhood Education program, the student will be eligible to obtain a Florida Educator Certification in Pre-school (Birth to Age 4) and Pre-Kindergarten/ Primary (Age 3 to Grade 3) with endorsements in English for Speakers of Other Languages (ESOL), Reading, and Pre-Kindergarten Disabilities.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

EEC 4940	Student Teaching in Early Childhood Education	10.0
		Total: 66.0

EDF2144 Maximizing Student Potential in the School Context 3.000 credits

The student will explore various aspects of learning and brain development in schools. Students will be introduced to the latest neuroscience education strategies used in schools to optimize their learning potential from infancy through adolescence.

Lecture Hours: 48.000

EME2040 Introduction to Technology for Educators 3.000 credits

The student will learn instructional design principles for the use of technology in teaching and learning. The student will participate in hands-on experiences with educational media, emerging technologies, hardware, software, and peripherals for the personal computer will be provided. The student will use data driven decision-making to identify appropriate software for classroom applications.

Lecture Hours: 48.000

Prerequisite: CGS1060C

Course User Fee: \$18.00

EME2071 Educating Young Children for Digital Literacy in the 21st Century 3.000 credits

This course provides an overview of appropriate use of technology in early childhood settings (ages 3-8). The student will learn how to make informed decisions regarding the intentional use of technology in ways that support young children's learning and development.

Lecture Hours: 48.000

Course User Fee: \$25.00

EDF3115 Child Development for ECE Teachers 3.000 credits

This course provides an overview of human life from fertilization through eight years of age. The student will examine growth and developmental characteristics during the prenatal, infancy, and early childhood periods. The student will learn to analyze typical and atypical development, developmental theories, learning theories, brain research, attachment, and relationships.

Lecture Hours: 48.000

Course User Fee: \$18.00

EEC3301 Teaching Methods in Early Childhood Education 3.000 credits

This course will introduce instructional models to design lesson plans and instruction based on state standards. The student will incorporate educational theories to develop strategies for early childhood serving all learners. (Ten hours of clinical experience required in an approved kindergarten-third grade setting.)

Lecture Hours: 48.000

Pre/Corequisite: EDF3115 and 10 hrs. of Field Experience Required.

Course User Fee: \$18.00

EEC3613 Observation and Assessment of Young Children 3.000 credits

This course will provide an overview of the process and importance of observing, documenting, and interpreting the behavior of young children. The student will learn and apply various methods to document the ongoing development of children and the value of using this information to support and plan for learning experiences. (Ten hours of clinical experience in an approved birth-age 1 least restrictive setting).

Lecture Hours: 48.000

Prerequisite: EEC1000

EEX3201 Young Children with Special Needs 3.000 credits

This course provides an overview of issues related to young children (birth through age eight) with special needs. The student will learn about possible causes and characteristics of exceptionalities, federal laws pertaining to students with disabilities, the referral process, educational interventions, available resources, and advocacy (Ten hours of clinical experience required in an approved birth - age four least restrictive setting).

Lecture Hours: 48.000

EEC3211 STEM for Early Childhood Education I 3.000 credits

The student will learn to use scientific and mathematical educational research-based methods and strategies to teach inquiry and problem-solving skills and plan activities for young children that foster exploration in the sciences. (Ten hours of clinical experience required in an approved prekindergarten: 1 observation required).

Lecture Hours: 48.000

Prerequisite: EEC3301 and 10 hrs. of Field Experience Required

Course User Fee: \$18.00

EEC3213 Language, Literature, and Emergent Literacy 3.000 credits

This course focuses on the development of language and literacy in children ages birth through age five. The student will learn the process of emergent literacy including vocabulary and language development, phonological awareness, alphabetic and print knowledge, and comprehension. The student will learn to design developmentally appropriate and effective emergent literacy activities in relation to the early learning and developmental standards. (Ten hours of clinical experience required in an approved pre-kindergarten inclusion setting.) This course focuses on the development of language and literacy in children ages birth through age five. The student will learn the process of emergent literacy including vocabulary and language development, phonological awareness, alphabetic and print knowledge, and comprehension. The student will learn to design developmentally appropriate and effective emergent literacy activities in relation to early learning and developmental standards. (Ten hours of clinical experience required in an approved pre-kindergarten least restrictive setting.)

Lecture Hours: 48.000

Pre/Corequisite: EEC1000

EEC3412 Family and Community Partnerships in Early Childhood Education 3.000 credits

This course focuses on family engagement and community involvement in early childhood education. The student will identify strategies for establishing and maintaining reciprocal relationships with all parents, families, and communities. The student will explore ways to connect students, parents, families, the school, and the community as a partnership to support student learning and well-being.

Lecture Hours: 48.000

Prerequisite: EEC1000

EEX3603 Positive Behavior Supports in All Settings 3.000 credits

This course provides a holistic approach to guiding young children's behavior and facilitating character education. The student will learn to utilize strategies that emphasize the importance of relationships to learning, self-awareness, and character based on best practices in character-based classroom management while focusing on individual needs of each child. (10 clinical experience hours in an approved pre-kindergarten least restrictive classroom).

Lecture Hours: 48.000

Pre/Corequisite: EEC3301, EEX3201 and 10 hrs. of Field Experience Required

Course User Fee: \$18.00

EEC4219C Science, Technology, and Mathematics (STEM) Methods for ECE II 3.000 credits

The student will learn to use scientific and mathematical research-based methods and strategies to teach inquiry and problem-solving skills and plan activities for young children that foster exploration in the nature of science, mathematics, and technology. (Ten hours of clinical experience required in a kindergarten-third grade setting with ESOL students during math and science instruction: 1 observation).

Lecture Hours: 48.000

Prerequisite: EEC3211

EEX3226 Assessment of All Young Children 3.000 credits

The student will utilize guidelines and techniques for observing, assessing, evaluating, and planning curriculum for young children. The student will learn to use formal and informal assessments to evaluate social-emotional, cognitive, language, and motor development and will use data to plan for instruction. (Ten hours of clinical experience required: 3 hours to include an observation of an evaluation of a young child at Early Steps, 3 hours to include a tour of the Mailman Center, Early Steps, and the FAAST Lab, and the remaining 4 hours are to be completed in an approved kindergarten-third grade inclusion setting with ESOL students).

Lecture Hours: 48.000

Prerequisite: EEC2271, EEC2601, Pre/Corequisite: EEC3301, EDF3115

Course User Fee: \$18.00

RED3009 Emergent and Early Literacy 3.000 credits

The teacher candidate will acquire the knowledge to apply the principles of explicit, systematic, and sequential evidence-based reading instruction and scaffold student learning while integrating the six components of reading (oral language, phonological awareness, phonics, fluency, vocabulary, and comprehension) in a K-2 setting. The teacher candidate will understand that teaching reading is an ongoing strategic process resulting in students comprehending various text. Reading competencies 1 and 2.

Lecture Hours: 48.000

Prerequisite: EEC3213, EEC3412

Course User Fee: \$18.00

**TSL3080 ESOL in Early Childhood Education I
3.000 credits**

The student will explore theories, research, and practices of English learners, including legal issues that have influenced the field. The student will analyze theories of first and second language acquisition, and concepts of global citizenship. (Ten hours of clinical experience requires in an approved kindergarten-third grade least restrictive environment with ESOL students.)

Lecture Hours: 48.000

Pre/Corequisite: EEC3301

Course User Fee: \$18.00

EEC3212 Integrated Social Sciences, Humanities, and Arts 3.000 credits

This course provides an overview of the role of social studies, the humanities, and the fine arts in early childhood classrooms. Students will learn to plan, implement, and assess developmentally appropriate activities that reflect the family and community influences on young children. Special fee. (10 hours of clinical experience and 1 observation required in grade 1–3 classroom with ESOL students).

Lecture Hours: 48.000

Prerequisite: EEC3301

Course User Fee: \$18.00

**EEC4268 Practicum in Early Childhood Education
3.000 credits**

The teacher candidate will use research methods to plan and implement an action research project to meet the needs of struggling readers. The student will attend professional development experiences designed to develop knowledge and pedagogy, prepare for teaching interviews, and entry into the profession.

Lecture Hours: 48.000

Recommended Preparation: Departmental Permission

Course User Fee: \$18.00

LAE4211 Methods and Resource for Literacy Development in Young Children 3.000 credits

The student will utilize a variety of assessment tools to measure and evaluate literacy in a K-3 setting. The student will learn to create and administer informal assessments, evaluate results, and differentiate instruction encompassing the reading components. Twenty hours of clinical experience and 1 observation required.

Lecture Hours: 48.000

Prerequisite: EEC4219C, EEX3226, RED3009, TSL3080,

Pre/Corequisite: EEC3212, TSL4310, Corequisite: EEC4268

Course User Fee: \$18.00

**TSL4310 ESOL in Early Childhood Education II
3.000 credits**

In this second TESOL course, the student will apply theories, principles, and current research on curriculum, instructional methods, and assessment for English learners in early childhood settings. The student will select modifications appropriate for language and content area teaching and learning. (Ten (10) hours of clinical experience in an approved first through third grade setting with ESOL students.)

Lecture Hours: 48.000

Prerequisite: TSL3080 and 10 hrs. of Field Experience Required

Course User Fee: \$18.00

EEC4936 Student Teaching Seminar: ECE 2.000 credits

The student will discuss and reflect on their development and mastery of the Florida Educator Accomplished Practices (FEAPS) during the completion of their student teaching experience in a classroom setting.

Lecture Hours: 32.000

Prerequisite: EEC4268, LAE4211, Corequisite: EEC4940

EEC4940 Student Teaching in Early Childhood Education 10.000 credits

The student will complete a full-time differentiated student teaching experience consisting of a traditional internship or teaching residency in a classroom setting. The student will learn and experience all the educational and professional responsibilities common to teachers within their area of expertise.

Internship Hours: 480.000

Corequisite: EEC4936

Program Description

Bachelor of Science | Code: S9100 | 134 credit

The Bachelor of Science in Electrical and Computer Engineering Technology degree is designed to prepare students for entry level engineering positions such as Electronics Engineers, Test Engineers, Project Engineers, Electronics Manufacturing Engineers, Electronics Systems Engineers, Electronics Hardware Engineers, Technical Support Engineers, Quality Control Engineers, Reliability Engineers, Field Engineers, Processing Engineers, and Sales Engineers.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 15.0
ENC 1102	English Composition 2	3.0
MAC 2311	Calculus and Analytical Geometry 1	5.0
CET 3126C	Computer Architecture	4.0
<i>Program Elective</i>		3.0
ETP 3240	Power Systems	3.0
OR		
ETP 3320	Introduction to Renewable Energy Technology	3.0
Lower Division*		

*Note: This Course Sequence Guide is for students transitioning from the Associate in Science (AS) in Electronics Engineering Technology (Plan Code: 26039). It is based on students having completed 15 general education credits and 45 program core/major requirements. Additionally, students must have completed EET 2323C Analog Communications and EET 2351C Digital and Data Communications for a total of 8 credits as major course electives. If one of these courses were not chosen as electives, they should be completed this term.

Semester 2		Units: 13.0
MAC 2312	Calculus and Analytical Geometry 2	4.0
PHY 2048	Physics with Calculus 1	4.0
PHY 2048L	Physics with Calculus 1 Lab	1.0
ETI 4480C	Applied Robotics	4.0

Semester 3		Units: 12.0
PHY 2049	Physics with Calculus 2	4.0
PHY 2049L	Physics with Calculus 2 Lab	1.0
<i>Social Sciences</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
ANT 2000	Introduction to Anthropology	3.0
OR		
DEP 2000	Human Growth and Development	3.0
OR		
ECO 2013	Principles of Economics (Macro)	3.0
OR		
POS 2041	American Federal Government	3.0
OR		
PSY 2012	Introduction to Psychology	3.0
EET 3716C	Advanced Systems Analysis	4.0

Foreign Language Competence*

*Note: Foreign language is a graduation requirement for the baccalaureate met through 8 credit hours at the elementary 2 level in one foreign language or equivalent. Certain foreign language courses count towards program electives. Students may satisfy equivalence through standardized examinations or successful completion of two credits (two years) in one foreign language at the secondary (high school) level. For additional information, including exemptions for students whose native language is not English, see the Testing and Assessment Department.

Semester 4		Units: 14.0
MAP 2302	Introduction to Differential Equations	3.0
EET 4158C	Linear Integrated Circuits and Devices	4.0
EET 4165C	Senior Design 1	3.0
EET 4732C	Signals & Systems	4.0
Semester 5		Units: 15.0
<i>Oral Communications</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0
<i>Humanities</i>		3.0
ARC 2701	History of Architecture 1	3.0
OR		
ARC 2702	History of Architecture 2	3.0
OR		
HUM 1020	Humanities	3.0
OR		
PHI 2600	Introduction to Ethics	3.0
EET 4166C	Senior Design 2	2.0
EET 4730C	Feedback Control Systems	4.0
<i>Program Elective</i>		3.0
CET 4190C	Applied Digital Signal Processing	4.0
OR		
CET 4663C	Electronic Security	3.0

Total: 69.0

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

**MAC2311 Calculus and Analytical Geometry 1
5.000 credits**

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

CET3126C Computer Architecture 4.000 credits

This course is intended for upper division students majoring in Electrical and Computer Engineering Technology as well as Information Systems Technology. This course introduces the study of advanced microprocessor design. Students will learn the basic organization of computer systems including instruction-set architecture, execution pipeline, memory hierarchy, virtual memory, and I/O subsystems. Students also learn advanced processor microarchitecture issues such as dynamic instruction scheduling, branch prediction, lock-up free caches, instruction-level parallelism, multiple instruction fetch/issuing, speculative execution, etc. to improve computer processor performance. Students will experimentally verify microarchitecture designs using industry standard microarchitecture simulators.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$63.00

ETP3240 Power Systems 3.000 credits

In this course, students will learn renewable energy theory and applications. This course focuses on solar photo-voltaics, solar power and tracking systems, charge controllers and inverters, wind power systems, biomass and geothermal power generation. In addition, this course covers the integration with electrical grid, production and end user systems.

Prerequisite: EET1025C.

Lecture Hours: 48.000

Prerequisite: EET1025C

**ETP3320 Introduction to Renewable Energy
Technology 3.000 credits**

In this course, students will learn renewable energy theory and applications. This course focuses on solar photo-voltaics, solar power and tracking systems, charge controllers and inverters, wind power systems, biomass and geothermal power generation. In addition, this course covers the integration with electrical grid, production and end user systems.

Prerequisite: EET2101C.

Lecture Hours: 48.000

Prerequisite: EET2101C

**MAC2312 Calculus and Analytical Geometry 2
4.000 credits**

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

ETI4480C Applied Robotics 4.000 credits

This is an upper division level course designed as an introduction to robotics programming and includes robotic applications for multifunction part manipulation and motion with stepper and servo-motors. Students learn topics related to robotic design including robotic vision, motion planning, sensing and sensors, actuators, navigation systems, mobility, forward and inverse kinematics, and path planning. Laboratory activities provide hands-on application of concepts and theories. Prerequisite: CET2123C or CET3383C.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET2123C OR CET 3383C

Course User Fee: \$63.00

PHY2049 Physics with Calculus 2 4.000 credits

Foundation course for physical science and engineering majors. PHY 2048 covers classical mechanics and thermodynamics. PHY 2049 includes electricity, magnetism, waves and optics.

Lecture Hours: 64.000

Prerequisite: PHY2048, PHY2048L, Corequisite: MAC2312, PHY2049L

Course User Fee: \$10.00

PHY2049L Physics with Calculus 2 Lab 1.000 credits

Laboratory for PHY 2049.

Lab Hours: 32.000

Prerequisite: PHY2048, PHY2048L, Corequisite: MAC2312, PHY2049

Course User Fee: \$20.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan. Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

EET3716C Advanced Systems Analysis 4.000 credits

This is an upper division level course for students majoring in electronics engineering technology designed to prepare students to perform electrical circuit systems analysis using Laplace transforms and partial fraction expansion. Students will learn theorems, Fourier series, frequency response and bode plots, and their application towards practical systems.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET1025C AND MAC2312

MAP2302 Introduction to Differential Equations 3.000 credits

The student will analyze ordinary differential equations, methods of solution of first order linear and nonlinear equations and applications, homogeneous and non-homogeneous linear equations with constant coefficients, differential operator methods, higher order linear equations; the Laplace transform and its properties, elementary existence theorems, series solutions, numerical solutions of first order equations, initial and boundary value problems, vibrations and waves, and an introduction to autonomous systems.

Computational Course. Prerequisite: MAC 2312 with a "C" or better or equivalent.

Lecture Hours: 48.000

Prerequisite: MAC2312

Course User Fee: \$18.00

EET4158C Linear Integrated Circuits and Devices 4.000 credits

This is an upper division level course for students majoring in electronics engineering technology designed to provide students with practical skills and knowledge needed for application of operational amplifiers, comparators, phase-locked loops, timers, regulators, other integrated circuits in electronic systems. Students learn to apply these skills towards the design of amplifiers, active filters, oscillators, differentiators, integrators and other miscellaneous integrated circuit based systems . Prerequisite: EET 3716C. Laboratory fee. (2 hr. lecture; 4 hr. lab)

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET3716C

Course User Fee: \$63.00

EET4165C Senior Design 1 3.000 credits

This project-based course is designed to synthesize students' knowledge of the analysis, design, manufacturing, and testing of electronic systems. Students will design experiments, explore professional ethics, practice professional oral and written communications, conduct project feasibility studies, and perform project scheduling. Students learn about human factors, intellectual property, and liability issues.

Lecture Hours: 16.000, Lab Hours: 64.000

Prerequisite: Department approval required

Course User Fee: \$63.00

EET4732C Signals & Systems 4.000 credits

This course is intended for upper division students majoring in Electronics Engineering Technology. Students will learn the theory and the mathematical techniques used in analyzing continuous-time linear systems. Students will learn continuous-time signal and systems analysis, the input-output relationships of linear time-invariant (LTI) systems, transient and steady state analysis, frequency domain analysis and Fourier analysis. Students will analyze and characterize LTI systems using Laplace transforms.

Prerequisite: EET 3716C.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: EET3716C

Course User Fee: \$63.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ARC2701 History of Architecture 1 3.000 credits

This course offers a survey of architecture from ancient times through the 18th century and includes works from the Western canon. Students will examine the integration of art forms, structural elements, and ornamental designs across world civilizations, analyzing their connections to broader aspects of human development. Through this exploration, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societies throughout historical periods.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARC2702 History of Architecture 2 3.000 credits

This course provides a survey of architecture from the 19th century to the present and includes works from the Western canon and examining architectural developments. Students will analyze the integration of art forms, structural elements, and ornamental designs across civilizations, exploring their connections to human development, including art and history. Through this study, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societal changes and cultural expressions throughout modern and contemporary periods. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course. Lecture Hours: 48.000

EET4166C Senior Design 2 2.000 credits

Senior Design 2 is a project-based experience course in which students apply all of the skills they have acquired to analyze, design, simulate, synthesize, and test a complete system. Lecture Hours: 16.000, Lab Hours: 32.000
 Prerequisite: EET4165C
Course User Fee: \$63.00

EET4730C Feedback Control Systems 4.000 credits

This upper division course for students majoring in electronics and computer engineering technology, is designed to introduce students to the analysis of circuit networks and control systems. Students learn about stability and compensation considerations, using root locus, the Nichols chart, and Bode plots; simulation techniques; and how to apply these principles to build and test control systems. Lecture Hours: 32.000, Lab Hours: 64.000
 Prerequisite: EET3716C
Course User Fee: \$63.00

CET4190C Applied Digital Signal Processing 4.000 credits

This is an upper division level course for students majoring in electronics engineering technology. Students will learn how to model digital signal processing (DSP) systems, apply the Z transform, and develop algorithms for convolution, correlation, the Discrete Fourier Transform (DFT), and the Fast Fourier Transform (FFT). Students will apply these concepts in the design and implementation of digital filters and DSP algorithms in an embedded system. Prerequisites: COP2270, EET4732C, EET2323C or EET2351C. Special Fee. Lecture Hours: 32.000, Lab Hours: 64.000
 Prerequisite: COP2270 AND EET4732C AND EET2323C OR EET2351C
Course User Fee: \$63.00

CET4663C Electronic Security 3.000 credits

This is an upper division course for students who are majoring in electronics engineering technologies. The student will learn information and communication security principles for computer systems and networks, including authentication, protection, security models, cryptography, applications, and public policy, along with case studies. Prerequisites: CET2123C, COP2270. Lecture Hours: 32.000, Lab Hours: 32.000
 Prerequisite: CET2123C AND COP2270
Course User Fee: \$63.00

Program Description

Exceptional Student Education (K-12)

Bachelor of Science | Code: S9260 | 120 credit

The Bachelor of Science (BS) in Exceptional Student Education (K-12) prepares students to work with children with disabilities who need specially designed instruction and related services. Graduates of the program are eligible for Florida Professional Teacher Certification in ESE, Reading, and ESOL.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Prerequisite Courses

Units: 12.0

EDF 1005	Introduction to the Education Profession	3.0
EDF 2144	Maximizing Student Potential in the School Context	3.0
EEX 2000	Introduction to Exceptional Student Education	3.0
EME 2040	Creativity, Innovation, and Technology	3.0
Semester 1		Units: 15.0
EDF 4430	Measurement and Assessment in Education	3.0
EDG 3321	General Teaching Skills	3.0
EDG 3443	Classroom and Behavior Management	3.0
RED 3013	Foundations of Reading Instruction	3.0
TSL 3243	ESOL I: Second Language Acquisition and Communication	3.0
Semester 2		Units: 12.0
EEX 3071	Teaching Exceptional and Diverse Populations in Inclusive Settings	3.0
RED 3393	Differentiated Instruction in Content Reading	3.0
SCE 4362	Methods of Teaching Science	3.0
TSL 4311	ESOL II: Methods of Teaching and Assessing ESOL Students	3.0
Semester 3		Units: 9.0
EDG 4376	Integrating Language Arts and Social Sciences	3.0
EEX 4221	Assessment in Special Education	3.0
EEX 4932	Advanced Topics in Exceptional Student Education	3.0
Semester 4		Units: 12.0
EEX 3120	Language Development and Communication Disorders	3.0
EEX 4833	Practicum in Exceptional Student Education	3.0
MAE 4360	Methods of Teaching Mathematics	3.0
RED 4519	Diagnosis and Instructional Intervention in Reading	3.0
Semester 5		Units: 12.0
EEX 4930	Seminar in Exceptional Student Education	3.0
EEX 4940	Internship in Exceptional Student Education	9.0
		Total: 72.0

EDF1005 Introduction to the Education Profession 3.000 credits

This course provides an overview of Florida's educator certification pathways and career options in education in accordance with Florida statutes. Topics include: key educational philosophies; professional ethics; legal responsibilities, including mandatory reporting for child abuse and neglect; the Florida educator accomplished practices (FEAP); key instructional practices associated with effective teaching of students with exceptionalities; Florida's state academic standards; and historical, legal and financial foundations of the Florida education systems. Students will explore effective teaching strategies in classroom management, educational technology and the foundations of all student learning needs. A minimum of 15 hours of required clinical experience in a variety of school settings is included.

Lecture Hours: 48.000

Course User Fee: \$18.00

EDF2144 Maximizing Student Potential in the School Context 3.000 credits

The student will explore various aspects of learning and brain development in schools. Students will be introduced to the latest neuroscience education strategies used in schools to optimize their learning potential from infancy through adolescence.

Lecture Hours: 48.000

EEX2000 Introduction to Exceptional Student Education 3.000 credits

The student will learn about the history, legal issues, and legislation related to exceptional student education in K-12. The student will learn about the differing types of exceptionalities, supports, and accommodations provided for students with differing learning profiles from birth to adulthood.

Lecture Hours: 48.000

Prerequisite: EDF1005

Course User Fee: \$18.00

EME2040 Creativity, Innovation, and Technology 3.000 credits

The student will learn to manage a productive & safe technology environment by promoting creativity and innovation in the classroom. The student will gain 21st century knowledge, skills, and attitudes for applying technology across multiple disciplines and grade levels.

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Prerequisite: CGS1060 OR Passing Score on the Computer Competency Exam

Course User Fee: \$190.03

EDF4430 Measurement and Assessment in Education 3.000 credits

The student will learn research-based principles of assessment. The student will select specific standards and competencies and develop formative and summative traditional and alternative assessments. The student will interpret assessment data that will improve academic achievement and ensure equity in the application of quantitative and qualitative assessments.

Lecture Hours: 48.000

Prerequisite: EDG3321

Course User Fee: \$18.00

EDG3321 General Teaching Skills 3.000 credits

The student will learn how human development and learning theories, developments in educational neuroscience, and current research-based pedagogy apply to the teaching and learning process. The student will incorporate principles and skills of effective instructional planning, including differentiated instruction, aligning instructional teaching skills to practice, selecting appropriate formative assessments, and developing learning experiences that require students to demonstrate a variety of skills.

Lecture Hours: 48.000

Course User Fee: \$18.00

EDG3443 Classroom and Behavior Management 3.000 credits

The student will examine strategies for fostering a productive learning environment, informed by research-based frameworks and learning theories. The student will learn strategies for observing, assessing, modifying behavior, and communicating with stakeholders. The student will learn to create a learning environment that encourages positive interactions, self-regulation, and resiliency. Fifteen hours of clinical experience is required.

Lecture Hours: 48.000

Pre/Corequisite: EDG3321

Course User Fee: \$18.00

RED3013 Foundations of Reading Instruction 3.000 credits

The teacher candidate will develop an understanding of reading components as a systematic process including oral language, phonological awareness, phonics, fluency, vocabulary, and comprehension. The teacher candidate will apply the principles of explicit, systematic and sequential evidence-based reading instruction and scaffold student learning while integrating the six components of reading in a K-12 setting. (Fifteen hour of clinical experience in a K-3 classroom is required.

Lecture Hours: 48.000

Pre/Corequisite: EDG3321

Course User Fee: \$18.00

TSL3243 ESOL I: Second Language Acquisition and Communication 3.000 credits

The teacher candidate will critically examine and apply theoretical frameworks related to first and second language acquisition, literacy development, and the structural features of language; evaluate the impact of varied communication styles on student learning; and analyze legal and policy considerations pertinent to the education of English language learners (ELLs). Fifteen hours of clinical experience in a classroom with ELLs are required. Fifteen hours of clinical experience are required.

Lecture Hours: 48.000

Pre/Corequisite: EDG3321, EEX3120

EEX3071 Teaching Exceptional and Diverse Populations in Inclusive Settings 3.000 credits

The student will learn current research-based instructional strategies, educational neuroscience, and legal and ethical issues necessary in addressing the needs of diverse learners in inclusive classrooms. The student will make informed decisions in adapting, accommodating, and modifying the curriculum for students with special needs. Fifteen hours of clinical experience are required. Special fee. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: EEX2000 AND EDG3321

Course User Fee: \$18.00

RED3393 Differentiated Instruction in Content Reading 3.000 credits

The teacher candidate will differentiate instruction for individual students based on their strengths and needs by applying the principles of research-based strategies and integrating the six components of reading: phonological awareness, phonics, oral language, fluency, vocabulary, and comprehension in the content area classroom. The teacher candidate will have a broad knowledge of students with differing profiles to understand and apply evidence-based instructional practices by differentiating process, product, and context. Reading competencies 2 and 4 (fifteen hours of clinical experience are required in a math or science 3-12 classroom.)

Lecture Hours: 48.000

Prerequisite: EDG3321, : Optional Prerequisite: RED3013.

Course User Fee: \$18.00

SCE4362 Methods of Teaching Science 3.000 credits

The teacher candidate will learn to design and implement science instruction utilizing the national framework for K-12 science education and educational neuroscience to provide all students with high-quality science education. The student will learn about the theoretical knowledge and skills essential for facilitating science instruction in a variety of classroom settings. Fifteen hours of clinical experience are required.

Lecture Hours: 48.000

Corequisite: EDF4430

Course User Fee: \$35.00

TSL4311 ESOL II: Methods of Teaching and Assessing ESOL Students 3.000 credits

The teacher candidate will apply TESOL instructional methods and strategies, as well as analyze, plan, design, and evaluate curriculum and materials. The teacher candidate will select, develop, and adapt assessment instruments and examine standardized ESOL measurement tools. Fifteen hours of clinical experience with English language learners are required.

Lecture Hours: 48.000

Prerequisite: TSL3243

EDG4376 Integrating Language Arts and Social Sciences 3.000 credits

The student will use knowledge, skills, and dispositions from the social sciences to organize and provide integrated instruction in the major themes, concepts, and modes of inquiry in grades K-12. The student will plan and integrate language arts and social science strategies and content to create accessibility of the curriculum to all learners.

Lecture Hours: 48.000

Prerequisite: EDG3321, Pre/Corequisite: EDF4430, RED3393

Course User Fee: \$18.00

EEX4221 Assessment in Special Education 3.000 credits

The student will study, analyze, and administer informal and formal assessments to K-12 learners with special needs. The student will learn to prepare and present assessment data for use in instructional planning and developing individualized educational plans for K-12 learners with disabilities.

Lecture Hours: 48.000

Prerequisite: EDG3321 AND EDF4430

Course User Fee: \$18.00

EEX4932 Advanced Topics in Exceptional Student Education 3.000 credits

The student will explore current issues and trends in Exceptional Student Education (ESE). The student will learn about the foundations of ESE, including instructional practices, differentiated instruction, positive behavioral supports, assessment, the transition process, and assistive technology. This course will help prepare students for the Florida Teacher Certification ESE exam.

Lecture Hours: 48.000

Prerequisite: EEX3071

EEX3120 Language Development and Communication Disorders 3.000 credits

The student will learn about typical language and speech development, characteristics and manifestations of communication disorders, and educational neuroscience research concerning first and second language acquisition. The student will learn about effective strategies and accommodations that can be used in planning instruction for P – 12 students with speech and language disorders and differences.

Lecture Hours: 48.000

Pre/Corequisite: EDG3321

Course User Fee: \$18.00

EEX4833 Practicum in Exceptional Student Education 3.000 credits

The teacher candidate will plan, develop, and implement literacy pedagogic methods that meet the needs of students with differing profiles in a K-12 setting. The teacher candidate will utilize action research methodology, assessment principles, educational neuroscience research, and best practices to determine the effectiveness of a literacy strategy. Reading course competency 5. (Sixty hours of clinical experience are required).

Lecture Hours: 48.000

Prerequisite: EDF4430, EDG3321, EDG3443, EDG4376, EEX3071, EEX3120, RED3393, TSL3243, Pre/

Corequisite: EEX4221 OR MAE4360 OR RED4519 OR SCE4362 OR TSL4311

MAE4360 Methods of Teaching Mathematics 3.000 credits

The teacher candidate will utilize theory and educational neuroscience research in developing knowledge and pedagogy essential for K-12 mathematics instruction which accommodates the needs of all learners. The problem-solving approach will be used to design, implement, and assess mathematics instruction and curriculum. Fifteen hours of clinical experience in a mathematics classroom are required.

Lecture Hours: 48.000

Prerequisite: EDG3321, Pre/Corequisite: EDF4430

Course User Fee: \$25.00

RED4519 Diagnosis and Instructional Intervention in Reading 3.000 credits

The teacher candidate will apply the principles of explicit, systematic and sequential evidence-based reading instruction and scaffold student learning while integrating the six components of reading. Teacher candidates will engage in a systematic problem-solving process to identify and remediate reading difficulties, using the results of informal reading assessments, to plan interventions. Reading competencies 3 and 4 (fifteen hours of clinical experience required in an approved first-third grade setting with ESOL students.)

Lecture Hours: 48.000

Prerequisite: RED3393

Course User Fee: \$18.00

EEX4930 Seminar in Exceptional Student Education 3.000 credits

The teacher candidate will engage in professional dialogue and explore professional learning opportunities related to teaching students with exceptionalities. This seminar course is taken in conjunction with a full time, supervised teaching experience and provides an opportunity to examine and reflect on the daily experiences of becoming a highly effective teacher.

Lecture Hours: 48.000

Prerequisite: All Coursework, State Examinations, and E-Portfolio completed and passed., Corequisite: EEX4940

Course User Fee: \$18.00

EEX4940 Internship in Exceptional Student Education 9.000 credits

The teacher candidate will engage in the educational and professional responsibilities common to teachers in exceptional student education. This internship experience reinforces and augments teaching strategies that students have developed through their coursework and clinical experiences. Students participate in a full time, supervised teaching experience.

Internship Hours: 432.000

Prerequisite: All coursework and state exams completed and passed, Corequisite: EEX4930

Program Description

Information Systems Technology - Networking Concentration

Bachelor of Science | Code: S9500 | 120 credit

The Bachelor of Science (BS) in Information Systems Technology (IST) degree program prepares students with essential skills and knowledge to effectively support the design, planning and management of information infrastructures and information resources within diverse organizational settings. The Networking Concentration focuses on how to plan, design, implement and maintain network infrastructures to keep organizations running smoothly. Students learn how to select technologies that best suit the client's needs. Students also acquire the technical skills needed to install, maintain, and extend multi-user computer systems and how to develop administrative policies and procedures.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 12.0

CGS 3763	Operating System Principles	4.0
CIS 3360	Principles of Information Security	4.0
<i>Elective</i>		4.0
<i>Group A</i>		3.0-4.0
CAI 1001C	Artificial Intelligence (AI) Thinking	3.0

Semester 3		Units: 8.0
CIS 4347	Information Storage Management	4.0
CNT 3409C	Network Security	4.0
Foreign Language Competence*		

*Note: Foreign language is a graduation requirement for the baccalaureate met through 8 credit hours at the elementary 2 level in one foreign language or equivalent. Certain foreign language courses count towards program electives. Students may satisfy equivalence through standardized examinations or successful completion of two credits (two years) in one foreign language at the secondary (high school) level. For additional information, including exemptions for students whose native language is not English, see the Testing and Assessment Department.

Semester 4		Units: 14.0
<i>Natural Science</i>		3.0

BSC 1005	General Education Biology	3.0
OR		
CHM 1025	Introductory Chemistry	3.0
OR		
ESC 1000	General Education Earth Science	3.0
OR		
EVR 1001	Introduction to Environmental Science	3.0
OR		
PHY 1025	Basic Physics	3.0
OR		
PSC 1515	Energy in the Natural Environment	3.0
CIS 3510	Information Technology Project Management	4.0
CNT 3526C	Wireless and Mobile Networking	4.0
General Education*		3.0

*Note: Students are encouraged to consult with an academic advisor to select approved courses that align with their interests and fulfill remaining graduation requirements.

Semester 5

Units: 12.0

CTS 4955	Networking Capstone	4.0
<i>Elective</i>		8.0
Group A*		
OR		
Group B**		

*Choose 8 credits from the following recommended options: CAI 1001C, CAI 2100C, CAI 2300C, CAI 2820C, CAI 2840C, CET 3126C, CIS 2010C, CIS 3215, CIS 3361, CIS 3368, CIS 3641C, CIS 3644C, CIS 3651C, CTS 1145, CTS 2375C, MAC 2233

**Group B - Choose 8 credits from the following 2000, 3000, or 4000 level recommended options: CAI 2100C, CAI 2300C, CAI 2820C, CAI 2840C, CET 3126C, CIS 2010C, CIS 3215, CIS 3361, CIS 3368, CIS 3641C, CIS 3644C, CIS 3651C, CTS 2375C, MAC 2233

Total: 60.0

CGS3763 Operating System Principles 4.000 credits

This upper division course, for students majoring in Information Systems Technology, introduces fundamental operating system topics and includes both computer system and operating system structure. Students will learn how processes, threads, concurrent programming, interrupt handling, CPU scheduling and process synchronization, and I/O system memory management affect the system structure. Additionally, students will learn how virtual memory, deadlocks, file system, and command interpreter relate to client/server systems.
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: COP1334
Course User Fee: \$63.00

CIS3360 Principles of Information Security 4.000 credits

This upper division course provides an overview of information systems security principles, practices, methods, and tools. Students will learn about the threats against an organization's digital assets, as well as the tools and methods to mitigate those threats. Topics include cryptography, authentication and access control systems, infrastructure security, and ethical issues. Prerequisite: CTS1134 or CTS1650
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CTS1134 OR CTS1650
Course User Fee: \$63.00

CAI1001C Artificial Intelligence (AI) Thinking 3.000 credits

A survey of artificial intelligence (AI) where students explore different technologies utilizing concepts and skills widely accepted for AI and digital competency. Classification algorithms, supervised vs. unsupervised learning, data preparation, and training/using learning models for predictions are presented. CGS1060C and MAT1033 are recommended, but not required.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

CAI2100C Machine Learning Foundations 3.000 credits

Students are introduced to machine learning concepts and Python applications, including data acquisition, supervised, unsupervised, and reinforced learning. In addition, students will develop and deploy artificial intelligence (AI) models utilizing classification algorithms. Prerequisites: CAI1001C, COP1047C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI1001CCOP1047C or equivalent knowledge of Python programming language.

Course User Fee: \$63.00

CAI2300C Introduction to Natural Language Processing 3.000 credits

Students will learn the fundamental concepts of Natural Language Processing (NLP) and text processing. In addition, focus will be on knowledge and skills necessary to create a language recognition application. Prerequisite: CAI2100C and recommended preparation: COP1047C or equivalent knowledge of Python programming language.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI2100CCOP1047C or equivalent knowledge of Python programming language.

Course User Fee: \$63.00

CAI2820C Artificial Intelligence Applications Solutions 3.000 credits

A lower division course for students majoring in Applied Artificial Intelligence (AI). Students will demonstrate competence to scope, acquire/explore data, model, evaluate, and deploy an AI/machine learning solution in a team environment. Students will create and present a code or no-code AI solution. Must be taken during the last semester before graduation. Prerequisites: CAI2300C and CAI2840C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI2840C AND CAI2300C

Course User Fee: \$63.00

CAI2840C Introduction to Computer Vision 3.000 credits

Students will learn fundamental concepts in Computer Vision (CV) and image processing, including introduction to necessary proprietary and open-source Python libraries. Recommended preparation: COP1047C or equivalent knowledge of Python programming language. (2 hr. lecture, 2 hr. lab)

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI2100C Recommended preparation: COP1047C or equivalent knowledge of Python programming language.

Course User Fee: \$63.00

CET3126C Computer Architecture 4.000 credits

This course is intended for upper division students majoring in Electrical and Computer Engineering Technology as well as Information Systems Technology. This course introduces the study of advanced microprocessor design. Students will learn the basic organization of computer systems including instruction-set architecture, execution pipeline, memory hierarchy, virtual memory, and I/O subsystems. Students also learn advanced processor microarchitecture issues such as dynamic instruction scheduling, branch prediction, lock-up free caches, instruction-level parallelism, multiple instruction fetch/issuing, speculative execution, etc. to improve computer processor performance. Students will experimentally verify microarchitecture designs using industry standard microarchitecture simulators.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$63.00

CIS2010C Introduction to Internet of Things Networking and Security 4.000 credits

This course explores Internet of Things (IoT) networks' design, implementation, and security, providing a well-rounded understanding of protocols and standards governing the Internet and IoT. Students gain experience performing security assessments and vulnerability testing of IoT systems using industry-standard tools, focusing on identifying and mitigating risks to build secure and resilient IoT solutions.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS3215 Ethics in CyberSecurity 4.000 credits

This course provides the study of the risk factors for digital and ethical misconduct, and it explores ethics, relevant laws, regulations, policies, standards, moral, and social issues and responsibilities faced by CyberSecurity professionals. Coverage includes examination of CyberSecurity policies; Federal Laws and Authorities and International Standards; ethical and legal compliance and enforcement; business issues; contractual management of assets and liabilities; and issues involving privacy, disclosure, free speech and individual rights.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS3361 Information Security Management 4.000 credits

This course covers how to manage, design, oversee and assess an organization's information security. Students will learn how to develop an information security strategy, how to write information security policies, and how to manage information risk. Other topics include security program development and management, business continuity planning and disaster recovery planning. Prerequisite(s): CIS 3360 or CTS 1120. Laboratory fee. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS3360 OR CTS1120

Course User Fee: \$63.00

CIS3368 Data Security & Governance 4.000 credits

This upper division course is for students majoring in Data Analytics. Students will gain an understanding of how analytics can be applied to a variety of security-related problems across organizations. In addition, students will explore various ethical, legal, and data governance issues that affect data analysts. (3 hr. lecture; 1 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

CIS3641C Cloud Developer 4.000 credits

This course focuses on software development with cloud technologies. Students learn about core cloud services, basic architecture, and best practices used in the development and maintenance of applications in a cloud platform. Proficiency is gained in application lifecycle management, serverless computing, and containers using primary cloud platform tools, including IDE's, distributed version control systems, CI/CD pipelines, and security. API usage, command line interfaces, and software development kits (SDKs) will be emphasized. Prerequisites: COP 1047C and CTS 1145 (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1047C AND CTS1145

Course User Fee: \$63.00

CIS3644C Cloud Security 4.000 credits

This course equips students with essential principles, tools, and techniques to effectively secure, configure, and operate cloud-based information systems.

Students will learn cloud services essentials, such as computing, storage, databases, and networking.

Additionally, they'll delve into security tools, key management services, digital signatures, certificates, authentication protocols, SSO services, firewalls, and access control lists. Prerequisites: CTS 1120 and CTS 2375C (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1120 AND CTS2375C

Course User Fee: \$63.00

CIS3651C Cloud System Administration and Operations 4.000 credits

This course offers a comprehensive exploration into the world of cloud system administration using cloud computing as the cornerstone of study. This intensive course seeks to equip students with hands-on knowledge and skill development in cloud infrastructure, tooling, computing, networking, storage, security, and deployment. From the fundamentals of Systems Operations on the cloud to intricate deployment strategies using CloudFormation, students will navigate various cloud services, ensuring a solid foundation in cloud administration. With a balance of theory, lab work, and activities, students will prepare to address real-world challenges helpful in the transition to cloud-based roles. Prerequisites: COP 1047C and CTS 1145. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1047C AND CTS1145

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS2375C Cloud Infrastructure and Services 4.000 credits

This course helps students develop technical expertise in Cloud computing and prepares them for industry certification. Students will learn the essentials of Cloud computing, business security and compliance considerations, migrating to the Cloud, architecting a Cloud server, and how to troubleshoot Cloud services.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS2145

Course User Fee: \$63.00

MAC2233 Business Calculus 3.000 credits

This course introduces the basic concepts of differential and integral calculus for students majoring in business administration and related fields. Topics include limits, continuity, differentiation and integration of polynomials, logarithmic and exponential functions with applications to business, economics, and the life sciences. Prerequisite: MAC 1105 or MAC1106 with a grade of C or better or departmental permission. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

CNT4603 System Administration and Maintenance 4.000 credits

This upper division course, for students majoring in Information Systems Technology, explores UNIX and Microsoft Windows systems and their administration and maintenance within the network setting. Students will learn how to install, maintain, and extend multi-user computer systems and how to develop administrative policies and procedures. Students will also learn how to apply troubleshooting and problem solving skills to resolve user and system issues.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CNT4702 Network Design and Planning 4.000 credits

This upper division course, for students majoring in Information Systems Technology, presents network design using layering. Students will learn how to apply cabling, topology, and architecture to design systems. Students will also learn how design impacts network performance and control issues such as congestion control, error control, and contention resolution. Prerequisite: CIS 3360.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS4347 Information Storage Management 4.000 credits

This upper division course, for students majoring in Information Systems Technology, introduces challenges and solutions for data storage and data management. Students will learn how to manage advanced storage systems, protocols, and architectures, including storage area networks (SAN), network attached storage (NAS), fiber channel networks, internet protocol SANS (IPSAN), iSCSI, and content-addressable storage (CAS). Prerequisite: CTS1134 or CTS1650. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CNT3409C Network Security 4.000 credits

This upper division course introduces students to current and emerging threats to the security of computer networks, as well as tools and techniques for the prevention, detection and recovery from such attacks. Topics include firewalls, intrusion detection and intrusion prevention systems, virtual private networks, remote authentication and authorization systems, and security protocols. Prerequisite(s): CIS 3360. Laboratory fee. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 27.000 - 32.000

Prerequisite: CIS3360

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CIS3510 Information Technology Project Management 4.000 credits

This upper division course, for students majoring in Information Systems Technology, covers the general aspects of project management and emphasizes the pertinent considerations that apply to information technology projects. Students will learn the principles, processes and practices of information technology project management, including techniques for planning, organizing, scheduling, and controlling IT projects with a substantial focus on cost estimation and risk management. Students must enroll in this course one semester before taking CTS 4955.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CNT3526C Wireless and Mobile Networking 4.000 credits

This is upper division course for students majoring in Information Systems Technology introduces students to wireless and mobile network architecture, protocols and technologies. In particular, students will learn about Wireless Local Area Networks (WLANs), Wireless Personal Area Networks (WPANs) and Wireless Metropolitan Area Networks (WMANs) technologies. Other topics include antenna concepts, cellular networks, the 802.11 network architecture, and wireless security. Prerequisites: CTS 1134 or CTS 1650.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CTS4955 Networking Capstone 4.000 credits

This upper division course, for students majoring in the BS-IST Networking track, requires students to demonstrate their competence to analyze, design, develop, and test an information system in a team environment. Each team will create and present an information technology (IT) solution proposal that includes: design documentation, implementation plan, and project test plan to create an operational information system. Students will also implement a proof-of-concept in a real or simulated/virtualized environment.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: Student must be classified as a Senior and have completed at least 3 of the 5 concentration courses to obtain departmental approval.

Course User Fee: \$63.00

Program Description

Information Systems Technology - Software Engineering Concentration

Bachelor of Science | Code: S9501 | 120 credit

The Bachelor of Science (BS) in Information Systems Technology (IST) degree program prepares students with essential skills and knowledge to effectively support the design, planning and management of information infrastructures and information resources within diverse organizational settings. The Software Engineering concentration focuses on designing and creating software. Students learn how to specify software requirements from clients and how to design, implement and validate software solutions for real-world problems.

CIS3360 Principles of Information Security 4.000 credits

This upper division course provides an overview of information systems security principles, practices, methods, and tools. Students will learn about the threats against an organization's digital assets, as well as the tools and methods to mitigate those threats. Topics include cryptography, authentication and access control systems, infrastructure security, and ethical issues. Prerequisite: CTS1134 or CTS1650
Lecture Hours: 48.000, Lab Hours: 32.000
Prerequisite: CTS1134 OR CTS1650
Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles. Lecture Hours: 48.000, Lab Hours: 32.000
Corequisite: COP1047C OR COP1334 OR COP2270
Course User Fee: \$63.00

COT3100C Discrete Structures 4.000 credits

This course delves into discrete structures with a strong focus on applications in computer science. It covers a range of topics including sets, functions and relations, propositional and predicate logic, basic proof techniques, logic, recursion and induction, graphs, Big-O notation, and various specific applications relevant to computer science.

Prerequisite: COP 2800; Corequisite: COP 3530 (3 lecture, 2 lab hours)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800 AND Corequisite: COP3530

Course User Fee: \$63.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

CGS3763 Operating System Principles 4.000 credits

This upper division course, for students majoring in Information Systems Technology, introduces fundamental operating system topics and includes both computer system and operating system structure. Students will learn how processes, threads, concurrent programming, interrupt handling, CPU scheduling and process synchronization, and I/O system memory management affect the system structure. Additionally, students will learn how virtual memory, deadlocks, file system, and command interpreter relate to client/server systems.

Prerequisite: COP1334. Special Fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1334

Course User Fee: \$63.00

COP3530 Data Structures 4.000 credits

This upper division course is for students majoring in B.S. in Information Systems Technology. Students will learn the fundamentals of data structures using the Java programming language. The students will learn to design, implement and use data structures to organize and store data in a computer so that it can be accessed and modified efficiently.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800

Course User Fee: \$63.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CET3126C Computer Architecture 4.000 credits

This course is intended for upper division students majoring in Electrical and Computer Engineering Technology as well as Information Systems Technology. This course introduces the study of advanced microprocessor design. Students will learn the basic organization of computer systems including instruction-set architecture, execution pipeline, memory hierarchy, virtual memory, and I/O subsystems. Students also learn advanced processor microarchitecture issues such as dynamic instruction scheduling, branch prediction, lock-up free caches, instruction-level parallelism, multiple instruction fetch/issuing, speculative execution, etc. to improve computer processor performance. Students will experimentally verify microarchitecture designs using industry standard microarchitecture simulators.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$63.00

CEN4065C Software Architecture and Design 4.000 credits

This upper division course is for students majoring in B.S. in Information Systems Technology or B.S. in Electrical and Computer Engineering Technology. The course covers the software engineering process of building the software architecture and designing the software product according to design criteria. This course covers in-depth topics in software process models, software architecture, requirements modeling with use-cases and class-based methods. Students will also learn design concepts including abstraction, component-level and OO architectural design, user interface analysis and design, and design patterns, and software project management.

Prerequisite: COP3530.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP3530

Course User Fee: \$63.00

CET3383C Software Engineering I 4.000 credits

This upper division course is for students majoring in B.S. in Information Systems Technology or B.S. in Electrical and Computer Engineering Technology. The student will learn the basic principles and concepts of software engineering; system requirements; modeling and testing; object oriented analysis and design; testing and validation; configuration management; and the analysis, design and programming of extensible software systems.

Prerequisite: CET2369C or COP2800.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET2369C, COP2800

Course User Fee: \$63.00

CAI1001C Artificial Intelligence (AI) Thinking 3.000 credits

A survey of artificial intelligence (AI) where students explore different technologies utilizing concepts and skills widely accepted for AI and digital competency. Classification algorithms, supervised vs. unsupervised learning, data preparation, and training/using learning models for predictions are presented. CGS1060C and MAT1033 are recommended, but not required.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

CAI2100C Machine Learning Foundations 3.000 credits

Students are introduced to machine learning concepts and Python applications, including data acquisition, supervised, unsupervised, and reinforced learning. In addition, students will develop and deploy artificial intelligence (AI) models utilizing classification algorithms. Prerequisites: CAI1001C, COP1047C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI1001CCOP1047C or equivalent knowledge of Python programming language.

Course User Fee: \$63.00

CAI2300C Introduction to Natural Language Processing 3.000 credits

Students will learn the fundamental concepts of Natural Language Processing (NLP) and text processing. In addition, focus will be on knowledge and skills necessary to create a language recognition application. Prerequisite: CAI2100C and recommended preparation: COP1047C or equivalent knowledge of Python programming language.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI2100CCOP1047C or equivalent knowledge of Python programming language.

Course User Fee: \$63.00

CAI2820C Artificial Intelligence Applications Solutions 3.000 credits

A lower division course for students majoring in Applied Artificial Intelligence (AI). Students will demonstrate competence to scope, acquire/explore data, model, evaluate, and deploy an AI/machine learning solution in a team environment. Students will create and present a code or no-code AI solution. Must be taken during the last semester before graduation. Prerequisites: CAI2300C and CAI2840C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI2840C AND CAI2300C

Course User Fee: \$63.00

CAI2840C Introduction to Computer Vision 3.000 credits

Students will learn fundamental concepts in Computer Vision (CV) and image processing, including introduction to necessary proprietary and open-source Python libraries. Recommended preparation: COP1047C or equivalent knowledge of Python programming language. (2 hr. lecture, 2 hr. lab)

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI2100C Recommended preparation: COP1047C or equivalent knowledge of Python programming language.

Course User Fee: \$63.00

CAI3303C Natural Language Processing 3.000 credits

Students will further explore Natural Language Processing domains. Focus on deep learning application and use of the latest pre-trained models on real world applications. Prerequisite: CAI2300C.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: CAI2300C

Course User Fee: \$63.00

CIS3368 Data Security & Governance 4.000 credits

This upper division course is for students majoring in Data Analytics. Students will gain an understanding of how analytics can be applied to a variety of security-related problems across organizations. In addition, students will explore various ethical, legal, and data governance issues that affect data analysts. (3 hr. lecture; 1 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

CIS3641C Cloud Developer 4.000 credits

This course focuses on software development with cloud technologies. Students learn about core cloud services, basic architecture, and best practices used in the development and maintenance of applications in a cloud platform. Proficiency is gained in application lifecycle management, serverless computing, and containers using primary cloud platform tools, including IDE's, distributed version control systems, CI/CD pipelines, and security. API usage, command line interfaces, and software development kits (SDKs) will be emphasized.

Prerequisites: COP 1047C and CTS 1145 (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1047C AND CTS1145

Course User Fee: \$63.00

CIS3651C Cloud System Administration and Operations 4.000 credits

This course offers a comprehensive exploration into the world of cloud system administration using cloud computing as the cornerstone of study. This intensive course seeks to equip students with hands-on knowledge and skill development in cloud infrastructure, tooling, computing, networking, storage, security, and deployment. From the fundamentals of Systems Operations on the cloud to intricate deployment strategies using CloudFormation, students will navigate various cloud services, ensuring a solid foundation in cloud administration. With a balance of theory, lab work, and activities, students will prepare to address real-world challenges helpful in the transition to cloud-based roles. Prerequisites: COP 1047C and CTS 1145. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1047C AND CTS1145

Course User Fee: \$63.00

CIS4347 Information Storage Management 4.000 credits

This upper division course, for students majoring in Information Systems Technology, introduces challenges and solutions for data storage and data management. Students will learn how to manage advanced storage systems, protocols, and architectures, including storage area networks (SAN), network attached storage (NAS), fiber channel networks, internet protocol SANS (IPSAN), iSCSI, and content-addressable storage (CAS). Prerequisite: CTS1134 or CTS1650. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CNT4603 System Administration and Maintenance 4.000 credits

This upper division course, for students majoring in Information Systems Technology, explores UNIX and Microsoft Windows systems and their administration and maintenance within the network setting. Students will learn how to install, maintain, and extend multi-user computer systems and how to develop administrative policies and procedures. Students will also learn how to apply troubleshooting and problem solving skills to resolve user and system issues.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CNT4702 Network Design and Planning 4.000 credits

This upper division course, for students majoring in Information Systems Technology, presents network design using layering. Students will learn how to apply cabling, topology, and architecture to design systems. Students will also learn how design impacts network performance and control issues such as congestion control, error control, and contention resolution. Prerequisite: CIS 3360.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP2658 iPhone Application Development 2 4.000 credits

This intermediate iOS course teaches the principles of iPhone application development for majors in Computer Science, Computer Information Systems, and related disciplines. Students will learn how to create mobile applications that can be deployed to iPhone smartphones, tablets or simulators utilizing Cocoa and XCode for development. Emphasis will be placed on learning the underlying iPhone framework and components in order to create quality mobile applications.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2664

Course User Fee: \$63.00

COP2660 Android Application Development 1 4.000 credits

This course teaches the principles of Android application development for majors in Computer Science, Computer Information Systems, and related disciplines. Students will learn how to create mobile applications for deployment to Android smartphones, tablets or simulators utilizing open source software (Java, Eclipse IDE, Android Plug-In and Android SDK) for development. Emphasis will be placed on the underlying Android framework to create quality applications.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800

Course User Fee: \$63.00

COP2662 Android Application Development 2 4.000 credits

This course for majors in Computer Science, Computer Information Systems, and related disciplines teaches how to develop advanced Android applications. Students will learn how to create applications utilizing the advanced capabilities of Android smartphones, including interfacing the application to the device's content providers' databases, GPS and location based services, notifications, background threads, audio, video, SMS, motion sensors and network connectivity. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2660, COP2800

Course User Fee: \$58.00

COP2664 iPhone Application Development 1 4.000 credits

This is an introduction to iOS programming course using the Objective C computer language, recommended for Computer Science and Computer Information Systems majors. Students will learn to code, compile and execute mobile iOS applications while learning advanced programming concepts and object oriented programming design concepts and principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP1332 OR COP1334

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

MAC2233 Business Calculus 3.000 credits

This course introduces the basic concepts of differential and integral calculus for students majoring in business administration and related fields. Topics include limits, continuity, differentiation and integration of polynomials, logarithmic and exponential functions with applications to business, economics, and the life sciences. Prerequisite: MAC 1105 or MAC1106 with a grade of C or better or departmental permission. Computational Course.
 Lecture Hours: 48.000
 Prerequisite: MAC1105 OR MAC1106
 Course User Fee: \$18.00

Program Description

Bachelor of Science in Nursing (RN to BSN)

Bachelor of Science in Nursing | Code: N9100 | 125 credit

The Bachelor of Science in Nursing (BSN) is designed for licensed RNs with an A.S. degree in Nursing from regionally accredited programs who wish to attain the next level of education in order to provide professional nursing care in all clinical practice settings around the world, or to be eligible for advanced nursing leadership, management, staff education and practice positions, in a multicultural society.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1 (In-Milestone)		Units: 12.0
NUR 3069L	Health Assessment Across the Lifespan Lab	1.0
NUR 3069	Health Assessment Across the Lifespan Theory	2.0
NUR 3125	Pathophysiology in Nursing Practice	3.0
NUR 3805	Foundations & Role Transitions of the Professional Nurse	3.0
NUR 4146	Pharmacology for Nursing	3.0
Semester 2 (In-Milestone)		Units: 12.0
NUR 3165	Evidence-Based Nursing Practice	3.0
NUR 4636	Community Health Nursing	3.0
NUR 4636L	Community Health Nursing Practicum	3.0
NUR 4667	Worldwide Trends in Nursing Care	3.0
Semester 3 (In-Milestone)		Units: 18.0
NUR 4945L	Transforming Practice Through Innovation and Leadership Capstone	3.0
Program Elective		3.0
NSP 3685	End-of-Life Nursing Care	3.0
OR		
NUR 3178	Complementary and Alternative Health Care	3.0
OR		
NUR 3289	Foundations of Gerontology	3.0
OR		
NUR 3674	Faith Based Community Nursing	3.0
Electives*		12.0

Select 12 credits from the following options: BSC, BCH*, CGS 1060C, CHM*, CHI1*, FRE1*, FRE2*, GER1*, GER2*, HBR1*, ITA1*, ITA2*, JPN1*, JPN2*, NUR 1002, NUR 1002L, PHY*, SPN1*, SPN2*

Total: 42.0

NUR3069 Health Assessment Across the Lifespan Theory 2.000 credits

This theory-based course introduces students to the principles and practices of comprehensive health assessment across the lifespan. Emphasis is placed on health history-taking, clinical reasoning, cultural sensitivity, and ethical standards. Students will learn to interpret subjective data, prioritize patient needs, and plan individualized health promotion strategies. The course culminates in the submission of a comprehensive health history and a narrated PowerPoint presentation featuring an age-appropriate health promotion intervention. (2.0 hours)

Lecture Hours: 32.000

NUR3069L Health Assessment Across the Lifespan Lab 1.000 credits

This hands-on lab course builds on the theory-based course by guiding students through the performance of comprehensive head-to-toe assessments across the lifespan. Students apply therapeutic communication, cultural humility, and ethical standards while practicing physical examination techniques and documentation. The course culminates in a video submission of a complete subjective and objective assessment, demonstrating clinical judgment and evidence-based practice.

Clinical Hours: 48.000

Corequisite: NUR3069 Graduate from an accredited RN Program

NUR3125 Pathophysiology in Nursing Practice 3.000 credits

This course builds upon prior knowledge in assessment, management of patients with commonly occurring diseases, and evaluation patient outcomes. The course will integrate the principles and rationales of pathophysiology at the cellular and systemic level using the nursing process. It will provide an in-depth theoretical and clinical principles of diseases encountered in healthcare settings. Health disparities resulting from social determinants of health, genetics, and stress related causes will also be explored.

Lecture Hours: 48.000

NUR3805 Foundations & Role Transitions of the Professional Nurse 3.000 credits

This course will introduce students to the theory and principles for delivering professional nursing practice. The course is designed to enhance the transition of registered nurses to the baccalaureate role and build on existing knowledge and professional experience. The course explores concepts of professional nursing as a way to guide and promote professional practice. The core components of this course focus on standards of nursing practice as it relates to the historical and theoretical framework for practice, moral, legal issues, evidence-based practice, quality and safety, leadership, economics, technology, information management, and trends in the future of healthcare. A minimum grade of "C" or better is required. Corequisite: NUR 3041. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

NUR4146 Pharmacology for Nursing 3.000 credits

This course is designed for the RN – BSN student and builds on the prior knowledge of entry level registered nurses. The focus is on the pharmacological treatment of various illnesses in diverse individuals across the lifespan. The emphasis is on the principles of pharmacokinetics, pharmacodynamics and pharmacogenetics in the safe treatment of selected illnesses.

Lecture Hours: 48.000

NUR3165 Evidence-Based Nursing Practice 3.000 credits

This introductory course emphasizes developing skills to translate empirical evidence into professional nursing practice, strongly focusing on evidence-based practice (EBP) knowledge. Students will explore best practice guidelines and empirical dissemination to improve patient and organizational outcomes in healthcare delivery. Throughout the course, students will use technology to access, retrieve, organize, and evaluate literature according to levels of evidence to enhance nursing practice. A key component of this course is the responsible use of Artificial Intelligence (AI) in gathering reliable information. Students will learn about AI applications in nursing, ethical considerations, and the importance of transparency, accountability, and fairness in AI systems (3-hour lecture)

Lecture Hours: 48.000 - 52.000

NUR4636 Community Health Nursing 3.000 credits

This course focuses on the holistic aspects of community nursing care applied to diverse global populations across the lifespan. The course introduces students to community nursing practice and formulates a paradigm shift from individual patients to the global community, addressing the history, evolution, theoretical framework, and purpose of community health nursing practice with an introduction to epidemiological principles, concepts of community assessment, health promotion, maintenance and education. The course involves the analysis of current knowledge and practice to illness prevention, health promotion, health restoration, community education and empowerment. Minimum grade of "C" or better required.

Lecture Hours: 48.000

Prerequisite: NUR3069, NUR3805, Corequisite: NUR4636L

Course User Fee: \$13.00

NUR4636L Community Health Nursing Practicum 3.000 credits

This course focuses on the clinical application of Community Health Nursing Theory. Students will utilize the nursing process in the delivery of healthcare within the community environment. Students will assess the individual, family, and/or community, develop a plan of care, and deliver care to an individual, family and/or community within a multicultural environment. Minimum grade of "C" or better required.

Clinical Hours: 144.000

Corequisite: NUR4636

NUR4667 Worldwide Trends in Nursing Care 3.000 credits

This course integrates the nursing process and theory to provide culturally sensitive, competent, and safe nursing care to diverse cultures. The goal of the course is to improve health outcomes by promoting quality of care for diverse populations through the development of self-evaluation and awareness of ethical, cultural practices, values, beliefs, including biases and prejudices. The course also provides the students with a worldview of the influence of culture on health care practices, barriers to transcultural communication, political, economic, social, and demographic issues in a diverse global society. A minimum grade of "C" or better.

Prerequisite: NUR 3069, NUR 3069L, NUR 3805 (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: NUR3069 AND NUR3069L AND NUR3805

NUR4945L Transforming Practice Through Innovation and Leadership Capstone 3.000 credits

This capstone practice experience empowers RN to BSN students to synthesize all previously acquired competencies gained throughout the program to a real-life clinical, patient, or population problem in a healthcare setting. Focus is on the application of nursing theory and principles, quality and safety standards, evidence-based practice guidelines, leadership skills, interprofessional collaboration, and innovative technologies to a quality improvement project. Students will present their findings through the development of an evidence-based poster.

Clinical Hours: 144.000

Prerequisite: NUR4636 AND NUR4636L

NSP3685 End-of-Life Nursing Care 3.000 credits

The purpose of this course is to provide healthcare professionals an overview of End-of-Life palliative and hospice care. Students will learn pain and symptom management, ethical and cultural considerations, assess psychosocial and emotional concerns of the patient and family, and describe the care of the patient during the last hours. Course is restricted to BSN students, requires departmental permission.

Lecture Hours: 48.000

NUR3178 Complementary and Alternative Health Care 3.000 credits

This is an upper-division course in Complementary and Alternative Health Care. This course evaluates complementary and alternative health care in diverse populations across the lifespan and around the globe. The course introduces students to complementary and alternative practice and formulates a paradigm shift from traditional patient care to holistic nursing care. The course addresses different complementary and alternative treatment practices through evidence-based research. The course involves the analysis of current knowledge and practice to illness prevention, health promotion, health restoration, patient education, and empowerment.

Lecture Hours: 48.000

NUR3289 Foundations of Gerontology 3.000 credits

This course focuses on the special healthcare needs of the geriatric population. Students will learn the physical, physiological, psychosocial and geropharmacologic implications related to aging. The trends in the changing demographics and the social consequences of aging will be identified. Established geriatric assessment and evaluative tools will also be discussed.

Lecture Hours: 48.000

Prerequisite: Admission to the BSN - RN program N9100

Course User Fee: \$125.00

NUR3674 Faith Based Community Nursing 3.000 credits

This course will provide education in faith-based community nursing to registered nurses. Students will learn the skills needed to integrate the care of mind, body, and spirit in faith-based communities. The intentional care of the spirit is part of the process in preventing and minimizing illness in a faith-based community.

Lecture Hours: 48.000

Prerequisite: RN with at least 2 years of experience and baccalaureate degree standing. Departmental permission required. (3 hr. lecture)

Program Description

Secondary Mathematics Education

Bachelor of Science | Code: S9250 | 120 credit

The four-year baccalaureate degrees in Education are designed to prepare students to become teachers and pass state professional certification exams. An internship in a school setting is required to provide practical experience. Additionally, individuals with Bachelor's degrees in other fields are able to earn teacher certification. Please refer to the College Catalog for specific program prerequisites (www.mdc.edu).

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Prerequisite Courses

EDF 1005	Introduction to the Education Profession	3.0
EDF 2144	Maximizing Student Potential in the School Context	3.0
EEX 2000	Introduction to Exceptional Student Education	3.0
EME 2040	Creativity, Innovation, and Technology	3.0
MAC 2311	Calculus and Analytical Geometry 1	5.0
MAC 2312	Calculus and Analytical Geometry 2	4.0
MAC 2313	Calculus and Analytic Geometry 3	4.0
STA 2023	Statistical Methods	3.0

Semester 1

Units: 15.0

EDF 4430	Measurement and Assessment in Education	3.0
EDG 3321	General Teaching Skills	3.0
EDG 3443	Classroom and Behavior Management	3.0

MAD 3107	Discrete Structures	3.0
MAP 2302	Introduction to Differential Equations	3.0
Semester 2		Units: 12.0
EEX 3071	Teaching Exceptional and Diverse Populations in Inclusive Settings	3.0
MAE 4360	Methods of Teaching Mathematics	3.0
MAS 3301	Algebraic Structures	3.0
RED 3393	Differentiated Instruction in Content Reading	3.0
Semester 3		Units: 9.0
MAS 3105	Linear Algebra	3.0
MAS 4203	Number Theory	3.0
TSL 4324C	ESOL Strategies for Content Area Teachers	3.0
Semester 4		Units: 10.0
MAE 4940	Advanced Topics in Mathematics Education Practicum	3.0
MHF 4404	History of Mathematics	3.0
MTG 3214	Euclidean Geometry	4.0
Semester 5		Units: 2.0
MAE 3951	Problem-Based Learning in Mathematics Education	2.0
Semester 6		Units: 12.0
MAE 4942	Seminar in Mathematics Education	3.0
MAE 4945	Internship in Secondary Mathematics Education	9.0

Total: 60.0

EDF1005 Introduction to the Education Profession 3.000 credits

This course provides an overview of Florida's educator certification pathways and career options in education in accordance with Florida statutes. Topics include: key educational philosophies; professional ethics; legal responsibilities, including mandatory reporting for child abuse and neglect; the Florida educator accomplished practices (FEAP); key instructional practices associated with effective teaching of students with exceptionalities; Florida's state academic standards; and historical, legal and financial foundations of the Florida education systems. Students will explore effective teaching strategies in classroom management, educational technology and the foundations of all student learning needs. A minimum of 15 hours of required clinical experience in a variety of school settings is included.

Lecture Hours: 48.000

Course User Fee: \$18.00

EDF2144 Maximizing Student Potential in the School Context 3.000 credits

The student will explore various aspects of learning and brain development in schools. Students will be introduced to the latest neuroscience education strategies used in schools to optimize their learning potential from infancy through adolescence.

Lecture Hours: 48.000

EEX2000 Introduction to Exceptional Student Education 3.000 credits

The student will learn about the history, legal issues, and legislation related to exceptional student education in K-12. The student will learn about the differing types of exceptionalities, supports, and accommodations provided for students with differing learning profiles from birth to adulthood.

Lecture Hours: 48.000

Prerequisite: EDF1005

Course User Fee: \$18.00

**EME2040 Creativity, Innovation, and Technology
3.000 credits**

The student will learn to manage a productive & safe technology environment by promoting creativity and innovation in the classroom. The student will gain 21st century knowledge, skills, and attitudes for applying technology across multiple disciplines and grade levels.

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Prerequisite: CGS1060 OR Passing Score on the Computer Competency Exam

Course User Fee: \$190.03

**MAC2311 Calculus and Analytical Geometry 1
5.000 credits**

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

**MAC2312 Calculus and Analytical Geometry 2
4.000 credits**

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

EDF4430 Measurement and Assessment in Education 3.000 credits

The student will learn research-based principles of assessment. The student will select specific standards and competencies and develop formative and summative traditional and alternative assessments. The student will interpret assessment data that will improve academic achievement and ensure equity in the application of quantitative and qualitative assessments.

Lecture Hours: 48.000

Prerequisite: EDG3321

Course User Fee: \$18.00

EDG3321 General Teaching Skills 3.000 credits

The student will learn how human development and learning theories, developments in educational neuroscience, and current research-based pedagogy apply to the teaching and learning process. The student will incorporate principles and skills of effective instructional planning, including differentiated instruction, aligning instructional teaching skills to practice, selecting appropriate formative assessments, and developing learning experiences that require students to demonstrate a variety of skills.

Lecture Hours: 48.000

Course User Fee: \$18.00

EDG3443 Classroom and Behavior Management 3.000 credits

The student will examine strategies for fostering a productive learning environment, informed by research-based frameworks and learning theories. The student will learn strategies for observing, assessing, modifying behavior, and communicating with stakeholders. The student will learn to create a learning environment that encourages positive interactions, self-regulation, and resiliency. Fifteen hours of clinical experience is required.

Lecture Hours: 48.000

Pre/Corequisite: EDG3321

Course User Fee: \$18.00

MAD3107 Discrete Structures 3.000 credits

Topics include sets, logic, switching circuits, Boolean Algebra, combinatorics, probability, mathematical proofs, mathematical induction, functions, relations, and graph theory. Credit is not also given for MAD 2104.

Lecture Hours: 48.000

Prerequisite: MAC2312

MAP2302 Introduction to Differential Equations 3.000 credits

The student will analyze ordinary differential equations, methods of solution of first order linear and nonlinear equations and applications, homogeneous and non-homogeneous linear equations with constant coefficients, differential operator methods, higher order linear equations; the Laplace transform and its properties, elementary existence theorems, series solutions, numerical solutions of first order equations, initial and boundary value problems, vibrations and waves, and an introduction to autonomous systems.

Computational Course. Prerequisite: MAC 2312 with a "C" or better or equivalent.

Lecture Hours: 48.000

Prerequisite: MAC2312

Course User Fee: \$18.00

EEX3071 Teaching Exceptional and Diverse Populations in Inclusive Settings 3.000 credits

The student will learn current research-based instructional strategies, educational neuroscience, and legal and ethical issues necessary in addressing the needs of diverse learners in inclusive classrooms. The student will make informed decisions in adapting, accommodating, and modifying the curriculum for students with special needs. Fifteen hours of clinical experience are required. Special fee. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: EEX2000 AND EDG3321

Course User Fee: \$18.00

MAE4360 Methods of Teaching Mathematics 3.000 credits

The teacher candidate will utilize theory and educational neuroscience research in developing knowledge and pedagogy essential for K-12 mathematics instruction which accommodates the needs of all learners. The problem-solving approach will be used to design, implement, and assess mathematics instruction and curriculum. Fifteen hours of clinical experience in a mathematics classroom are required.

Lecture Hours: 48.000

Prerequisite: EDG3321, Pre/Corequisite: EDF4430

Course User Fee: \$25.00

MAS3301 Algebraic Structures 3.000 credits

This course is designed for students who are majoring in secondary mathematics education, mathematics, science or engineering. Topics include set theory, basic properties of the integers, groups, rings, fields and the homomorphisms of these algebraic structures.

Lecture Hours: 48.000

Prerequisite: MAC2312

RED3393 Differentiated Instruction in Content Reading 3.000 credits

The teacher candidate will differentiate instruction for individual students based on their strengths and needs by applying the principles of research-based strategies and integrating the six components of reading: phonological awareness, phonics, oral language, fluency, vocabulary, and comprehension in the content area classroom. The teacher candidate will have a broad knowledge of students with differing profiles to understand and apply evidence-based instructional practices by differentiating process, product, and context. Reading competencies 2 and 4 (fifteen hours of clinical experience are required in a math or science 3-12 classroom.)
Lecture Hours: 48.000
Prerequisite: EDG3321, : Optional Prerequisite: RED3013.

Course User Fee: \$18.00

MAS3105 Linear Algebra 3.000 credits

This course is designed for students who are majoring in secondary mathematics education. Major topics include systems of linear equations, matrices, determinants, vector spaces, linear transformations, eigenvectors and eigenvalues, inner-product spaces and orthogonality.
Lecture Hours: 48.000
Prerequisite: MAC2312

MAS4203 Number Theory 3.000 credits

Topics include mathematical induction, divisibility, the Euclidean algorithm, primes, the Fundamental Theorem of Arithmetic, number-theoretic functions, congruence, linear Diophantine equations, linear congruences, the Chinese Remainder Theorem, and the theorems of Euler, Fermat, and Wilson.
Lecture Hours: 48.000
Prerequisite: MAC2312

TSL4324C ESOL Strategies for Content Area Teachers 3.000 credits

The student will learn topics related to teaching content area subjects to English Language Learners. The student will plan and implement curriculum, instruction, and assessment activities to meet the needs of culturally and linguistically diverse learners. Fifteen hours of clinical experience are required. Pre/Corequisite: EDG3321.
Lecture Hours: 48.000
Pre/Corequisite: EDG3321

MAE4940 Advanced Topics in Mathematics Education Practicum 3.000 credits

The teacher candidate will plan and implement mathematics instruction that meets the needs of all learners. The student will utilize action research methodology, assessment principles, educational neuroscience research, and best practices to identify and address issues related to mathematics learning in grades 6-12. Sixty (60) hours of clinical experience in a 6-12 mathematics classroom are required.
Lecture Hours: 48.000
Prerequisite: MAE4360, Select 6 credits (2 courses) from the following course option: MAD3103, MAS3105, MAS3301, MAS4203, MHF4404, MTG3214.

MHF4404 History of Mathematics 3.000 credits

A study of the development of mathematics from ancient civilizations to the present time.
Lecture Hours: 48.000
Prerequisite: MAC2312

MTG3214 Euclidean Geometry 4.000 credits

This course encompasses a range of geometry topics and pedagogical ideas for the teaching of geometry including properties of shapes, defined and undefined terms, postulates and theorems, logical thinking and proofs, constructions, patterns, and sequences, the coordinate plane, axiomatic nature of Euclidean geometry, and basic topics of non-Euclidean geometries. Prerequisite: MAC 1147. (4 hr. lecture)
Lecture Hours: 64.000
Prerequisite: MAC1147
Course User Fee: \$25.00

MAE3951 Problem-Based Learning in Mathematics Education 2.000 credits

The teacher candidate will learn and apply the principles of project-based learning by designing and implementing projects to explore real-world problems, questions, and challenges in the field of education. The student will develop their technology, critical, creative, and communication skills by producing products to share their findings and proposed solutions. (2-hour lecture; this course requires approved clinical hours).
Lecture Hours: 32.000
Prerequisite: Departmental Approval Required.

**MAE4942 Seminar in Mathematics Education
3.000 credits**

The teacher candidate will engage in professional dialogue and explore professional learning opportunities related to teaching in the secondary mathematics setting. This seminar course is taken in conjunction with a full time, supervised teaching experience and provides an opportunity to examine and reflect on the daily experiences of becoming a highly effective teacher.

Lecture Hours: 48.000

Prerequisite: All Coursework, State Examinations, and E-Portfolio completed and passed., Corequisite: MAE4945

Course User Fee: \$18.00

MAE4945 Internship in Secondary Mathematics Education 9.000 credits

The teacher candidate will complete a full time, supervised teaching experience. The student will learn and experience all of the educational and professional responsibilities common to mathematics teachers.

Internship Hours: 432.000

Prerequisite: All coursework and state exams completed and passed, Corequisite: MAE4942

Program Description

Secondary Science Education - Biology

Bachelor of Science | Code: S9210 | 120 credit

The four-year baccalaureate degrees in Education are designed to prepare students to become teachers and pass state professional certification exams. An internship in a school setting is required to provide practical experience. Additionally, individuals with Bachelor's degrees in other fields are able to earn teacher certification. Please refer to the College Catalog for specific program prerequisites (www.mdc.edu).

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Prerequisite Courses

BSC 2010	Principles of Biology	3.0
BSC 2010L	Principles of Biology 1 Laboratory	2.0
BSC 2011	Principles of Biology 2	3.0
BSC 2011L	Principles of Biology 2 Laboratory	2.0
CHM 1045	General Chemistry and Qualitative Analysis	3.0
CHM 1045L	General Chemistry Lab	2.0
CHM 1046	General Chemistry and Qualitative Analysis	3.0
CHM 1046L	General Chemistry and Qualitative Analysis Lab	2.0
EDF 1005	Introduction to the Education Profession	3.0
EDF 2144	Maximizing Student Potential in the School Context	3.0
EEX 2000	Introduction to Exceptional Student Education	3.0
EME 2040	Creativity, Innovation, and Technology	3.0

Semester 1

Units: 15.0

<i>Biological Sciences - Anatomy</i>		3.0
BSC 1084	Functional Human Anatomy	3.0
OR		
BSC 2020	Human Biology: Fundamentals of Anatomy/Physiology	3.0
EDF 4430	Measurement and Assessment in Education	3.0
EDG 3321	General Teaching Skills	3.0
Science Electives*		6.0

*Select 6 credits from the following course options: BCH 3023, BCH 3023L, BOT 3015, BSC 3930, CHM 2210, CHM 2210L, CHM 2211, CHM 2211L, CHM 2200, CHM 2200L, PCB 3060L, PCB 4674, SCE 3893, ZOO 3021

Semester 2		Units: 12.0
EEX 3071	Teaching Exceptional and Diverse Populations in Inclusive Settings	3.0
RED 3393	Differentiated Instruction in Content Reading	3.0
SCE 4362	Methods of Teaching Science	3.0
Science Electives*		3.0

*Select 3 credits from the following course options: BCH 3023, BCH 3023L, BOT 3015, BSC 3930, CHM 2210, CHM 2210L, CHM 2211, CHM 2211L, CHM 2200, CHM 2200L, PCB 3060L, PCB 4674, SCE 3893, ZOO 3021

Semester 3		Units: 9.0
PCB 3043	Fundamentals of Ecology	3.0
<i>Microbiology</i>		5.0
		5.0
MCB 2010	Microbiology	3.0
AND		
MCB 2010L	Microbiology Laboratory	2.0
OR		
		5.0
MCB 3023	Principles of Microbiology	3.0
AND		
MCB 3023L	Principles of Microbiology Lab	2.0
Science Elective*		1.0

*Select 1 credit from the following course options: BCH 3023, BCH 3023L, BOT 3015, BSC 3930, CHM 2210, CHM 2210L, CHM 2211, CHM 2211L, CHM 2200, CHM 2200L, PCB 3060L, PCB 4674, SCE 3893, ZOO 3021

Semester 4		Units: 12.0
EDG 3443	Classroom and Behavior Management	3.0
PCB 3060	Principles of Genetics	3.0
SCE 4363	Addressing Scientific Misconceptions in the Secondary Science Classroom (Practicum)	3.0
TSL 4324C	ESOL Strategies for Content Area Teachers	3.0
Semester 5		Units: 12.0
SCE 4943	Seminar in Science Education	3.0
SCE 4945	Internship in Science Education	9.0

Total: 60.0

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

EDF1005 Introduction to the Education Profession 3.000 credits

This course provides an overview of Florida's educator certification pathways and career options in education in accordance with Florida statutes. Topics include: key educational philosophies; professional ethics; legal responsibilities, including mandatory reporting for child abuse and neglect; the Florida educator accomplished practices (FEAP); key instructional practices associated with effective teaching of students with exceptionalities; Florida's state academic standards; and historical, legal and financial foundations of the Florida education systems. Students will explore effective teaching strategies in classroom management, educational technology and the foundations of all student learning needs. A minimum of 15 hours of required clinical experience in a variety of school settings is included.

Lecture Hours: 48.000

Course User Fee: \$18.00

EDF2144 Maximizing Student Potential in the School Context 3.000 credits

The student will explore various aspects of learning and brain development in schools. Students will be introduced to the latest neuroscience education strategies used in schools to optimize their learning potential from infancy through adolescence.

Lecture Hours: 48.000

EEX2000 Introduction to Exceptional Student Education 3.000 credits

The student will learn about the history, legal issues, and legislation related to exceptional student education in K-12. The student will learn about the differing types of exceptionalities, supports, and accommodations provided for students with differing learning profiles from birth to adulthood.

Lecture Hours: 48.000

Prerequisite: EDF1005

Course User Fee: \$18.00

EME2040 Creativity, Innovation, and Technology 3.000 credits

The student will learn to manage a productive & safe technology environment by promoting creativity and innovation in the classroom. The student will gain 21st century knowledge, skills, and attitudes for applying technology across multiple disciplines and grade levels.

Lab Hours: 48.000, Clinical Hours: 1.000 - 30.000

Prerequisite: CGS1060 OR Passing Score on the Computer Competency Exam

Course User Fee: \$190.03

BSC1084 Functional Human Anatomy 3.000 credits

This course covers basic human anatomy for students in allied health and mortuary science programs. It includes the dynamics of gross and functional anatomy, terminology, body orientation, and systematic relationships.

Lecture Hours: 48.000

BSC2020 Human Biology: Fundamentals of Anatomy/Physiology 3.000 credits

This course provides a basic understanding of the human body, its systems, and their functions. It includes the dynamics of physiology, terminology, and physiological relationships of the body systems.

Lecture Hours: 48.000

Course User Fee: \$10.00

EDF4430 Measurement and Assessment in Education 3.000 credits

The student will learn research-based principles of assessment. The student will select specific standards and competencies and develop formative and summative traditional and alternative assessments. The student will interpret assessment data that will improve academic achievement and ensure equity in the application of quantitative and qualitative assessments.

Lecture Hours: 48.000

Prerequisite: EDG3321

Course User Fee: \$18.00

EDG3321 General Teaching Skills 3.000 credits

The student will learn how human development and learning theories, developments in educational neuroscience, and current research-based pedagogy apply to the teaching and learning process. The student will incorporate principles and skills of effective instructional planning, including differentiated instruction, aligning instructional teaching skills to practice, selecting appropriate formative assessments, and developing learning experiences that require students to demonstrate a variety of skills.

Lecture Hours: 48.000

Course User Fee: \$18.00

EEX3071 Teaching Exceptional and Diverse Populations in Inclusive Settings 3.000 credits

The student will learn current research-based instructional strategies, educational neuroscience, and legal and ethical issues necessary in addressing the needs of diverse learners in inclusive classrooms. The student will make informed decisions in adapting, accommodating, and modifying the curriculum for students with special needs. Fifteen hours of clinical experience are required. Special fee. (3 hr. lecture)

Lecture Hours: 48.000

Prerequisite: EEX2000 AND EDG3321

Course User Fee: \$18.00

RED3393 Differentiated Instruction in Content Reading 3.000 credits

The teacher candidate will differentiate instruction for individual students based on their strengths and needs by applying the principles of research-based strategies and integrating the six components of reading: phonological awareness, phonics, oral language, fluency, vocabulary, and comprehension in the content area classroom. The teacher candidate will have a broad knowledge of students with differing profiles to understand and apply evidence-based instructional practices by differentiating process, product, and context. Reading competencies 2 and 4 (fifteen hours of clinical experience are required in a math or science 3-12 classroom.)

Lecture Hours: 48.000

Prerequisite: EDG3321, : Optional Prerequisite: RED3013.

Course User Fee: \$18.00

SCE4362 Methods of Teaching Science 3.000 credits

The teacher candidate will learn to design and implement science instruction utilizing the national framework for K-12 science education and educational neuroscience to provide all students with high-quality science education. The student will learn about the theoretical knowledge and skills essential for facilitating science instruction in a variety of classroom settings. Fifteen hours of clinical experience are required.

Lecture Hours: 48.000

Corequisite: EDF4430

Course User Fee: \$35.00

PCB3043 Fundamentals of Ecology 3.000 credits

This is a foundations course in ecology. In this course, students will learn the basic principles of ecology at organismal, population, community, and ecosystem levels, including consideration of Florida's ecosystems and human impact on those systems.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

MCB3023 Principles of Microbiology 3.000 credits

This course offers an introduction to the principles of microbiology. Students will learn the taxonomy, biochemistry, genetics, and ecology of microorganisms and will have an understanding of the impact of microorganisms on the advancement of the biological sciences.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, CHM2211, CHM2211L, Corequisite: MCB3023L

Course User Fee: \$25.00

MCB3023L Principles of Microbiology Lab 2.000 credits

This Laboratory course accompanies MCB3023. Students will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, enumeration, biochemistry, identification, genetics, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2011, BSC2011L, CHM2211, CHM2211L, Corequisite: MCB3023

Course User Fee: \$110.00

EDG3443 Classroom and Behavior Management 3.000 credits

The student will examine strategies for fostering a productive learning environment, informed by research-based frameworks and learning theories. The student will learn strategies for observing, assessing, modifying behavior, and communicating with stakeholders. The student will learn to create a learning environment that encourages positive interactions, self-regulation, and resiliency. Fifteen hours of clinical experience is required.

Lecture Hours: 48.000

Pre/Corequisite: EDG3321

Course User Fee: \$18.00

PCB3060 Principles of Genetics 3.000 credits

This course is an introduction to the mechanisms of transmission of hereditary information. Students will learn the classical Mendelian principles of heredity, deviation of Mendelian principles, genetic analysis, linkage and mapping, genetics of populations, gene regulation, mutation, the genetic bases of cancer and other genetic disorders will also be studied.

Lecture Hours: 48.000

Prerequisite: BSC2011, BSC2011L, Corequisite: PCB3060L

SCE4363 Addressing Scientific Misconceptions in the Secondary Science Classroom (Practicum) 3.000 credits

The teacher candidate will design, implement, and examine the alignment of their personal instructional practices to the national framework for K-12 science education utilizing the action research process. The student will focus on identifying, analyzing, and addressing misconceptions in science in grades 6-12. Sixty hours of clinical.

Lecture Hours: 48.000

Prerequisite: EEX3071, SCE4362, Corequisite: RED3393

Course User Fee: \$18.00

TSL4324C ESOL Strategies for Content Area Teachers 3.000 credits

The student will learn topics related to teaching content area subjects to English Language Learners. The student will plan and implement curriculum, instruction, and assessment activities to meet the needs of culturally and linguistically diverse learners. Fifteen hours of clinical experience are required. Pre/Corequisite: EDG3321.

Lecture Hours: 48.000

Pre/Corequisite: EDG3321

SCE4943 Seminar in Science Education 3.000 credits

The teacher candidate will engage in professional dialogue and explore professional learning opportunities related to teaching in the secondary science setting. This seminar course is taken in conjunction with a full time, supervised teaching experience and provides an opportunity to examine and reflect on the daily experiences of becoming a highly effective teacher.

Lecture Hours: 48.000

Prerequisite: All coursework (EDG 3321, EDF 4430, BSC 1084 or BSC 2020, RED 3393, SCE 4362, EEX 3071, MCB 2010/MCB 2010L or MCB 3023/MCB 3023L, PCB 3043, PCB 3060, TSL 4324C, EDG 3443, SCE 4363, state exams, and E-Portfolio completed and passed., Corequisite: SCE4945

Course User Fee: \$18.00

SCE4945 Internship in Science Education 9.000 credits

The teacher candidate will complete a full time, supervised teaching experience. The student will learn and experience all of the educational and professional responsibilities common to science teachers.

Internship Hours: 432.000

Prerequisite: All coursework (EDG 3321, EDF 4430, BSC 1084 or BSC 2020, RED 3393, SCE 4362, EEX 3071, MCB 2010/MCB 2010L or MCB 3023/MCB 3023L, PCB 3043, PCB 3060, TSL 4324C, EDG 3443, SCE 4363) and state exams completed and passed,

Corequisite: SCE4943

Certificate of Professional Preparation (CPP)

Cyber Defense

Certificate of Professional Preparation | Code: PBC04 | 24 credits

Semester 1		Units: 4.0
CTS 1134	Networking Technologies	4.0
OR		
CTS 1650	CCNA 1: Cisco Fundamentals	4.0
Semester 2		Units: 4.0
CIS 3360	Principles of Information Security	4.0
Semester 3		Units: 8.0
CIS 3361	Information Security Management	4.0
CIS 4366	Computer Forensics	4.0
Semester 4		Units: 8.0
CIS 4364	Intrusion Detection and Incident Response	4.0
CIS 4388	Advanced Computer Forensics	4.0
		Total: 24.0

CTS1134 Networking Technologies 4.000 credits

This course will provide an introduction to the technical areas of network connectivity, data communications, and communication protocols. Emphasis on understanding the foundation of networking technologies and data communication concepts. Topics covered will include an exploration of computer networking development, the OSI reference model, data signaling, data translation, standards for communications and data transmissions, network topologies and access methods. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1650 CCNA 1: Cisco Fundamentals 4.000 credits

This is the first course of the four-course Cisco curriculum that will prepare students for professional certification as a Cisco Certified Network Associate (CCNA). Students will learn networking concepts and practices, network terminology and protocols, the OSI reference model, cabling, cabling tools, routers, router and switch configurations, LAN/WAN topologies, IP addressing, and network standards.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Knowledge of computer operating systems and hardware is required.

Course User Fee: \$63.00

CIS3360 Principles of Information Security 4.000 credits

This upper division course provides an overview of information systems security principles, practices, methods, and tools. Students will learn about the threats against an organization's digital assets, as well as the tools and methods to mitigate those threats. Topics include cryptography, authentication and access control systems, infrastructure security, and ethical issues. Prerequisite: CTS1134 or CTS1650

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CIS3361 Information Security Management 4.000 credits

This course covers how to manage, design, oversee and assess an organization's information security. Students will learn how to develop an information security strategy, how to write information security policies, and how to manage information risk. Other topics include security program development and management, business continuity planning and disaster recovery planning. Prerequisite(s): CIS 3360 or CTS 1120. Laboratory fee. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS3360 OR CTS1120

Course User Fee: \$63.00

CIS4366 Computer Forensics 4.000 credits

This upper division course provides the student with knowledge and skills to conduct formal incident investigations. Students will learn how to collect and analyze evidence from Windows and Linux computer systems. Other topics include legal issues, evidence analysis, and report writing. Prerequisite(s): CIS 3360 or CET 2880C. Laboratory fee. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS3360 OR CET2880C

Course User Fee: \$63.00

CIS4364 Intrusion Detection and Incident Response 4.000 credits

This upper division course addresses the underlying principles and techniques for detecting and responding to current and emerging cybersecurity threats. Students will learn how to handle various types of malware, email, web, network, cloud and internal network incidents, as well as risk assessment methodologies, and policies related to incident handling. Prerequisite: CIS 3360.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS3360

Course User Fee: \$63.00

CIS4388 Advanced Computer Forensics 4.000 credits

This upper division course is a continuation of Computer Forensics. The course examines forensics techniques necessary to investigate and analyze network traffic. The course covers packet capture and analysis, log file analysis, and flow analysis. Other topics include mobile forensics, cloud forensics, malware forensics, database forensics, and investigating email crimes and web attacks. Prerequisite: CIS 4366 (3 hr. lecture, 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS4366

Course User Fee: \$63.00

[Educator Preparation Institute](#)

Certificate of Professional Preparation | Code: 69000 | 21 credits

The Educator Preparation Institute (EPI) is a state approved competency-based alternative certification program for individuals who have a bachelor's degree or higher in a discipline other than education and are currently teaching on a Temporary Teaching Certificate or who wish to enter the teaching profession. It focuses on the skills and competencies identified by the state as necessary for a high quality teacher to possess. Emphasis is placed on the Sunshine State Standards, teaching methods and strategies, the integration of technology into instructional practice, literacy development, assessment techniques and integration of technology into instructional practice, literacy development, assessment techniques and analysis of data, classroom management and school safety. At the completion of these modules the student will have successfully demonstrated the Florida Educator Accomplished Practices and have provided documentation of mastery in a comprehensive professional portfolio.

Program Modality: Resident [In-Person (IP)]

Contracted: No

Semester 1		Units: 9.0
EDG 3443	Classroom and Behavior Management	3.0
EPI 0001	Classroom Management	3.0
EPI 0002	Instructional Strategies	3.0
EPI 0003	Technology	3.0
Semester 2		Units: 6.0
EPI 0004	The Teaching and Learning Process	3.0
EPI 0010	Research-Based Practices in Reading	3.0
Semester		Units: 6.0
EPI 0020	Professional Foundations	1.0
EPI 0030	Empowering All Learners	2.0
EPI 0940	Field Experience II	2.0
EPI 0945	Field Experience I	1.0
		Total: 21.0

EDG3443 Classroom and Behavior Management 3.000 credits

The student will examine strategies for fostering a productive learning environment, informed by research-based frameworks and learning theories. The student will learn strategies for observing, assessing, modifying behavior, and communicating with stakeholders. The student will learn to create a learning environment that encourages positive interactions, self-regulation, and resiliency. Fifteen hours of clinical experience is required.

Lecture Hours: 48.000

Pre/Corequisite: EDG3321

Course User Fee: \$18.00

EPI0001 Classroom Management 3.000 credits

The student will learn how to plan and develop a positive and productive learning environment in P-12 settings grounded in research-based character development models and learning theories. The student will learn to create a learning environment that encourages positive interactions and self-regulation. Ten hours of clinical experience are required for successful completion of this course.

Lecture Hours: 48.000

Recommended Preparation: (1) Bachelor degree earned from an accredited institution of higher education in any area except Education; (2) Cumulative bachelor degree GPA of 2.5 or higher on a 4.0 scale; and (3) Admitted to the Educator Preparation Institute program.

EPI0002 Instructional Strategies 3.000 credits

The student will connect human developmental theories and current educational neuroscience research to the planning of instructional activities for students in P-12 settings. The student will learn to develop lesson plans that incorporate varied teaching strategies and questioning skills at all levels, differentiated instruction, and appropriate formative and summative assessments. The student will incorporate learning experiences that require P-12 students to demonstrate a variety of skills. Fifteen hours of clinical experience are required for successful completion of this course.

Lecture Hours: 48.000

Prerequisite: EPI0001 or an equivalent course.

EPI0003 Technology 3.000 credits

The student will learn about the use of instructional technology to teach P-12 students. The student will learn how technology can support classroom management, administration, and teaching. The student will learn the legal and ethical use of technology. Fifteen hours of clinical experience are required for successful completion of this course.

Lecture Hours: 48.000

Prerequisite: EPI0002

EPI0004 The Teaching and Learning Process 3.000 credits

The teacher candidate will learn the formal philosophies of education: perennialism, essentialism, progressivism, and reconstructionism, and their application to the P-12 teaching and learning process. The teacher candidate will develop a substantive understanding of the six components of reading as a process: oral language, phonological awareness, phonics, fluency, vocabulary, and comprehension, select and administer appropriate assessments, and analyze data to inform reading instruction. Reading competencies 1 and 3. Fifteen hours of clinical experience are required for successful completion of this course.

Lecture Hours: 48.000

Prerequisite: EPI0002

EPI0010 Research-Based Practices in Reading 3.000 credits

The teacher candidate will differentiate instruction for all learners by applying the principles of research-based strategies and integrating the six components of reading: phonological awareness, phonics, oral language, fluency, vocabulary, and comprehension. Teacher candidates will have a broad knowledge of students from differing profiles to understand and apply evidence-based instructional practices by differentiating process, product, and context. Reading competencies 2 and 4. Fifteen hours of clinical experience are required for successful completion of this course.

Lecture Hours: 48.000

Prerequisite: EPI0004

EPI0020 Professional Foundations 1.000 credits

The student will learn to evaluate his/her role as a productive member of the teaching profession. The student will learn to reflect on his/her development and mastery of the pre-professional Florida educator accomplished practices during the completion of the clinical education experience in a P-12 classroom setting. Fifteen hours of clinical experience are required for successful completion of this course.

Lecture Hours: 16.000

Prerequisite: EPI0004

EPI0030 Empowering All Learners 2.000 credits

This course focuses on effective strategies for identifying and meeting the varied needs of students in the classroom. Students will examine teaching practices, legal and ethical responsibilities, and assessment methods to ensure all learners are supported. The course covers approaches to differentiated instruction, fostering positive learning environments, and utilizing assessment data to guide instructional decisions. Participants will also learn how to collaborate with families and communities to support student learning. Through reflective practice, students will develop actionable plans to enhance teaching performance and improve learner outcomes.

Lecture Hours: 32.000

Prerequisite: EPI0002

EPI0940 Field Experience II 2.000 credits

This is the second of two field experience courses that mark the culmination of the educator preparation institute program. In this course, the teacher will observe the classroom and develop and teach a unit lesson in a P-12 setting. Building on previous formal classroom observations and actionable feedback on their lesson plans and mini-teache, the teacher candidate will refine their instructional practices. They will also demonstrate knowledge of the components of reading and the ability to apply effective instructional reading practices. The teacher candidate will be formally observed teaching in a P-12 setting. Reading course competency 5. Sixty hours of clinical experience are required for successful completion of this course.

Lecture Hours: 32.000

Prerequisite: EPI0004

EPI0945 Field Experience I 1.000 credits

The student will observe effective teaching/learning techniques in P-12 settings with to collect and analyze observational data, and also plan/implement teaching strategies that meet the needs of all learners. A formal observation/assessment of the students teaching performance will be conducted. Fifteen hours of clinical experience are required for successful completion of this course.

Lecture Hours: 16.000

Prerequisite: EPI0004

Program Description

Future-Ready Teaching: AI Applications in the Classroom

Certificate of Professional Preparation | Code: PBC08 | 15 credits

The Certificate of Professional Preparation (CPP) in Future-Ready Teaching: AI Applications in the Classroom equips educators with essential skills to integrate artificial intelligence into teaching and learning environments. Through hands-on coursework, participants learn to apply AI tools for data-driven instruction, foster innovation, and demonstrate leadership in educational technology. Graduates will be prepared to lead the way in AI-enhanced education for their schools and communities.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 6.0
CAI 1001C	Artificial Intelligence (AI) Thinking	3.0
PHI 2680	Artificial Intelligence and Ethics	3.0
Semester 2		Units: 9.0
ECW 4012	Leading the Future: AI Advocacy and Innovation in Education	3.0
ECW 4013	Teaching with AI: Designing Human-Centered Classrooms	3.0
ECW 4014	Reimagining Assessments to Maximize Student Potential	3.0
		Total: 15.0

CAI1001C Artificial Intelligence (AI) Thinking 3.000 credits

A survey of artificial intelligence (AI) where students explore different technologies utilizing concepts and skills widely accepted for AI and digital competency. Classification algorithms, supervised vs. unsupervised learning, data preparation, and training/using learning models for predictions are presented. CGS1060C and MAT1033 are recommended, but not required.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

PHI2680 Artificial Intelligence and Ethics 3.000 credits

This course acquaints students with ethics as relevant to the design, implementation, and administration of artificial intelligence and emerging technologies. It will explore issues such as the biases of algorithms, autonomous warfare, the risks of surveillance technologies, and the effects of technologies on employment. In addition, this course will also delve into the critical examination of the Western Canon's influence on the development and ethical implications of artificial intelligence and emerging technologies.

Lecture Hours: 48.000

ECW4012 Leading the Future: AI Advocacy and Innovation in Education 3.000 credits

This course empowers educators to lead ethical, inclusive AI integration in schools through systems thinking, human-centered advocacy, and collective leadership. Students will explore inclusive policy, responsible implementation, and community empowerment, while designing initiatives that promote lifelong leadership, voice, and agency for meaningful and sustainable local impact.

Lecture Hours: 48.000

ECW4013 Teaching with AI: Designing Human-Centered Classrooms 3.000 credits

This course invites learners to explore the integration of artificial intelligence through a pedagogical lens, where technology serves as a tool for reimagining teaching and learning. Learners will critically engage with AI tools by grounding their use in learning theory and evidence-based design practices. Through inquiry, collaboration, and hands-on experimentation, learners will examine how AI can amplify creativity, personalize learning, and promote human-centeredness.

Lecture Hours: 48.000

ECW4014 Reimagining Assessments to Maximize Student Potential 3.000 credits

The course will explore the interconnected relationship between lesson planning, assessment, feedback, and classroom management while maintaining pedagogical integrity. The student will develop reflective, inclusive, and ethical practices that support differentiated instruction, student engagement, and responsible AI use across diverse learning environments.

Lecture Hours: 48.000

Instructional Design and Technology

Certificate of Professional Preparation | Code: CPP03 | 15 credits

This program is designed to provide baccalaureate-prepared students with the knowledge and skills necessary to work as instructional designers and technologists. Instructional designers and technologists plan and conduct instructional design workshops, seminars, and trainings for learning and organizational development. Instructional designers and technologists develop and deliver comprehensive, highly-engaging and interactive training experiences and evaluation strategies for all learning solutions that demonstrate impact and effectiveness. Instructional designers promote collaboration, partnerships, and relationships among the participants and stakeholders, acquire and apply new technology skills to instructional design practice, and design learning that reflects an understanding and appreciation of diverse learners and cultural differences.

Program Modality: Resident [In-Person (IP)]

Contracted: No

Semester		Units: 15.0
EME 4610	Introduction to Instructional Design	3.0
EME 4611	Instructional Design Development 1	3.0
EME 4612	Instructional Design Development 2	3.0
EME 4671	Instructional Design Analysis	3.0
EME 4683	Instructional Design Application	3.0

Total: 15.0

EME4610 Introduction to Instructional Design 3.000 credits

This is the first in a series of five courses that leads to a certificate in Instructional Design. The student will develop an overview of the field of instructional design as it relates to training, development, and education. The student will compare and contrast instructional design models, learning theories, and current technologies.

Lecture Hours: 48.000

Prerequisite: Bachelor degree

EME4611 Instructional Design Development 1 3.000 credits

In this course, the student will develop and launch a prototype of a training, development, or educational opportunity using different types of media tools.

Lecture Hours: 48.000

Recommended Preparation: Bachelor Degree., Pre/Corequisite: EME4683

EME4612 Instructional Design Development 2 3.000 credits

In this course in Instructional Design, the student will develop assessments and an evaluation plan for a training, development, or educational opportunity. The student will conduct User Acceptance Testing using established criteria, and utilize feedback to modify his or her prototype.

Lecture Hours: 48.000

Recommended Preparation: Bachelor degree, Pre/Corequisite: EME4611

EME4671 Instructional Design Analysis 3.000 credits

In this course, the student will evaluate and analyze training, development, and education opportunities and project development. The student will develop a needs analysis for an instructional design project based on research-based best practices in the field.

Lecture Hours: 48.000

Recommended Preparation: Bachelor degree, Pre/Corequisite: EME4610

EME4683 Instructional Design Application 3.000 credits

In this course, the student will utilize best practices of learning design, learning theories, and instructional strategies for adult learners to write objectives, develop an outline, and create storyboards that encompass the scope of a training, development, or educational opportunity.

Lecture Hours: 48.000

Recommended Preparation: Bachelor degree, Pre/Corequisite: EME4671

Networking

Certificate of Professional Preparation | Code: PBC05 | 28 credit

Modern computer networks are increasingly pervasive and complex. They help improve the speed and efficiency of daily business operations, allowing for easy information discovery, storage, sharing, and protection. As technology evolves, it is indispensable for organizations to maintain the efficiency, speed and security of computer networks, thus facilitating seamless collaboration among people and applications. The Certificate of Professional Preparation (CPP) in Networking is designed for current and pre-professionals interested in working in the field of networking. They will learn how to plan, design, implement and maintain network infrastructures.

Note: Program Admissions Requirements: Baccalaureate degree in any field of study from a regionally accredited institution.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1**Units: 4.0**

CTS 1134	Networking Technologies	4.0
OR		4.0
CTS 1650	CCNA 1: Cisco Fundamentals	4.0

Semester 2**Units: 12.0**

CNT 3526C	Wireless and Mobile Networking	4.0
CNT 4603	System Administration and Maintenance	4.0
CIS 3360	Principles of Information Security	4.0

Semester 3

Units: 12.0

CNT 3409C	Network Security	4.0
CNT 4702	Network Design and Planning	4.0
CIS 4347	Information Storage Management	4.0

Total: 28.0

CTS1134 Networking Technologies 4.000 credits

This course will provide an introduction to the technical areas of network connectivity, data communications, and communication protocols. Emphasis on understanding the foundation of networking technologies and data communication concepts. Topics covered will include an exploration of computer networking development, the OSI reference model, data signaling, data translation, standards for communications and data transmissions, network topologies and access methods. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1650 CCNA 1: Cisco Fundamentals 4.000 credits

This is the first course of the four-course Cisco curriculum that will prepare students for professional certification as a Cisco Certified Network Associate (CCNA). Students will learn networking concepts and practices, network terminology and protocols, the OSI reference model, cabling, cabling tools, routers, router and switch configurations, LAN/WAN topologies, IP addressing, and network standards.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Knowledge of computer operating systems and hardware is required.

Course User Fee: \$63.00

CNT3526C Wireless and Mobile Networking 4.000 credits

This is upper division course for students majoring in Information Systems Technology introduces students to wireless and mobile network architecture, protocols and technologies. In particular, students will learn about Wireless Local Area Networks (WLANs), Wireless Personal Area Networks (WPANs) and Wireless Metropolitan Area Networks (WMANs) technologies. Other topics include antenna concepts, cellular networks, the 802.11 network architecture, and wireless security. Prerequisites: CTS 1134 or CTS 1650.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CNT4603 System Administration and Maintenance 4.000 credits

This upper division course, for students majoring in Information Systems Technology, explores UNIX and Microsoft Windows systems and their administration and maintenance within the network setting. Students will learn how to install, maintain, and extend multi-user computer systems and how to develop administrative policies and procedures. Students will also learn how to apply troubleshooting and problem solving skills to resolve user and system issues.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CIS3360 Principles of Information Security 4.000 credits

This upper division course provides an overview of information systems security principles, practices, methods, and tools. Students will learn about the threats against an organization's digital assets, as well as the tools and methods to mitigate those threats. Topics include cryptography, authentication and access control systems, infrastructure security, and ethical issues. Prerequisite: CTS1134 or CTS1650

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CNT3409C Network Security 4.000 credits

This upper division course introduces students to current and emerging threats to the security of computer networks, as well as tools and techniques for the prevention, detection and recovery from such attacks. Topics include firewalls, intrusion detection and intrusion prevention systems, virtual private networks, remote authentication and authorization systems, and security protocols. Prerequisite(s): CIS 3360. Laboratory fee. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 27.000 - 32.000

Prerequisite: CIS3360

Course User Fee: \$63.00

CNT4702 Network Design and Planning 4.000 credits

This upper division course, for students majoring in Information Systems Technology, presents network design using layering. Students will learn how to apply cabling, topology, and architecture to design systems. Students will also learn how design impacts network performance and control issues such as congestion control, error control, and contention resolution. Prerequisite: CIS 3360.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS4347 Information Storage Management 4.000 credits

This upper division course, for students majoring in Information Systems Technology, introduces challenges and solutions for data storage and data management. Students will learn how to manage advanced storage systems, protocols, and architectures, including storage area networks (SAN), network attached storage (NAS), fiber channel networks, internet protocol SANS (IPSAN), ISCSI, and content-addressable storage (CAS).

Prerequisite: CTS1134 or CTS1650. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

Reading Endorsement

Certificate of Professional Preparation | Code: CPP02 | 15 credits

The Reading Endorsement is a Certificate of Professional Preparation that adds licensure to professionally certified teachers so that they can teach reading. This program meets the specifications in State Board Rule 6A-4.0292 for the Reading Endorsement.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1**Units: 15.0**

RED 4033	Teaching Foundations of Reading Instruction	3.0
RED 4342	Application of Research Based Practices in Reading Education	3.0
RED 4541	Foundations of Assessment	3.0
RED 4654	Foundations and Applications of Differentiated Instruction	3.0
RED 4854	Reading Practicum	3.0

Total: 15.0

RED4033 Teaching Foundations of Reading Instruction 3.000 credits

The student will develop a foundational understanding of the six components of reading as a systematic process: oral language, phonological awareness, phonics, fluency, vocabulary, and comprehension. The student will recognize the principles, techniques, and procedures required to develop the foundational reading skills that are essential to increasing reading proficiency in students from grades K-12. This is the first of five courses that lead to the Florida Department of Education Reading Endorsement. This course corresponds to Competency 1.

Lecture Hours: 48.000

RED4342 Application of Research Based Practices in Reading Education 3.000 credits

Building on the foundation of RED4033, the student will apply the principles of evidence-based research in comprehensive reading instruction. The student will use the reading skills, techniques, and strategies that facilitate reading comprehension. The student will apply the principles of research-based reading instruction, and integrate the six components of reading to facilitate the comprehension of different texts. This is the second of five courses that lead to the Florida Department of Education Reading Endorsement. This course corresponds to Competency 2.

Lecture Hours: 48.000

Prerequisite: RED4033Bachelor's Degree

RED4541 Foundations of Assessment 3.000 credits

The student will select and administer appropriate assessments and analyze data to inform reading instruction to meet the needs of all students. The student will engage in a systematic problem-solving process to remediate reading difficulties in emergent, beginning, and fluent readers and will plan effective instructional interventions. This is the third of five courses that lead to the Florida Department of Education Reading Endorsement. This course corresponds to Competency 3.

Lecture Hours: 48.000

Prerequisite: RED4342Bachelor's Degree

RED4654 Foundations and Applications of Differentiated Instruction 3.000 credits

The student will apply research-based best practices in educational neuroscience research related to the instruction of reading. Using knowledge of diverse learners, the student will apply intensive, explicit, multisensory sequential approaches and instructional practices by differentiating the process, product, or context of their reading instruction, and providing scaffolds to enhance comprehension in all content areas. This is the fourth of five courses that lead to the Florida Department of Education Reading Endorsement. This course corresponds to Competency 4.

Lecture Hours: 48.000

Prerequisite: RED4541Bachelor's Degree

RED4854 Reading Practicum 3.000 credits

The student will synthesize and apply knowledge of the six components of reading, formal and informal reading assessments, skills related to data analysis, and differentiation of instruction in order to plan and implement a comprehensive, intensive, effective, systematic, multisensory, research-based reading plan of instruction for all students. This is the fifth of five courses that lead to the Florida Department of Education Reading Endorsement. This course corresponds to Competency 5.

Lecture Hours: 48.000

Prerequisite: RED4654Bachelor's Degree

Software Engineering

Certificate of Professional Preparation | Code: PBC06 | 28 credits

Software engineers contribute to the development and maintenance of computer systems software and applications software. Computer systems software consists of programs that include computing utilities and operating systems. Applications software includes a variety of user-focused programs from web-browsers to multimedia applications. The Certificate of Professional Preparation in Software Engineering will provide students with the knowledge of software development, computer architecture, algorithm design, and data structures to apply software engineering principles to software creation. By applying these engineering principles to every stage of the development process, students learn how to specify software requirements from clients and how to design, implement and validate software solutions. Note: Program Admissions Requirements: Baccalaureate degree in any field of study from a regionally accredited institution.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 4.0

COP 1334	Introduction to C++ Programming	4.0
Semester		Units: 8.0
CET 3126C	Computer Architecture	4.0
COP 2800	Java Programming	4.0
Semester 3		Units: 8.0
CET 3383C	Software Engineering I	4.0
COP 3530	Data Structures	4.0
Semester 4		Units: 8.0
CEN 4025C	Software Engineering II	4.0
COT 4400	Design and Analysis of Algorithms	4.0
		Total: 28.0

COP1334 Introduction to C++ Programming 4.000 credits

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CET3126C Computer Architecture 4.000 credits

This course is intended for upper division students majoring in Electrical and Computer Engineering Technology as well as Information Systems Technology. This course introduces the study of advanced microprocessor design. Students will learn the basic organization of computer systems including instruction-set architecture, execution pipeline, memory hierarchy, virtual memory, and I/O subsystems. Students also learn advanced processor microarchitecture issues such as dynamic instruction scheduling, branch prediction, lock-up free caches, instruction-level parallelism, multiple instruction fetch/issuing, speculative execution, etc. to improve computer processor performance. Students will experimentally verify microarchitecture designs using industry standard microarchitecture simulators.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Corequisite: COP1047C OR COP1334 OR COP2270

Course User Fee: \$63.00

CET3383C Software Engineering I 4.000 credits

This upper division course is for students majoring in B.S. in Information Systems Technology or B.S. in Electrical and Computer Engineering Technology. The student will learn the basic principles and concepts of software engineering; system requirements; modeling and testing; object oriented analysis and design; testing and validation; configuration management; and the analysis, design and programming of extensible software systems. Prerequisite: CET2369C or COP2800.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: CET2369C, COP2800

Course User Fee: \$63.00

COP3530 Data Structures 4.000 credits

This upper division course is for students majoring in B.S. in Information Systems Technology. Students will learn the fundamentals of data structures using the Java programming language. The students will learn to design, implement and use data structures to organize and store data in a computer so that it can be accessed and modified efficiently.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800

Course User Fee: \$63.00

CEN4025C Software Engineering II 4.000 credits

This upper division course is for students majoring in the B.S. in Information Systems Technology or the B.S. in Electrical and Computer Engineering Technology programs. This course covers in-depth topics in software process structures, process models, requirements modeling with use-cases and class based methods. Students will also learn design concepts including abstraction, OOD concepts, component-level and architectural design, user interface analysis and design, and design patterns. Prerequisite: CET3383C.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: Pre-requisite requirement CET3383C

Course User Fee: \$63.00

COT4400 Design and Analysis of Algorithms 4.000 credits

This upper division course is for students majoring in the B.S. in Information Systems Technology or the B.S. in Electrical and Computer Engineering Technology programs. This course covers general techniques in algorithm design (such as divide-and-conquer, greedy method, dynamic programming, search and traversal techniques, branch-and-bound) in the context of problem domains like graph, sorting and optimization problems.

Prerequisite(s): COP1334 or COP2270. (3 hr. lecture, 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800 AND Pre/Corequisite: COP3530

Course User Fee: \$63.00

Vulnerability Assessment

Certificate of Professional Preparation | Code: PBC07 | 24 credits

Vulnerability Assessment is a cybersecurity specialty for professionals who protect and defend an organization's information system from various threats. They perform assessments of systems and networks against known vulnerabilities and recommend appropriate mitigation countermeasures against potential cyber-attacks and data breaches. The Certificate of Professional Preparation (CPP) in Vulnerability Assessment is designed for current and pre-professionals interested in working in the field of cybersecurity operations. Note: Program Admissions Requirements: Baccalaureate degree in any field of study from a regionally accredited institution.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 8.0
CTS 1134	Networking Technologies	4.0
OR		4.0
CTS 1650	CCNA 1: Cisco Fundamentals	4.0
CIS 3215	Ethics in CyberSecurity	4.0
Semester 2		Units: 4.0
CIS 3360	Principles of Information Security	4.0
Semester 3		Units: 8.0
CIS 4204	Ethical Hacking I	4.0

CIS 4364	Intrusion Detection and Incident Response	4.0
Semester 4		Units: 4.0
CIS 4378	Ethical Hacking II	4.0

Total: 24.0

CTS1134 Networking Technologies 4.000 credits

This course will provide an introduction to the technical areas of network connectivity, data communications, and communication protocols. Emphasis on understanding the foundation of networking technologies and data communication concepts. Topics covered will include an exploration of computer networking development, the OSI reference model, data signaling, data translation, standards for communications and data transmissions, network topologies and access methods. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1650 CCNA 1: Cisco Fundamentals 4.000 credits

This is the first course of the four-course Cisco curriculum that will prepare students for professional certification as a Cisco Certified Network Associate (CCNA). Students will learn networking concepts and practices, network terminology and protocols, the OSI reference model, cabling, cabling tools, routers, router and switch configurations, LAN/WAN topologies, IP addressing, and network standards.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Knowledge of computer operating systems and hardware is required.

Course User Fee: \$63.00

CIS3215 Ethics in CyberSecurity 4.000 credits

This course provides the study of the risk factors for digital and ethical misconduct, and it explores ethics, relevant laws, regulations, policies, standards, moral, and social issues and responsibilities faced by CyberSecurity professionals. Coverage includes examination of CyberSecurity policies; Federal Laws and Authorities and International Standards; ethical and legal compliance and enforcement; business issues; contractual management of assets and liabilities; and issues involving privacy, disclosure, free speech and individual rights.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CIS3360 Principles of Information Security 4.000 credits

This upper division course provides an overview of information systems security principles, practices, methods, and tools. Students will learn about the threats against an organization's digital assets, as well as the tools and methods to mitigate those threats. Topics include cryptography, authentication and access control systems, infrastructure security, and ethical issues. Prerequisite: CTS1134 or CTS1650

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CTS1134 OR CTS1650

Course User Fee: \$63.00

CIS4204 Ethical Hacking I 4.000 credits

This upper division course introduces students to penetration testing techniques. Students will learn how to footprint, scan, sniff, enumerate networks, and hack systems. Other topics include denial of service attacks, social engineering, malware, vulnerability analysis and relevant laws. Prerequisites: CIS3360

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS3360

Course User Fee: \$63.00

CIS4364 Intrusion Detection and Incident Response 4.000 credits

This upper division course addresses the underlying principles and techniques for detecting and responding to current and emerging cybersecurity threats. Students will learn how to handle various types of malware, email, web, network, cloud and internal network incidents, as well as risk assessment methodologies, and policies related to incident handling. Prerequisite: CIS 3360.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS3360

Course User Fee: \$63.00

CIS4378 Ethical Hacking II 4.000 credits

This upper division course is a continuation of Ethical Hacking I. Students will focus on how web applications, wireless networks, and mobile platforms can be hacked, and how intrusion detection systems (IDS), firewalls, and honeypots can be evaded. Other topics include cloud computing security, Internet of Things (IoT) security, and cryptography. Prerequisite: CIS4204.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: CIS4204

Course User Fee: \$63.00

Associate in Arts (AA) Degree Pathways

Program Description

Accounting

Associate in Arts | Code: 10504 | 60 credit

This program offers fundamental instruction in accounting and related subjects (such as economics or business). Students who wish to become an accountant may transfer to senior colleges or universities that offer baccalaureate degrees in accounting. Accountants work in a variety of settings such as corporations, small businesses, financial institutions, and government agencies.

Program Modality: Both [In-Person (IP) and On-line]

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits
Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite: MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033Any Mathematics level higher than MAT 1033 will satisfy this requirement. MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites:

ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

MAC2233 Business Calculus 3.000 credits

This course introduces the basic concepts of differential and integral calculus for students majoring in business administration and related fields. Topics include limits, continuity, differentiation and integration of polynomials, logarithmic and exponential functions with applications to business, economics, and the life sciences. Prerequisite: MAC 1105 or MAC1106 with a grade of C or better or departmental permission.

Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

Program Description

Agriculture

Associate in Arts | Code: 10100 | 60 credit

Agriculture is the art, science and industry of managing the growth of plants and animals for human use. Study at MDC emphasizes a strong foundation in the sciences of biology (including botany), chemistry and/or physics. The range of careers in agriculture extends from rural farming to urban landscaping, with numerous specializations in areas such as hydroponics, agricultural engineering, animal husbandry, food packing and processing and soil chemistry.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0
ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
HOS 1010	Horticulture 1	3.0
Computer Competency*		

*Computer Skills Placement (CSP) ---or--- CGS 1060C. Departmental Recommendation: Computer Skills Placement (CSP)

Semester 2		Units: 12.0
ENC 1102	English Composition 2	3.0
HUM 1020	Humanities	3.0
CHM 1045	General Chemistry and Qualitative Analysis	3.0
CHM 1045L	General Chemistry Lab	2.0
SLS 1106	First Year Experience Seminar	1.0

Semester 3		Units: 11.0
BSC 2010	Principles of Biology	3.0
BSC 2010L	Principles of Biology 1 Laboratory	2.0
PSY 2012	Introduction to Psychology	3.0
IPM 2112	Principles of Entomology	3.0

Semester 4		Units: 13.0
<i>Biological Science</i>		4.0
BSC 2011	Principles of Biology 2	3.0
AND		
BSC 2011L	Principles of Biology 2 Laboratory	2.0
SPC 2608	Introduction to Public Speaking	3.0
ORH 1251	Nursery Practices 1	3.0
<i>Program Elective</i>		3.0
IPM 2635	Introduction to Plant Pathology	3.0

OR		
HOS 2005	Hydroponic Systems	3.0

Semester 5

Units: 12.0

ECO 2013	Principles of Economics (Macro)	3.0
PHI 2600	Introduction to Ethics	3.0
STA 2023	Statistical Methods	3.0
ORH 2949	Landscape Technology Internship	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

HOS1010 Horticulture 1 3.000 credits

This is an introductory course on the principles of horticulture. Students will learn plant structure and function, plant propagation, plant nutrients and fertilizers, potting media, soils, pruning, and plant pests. A survey of various fields in ornamental horticulture will also be covered.

Lecture Hours: 48.000

ENC1102 English Composition 2 3.000 credits

This is the second required general education core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres, and/or nonfiction, and produce a documented paper based on research. Prerequisite: ENC1101. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

SL1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

IPM2112 Principles of Entomology 3.000 credits

This is an introductory course on the principles of entomology. Students will learn to identify characteristics of arthropods, the insect orders, and the growth cycle of insects. Students will also address insect pests specific to South Florida and methods to responsibly manage plant pests.

Lecture Hours: 48.000

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ORH1251 Nursery Practices 1 3.000 credits

The student will learn the techniques and practices in commercial production of ornamental plants.

Emphasis on types of nurseries.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: HOS1010

IPM2635 Introduction to Plant Pathology 3.000 credits

The students will learn to identify diseases that affect plants and management practices for different types of plant diseases. Environmental factors contributing to a plant's susceptibility to a particular disease will also be discussed. Methods of prevention, eradication, and control will be given for each specific disease.

Lecture Hours: 48.000

HOS2005 Hydroponic Systems 3.000 credits

This course will provide an overview of the different types of hydroponic systems. Students will learn about set-up requirements, maintenance, nutrient formulations, and growing plants in a soilless culture. The course will emphasize knowledge and skills required to run small hydroponic systems. (3 Hr. Lecture)

Lecture Hours: 48.000

Course User Fee: \$35.60

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

ORH2949 Landscape Technology Internship 3.000 credits

The internship will provide students with hands-on work experience in horticulture. Landscape, or related technology industries. Students will learn employability skills, and the specific skills and safety requirements necessary for effective work in this environment.

Other Hours: 144.000

Program Description

Associate in Arts | Code: 12200 | 60 credit

Anthropology studies all aspects of human life by evaluating society, evolution and culture. Course offerings prepare the student in the four fields of the discipline: cultural anthropology, physical anthropology, anthropological linguistics and archaeology. Most anthropologists are researchers who work in museums or educational institutions. Students majoring in anthropology should plan to obtain the Ph.D. degree to fully succeed in the field.

Program Modality: Both [In-Person (IP) and On-line]

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

ANT2410 Introduction to Cultural Anthropology 3.000 credits

This course focuses on the study of human organization and culture by exploring similarities and differences among a variety of cultures. Students will apply theories and methods developed by anthropologists to understand complex human behaviors revealed in the cultural expression of race, ethnicity, language, economic systems, political systems, families and kinship, marriage, gender, religion, ecology, art, transnational migration, and the globalization of the world system.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

SYG2430 Marriage and The Family 3.000 credits

The family as a social institution — its origin and development, its forms and functions, its interrelation with other social institutions, and its role in contemporary civilization. Areas of study include factors contributing to or acting against successful, stable marriage.

Lecture Hours: 48.000

ISS1120 The Social Environment 3.000 credits

The broader aspects of the social environment with a focus on the political and economic dimensions of culture; emphasis is given to a critical analysis of the roles that economics and government play in the life of the individual and the nation state, and their global implications. (3 hr lecture)

Lecture Hours: 48.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

SYG2230 Multi-Ethnic America 3.000 credits

In this course, students will gain an understanding of the theory and problems of underrepresented populations in American society, with an emphasis on inequity, bias, and the evolving dynamics of bias and discrimination. Additionally, the course will critically examine the portrayal of underrepresented populations in the Western Canon, providing insight into the historical and cultural influences that have shaped societal perceptions and attitudes.

EUH2032 History of The Holocaust 3.000 credits

This is a foundation course in Holocaust Studies. Students will learn the historical origins, execution and consequences of the Holocaust. This course also examines the Holocaust's place in context of genocides past and present.

Lecture Hours: 48.000

PSY2800 Psychology of Genocide 3.000 credits

Students will learn the psychological, social, and cultural roots of genocide, human cruelty, and mass violence. Students will examine the various factors influencing such acts, and the emotional and psychological impact upon victims, perpetrators, rescuers, and society.

Lecture Hours: 48.000

Prerequisite: ENC1101

ANT2511 Introduction to Physical Anthropology 3.000 credits

This course introduces students to the origins of humanity from early primates, extinct hominins, and to modern people. Students in this course will learn the basics of evolutionary theory and genetics, investigate human evolutionary history through the fossil record, observe contemporary non-human primates, and apply this knowledge to a biocultural understanding of human variation, past and present.

Lecture Hours: 48.000

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CLP2000 Dynamics of Behavior 3.000 credits

Analysis of mechanisms of adjustment, motivation, frustration and conflict, learning personality and psychotherapy. Emphasis is on the psychological processes of the normal individual functioning in society rather than on behavior disorders.

Lecture Hours: 48.000

PSY2050 Introduction to Forensic Psychology 3.000 credits

This course explores the interaction between psychology and the legal system. Students will learn the foundations, history, and terminology of forensic psychology and the influence of media and cultural issues. Students will also learn about the forensic psychologists role in criminal and civil proceedings, public policy, law enforcement, and victimization.

Lecture Hours: 48.000

Prerequisite: PSY2012

WOH2012 History of World Civilization to 1789 3.000 credits

This course covers the history of World Civilizations from the prehistoric period to the 18th century. Students will learn of the major political, social, economic, and cultural structures of civilizations and their development through 1789.

Lecture Hours: 48.000

WOH2022 History of World Civilization From 1789 3.000 credits

The student will examine the historical development of world civilizations since 1789. Students will learn of historical processes and developments in social, cultural, political, and economic contexts since the 18th century.

Lecture Hours: 48.000

Program Description

Architecture

Associate in Arts | Code: 10200 | 60 credit

This program provides a foundation in areas such as architectural drawing, design and structure, as well as necessary courses in mathematics. Students may transfer to one of three universities in Florida that have accredited programs in architecture. An architect designs and oversees the construction or remodeling of buildings, working with engineers and contractors toward a prescribed goal.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

		Units: 12.0
ENC 1101	English Composition 1	3.0
ARH 1000	Art Appreciation	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ARC1115 Architectural Communications 1 2.000 credits

Exercises in freehand drawing, sketching and linear perspective are designed to increase the student's awareness of the architectural environment. This is accomplished through a series of form studies of nature, architectural forms, and abstract elements of composition.

Lecture Hours: 16.000, Lab Hours: 32.000

Course User Fee: \$25.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

ARC1126C Architectural Drawing 1 4.000 credits

This course exercises the visualization and drafting of architectural objects and construction conditions. Students will learn to draw orthographic projections, isometric and sectional drawings as an expression of architectural communication. Topics include drawing plans, elevations, details, schedules, and sections of wood frame and masonry structures.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

ARC1301 Architectural Design 1 4.000 credits

Introductory course to architectural design, its scope, methods and vocabulary interfacing graphics and design as a means towards an awareness and understanding of basic organizational principles. Design concepts analyzed through graphical representation and modeling. Pre/Corequisite: ARC1115.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

ARC2701 History of Architecture 1 3.000 credits

This course offers a survey of architecture from ancient times through the 18th century and includes works from the Western canon. Students will examine the integration of art forms, structural elements, and ornamental designs across world civilizations, analyzing their connections to broader aspects of human development. Through this exploration, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societies throughout historical periods.

Lecture Hours: 48.000

Course User Fee: \$10.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ARC1302 Architectural Design 2 4.000 credits

A continuation of ARC1301, emphasizing the application of ordering concepts, and aspects and determinants of form and space. An individual design process is developed by the student. Prerequisite: ARC1301; Pre/Corequisites: ARC1126, ARC2701.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

ARC2171C Computer Aided Drafting 1 4.000 credits

Computer-aided drafting as it applies in the fields of architecture and interior design using office simulation. Emphasis is on the production of computer-aided drafting of working drawings involving different types of structure.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ARC1126C OR ARC2461

Course User Fee: \$50.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

PHY2053L Physics (Without Calculus) 1 Lab 1.000 credits

This laboratory course is designed to complement PHY2053. Students will engage in hands-on experiments that reinforce theoretical concepts related to kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Through practical applications of algebra and trigonometry, learners will develop analytical skills while conducting experiments that illustrate key physical principles. The course emphasizes critical thinking and problem-solving as students collect and analyze data, interpret results, and communicate their findings effectively. This lab experience aims to deepen students' understanding of the scientific concepts covered in the parent course and their relevance to real-world situations.

Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053

Course User Fee: \$20.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

WOH2012 History of World Civilization to 1789 3.000 credits

This course covers the history of World Civilizations from the prehistoric period to the 18th century. Students will learn of the major political, social, economic, and cultural structures of civilizations and their development through 1789.

Lecture Hours: 48.000

WOH2022 History of World Civilization From 1789 3.000 credits

The student will examine the historical development of world civilizations since 1789. Students will learn of historical processes and developments in social, cultural, political, and economic contexts since the 18th century.

Lecture Hours: 48.000

ARC2461 Architectural Materials and Construction 1 4.000 credits

An introduction to basic materials and methods of building construction. Emphasis is on wood, concrete, unit masonry, and light steel construction. Laboratory projects may include working drawings' interpretation, sketching construction details, or field trips to construction sites and fabricant plants. Designed primarily as the initial materials and methods course for architectural transfer students.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ARC1126C OR BCN1251

Course User Fee: \$25.00

ARC2702 History of Architecture 2 3.000 credits

This course provides a survey of architecture from the 19th century to the present and includes works from the Western canon and examining architectural developments. Students will analyze the integration of art forms, structural elements, and ornamental designs across civilizations, exploring their connections to human development, including art and history. Through this study, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societal changes and cultural expressions throughout modern and contemporary periods. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$10.00

Program Description

Art or Art Education

Associate in Arts | Code: 11000 | 60 credit

This program offers hands-on instruction in medias such as ceramics, jewelry making and metalsmithing, painting, photography, print making and sculpture. Additionally, the curriculum includes design, art history and education classes, so that students may work as artists or art teachers.

Program Modality: Both [In-Person (IP) and On-line]

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

ART1300C Drawing 4.000 credits

Basic problems in freehand drawing, including perspective, still-life and landscape. Emphasis is on developing a sense of structure through line, form and texture.

Lecture Hours: 32.000, Lab Hours: 64.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

ART1202C Two-Dimensional Design 4.000 credits

This course is designed to give students an understanding of advanced concepts of two-dimensional design and to give hands on opportunity to transform visual and experiential information into two-dimensional form. Creative individual thinking and image making and successful problem solving both aesthetically and technically are ultimate goals.

Lecture Hours: 32.000, Lab Hours: 64.000

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

ARH2050 Art History 1 3.000 credits

This course offers a survey of visual arts from prehistory to 800 C.E. and includes works from the western canon. Students will examine artistic expressions across civilizations, analyzing their connections to historical contexts and aspects of human development. Through this exploration, students will develop critical thinking skills and gain understanding of how visual arts reflect and influence societal developments, ideas, and values throughout early history.

Lecture Hours: 48.000

Course User Fee: \$10.00

ART1202C Two-Dimensional Design 4.000 credits

This course is designed to give students an understanding of advanced concepts of two-dimensional design and to give hands on opportunity to transform visual and experiential information into two-dimensional form. Creative individual thinking and image making and successful problem solving both aesthetically and technically are ultimate goals.

Lecture Hours: 32.000, Lab Hours: 64.000

ARH2051 Art History 2 3.000 credits

In this course, students will embark on a world survey of the visual arts from 800 to 1850 A.D., exploring various artistic movements, styles, and cultural contexts. The course will delve into the rich and diverse artistic traditions from different regions, including works from the Western canon. Writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$5.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ART1330C Figure Drawing 4.000 credits

Drawing and painting from the live model with emphasis on structure, movement and expression.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$80.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

Program Description

Atmospheric Science & Meteorology

Associate in Arts | Code: 11903 | 60 credit

To transfer to a four-year program in atmospheric science and meteorology, students must take science and math courses as well as introductory courses in meteorology. Job opportunities may include weather forecasting in aviation, marine or shipping companies, government agencies, and broadcasting or transportation industries. Additionally, meteorologists may work with other scientists researching phenomena such as volcanoes, hurricanes and fluctuating climate systems.

Program Modality: Both [In-Person (IP) and On-line]

PHY 2049L	Physics with Calculus 2 Lab	1.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

MET1010 Introduction to Weather 3.000 credits

An introduction to fundamentals of weather and their impact on human activities. Topics include temperature, humidity, clouds, precipitation, air masses, fronts, and storms. Emphasis is on understanding how these processes take place and their results.

Lecture Hours: 48.000

Pre/Corequisite: PSC1515

Course User Fee: \$10.00

GIS1040 Introduction to GIS Technology 4.000 credits

This course teaches the principles of Geographic Information Systems (GIS). The student will learn fundamental GIS concepts, GIS models and formats, as well as map creation and analysis. At the end of the course, the student will be able to perform basic operations in GIS software. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2049 Physics with Calculus 2 4.000 credits

Foundation course for physical science and engineering majors. PHY 2048 covers classical mechanics and thermodynamics. PHY 2049 includes electricity, magnetism, waves and optics.

Lecture Hours: 64.000

Prerequisite: PHY2048, PHY2048L, Corequisite: MAC2312, PHY2049L

Course User Fee: \$10.00

PHY2049L Physics with Calculus 2 Lab 1.000 credits

Laboratory for PHY 2049.

Lab Hours: 32.000

Prerequisite: PHY2048, PHY2048L, Corequisite: MAC2312, PHY2049

Course User Fee: \$20.00

Program Description

Biology

Associate in Arts | Code: 10400 | 60 credit

Biology, or life science, is the study of all aspects of living organisms, emphasizing the relationship of animals and plants to their environment. This program provides the first two years of a four-year curriculum for students planning to major in biology, botany, zoology, marine biology, ecological studies or microbiology. Biology majors may also enter professional schools in medicine, dentistry, veterinary medicine, optometry or podiatry.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds.

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting. Prerequisites: CHM1046, CHM1046L; Corequisite: CHM2210.

Lab Hours: 64.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

CHM2211 Organic Chemistry 2 3.000 credits

In organic chemistry 2, students will learn about nomenclature, preparation reactions, and electronic and structural features of alcohols, ethers, phenols, aldehydes, ketones, carboxylic acids, acid anhydrides, amides, esters, and other organic compounds.

Lecture Hours: 48.000

Prerequisite: CHM2210, CHM2210L, Corequisite: CHM2211L

Course User Fee: \$15.00

CHM2211L Organic Chemistry 2 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2211. Topics include nomenclature, preparation reactions, and electronic and structural features of alcohols, ethers, phenols, aldehydes, ketones, carboxylic acids, acid anhydrides, amides, esters, and other organic compounds will be performed in a laboratory setting.

Lab Hours: 64.000

Prerequisite: CHM2210, CHM2210L, Corequisite: CHM2211

Course User Fee: \$45.00

Program Description

Building Construction

Associate in Arts | Code: 10907 | 60 credit

This program is for students primarily interested in the construction of buildings rather than their architectural design. Coursework includes math and science subjects as well as courses in business and construction. A four-year degree in this program will prepare students to enter the building construction industry at the management level.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 13.0

ENC 1101	English Composition 1	3.0
<i>Humanities</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
HUM 1020	Humanities	3.0
OR		
LIT 2000	Introduction to Literature	3.0
OR		
MUL 1010	Music Appreciation	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
OR		

THE 2000	Theatre Appreciation	3.0
MAC 1105	College Algebra	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
SLS 1106	First Year Experience Seminar	1.0

Semester 2

Units: 12.0

ENC 1102	English Composition 2	3.0
MAC 1147	Pre-Calculus Algebra and Trigonometry	5.0
GLY 1010	Physical Geology	3.0
GLY 1010L	Physical Geology Laboratory	1.0
Computer Competency*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Skills Placement (CSP)

Semester 3

Units: 10.0

ARC 1126C	Architectural Drawing 1	4.0
ARC 2701	History of Architecture 1	3.0
ECO 2013	Principles of Economics (Macro)	3.0

Semester 4

Units: 14.0

ACG 2021	Financial Accounting	3.0
ACG 2021L	Financial Accounting Lab	1.0
BUL 2241	Business Law 1	3.0
SPC 2608	Introduction to Public Speaking	3.0
SUR 1101C	Surveying 1	4.0

Semester 5

Units: 11.0

PHY 2053	Physics (without Calculus) 1	3.0
PHY 2053L	Physics (Without Calculus) 1 Lab	1.0
STA 2023	Statistical Methods	3.0
Pathway Electives*		4.0

*Select 4 credits from the following course options: BCN1272, BCN1275, BCT1743, BCT1750, BCT1770, BCT1771, or BCT2760

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon.

Written analysis of literary works may be required.

Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics.

Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues.

Lecture Hours: 48.000

Course User Fee: \$5.00

GLY1010L Physical Geology Laboratory 1.000 credits

Laboratory for GLY 1010. Studies of common minerals and rocks and topographic and geologic maps along with aerial photography.

Lab Hours: 32.000

Corequisite: GLY1010

Course User Fee: \$10.00

ARC1126C Architectural Drawing 1 4.000 credits

This course exercises the visualization and drafting of architectural objects and construction conditions.

Students will learn to draw orthographic projections, isometric and sectional drawings as an expression of architectural communication. Topics include drawing plans, elevations, details, schedules, and sections of wood frame and masonry structures.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

ARC2701 History of Architecture 1 3.000 credits

This course offers a survey of architecture from ancient times through the 18th century and includes works from the Western canon. Students will examine the integration of art forms, structural elements, and ornamental designs across world civilizations, analyzing their connections to broader aspects of human development. Through this exploration, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societies throughout historical periods.

Lecture Hours: 48.000

Course User Fee: \$10.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

BUL2241 Business Law 1 3.000 credits

Law in relation to the proper conduct of business, including a consideration of the nature and source of law, courts and courtroom procedure, contracts, sales of goods, negotiable instruments and secured transactions. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

SUR1101C Surveying 1 4.000 credits

The theories and practices in surveying and the use of the principal types of surveying instruments in horizontal and vertical planes. Problems include the measurement of distance; the use of compass, sextant, transit traverse, stadia, and basic mapping. Field and laboratory practice are required. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147

Course User Fee: \$55.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

PHY2053L Physics (Without Calculus) 1 Lab 1.000 credits

This laboratory course is designed to complement PHY2053. Students will engage in hands-on experiments that reinforce theoretical concepts related to kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Through practical applications of algebra and trigonometry, learners will develop analytical skills while conducting experiments that illustrate key physical principles. The course emphasizes critical thinking and problem-solving as students collect and analyze data, interpret results, and communicate their findings effectively. This lab experience aims to deepen students' understanding of the scientific concepts covered in the parent course and their relevance to real-world situations.

Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053

Course User Fee: \$20.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

Program Description

Business Administration

Associate in Arts | Code: 10503 | 60 credits

Business Administration includes courses in accounting, business law and finance, as well as more generalized courses in mathematics. Students may transfer to senior colleges or universities that offer baccalaureate degrees in business administration. Ultimately, graduates may work in the fields of banking, finance, marketing, information systems or real estate.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1101	English Composition 1	3.0
GEB 1011	Principles of Business	3.0
MAC 1105	College Algebra	3.0
SLS 1106	First Year Experience Seminar	1.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---OR--- CGS1060C - Introduction to Computer Technology and Applications.
Departmental Recommendation: Computer Competency Test (CCT).

Semester 2		Units: 12.0
ECO 2013	Principles of Economics (Macro)	3.0
ENC 1102	English Composition 2	3.0
<i>Oral Communication</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0
QMB 2100	Basic Business Statistics	3.0

Semester 3		Units: 9.0
BSC 1005	General Education Biology	3.0
ECO 2023	Principles of Economics (Micro)	3.0
PHI 2600	Introduction to Ethics	3.0

Semester 4		Units: 13.0
ACG 2021	Financial Accounting	3.0
ACG 2021L	Financial Accounting Lab	1.0
<i>Humanities *</i>		3.0
ARH 1000	Art Appreciation	3.0
OR		
HUM 1020	Humanities	3.0

PHI 2010	Introduction to Philosophy	3.0
OR		
THE 2000	Theatre Appreciation	3.0
PSC 1515	Energy in the Natural Environment	3.0
Pathway Electives*		3.0

Select 3 credits from the following course option: ACG 1403, ACG 2360, ACG 2450, ACG 2630, CHI 1120, COP 1332, COP 1334, COP 2270, FRE 1120, GER 1120, ITA 1120, JPN 1120, MAN, MAR*, OST 2335, POR 1120, RUS 1120, SPN 1120, STA 2023, TAX*.

Semester		Units: 13.0
ACG 2071	Managerial Accounting	3.0
ACG 2071L	Managerial Accounting Lab	1.0
MAC 2233	Business Calculus	3.0
Pathway Elective*		6.0

Select 6 credits from the following course option: ACG 1403, ACG 2360, ACG 2450, ACG 2630, CHI 1120, COP 1332, COP 1334, COP 2270, FRE 1120, GER 1120, ITA 1120, JPN 1120, MAN, MAR*, OST 2335, POR 1120, RUS 1120, SPN 1120, STA 2023, TAX*.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits
Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite: MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033 Any Mathematics level higher than MAT 1033 will satisfy this requirement. MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision- making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L
Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.
Lab Hours: 32.000
Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071
Course User Fee: \$32.00

MAC2233 Business Calculus 3.000 credits

This course introduces the basic concepts of differential and integral calculus for students majoring in business administration and related fields. Topics include limits, continuity, differentiation and integration of polynomials, logarithmic and exponential functions with applications to business, economics, and the life sciences. Prerequisite: MAC 1105 or MAC1106 with a grade of C or better or departmental permission.
Computational Course.
Lecture Hours: 48.000
Prerequisite: MAC1105 OR MAC1106
Course User Fee: \$18.00

Program Description

Chemistry

Associate in Arts | Code: 11901 | 60 credits

Chemistry is the science that investigates the composition, properties and change of properties of elementary forms of matter. In addition to coursework in chemistry, the A.A. is a science and math intensive program that includes courses in botany, biology, physics, geometry and calculus. Chemists may work as researchers, analysts, or quality control specialists in companies that manufacture anything from pharmaceuticals to food products. Additionally, students may pursue careers in medicine, environmental science, chemical engineering or many other fields.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view. Lecture Hours: 48.000

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L. Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105
Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds.

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM 2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting.

Lab Hours: 64.000

Prerequisite: CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

Program Description

Computer Arts Animation

Associate in Arts | Code: 11005 | 60 credits

This program enables students develop creative and artistic skills conjunction with advanced computer skills. Studies include basic drawing and figure drawing, use of computer animation software and general education, well as evaluation of trends and standards in the animation industry for television and film.

Program Modality: Both [In-Person (IP) and On-line]

Select 4 credits from the following course option: ART, CAP*, DIG*, FIL*

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

ART1300C Drawing 4.000 credits

Basic problems in freehand drawing, including perspective, still-life and landscape. Emphasis is on developing a sense of structure through line, form and texture.

Lecture Hours: 32.000, Lab Hours: 64.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

ART1202C Two-Dimensional Design 4.000 credits

This course is designed to give students an understanding of advanced concepts of two-dimensional design and to give hands on opportunity to transform visual and experiential information into two-dimensional form. Creative individual thinking and image making and successful problem solving both aesthetically and technically are ultimate goals. Lecture Hours: 32.000, Lab Hours: 64.000

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement. Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$63.00

ARH2050 Art History 1 3.000 credits

This course offers a survey of visual arts from prehistory to 800 C.E. and includes works from the western canon. Students will examine artistic expressions across civilizations, analyzing their connections to historical contexts and aspects of human development. Through this exploration, students will develop critical thinking skills and gain understanding of how visual arts reflect and influence societal developments, ideas, and values throughout early history. Lecture Hours: 48.000
Course User Fee: \$10.00

ART1203C Three-Dimensional Design 4.000 credits

This course is designed to give students an understanding of the concepts of three-dimensional design and to provide hands-on opportunity to transform visual and experiential information into three-dimensional form. Creative individual thinking and image making and successful problem solving both aesthetically and technically are ultimate goals. Self-evaluation and safety skills will also figure prominently. Prerequisite: ART1202C. Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: ART1202C
Course User Fee: \$40.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method. Lecture Hours: 48.000
Course User Fee: \$8.00

ARH2051 Art History 2 3.000 credits

In this course, students will embark on a world survey of the visual arts from 800 to 1850 A.D., exploring various artistic movements, styles, and cultural contexts. The course will delve into the rich and diverse artistic traditions from different regions, including works from the Western canon. Writing intensive course. Lecture Hours: 48.000
Course User Fee: \$5.00

ART1330C Figure Drawing 4.000 credits

Drawing and painting from the live model with emphasis on structure, movement and expression. Lecture Hours: 32.000, Lab Hours: 64.000
Course User Fee: \$80.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ASL1150C American Sign Language 2 4.000 credits

This course provides continued instruction in the linguistic principles of American Sign Language and an additional 500 sign concepts. The course includes lecture, discussion and lab practice which is conducted in ASL. Prerequisite: ASL1140C.

Lecture Hours: 64.000

CHI1121 Elementary Mandarin Chinese 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Mandarin Chinese. Note: students must pass this course with a "C" or better to continue to CHI2220.

Lecture Hours: 64.000

Prerequisite: CHI1120

Course User Fee: \$15.00

FRE1121 Elementary French 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in French. Note: Students must pass this course with a C or better to continue to FRE2220.

Lecture Hours: 64.000

Prerequisite: FRE1120

Course User Fee: \$15.00

GER1121 Elementary German 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in German. Note: Students must pass this course with a C or better to continue to GER2220.

Lecture Hours: 64.000

Prerequisite: GER1120

Course User Fee: \$15.00

ITA1121 Elementary Italian 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Italian. Note: Students must pass this course with a C or better to continue to ITA2220.

Lecture Hours: 64.000

Prerequisite: ITA1120

Course User Fee: \$15.00

JPN1121 Elementary Japanese 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Japanese. Note: Students must pass this course with a C or better to continue to JPN2220.

Lecture Hours: 64.000

Prerequisite: JPN1120

Course User Fee: \$15.00

POR1121 Elementary Portuguese 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Portuguese. Note: students must pass this course with a "C" or better to continue to POR2220.

Lecture Hours: 64.000

Prerequisite: POR1120

Course User Fee: \$15.00

RUS1121 Elementary Russian 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Russian.

Lecture Hours: 64.000

Prerequisite: RUS1120

Course User Fee: \$15.00

SPN1121 Elementary Spanish 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Spanish. Note: Students must pass this course with a C or better to continue to SPN2220.

Lecture Hours: 64.000

Prerequisite: SPN1120

Course User Fee: \$15.00

Program Description

Computer Information Systems

Associate in Arts | Code: 10702 | 60 credits

CIS focuses on the structure, management and control of information resources on computers. Coursework includes business and math classes, as well as courses in information systems and programming languages. Students transfer to four-year institutions and major in computer information systems, computer and information sciences, information sciences, or management information systems. Degrees lead to careers in systems analysis, computer application programming, database management, network services and IT support.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

COP1334 Introduction to C++ Programming 4.000 credits

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)
Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$63.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)
Lecture Hours: 48.000
Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.
Lecture Hours: 48.000
Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."
Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.
Lecture Hours: 48.000

MAD2104 Discrete Mathematics 3.000 credits

This course introduces the student to the principles of discrete mathematics that apply to computer science. The student will examine set theory, logic, Boolean algebra, number theory, vectors and matrices, combinatorics, probability, relations, functions, and basic graph theory. Computational Course.
Lecture Hours: 48.000
Prerequisite: MAC1106 OR MAC1140
Course User Fee: \$18.00

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.
Lecture Hours: 48.000
Course User Fee: \$10.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.
Lecture Hours: 48.000, Lab Hours: 32.000
Corequisite: COP1047C OR COP1334 OR COP2270
Course User Fee: \$63.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.
Lecture Hours: 48.000
Course User Fee: \$15.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.
Lecture Hours: 48.000
Recommended Preparation: Completion of MGF1131 prior to registration.
Course User Fee: \$18.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.
Lecture Hours: 48.000
Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHY1020 General Education Physics 3.000 credits

This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. Student learning outcomes: students will critically evaluate everyday phenomena using the scientific method; students will explain the basis of physical principles (such as conservation laws) and how they apply to everyday phenomena; students will interpret information conveyed in diagrams and graphs; and students will perform simple calculations relevant to real world problems.

Lecture Hours: 48.000

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

CAP1788 Introduction to Data Analytics 4.000 credits

This course offers a broad introduction to data analytics and the role it plays in modern organizations. Students will use Excel and Tableau to import, clean, transform, and visualize data. Students will also learn how to effectively communicate findings to decision makers.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CGS1540C Database Concepts Design 4.000 credits

This course is designed for computer science majors and non-majors who require a fundamental knowledge of databases and database management systems. Students will learn how to design, implement and use databases to maintain and manipulate data. Students should have knowledge of basic computer concepts or seek faculty advisement.

Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Students should have knowledge of basic computer concepts or seek faculty advisement.

Course User Fee: \$63.00

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP2805C Java Programming 2 4.000 credits

This is an advanced level programming course using Java. Students will learn how to code, compile and execute programs. Topics include object serialization, Java Collection, sorting/searching algorithms, multithreading and networking capabilities, and Java databases.

Lecture Hours: 48.000, Lab Hours: 32.000

Prerequisite: COP2800

Course User Fee: \$63.00

CTS1120 Cybersecurity Fundamentals 4.000 credits

This course provides a foundation of knowledge in the information technology security field. Students will learn general network security concepts; compliance and operational security; threats and vulnerabilities; application, data, and host security; access control and identity management; cryptography. Hands-on training benefits the novice as well as the experienced network professional. Lecture Hours: 48.000, Lab Hours: 32.000

Recommended Preparation: Note: Students are strongly encouraged to complete CTS 1134 prior to enrollment in CTS 1120. Students who enroll concurrently should ensure they have a foundational understanding of networking concepts, including IP addressing, protocols, and network services. In mini-term formats, students should complete CTS 1134 during the first half of the term and CTS 1120 during the second half.

Course User Fee: \$63.00

CTS1134 Networking Technologies 4.000 credits

This course will provide an introduction to the technical areas of network connectivity, data communications, and communication protocols. Emphasis on understanding the foundation of networking technologies and data communication concepts. Topics covered will include an exploration of computer networking development, the OSI reference model, data signaling, data translation, standards for communications and data transmissions, network topologies and access methods. Laboratory fee.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

CTS1145 Cloud Essentials 4.000 credits

This course provides knowledge of Cloud computing concepts, services, architecture, system integration, connectivity, data center migration, administration, security, and technical support. Coverage includes preparation for the CompTIA Cloud Essentials certification examination. (3 hr. lecture; 2 hr. lab).

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

Program Description

Computer Science

Associate in Arts | Code: 10703 | 60 credits

As the name suggests, Computer Science is a more science-intensive program than CIS. In addition to courses in programming and applications, the program provides a thorough grounding in mathematics, biology, chemistry and physics. Computer scientists design technical programs, do research, create new technologies, develop operating systems, code device drivers, write specialized programming languages and implement complex applications in a variety of settings. Computer Science requires skills in mathematics and physics. Students must complete Calculus II and Physics with Calculus II before entering their junior year.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 13.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		

POS 2041	American Federal Government	3.0
SLS 1106	First Year Experience Seminar	1.0

Semester 2

Units: 14.0

CHM 1045	General Chemistry and Qualitative Analysis	3.0
CHM 1045L	General Chemistry Lab	2.0
COP 1334	Introduction to C++ Programming	4.0
MAC 1147	Pre-Calculus Algebra and Trigonometry	5.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 3

Units: 7.0

COP 2800	Java Programming	4.0
ENC 1102	English Composition 2	3.0

Semester 4

Units: 14.0

ECO 2013	Principles of Economics (Macro)	3.0
MAC 2311	Calculus and Analytical Geometry 1	5.0
<i>Oral Communication</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0
PHY 1025	Basic Physics	3.0

Semester 5

Units: 12.0

MAC 2312	Calculus and Analytical Geometry 2	4.0
PHI 2600	Introduction to Ethics	3.0
PHY 2048	Physics with Calculus 1	4.0
PHY 2048L	Physics with Calculus 1 Lab	1.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

**COP1334 Introduction to C++ Programming
4.000 credits**

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)
Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$63.00

**MAC1147 Pre-Calculus Algebra and Trigonometry
5.000 credits**

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics.
Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.
Lecture Hours: 80.000
Prerequisite: MAC1105
Course User Fee: \$18.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.
Lecture Hours: 48.000, Lab Hours: 32.000
Corequisite: COP1047C OR COP1334 OR COP2270
Course User Fee: \$63.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.
Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.
Lecture Hours: 48.000
Course User Fee: \$15.00

**MAC2311 Calculus and Analytical Geometry 1
5.000 credits**

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

**MAC2312 Calculus and Analytical Geometry 2
4.000 credits**

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

Program Description

Criminal Justice Administration

Associate in Arts | Code: 12204 | 60 credits

In addition to coursework focusing on criminal justice and law, this program includes classes in history, sociology and political science. Thus, pre-law students will find this program suitable, as well as those seeking Bachelor's degrees in criminal justice. This program may lead to careers in law enforcement, corrections (including probation and parole), and security in private businesses or government.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 12.0

ENC 1101	English Composition 1	3.0
HUM 1020	Humanities	3.0
PHI 2600	Introduction to Ethics	3.0
SPC 1017	Introduction to Communication	3.0

Semester 2

Units: 12.0

BSC 1005	General Education Biology	3.0
ENC 1102	English Composition 2	3.0
POS 2041	American Federal Government	3.0
<i>Social Science</i>		3.0
DEP 2000	Human Growth and Development	3.0
OR		

ECO 2013	Principles of Economics (Macro)	3.0
OR		
PSY 2012	Introduction to Psychology	3.0

Semester 3 **Units: 12.0**

CCJ 1010	Introduction to Criminology	3.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
MAC 1105	College Algebra	3.0
PSC 1515	Energy in the Natural Environment	3.0

Semester 4 **Units: 12.0**

CCJ 1020	Introduction to Criminal Justice	3.0
CJC 1000	Introduction to Corrections	3.0
CJL 2062	Constitutional Law and Legal Procedure or Evidence	3.0
STA 2023	Statistical Methods	3.0

Semester 5 **Units: 12.0**

CCJ 1191	Human Behavior in Criminal Justice	3.0
CCJ 2840	Introduction to Criminal Justice Research with AI	3.0
CJE 2600	Criminal Investigation	3.0
CJJ 2002	Juvenile Delinquency	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

CCJ1010 Introduction to Criminology 3.000 credits

Theories and causes of criminal and delinquent behavior, including its variations, ramifications, explanations and measures of prevention, control and treatment.

Lecture Hours: 48.000

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CCJ1020 Introduction to Criminal Justice 3.000 credits

This course will explore and define the various components of the criminal justice system. It is designed for the entry level criminal justice practitioner and beginning student interested in entering the field.

Lecture Hours: 48.000

CJC1000 Introduction to Corrections 3.000 credits

A comprehensive view of the historical and philosophical treatment programs and developments in the field of adult institutional corrections. Emphasis is on understanding the offender in the correctional system; an examination of the correctional client and staff, agencies and recidivism; (3 hr. lecture).

Lecture Hours: 48.000

CJL2062 Constitutional Law and Legal Procedure or Evidence 3.000 credits

An examination of the United States and Florida Constitutions, with emphasis on leading cases dealing with arrest, search and seizure, confessions and the rules of evidence.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

CCJ1191 Human Behavior in Criminal Justice 3.000 credits

Human behavior and how it relates to the duties and responsibilities of the criminal justice practitioner.

Lecture Hours: 48.000

CCJ2840 Introduction to Criminal Justice Research with AI 3.000 credits

This course provides an introduction to core research methods utilized in the field of Criminology and Criminal Justice. Students will learn foundational research concepts, including research design, data collection methods, and data analysis techniques. A key focus will be on the ethical and effective use of Artificial Intelligence (AI) tools to assist in various stages of the research process, such as data cleaning, analysis, and interpretation. Students will gain practical experience in applying these methods through hands-on projects and develop critical thinking skills necessary for evaluating research findings and understanding the social implications of criminal justice research. Recommended: Students are encouraged to take ENC1101 or CCJ1020 prior to registration.

Lecture Hours: 48.000

Recommended Preparation: ENC1101 OR CCJ1020

CJE2600 Criminal Investigation 3.000 credits

Fundamentals of criminal investigation, theory and practice, including crime scene search; preservation, collection and transportation of physical evidence; interviewing, interrogating; statement taking; and case preparation, with investigation of specific offenses; relationship with the police science laboratory.

Lecture Hours: 48.000

CJJ2002 Juvenile Delinquency 3.000 credits

A history of the juvenile court system in the United States. An analysis of delinquency and the family structure. Delinquency control including the police function with juveniles and their families, preventative measures by adequate court and police enforcement, rehabilitative processes, and the philosophy and programs of schools for boys and girls and detention homes.

Lecture Hours: 48.000

Program Description

Dance

Associate in Arts | Code: 11003 | 60 credits

Studio classes feature modern dance and ballet, and the program also includes theoretical courses. This curriculum meets the pre-professional and general education course requirements for transfer, but students should meet with an advisor to discuss the specific requirements of the four-year institution they plan to attend. Often,

departments in four-year institutions will require an audition. This program is designed to prepare students pursuing careers in choreography or the performance of ballet and jazz or contemporary forms of dance. The program is also suited for students wishing to become teachers of dance.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

DAA1104 Modern 1 2.000 - 3.000 credits

Beginning exploration of techniques, creative aspects, and theoretical concepts of modern dance which includes but is not limited to proper alignment and mechanics of breathing and phrasing, verbal and movement vocabulary, including structural improvisation, and exercises utilizing Laban's movement analysis. No previous experience required. Dance Majors only.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

DAA1204 Ballet 1 2.000 - 3.000 credits

Beginning exploration of techniques and theoretical concepts of ballet increasing awareness of proper alignment, balance, coordination and application of various musical meters. No previous experience required. Dance Majors only.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

DAA1105 Intermediate Modern 2.000 - 3.000 credits

Further development of modern dance techniques, creative aspects, theoretical concepts emphasizing components based on Graham, Cunningham and Limon techniques. Dance Majors only.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

Prerequisite: DAA1104

DAA1205 Intermediate Ballet 2.000 - 3.000 credits

Continuing exploration of techniques and theoretical concepts of ballet placing further emphasis on precision of lines and exactness of movement. Dance Majors only.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

Prerequisite: DAA1204

DAN2100 Dance Appreciation 3.000 credits

This course provides an overview of dance as an art form, entertainment, and social activity and includes works from the Western canon to examine its significance from ancient times to the 21st century. Students will analyze dance genres such as ballet, modern dance, jazz dance, and world dance forms, exploring their connections to literature, music, and philosophy while considering the roles of dancers, choreographers, and audiences. Through this study, students will develop critical thinking skills and gain understanding of how dance reflects and influences culture across time periods and societies.

Lecture Hours: 48.000

DAN2130 Dance History 1 3.000 credits

In this course, students will engage in a comprehensive study of the origins and development of dance as an art form, tracing its evolution from its inception in primitive cultures to the present day. The course will explore the cultural, historical, and social contexts that shaped the various styles and techniques of dance throughout history. Students will analyze and critique significant dance works, including those from the western canon, to gain a deeper understanding of the artistic, aesthetic, and expressive elements of dance. Writing intensive course.

Lecture Hours: 48.000

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

DAA2106 Modern2 2.000 - 3.000 credits

Further development of modern dance techniques, creative aspects and theoretical concepts emphasizing components based on Graham, Cunningham and Limon techniques. The use of improvisation as an introduction to basic principles of form and their application to dance composition will be emphasized. Dance Majors only.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

Prerequisite: DAA1104or Departmental Permission.

Course User Fee: \$5.00

DAA2207 Advanced Ballet 2.000 - 3.000 credits

Continuing exploration of techniques and theoretical concepts of ballet placing further emphasis on precision of line and exactness of movement. May be repeated for credit. Dance majors only.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

Prerequisite: DAA1205or Departmental Permission.

DAA1504 Jazz Dance 1 2.000 - 3.000 credits

This course is designed to introduce the student to the vocabulary and technique of jazz dance, incorporating a fusion of styles from popular, Afro-Caribbean, and contemporary modern jazz choreographers. For majors only. Audition required. May be repeated for credit.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

DAA2610 Dance Composition and Improvisation 1 2.000 - 3.000 credits

Individual experience in developing movement phrases and combinations based on solving problems within a form and a movement framework, as well as the movement imagery designed to develop the dancer's creative imagination. Individuals will experience composition using the basic elements of movement theory in an improvisational framework.

Lecture Hours: 16.000 - 32.000, Lab Hours: 32.000 - 64.000

DAA2680 Repertory 1 2.000 - 3.000 credits

Dance works in both ballet and many different styles of modern and ethnic dance vocabularies are studied. Works include both standard repertory and commissioned dances. Students work with choreographers, directors and reconstructors of classic works, giving the dancer the experience of being choreographed on and being directed in repertory works. The works learned are performed by the students in workshop and public performances throughout the year.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan. Lecture Hours: 48.000

DAA2107 Advanced Modern 2 2.000 - 3.000 credits

Further development of modern dance techniques, creative aspects and theoretical concepts based on Graham, Cunningham, and Limon techniques. May be repeated for credit. Dance Majors only.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

Prerequisite: DAA2106or Departmental Permission

DAA2681 Repertory 2 2.000 - 3.000 credits

A continuation of DAA 2680.

Lecture Hours: 16.000, Lab Hours: 32.000 - 64.000

Prerequisite: DAA2680or Departmental Permission.

Program Description

Dietetics

Associate in Arts | Code: 11305 | 60 credits

This program provides the science education needed to transfer to a four-year program in dietetics. Chemistry, biology, anatomy and physiology are emphasized in this program. Dieticians and nutrition specialists may work as meal planners in institutions such as schools and hospitals, in the food products or health and fitness industry, or in a range of health and medical professions.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 10.0
ENC 1101	English Composition 1	3.0
MAT 1033	Intermediate Algebra	3.0
MAT 1033L	Intermediate Algebra Recitation Hall	0.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
SLS 1106	First Year Experience Seminar	1.0
Semester 2		Units: 13.0
ENC 1102	English Composition 2	3.0
MAC 1105	College Algebra	3.0
<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
CHM 1025	Introductory Chemistry	3.0
CHM 1025L	Introductory Chemistry Lab	1.0
Semester 3		Units: 13.0

BSC 2010	Principles of Biology	3.0
BSC 2010L	Principles of Biology 1 Laboratory	2.0
CHM 1045	General Chemistry and Qualitative Analysis	3.0
CHM 1045L	General Chemistry Lab	2.0
<i>Oral Communication</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0

Semester 4

Units: 13.0

CHM 1046	General Chemistry and Qualitative Analysis	3.0
CHM 1046L	General Chemistry and Qualitative Analysis Lab	2.0
MCB 2010	Microbiology	3.0
MCB 2010L	Microbiology Laboratory	2.0
PSY 2012	Introduction to Psychology	3.0

Semester 5

Units: 11.0

HUN 1201	Essentials of Human Nutrition	3.0
PHI 2600	Introduction to Ethics	3.0
STA 2023	Statistical Methods	3.0
ECO 2013	Principles of Economics (Macro)	2.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications.

Lecture Hours: 48.000

Prerequisite: MAT0022C OR MAT0028 OR MAT0057 or by placement score, or eligible exemption.

Course User Fee: \$18.00

MAT1033L Intermediate Algebra Recitation Hall 0.000 credits

The student will receive individualized, small group or whole group instruction to deepen their conceptual understanding of mathematics. The student will reinforce and apply content knowledge with effective problem-solving techniques and non-cognitive activities to make mathematics meaningful and relevant to their fields of study while strengthening the concepts needed to achieve the objectives of MAT1033. This lab session is associated and funded by the First in the World Grant, CCAT Math Project.

Lab Hours: 1.000

Corequisite: MAT1033

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.
Lecture Hours: 48.000

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$15.00

CHM1025L Introductory Chemistry Lab 1.000 credits

This course is an optional beginning chemistry laboratory course, which has been designed for those students who have little or no background in chemistry and are enrolled in CHM1025. The students will reinforce what they learn in CHM1025. Students will learn about basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Lab Hours: 32.000
Prerequisite: MAT1033, Corequisite: CHM1025
Course User Fee: \$30.00

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

Program Description

Drama or Drama Education

Associate in Arts | Code: 11002 | 60 credits

This is a comprehensive program in all aspects of theatrical production, including lighting, costuming, make-up and other aspects of stagecraft. Students participate in stage productions which are presented to the public throughout the academic year. While this program does provide the necessary coursework to transfer to a four-year institution, some departments in four-year colleges and universities will require an audition or portfolio, depending on the student's intended area of study. Careers in drama include education, theatrical production, casting, acting and a wide variety of stagecraft.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 15.0
ENC 1101	English Composition 1	3.0
MGF 1130	Mathematical Thinking	3.0
TPP 1100	Acting 1	3.0
TPP 1120	Improvisation Ensemble	3.0
SLS 1510	Preparing for Student Success	3.0
Semester 2		Units: 12.0
ENC 1102	English Composition 2	3.0
TPP 1700	Voice for the Stage	3.0
TPP 2111	Acting 2	3.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
Semester 3		Units: 9.0
MGF 1131	Mathematics in Context	3.0
THE 2000	Theatre Appreciation	3.0
<i>Humanities</i>		3.0
DAN 2100	Dance Appreciation	3.0
OR

TPP 2260	Acting for the Camera 1	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

TPP1100 Acting 1 3.000 credits

The fundamentals of stage performance, stressing voice, movement, and the more formal and technical aspects of the actor's art. May be repeated for credit. Lecture Hours: 48.000

TPP1120 Improvisation Ensemble 3.000 credits

The student will develop the skills of improvisation for use in role development and for performance.

Lecture Hours: 48.000

SLS1510 Preparing for Student Success 3.000 credits

This course provides an orientation to college life and helps develop academic, career, and personal goals. Students will learn college success strategies, goal-setting, learning style assessments, as well as general and discipline-specific study skills in the context of various theoretical, practical, and experiential perspectives.

Lecture Hours: 48.000

Course User Fee: \$15.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

TPP1700 Voice for the Stage 3.000 credits

The study and application of voice production, breathing, articulation, accents and movement in the actor's delivery. Emphasis is on clarity, precision, properly phrased and meaningful communication from the performer to the audience.

Lecture Hours: 48.000

TPP2111 Acting 2 3.000 credits

In this course, actors who have learned to express themselves freely now learn to adjust this expression to the demand of the role. Students begin to apply their skills for observation, imagination, and concentration to the study of roles close to themselves. Vocal and physical flexibility and expressiveness are now put to work in the realization of expectations of the playwright, here the student develops a systematic approach to creating a three-dimensional character. (3 hr. lecture)

Lecture Hours: 48.000

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society.

Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

DAN2100 Dance Appreciation 3.000 credits

This course provides an overview of dance as an art form, entertainment, and social activity and includes works from the Western canon to examine its significance from ancient times to the 21st century. Students will analyze dance genres such as ballet, modern dance, jazz dance, and world dance forms, exploring their connections to literature, music, and philosophy while considering the roles of dancers, choreographers, and audiences. Through this study, students will develop critical thinking skills and gain understanding of how dance reflects and influences culture across time periods and societies.

Lecture Hours: 48.000

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

MUL2380 Jazz and Popular Music in America 3.000 credits

A survey of the development of popular and jazz music with an emphasis on musical styles and outstanding artists. (3 hr. lecture)

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

TPP1150 Scene Study 1 1.000 - 3.000 credits

This course teaches the aspiring young theatre professional how to analyze a play in terms of the author's personal statement, the historical and social context within which it was written, the particular style used by the author, and the many options open to director and actor for bringing the work to stage life. A substantial portion of class time will be devoted to oral reading and interpretation of text.

Lecture Hours: 16.000 - 48.000

TPA1248 Makeup for the Stage 3.000 credits

An introduction to the art and techniques of makeup as used by the actor, theatrical designer, and technician. Special emphasis is given to straight makeup, age makeup, hair, character extension, and stylization.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

TPP2260 Acting for the Camera 1 3.000 credits

Acting students will attend lecture/lab to acquire the technical knowledge and training necessary for acting in the film and television industry. They will acquire a knowledge of the working procedure and terminology used in these media.

Lecture Hours: 32.000, Lab Hours: 32.000

Prerequisite: TPP1100or Departmental Permission.

Program Description

Economics

Associate in Arts | Code: 12201 | 60 credits

Economics is the study of how people produce, trade and consume goods and services. The A.A. program emphasizes fundamental coursework in business and mathematics. While many students choose to obtain graduate degrees, economists with Bachelor's degrees can work in fields such as business economics and forecasting, urban real estate and regional planning, analysis of markets and industrial regulation, management consulting and in banking and financial services.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy. Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view. Lecture Hours: 48.000

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ECO2023 Principles of Economics (Micro) 3.000 credits

Theory of markets, price mechanism, production, distribution and resource allocation; application of marginal analysis and equilibrium theory to the price and output decisions of the individual firm in pure competition, monopolistic competition, oligopoly and monopoly; agriculture; labor, rent interest and profits theory 3 credits Pre-requisite: MAT1033 with a "C" or higher MAC1105 is not a pre requisite but is it highly recommended. (3 hr. lecture) Prerequisite: MAT1033 Recommended Preparation:

Lecture Hours: 48.000

Prerequisite: MAT1033Any Mathematics level higher than MAT 1033 will satisfy this requirement.

MAC1105 is not a pre requisite but it is highly recommended , MAC1105

Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites:

ACG2001, ACG2021L, ACG2021, ACG2011;

Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

MAC2233 Business Calculus 3.000 credits

This course introduces the basic concepts of differential and integral calculus for students majoring in business administration and related fields. Topics include limits, continuity, differentiation and integration of polynomials, logarithmic and exponential functions with applications to business, economics, and the life sciences. Prerequisite: MAC 1105 or MAC1106 with a grade of C or better or departmental permission. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

Program Description

Engineering - Architectural

Associate in Arts | Code: 10905 | 60 credits

Miami Dade College offers ten Engineering A.A. programs: architectural, chemical, civil, computer, electrical, industrial, mechanical, ocean, science, and surveying and mapping. Each has its own curriculum to best prepare students for transfer to a four-year institution. Interdisciplinary fields can include the study of biomechanics, kinesiology, nutrition and related areas.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1**Units: 13.0**

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

EGN1008C Introduction to Engineering 3.000 credits

An introduction to the opportunities, challenges, and required skills of the engineering profession. Students will explore the different disciplines of engineering, their function in industry, and required education. Professional issues such as registration, ethics, and safety are discussed. Projects and activities are used to develop problem solving, communication and computer skills.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.
Lecture Hours: 64.000
Prerequisite: MAC2311
Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.
Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.
Lecture Hours: 64.000
Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L
Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.
Lab Hours: 32.000
Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048
Course User Fee: \$20.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better.
Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

Program Description

Engineering - Biomedical

Associate in Arts | Code: 10904 | 60 credits

Miami Dade College offers ten Engineering A.A. programs: architectural, chemical, civil, computer, electrical, industrial, mechanical, ocean, science, and surveying and mapping. Each has its own curriculum to best prepare students for transfer to a four-year institution. Interdisciplinary fields can include the study of biomechanics, kinesiology, nutrition and related areas.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1101	English Composition 1	3.0

----------	----------------------------------	-----

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course. Lecture Hours: 48.000

EGN1008C Introduction to Engineering 3.000 credits

An introduction to the opportunities, challenges, and required skills of the engineering profession. Students will explore the different disciplines of engineering, their function in industry, and required education. Professional issues such as registration, ethics, and safety are discussed. Projects and activities are used to develop problem solving, communication and computer skills. Lecture Hours: 32.000, Lab Hours: 32.000
Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program. Lecture Hours: 16.000
Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better. Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.
Lecture Hours: 64.000
Prerequisite: MAC2311
Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.
Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.
Lecture Hours: 64.000
Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L
Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.
Lab Hours: 32.000
Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048
Course User Fee: \$20.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better.

Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

Program Description

Engineering - Civil

Associate in Arts | Code: 10908 | 60 credits

Miami Dade College offers ten Engineering A.A. programs: architectural, chemical, civil, computer, electrical, industrial, mechanical, ocean, science, and surveying and mapping. Each has its own curriculum to best prepare students for transfer to a four-year institution. Interdisciplinary fields can include the study of biomechanics, kinesiology, nutrition and related areas.

Program Modality: Both [In-Person (IP) and On-line]

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course. Lecture Hours: 48.000

EGN1008C Introduction to Engineering 3.000 credits

An introduction to the opportunities, challenges, and required skills of the engineering profession. Students will explore the different disciplines of engineering, their function in industry, and required education. Professional issues such as registration, ethics, and safety are discussed. Projects and activities are used to develop problem solving, communication and computer skills. Lecture Hours: 32.000, Lab Hours: 32.000
Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program. Lecture Hours: 16.000
Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better. Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

EGN1008C Introduction to Engineering 3.000 credits

An introduction to the opportunities, challenges, and required skills of the engineering profession. Students will explore the different disciplines of engineering, their function in industry, and required education. Professional issues such as registration, ethics, and safety are discussed. Projects and activities are used to develop problem solving, communication and computer skills.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.
Lecture Hours: 64.000
Prerequisite: MAC2311
Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.
Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.
Lecture Hours: 64.000
Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L
Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.
Lab Hours: 32.000
Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048
Course User Fee: \$20.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better.

Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

Program Description

Engineering - Electrical

Associate in Arts | Code: 10910 | 60 credits

Miami Dade College offers ten Engineering A.A. programs: architectural, chemical, civil, computer, electrical, industrial, mechanical, ocean, science, and surveying and mapping. Each has its own curriculum to best prepare students for transfer to a four-year institution. Interdisciplinary fields can include the study of biomechanics, kinesiology, nutrition and related areas.

An introduction to the opportunities, challenges, and required skills of the engineering profession. Students will explore the different disciplines of engineering, their function in industry, and required education. Professional issues such as registration, ethics, and safety are discussed. Projects and activities are used to develop problem solving, communication and computer skills. Lecture Hours: 32.000, Lab Hours: 32.000
Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program. Lecture Hours: 16.000
Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better. Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

Program Description

Engineering - Geomatics (Surveying and Mapping)

Associate in Arts | Code: 10909 | 60 credits

Miami Dade College offers ten Engineering A.A. programs: architectural, chemical, civil, computer, electrical, industrial, mechanical, ocean, science, and surveying and mapping. Each has its own curriculum to best prepare students for transfer to a four-year institution. Interdisciplinary fields can include the study of biomechanics, kinesiology, nutrition and related areas.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

MAC 2313	Calculus and Analytic Geometry 3	4.0
----------	----------------------------------	-----

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

EGN1008C Introduction to Engineering 3.000 credits

An introduction to the opportunities, challenges, and required skills of the engineering profession. Students will explore the different disciplines of engineering, their function in industry, and required education. Professional issues such as registration, ethics, and safety are discussed. Projects and activities are used to develop problem solving, communication and computer skills.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.
Lecture Hours: 64.000
Prerequisite: MAC2311
Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course. Lecture Hours: 48.000

EGN1008C Introduction to Engineering 3.000 credits

An introduction to the opportunities, challenges, and required skills of the engineering profession. Students will explore the different disciplines of engineering, their function in industry, and required education. Professional issues such as registration, ethics, and safety are discussed. Projects and activities are used to develop problem solving, communication and computer skills. Lecture Hours: 32.000, Lab Hours: 32.000
Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program. Lecture Hours: 16.000
Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better. Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

Program Description

Engineering - Mechanical

Associate in Arts | Code: 10911 | 60 credits

Miami Dade College offers ten Engineering A.A. programs: architectural, chemical, civil, computer, electrical, industrial, mechanical, ocean, science, and surveying and mapping. Each has its own curriculum to best prepare students for transfer to a four-year institution. Interdisciplinary fields can include the study of biomechanics, kinesiology, nutrition and related areas.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 13.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
Humanities		3.0

----------	----------------------------------	-----

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

EGN1008C Introduction to Engineering 3.000 credits

An introduction to the opportunities, challenges, and required skills of the engineering profession. Students will explore the different disciplines of engineering, their function in industry, and required education. Professional issues such as registration, ethics, and safety are discussed. Projects and activities are used to develop problem solving, communication and computer skills.

Lecture Hours: 32.000, Lab Hours: 32.000

Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.
Lecture Hours: 64.000
Prerequisite: MAC2311
Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.
Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.
Lecture Hours: 64.000
Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L
Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.
Lab Hours: 32.000
Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048
Course User Fee: \$20.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better.

Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

Program Description

Engineering - Ocean

Associate in Arts | Code: 10913 | 60 credits

Miami Dade College offers ten Engineering A.A. programs: architectural, chemical, civil, computer, electrical, industrial, mechanical, ocean, science, and surveying and mapping. Each has its own curriculum to best prepare students for transfer to a four-year institution. Interdisciplinary fields can include the study of biomechanics, kinesiology, nutrition and related areas.

Program Modality: Both [In-Person (IP) and On-line]

----------	----------------------------------	-----

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000
Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course. Lecture Hours: 48.000

EGN1008C Introduction to Engineering 3.000 credits

An introduction to the opportunities, challenges, and required skills of the engineering profession. Students will explore the different disciplines of engineering, their function in industry, and required education. Professional issues such as registration, ethics, and safety are discussed. Projects and activities are used to develop problem solving, communication and computer skills. Lecture Hours: 32.000, Lab Hours: 32.000
Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program. Lecture Hours: 16.000
Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better. Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems.

Prerequisite: MAC 2312 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

Program Description

English/Literature & English Education

Associate in Arts | Code: 11500 | 60 credits

English/Literature is the study of great written works and how they were shaped by historical and cultural events. This program also includes education courses to prepare students for careers as teachers. However, students who graduate with a Bachelor's degree in English are equipped to work in publishing, and may be qualified to work as a writer in virtually any field.

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

SLS1510 Preparing for Student Success 3.000 credits

This course provides an orientation to college life and helps develop academic, career, and personal goals. Students will learn college success strategies, goal-setting, learning style assessments, as well as general and discipline-specific study skills in the context of various theoretical, practical, and experiential perspectives.

Lecture Hours: 48.000

Course User Fee: \$15.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon.

Written analysis of literary works may be required.

Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

ENC2300 Advanced Composition and Communication 3.000 credits

This writing-based course addresses techniques of critical thinking, persuasion, and argumentation. Students will refine their composition skills and develop their oral communication skills by examining and discussing a range of issues. Prerequisites: ENC1101, 1102 or equivalent with a grade of "C" or better. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101 AND ENC1102

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CRW2001 Creative Writing 1 3.000 credits

Imaginative writing in selected genres.

Lecture Hours: 48.000

CRW2002 Creative Writing 2 3.000 credits

Imaginative writing in selected genres.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ENG2012 Literary Theory 3.000 credits

This course introduces students to the study of literary criticism. Students will discuss, analyze, and write about literature through the lens of contemporary critical theory.

Lecture Hours: 48.000

Prerequisite: ENC1101

LIT2120 A Survey of World Literature 3.000 credits

This course examines world literature from the mid-renaissance to the present and includes works from the Western canon. Students will analyze literary works that exemplify human experience, exploring their connections to historical contexts, ideas, and literary developments. Through this study, students will develop critical thinking skills and gain understanding of how literature reflects and influences societies across time periods and societies. This is a writing intensive course.

Lecture Hours: 48.000

Prerequisite: ENC1102 or equivalent.

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.
Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.
Lecture Hours: 48.000

AML2010 American Literature 1 3.000 credits

American Literature from Colonial times to the Civil War. Prerequisites: ENC1101, ENC1102.
Lecture Hours: 48.000
Prerequisite: ENC1101

AML2020 American Literature 2 3.000 credits

American literature from the Civil War to the present. Prerequisites: ENC1101, ENC1102.
Lecture Hours: 48.000
Prerequisite: ENC1101

AML2600 African American Literature 3.000 credits

A study of African American historical and contemporary literature from various genres such as poetry, fiction, narratives, speeches, films, and drama. Prerequisite of ENC1101 with a Grade of "C" or higher, or equivalent.
Lecture Hours: 48.000
Prerequisite: ENC1101

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.
Lecture Hours: 48.000
Course User Fee: \$10.00

LIT2090 Contemporary Literature 3.000 credits

This course is a survey of contemporary prose and poetry.
Lecture Hours: 48.000

LIT2480 Issues in Literature & Culture 3.000 credits

Students will learn about literature as a socio-cultural response by writers to the world in which they live; they will connect literary texts to cultural issues through completion of oral and written assignments, critical analysis and practical investigation. Fulfills Gordon Rule writing requirement. Prerequisite: ENC 1102. (3 hr. lecture)
 Lecture Hours: 48.000
 Prerequisite: ENC1102ENC1102

ENL2012 English Literature 1 3.000 credits

A survey of major British writers from Chaucer through the 18th century. Required of English majors.
 Lecture Hours: 48.000
 Prerequisite: ENC1102

ENL2022 English Literature 2 3.000 credits

A survey of major British writers from the 18th century through the contemporary period. Required of English majors.
 Lecture Hours: 48.000
 Prerequisite: ENC1102

Program Description

Environmental Sciences

Associate in Arts | Code: 10203 | 60 credits

Environmental Studies examines environmental issues from both ecological and sociological standpoints. Thus, it is an interdisciplinary major which combines life sciences, social sciences and the humanities. Students at MDC take mostly science and mathematics courses to prepare for transfer into a baccalaureate program. This field is projected to grow in the 21st century, as the need for environmental researchers, analysts, engineers and journalists will grow.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 10.0

ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
SLS 1106	First Year Experience Seminar	1.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---OR--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 2

Units: 14.0

ENC 1102	English Composition 2	3.0
<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
CHM 1025	Introductory Chemistry	3.0
CHM 1025L	Introductory Chemistry Lab	1.0

EVR 1001	Introduction to Environmental Science	3.0
EVR 1001L	Introduction to Environmental Science Lab	1.0

Semester 3

Units: 13.0

BSC 2010	Principles of Biology	3.0
BSC 2010L	Principles of Biology 1 Laboratory	2.0
CHM 1045	General Chemistry and Qualitative Analysis	3.0
CHM 1045L	General Chemistry Lab	2.0
<i>Social Science</i>		3.0
ANT 2000	Introduction to Anthropology	3.0
OR		
ECO 2013	Principles of Economics (Macro)	3.0
OR		
PSY 2012	Introduction to Psychology	3.0

PHI 2600	Introduction to Ethics	3.0
STA 2023	Statistical Methods	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

CHM1025L Introductory Chemistry Lab 1.000 credits

This course is an optional beginning chemistry laboratory course, which has been designed for those students who have little or no background in chemistry and are enrolled in CHM1025. The students will reinforce what they learn in CHM1025. Students will learn about basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1025

Course User Fee: \$30.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

EVR1001L Introduction to Environmental Science Lab 1.000 credits

This course is the laboratory component for EVR1001 - Introduction to Environmental Science. Students will learn how the human and physical/biological worlds affect global climate change, including human/non-human interactions with minerals and mining, landscape ecology, petroleum depletion, and alternative fuels with the understanding of the earth's environment.

Lab Hours: 32.000

Pre/Corequisite: EVR1001

Course User Fee: \$20.00

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.
Lecture Hours: 48.000

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.
Lecture Hours: 48.000
Prerequisite: BSC2010, BSC2010L, BSC2011L
Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.
Lab Hours: 64.000
Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011
Course User Fee: \$40.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.
Lecture Hours: 48.000
Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L
Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.
Lab Hours: 64.000
Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046
Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)
Lecture Hours: 48.000
Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues.

Lecture Hours: 48.000

Course User Fee: \$5.00

GLY1010L Physical Geology Laboratory 1.000 credits

Laboratory for GLY 1010. Studies of common minerals and rocks and topographic and geologic maps along with aerial photography.

Lab Hours: 32.000

Corequisite: GLY1010

Course User Fee: \$10.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

Program Description

Exercise Science

Associate in Arts | Code: 12103 | 60 credits

Exercise Science studies the relationship of physical exercise to human health and disease prevention. This program at MDC prepares students for transfer with coursework in human anatomy and physiology, nutrition, health and exercise. Exercise science is a growing field with professionals working in diverse settings, such as

hospitals and health clubs, research facilities and sports teams. Specialists also work in corporate, industrial and educational environments.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications.

Lecture Hours: 48.000

Prerequisite: MAT0022C OR MAT0028 OR MAT0057 or by placement score, or eligible exemption.

Course User Fee: \$18.00

MAT1033L Intermediate Algebra Recitation Hall 0.000 credits

The student will receive individualized, small group or whole group instruction to deepen their conceptual understanding of mathematics. The student will reinforce and apply content knowledge with effective problem-solving techniques and non-cognitive activities to make mathematics meaningful and relevant to their fields of study while strengthening the concepts needed to achieve the objectives of MAT1033. This lab session is associated and funded by the First in the World Grant, CCAT Math Project.

Lab Hours: 1.000

Corequisite: MAT1033

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

**BSC2085 Human Anatomy and Physiology 1
3.000 credits**

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

**BSC2085L Human Anatomy & Physiology Lab 1
1.000 credits**

In this laboratory course, student will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

**BSC2086 Human Anatomy & Physiology 2 3.000
credits**

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite:

BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

**BSC2086L Human Anatomy & Physiology 2
Laboratory 1.000 credits**

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development from an experiential approach. Prerequisites:

BSC2085, BSC2085L; Corequisite: BSC2086.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

**DEP2000 Human Growth and Development 3.000
credits**

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

**HUN1201 Essentials of Human Nutrition 3.000
credits**

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

HLP1081 Fitness & Wellness for Life 3.000 credits

In this course students will learn the roles of exercise, physical activity, diet, and stress management in achieving optimal wellness. Students will explore current developments in health and complete lab assignments, which will assist in the determination of their current health status. Individualized exercise and dietary protocols based on these assessments will be developed. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHY1004 Physics With Applications 1 3.000 credits

Emphasizes the basic concepts and principles and their practical applications. Designed specifically for students in technical studies and for others wishing to strengthen their physics background before taking advanced courses.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: PHY1004L

Course User Fee: \$10.00

PHY1004L Physics with Applications 1 Lab 1.000 credits

Laboratory for PHY 1004.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: PHY1004

Course User Fee: \$20.00

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

DAN2100 Dance Appreciation 3.000 credits

This course provides an overview of dance as an art form, entertainment, and social activity and includes works from the Western canon to examine its significance from ancient times to the 21st century. Students will analyze dance genres such as ballet, modern dance, jazz dance, and world dance forms, exploring their connections to literature, music, and philosophy while considering the roles of dancers, choreographers, and audiences. Through this study, students will develop critical thinking skills and gain understanding of how dance reflects and influences culture across time periods and societies.

Lecture Hours: 48.000

DAN2130 Dance History 1 3.000 credits

In this course, students will engage in a comprehensive study of the origins and development of dance as an art form, tracing its evolution from its inception in primitive cultures to the present day. The course will explore the cultural, historical, and social contexts that shaped the various styles and techniques of dance throughout history. Students will analyze and critique significant dance works, including those from the western canon, to gain a deeper understanding of the artistic, aesthetic, and expressive elements of dance. Writing intensive course.

Lecture Hours: 48.000

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PET1170 Fundamentals of Athletic Coaching and Management 3.000 credits

This course will introduce students to the basic principles of athletic coaching and team management. Students will discuss the fundamentals of developing an individual athlete and team, effective athlete training programming, and factors which impact the operations of athletic organizations. Students will develop an understanding of how policy and coaching decisions influence an organization at all levels (Credit hours 3.00).

Lecture Hours: 48.000

Course User Fee: \$55.83

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

Program Description

Foreign Language

Associate in Arts | Code: 10301 | 60 credits

Foreign language programs train students to achieve reading, writing and verbal fluency in one or more foreign languages. The demand for interpreters, translators and language instructors is projected to grow in the 21st

century, and graduates with Bachelor's degrees can work almost anywhere in the world for corporations, businesses, governments, non-profit agencies or schools.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

CHI1120 Elementary Mandarin Chinese 1 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice mid-level in Mandarin Chinese. Note: students must pass this course with a "C" or better to continue to CHI1121.

Lecture Hours: 64.000

Course User Fee: \$15.00

FRE1120 Elementary French 1 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice mid-level in French. Note: Students must pass this course with a C or better to continue to FRE1121.

Lecture Hours: 64.000

Course User Fee: \$15.00

GER1120 Elementary German 1 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice mid-level in German. Note: Students must pass this course with a C or better to continue to GER1121.

Lecture Hours: 64.000

Course User Fee: \$15.00

ITA1120 Elementary Italian 1 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice mid-level in Italian. Note: Students must pass this course with a C or better to continue to ITA1121.

Lecture Hours: 64.000

Course User Fee: \$15.00

JPN1120 Elementary Japanese 1 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice mid-level in Japanese. Note: Students must pass this course with a C or better to continue to JPN1121.

Lecture Hours: 64.000

Course User Fee: \$15.00

POR1120 Elementary Portuguese 1 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice mid-level in Portuguese. Note: Students must pass this course with a C or better to continue to POR1121.

Lecture Hours: 64.000

Course User Fee: \$15.00

SPN1120 Elementary Spanish 1 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice mid-level in Spanish. Note: Students must pass this course with a C or better to continue to SPN1121.

Lecture Hours: 64.000

Course User Fee: \$15.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

CHI1121 Elementary Mandarin Chinese 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Mandarin Chinese. Note: students must pass this course with a "C" or better to continue to CHI2220.

Lecture Hours: 64.000

Prerequisite: CHI1120

Course User Fee: \$15.00

FRE1121 Elementary French 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in French. Note: Students must pass this course with a C or better to continue to FRE2220.

Lecture Hours: 64.000

Prerequisite: FRE1120

Course User Fee: \$15.00

GER1121 Elementary German 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in German. Note: Students must pass this course with a C or better to continue to GER2220.

Lecture Hours: 64.000

Prerequisite: GER1120

Course User Fee: \$15.00

ITA1121 Elementary Italian 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Italian. Note: Students must pass this course with a C or better to continue to ITA2220.

Lecture Hours: 64.000

Prerequisite: ITA1120

Course User Fee: \$15.00

JPN1121 Elementary Japanese 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Japanese. Note: Students must pass this course with a C or better to continue to JPN2220.

Lecture Hours: 64.000

Prerequisite: JPN1120

Course User Fee: \$15.00

POR1121 Elementary Portuguese 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Portuguese. Note: students must pass this course with a "C" or better to continue to POR2220.

Lecture Hours: 64.000

Prerequisite: POR1120

Course User Fee: \$15.00

SPN1121 Elementary Spanish 2 4.000 credits

In this course, students will develop appropriate proficiency in interpersonal, interpretive, and presentational modes at the novice high level in Spanish. Note: Students must pass this course with a C or better to continue to SPN2220.

Lecture Hours: 64.000

Prerequisite: SPN1120

Course User Fee: \$15.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

FRW2010 Introductory Readings in French Literature I 3.000 credits

This course introduces students to foundational texts of French literature from medieval times through the 17th century and includes works from the Western canon. Students will analyze major literary movements, themes, and stylistic developments through careful reading of representative authors and texts. The course develops critical thinking skills through discussion, analysis, and written interpretation of literary works that have shaped French intellectual tradition.

Lecture Hours: 48.000

FRW2011 Introductory Readings in French Literature II 3.000 credits

This course examines French literature from the 18th century to the present day, exploring major authors and literary movements, and includes works from the Western canon. Students will engage with texts that reflect evolving philosophical, social, and artistic perspectives in French literary tradition. Through close reading and critical analysis, students develop interpretive skills while examining the continued influence of these works on contemporary thought.

Lecture Hours: 48.000

HCW2020 Selected Readings in Haitian-Creole Literature 3.000 credits

This course surveys significant works in Haitian-Creole literature alongside foundational texts that influenced its development and includes works from the Western canon. Students will examine the literary traditions, themes, and artistic expressions that characterize this body of literature. The course emphasizes critical analysis and interpretation while exploring the historical and intellectual contexts that shaped these literary works.

Lecture Hours: 48.000

SPW2010 Introduction to Masterpieces of Spain 3.000 credits

This course presents major works of Spanish literature from medieval times through the present and includes works from the Western canon. Students will study representative texts that demonstrate the evolution of Spanish literary forms, themes, and artistic achievement. Through critical reading and analysis, students develop skills in literary interpretation while examining works that have significantly influenced Spanish intellectual tradition.

Lecture Hours: 48.000

Recommended Preparation: Oral and written fluency in Spanish and/or permission from faculty or Department Chairperson.

SPW2020 Introduction to Masterpieces of Latin America 3.000 credits

This course introduces students to significant works of Latin American literature alongside influential texts that shaped its development and includes works from the Western canon. Students will analyze diverse literary voices and movements that characterize Latin American artistic expression. The course emphasizes critical thinking through examination of texts that reflect the philosophical, historical, and intellectual foundations of Latin American literary tradition.

Lecture Hours: 48.000

Recommended Preparation: Oral and written native fluency in Spanish and/or permission from faculty or Department Chairperson.

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.
Lecture Hours: 48.000

WOH2012 History of World Civilization to 1789 3.000 credits

This course covers the history of World Civilizations from the prehistoric period to the 18th century. Students will learn of the major political, social, economic, and cultural structures of civilizations and their development through 1789.
Lecture Hours: 48.000

WOH2022 History of World Civilization From 1789 3.000 credits

The student will examine the historical development of world civilizations since 1789. Students will learn of historical processes and developments in social, cultural, political, and economic contexts since the 18th century.
Lecture Hours: 48.000

FRE2220 Intermediate French 1 4.000 credits

Students will learn to understand, speak, read, write, and gain cultural awareness of french through a systematic review (using an integrated, multimedia approach) of reading grammar, and writing skills with emphasis on oral and written communication.
Lecture Hours: 64.000
Prerequisite: FRE1121
Course User Fee: \$15.00

GER2220 Intermediate German 1 4.000 credits

Students will learn to understand, speak, read, write, and gain cultural awareness of German through a systematic review (using an integrated, multimedia approach) of reading, grammar, and writing skills with emphasis on oral and written communication.
Lecture Hours: 64.000
Prerequisite: GER1121
Course User Fee: \$15.00

ITA2220 Intermediate Italian 1 4.000 credits

Students will learn to understand, speak, read, write, and gain cultural awareness of italian through a systematic review (using an integrated, multimedia approach) of reading, grammar, and writing skills with emphasis on oral and written communication.
Lecture Hours: 64.000
Prerequisite: ITA1121
Course User Fee: \$15.00

JPN2220 Intermediate Japanese 1 4.000 credits

Students will learn to understand, speak, read, write, and gain cultural awareness of Japanese through a systematic review (using an integrated, multimedia approach) of reading, grammar, and writing skills with emphasis on oral and written communication.
Lecture Hours: 64.000
Prerequisite: JPN1121
Course User Fee: \$15.00

SPN2220 Intermediate Spanish 1 4.000 credits

Students will learn to understand, speak, read, write, and gain cultural awareness of Spanish through a systematic review (using an integrated, multimedia approach) of reading, grammar, and writing skills with emphasis on oral and written communication.
Lecture Hours: 64.000
Prerequisite: SPN1121
Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

FRE2221 Intermediate French 2 4.000 credits

This is a continuation of Intermediate French 1. Students will learn to understand, speak, read, and write French. Students will also learn to develop cross-cultural awareness through a systematic review of reading and writing skills with emphasis on oral as well as written expression.

Lecture Hours: 64.000

Prerequisite: FRE1121

Course User Fee: \$15.00

GER2221 Intermediate German 2 4.000 credits

This is a continuation of Intermediate German 1. Students will learn to understand, speak, read, and write German. Students will also learn to develop cross-cultural awareness through a systematic review of reading and writing skills with emphasis on oral as well as written expression.

Lecture Hours: 64.000

Prerequisite: GER2220

Course User Fee: \$15.00

ITA2221 Intermediate Italian 2 4.000 credits

This is a continuation of Intermediate Italian 1. Students will learn to understand, speak, read, and write Italian. Students will also learn to develop cross-cultural awareness through a systematic review of reading and writing skills with emphasis on oral as well as written expression.

Lecture Hours: 64.000

Prerequisite: ITA2220

Course User Fee: \$15.00

JPN2221 Intermediate Japanese 2 4.000 credits

This is a continuation of Intermediate Japanese 1. Students will learn to understand, speak, read, and write Japanese. Students will also learn to develop cross-cultural awareness through a systematic review of reading and writing skills with emphasis on oral as well as written expression.

Lecture Hours: 64.000

Prerequisite: JPN2220

Course User Fee: \$15.00

SPN2221 Intermediate Spanish 2 4.000 credits

This is a continuation of Intermediate Spanish 1. Students will learn to understand, speak, read, and write Spanish. Students will also learn to develop cross-cultural awareness through a systematic review of reading and writing skills with emphasis on oral as well as written expression.

Lecture Hours: 64.000

Prerequisite: SPN2220

Course User Fee: \$15.00

Program Description

Forestry

Associate in Arts | Code: 10101 | 60 credits

Forestry studies the ecology and economy of forest management. Students should be aware that the University of Florida is the only in-state university offering this program, with majors in forest resources, and conservation and urban forestry. Foresters manage, develop, and protect woodlands and their resources (timber, water, wildlife, forage and recreational areas).

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 10.0
ENC 1101	English Composition 1	3.0
MAC 1105	College Algebra	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
SLS 1106	First Year Experience Seminar	1.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---OR--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 2		Units: 13.0
ENC 1102	English Composition 2	3.0
CHM 1025	Introductory Chemistry	3.0
CHM 1025L	Introductory Chemistry Lab	1.0
EVR 1001	Introduction to Environmental Science	3.0
<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0

Semester 3		Units: 13.0
BSC 2010	Principles of Biology	3.0
BSC 2010L	Principles of Biology 1 Laboratory	2.0
CHM 1045	General Chemistry and Qualitative Analysis	3.0
CHM 1045L	General Chemistry Lab	2.0
<i>Social</i>		3.0
ANT 2000	Introduction to Anthropology	3.0
OR		
ECO 2013	Principles of Economics (Macro)	3.0
OR		
PSY 2012	Introduction to Psychology	3.0
OR		
SYG 2000	Introduction to Sociology	3.0

Semester 4	Units: 11.0
-------------------	--------------------

BSC 2011	Principles of Biology 2	3.0
BSC 2011L	Principles of Biology 2 Laboratory	2.0
HOS 1010	Horticulture 1	3.0
PHI 2600	Introduction to Ethics	3.0

Semester 5

Units: 13.0

GIS 1040	Introduction to GIS Technology	4.0
HOS 1011	Horticulture 2	3.0
STA 2023	Statistical Methods	3.0
<i>Oral Communication</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

CHM1025L Introductory Chemistry Lab 1.000 credits

This course is an optional beginning chemistry laboratory course, which has been designed for those students who have little or no background in chemistry and are enrolled in CHM1025. The students will reinforce what they learn in CHM1025. Students will learn about basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1025

Course User Fee: \$30.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy.

Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045
Course User Fee: \$30.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

HOS1010 Horticulture 1 3.000 credits

This is an introductory course on the principles of horticulture. Students will learn plant structure and function, plant propagation, plant nutrients and fertilizers, potting media, soils, pruning, and plant pests. A survey of various fields in ornamental horticulture will also be covered.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

GIS1040 Introduction to GIS Technology 4.000 credits

This course teaches the principles of Geographic Information Systems (GIS). The student will learn fundamental GIS concepts, GIS models and formats, as well as map creation and analysis. At the end of the course, the student will be able to perform basic operations in GIS software. (3 hr. lecture, 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

HOS1011 Horticulture 2 3.000 credits

The student will learn the maintenance and management aspects of horticulture business (nursery facility or landscape maintenance and design) including irrigation systems, plant growing facilities, plant propagation equipment, and landscape maintenance equipment. Hands-on practice in programming of plant production crops and nursery design in our nursery.

Lecture Hours: 48.000

Prerequisite: HOS1010

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

Program Description

Geology

Associate in Arts | Code: 11904 | 60 credits

Geologists study the structure, composition and history of the Earth. This program provides basic coursework in geology, calculus, biology and chemistry. Some examples of employers of geologists include agencies targeting pollution or urban waste, corporations searching for new sources of petroleum or natural gas and research organizations studying volcanoes or earthquakes.

Program Modality: Both [In-Person (IP) and On-line]

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications.

Lecture Hours: 48.000

Prerequisite: MAT0022C OR MAT0028 OR MAT0057or by placement score, or eligible exemption.

Course User Fee: \$18.00

MAT1033L Intermediate Algebra Recitation Hall 0.000 credits

The student will receive individualized, small group or whole group instruction to deepen their conceptual understanding of mathematics. The student will reinforce and apply content knowledge with effective problem-solving techniques and non-cognitive activities to make mathematics meaningful and relevant to their fields of study while strengthening the concepts needed to achieve the objectives of MAT1033. This lab session is associated and funded by the First in the World Grant, CCAT Math Project.

Lab Hours: 1.000

Corequisite: MAT1033

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy.

Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: MAC1105, Corequisite: CHM1045, Prerequisite: CHM1025 Or an approved ACS Proficiency Exam score.

Course User Fee: \$30.00

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics.

Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

PHY2053L Physics (Without Calculus) 1 Lab 1.000 credits

This laboratory course is designed to complement PHY2053. Students will engage in hands-on experiments that reinforce theoretical concepts related to kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Through practical applications of algebra and trigonometry, learners will develop analytical skills while conducting experiments that illustrate key physical principles. The course emphasizes critical thinking and problem-solving as students collect and analyze data, interpret results, and communicate their findings effectively. This lab experience aims to deepen students' understanding of the scientific concepts covered in the parent course and their relevance to real-world situations.

Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053

Course User Fee: \$20.00

ARH2050 Art History 1 3.000 credits

This course offers a survey of visual arts from prehistory to 800 C.E. and includes works from the western canon. Students will examine artistic expressions across civilizations, analyzing their connections to historical contexts and aspects of human development. Through this exploration, students will develop critical thinking skills and gain understanding of how visual arts reflect and influence societal developments, ideas, and values throughout early history.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARC2701 History of Architecture 1 3.000 credits

This course offers a survey of architecture from ancient times through the 18th century and includes works from the Western canon. Students will examine the integration of art forms, structural elements, and ornamental designs across world civilizations, analyzing their connections to broader aspects of human development. Through this exploration, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societies throughout historical periods.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARC2702 History of Architecture 2 3.000 credits

This course provides a survey of architecture from the 19th century to the present and includes works from the Western canon and examining architectural developments. Students will analyze the integration of art forms, structural elements, and ornamental designs across civilizations, exploring their connections to human development, including art and history. Through this study, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societal changes and cultural expressions throughout modern and contemporary periods. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$10.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon.

Written analysis of literary works may be required.

Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

GLY1010 Physical Geology 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize geoscience data to draw scientifically valid conclusions; students will recognize the different time scales associated with different geologic processes; students will describe interactions between humans and earth's spheres; and students will apply their understanding of geologic principles to complex issues.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHY2054 Physics (Without Calculus) 2 3.000 credits

An introduction to the basic principles of physics. PHY 2053 covers mechanics, sound and thermodynamics. PHY 2054 includes electricity, magnetism and optics.

Lecture Hours: 48.000

Prerequisite: PHY2053, PHY2053L, Corequisite: PHY2054L

Course User Fee: \$10.00

PHY2054L Physics (Without Calculus) 2 Lab 1.000 credits

The physics lab courses are one-credit courses designed to be taken in conjunction with a physics lecture. A different experiment is performed each week with topics chosen to correspond with the material being studied in the lecture. Each experiment is designed to be completed in about 2 contact hours.

Lab Hours: 32.000

Prerequisite: PHY2053, PHY2053L, Corequisite: PHY2054

Course User Fee: \$20.00

Program Description

Graphic or Commercial Arts

Associate in Arts | Code: 11004 | 60 credits

Graphic Arts emphasizes studio courses in design, drawing and digital techniques. Graduates may work in advertising agencies, design studios, exhibit and display businesses, department stores and industrial organizations.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 14.0

ENC 1101	English Composition 1	3.0
MGF 1130	Mathematical Thinking	3.0
ARH 1000	Art Appreciation	3.0
ART 1300C	Drawing	4.0
SLS 1106	First Year Experience Seminar	1.0
Semester 2		Units: 13.0
ENC 1102	English Composition 2	3.0
MAC 1105	College Algebra	3.0
ART 1202C	Two-Dimensional Design	4.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
Semester 3		Units: 7.0
ARH 2051	Art History 2	3.0
ART 1203C	Three-Dimensional Design	4.0
Semester 4		Units: 13.0
BSC 1005	General Education Biology	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
ARH 2051	Art History 2	3.0
ART 1330C	Figure Drawing	4.0
Semester 5		Units: 13.0
ESC 1000	General Education Earth Science	3.0
PSY 2012	Introduction to Psychology	3.0
SPC 2608	Introduction to Public Speaking	3.0
Pathway Electives*		4.0

*Select 4 credits from the following course options: GRA 1111C, GRA 1113C, GRA 1206C, GRA 1280C, GRA 1750, GRA 1949, GRA 2117C, GRA 2121C, GRA 2151C, GRA 2203C, GRA 2207C, GRA 2305C, GRA 2545C, GRA 2546C, GRA 2949

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

ART1300C Drawing 4.000 credits

Basic problems in freehand drawing, including perspective, still-life and landscape. Emphasis is on developing a sense of structure through line, form and texture.

Lecture Hours: 32.000, Lab Hours: 64.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

ART1202C Two-Dimensional Design 4.000 credits

This course is designed to give students an understanding of advanced concepts of two-dimensional design and to give hands on opportunity to transform visual and experiential information into two-dimensional form. Creative individual thinking and image making and successful problem solving both aesthetically and technically are ultimate goals. Lecture Hours: 32.000, Lab Hours: 64.000

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement. Lecture Hours: 48.000, Lab Hours: 32.000
Course User Fee: \$63.00

ARH2051 Art History 2 3.000 credits

In this course, students will embark on a world survey of the visual arts from 800 to 1850 A.D., exploring various artistic movements, styles, and cultural contexts. The course will delve into the rich and diverse artistic traditions from different regions, including works from the Western canon. Writing intensive course. Lecture Hours: 48.000
Course User Fee: \$5.00

ART1203C Three-Dimensional Design 4.000 credits

This course is designed to give students an understanding of the concepts of three-dimensional design and to provide hands-on opportunity to transform visual and experiential information into three-dimensional form. Creative individual thinking and image making and successful problem solving both aesthetically and technically are ultimate goals. Self-evaluation and safety skills will also figure prominently. Prerequisite: ART1202C. Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: ART1202C
Course User Fee: \$40.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method. Lecture Hours: 48.000
Course User Fee: \$8.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ARH2051 Art History 2 3.000 credits

In this course, students will embark on a world survey of the visual arts from 800 to 1850 A.D., exploring various artistic movements, styles, and cultural contexts. The course will delve into the rich and diverse artistic traditions from different regions, including works from the Western canon. Writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$5.00

ART1330C Figure Drawing 4.000 credits

Drawing and painting from the live model with emphasis on structure, movement and expression.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$80.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence. Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

Program Description

Health Services Administration

Associate in Arts | Code: 11200 | 60 credits

This program provides the fundamental science coursework for transfer to a baccalaureate program in health services administration. The Baccalaureate degree prepares students for entry-level management positions in health services delivery organizations. Persons licensed in clinical health often pursue this degree, as do medical care professionals who do not have an undergraduate degree. The Baccalaureate also prepares individuals for graduate study in this field.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications.

Lecture Hours: 48.000

Prerequisite: MAT0022C OR MAT0028 OR MAT0057or by placement score, or eligible exemption.

Course User Fee: \$18.00

MAT1033L Intermediate Algebra Recitation Hall 0.000 credits

The student will receive individualized, small group or whole group instruction to deepen their conceptual understanding of mathematics. The student will reinforce and apply content knowledge with effective problem-solving techniques and non-cognitive activities to make mathematics meaningful and relevant to their fields of study while strengthening the concepts needed to achieve the objectives of MAT1033. This lab session is associated and funded by the First in the World Grant, CCAT Math Project.

Lab Hours: 1.000

Corequisite: MAT1033

GEB1011 Principles of Business 3.000 credits

The student will learn the major disciplines of business including general business, business ethnics, forms of business ownership, economics, management and leadership, human relations marketing, information systems, accounting, financial management, money and banking, and business law.

Lecture Hours: 48.000

Course User Fee: \$20.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written

Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

MAN2021 Principles of Management 3.000 credits

The student will learn to analyze the major functions of management. Emphasis is placed on learning how to manage organizations for excellence in both performance and employee satisfaction. Major topics include but are not limited to business ethics and social responsibility, strategic and operational planning, decision making, organization structure and behavior, managing groups and teams, communication and information technology.

Lecture Hours: 48.000

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAN2300 Human Resources Management 3.000 credits

Reviews how the personnel/human resources department contributes to overall planning and profitability of an organization. Major topics include typical personnel functions: recruitment and selection, training, performance appraisal, job analysis, and compensation and benefits administration. Class discussions will focus on changing value systems in the work force and the resulting challenges for managers.

Lecture Hours: 48.000

Course User Fee: \$20.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas. Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

ACG2021 Financial Accounting 3.000 credits

An introduction to financial accounting concepts and analysis with emphasis on corporate financial statements and determination of income.

Lecture Hours: 48.000

Corequisite: ACG2021L

ACG2021L Financial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the financial field. Additional support will be provided to the students in order to achieve the objectives of ACG2021. May be repeated for credit. Laboratory fee.

Lab Hours: 32.000

Corequisite: ACG2021

Course User Fee: \$32.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

ACG2071 Managerial Accounting 3.000 credits

Managerial Accounting focuses on the accounting information needs of the various levels of internal management within an organization. Internal responsibility is directed at three major areas of management responsibility: cost determination, planning and control, and long-term decision-making. Prerequisites: ACG2011 and ACG2001 or ACG2021; Corequisite: ACG2071L

Lecture Hours: 48.000

ACG2071L Managerial Accounting Lab 1.000 credits

Students will learn to interpret and solve problems related to the managerial accounting field. Additional support will be provided to students in order to achieve the objectives of ACG2071. Prerequisites: ACG2001, ACG2021L, ACG2021, ACG2011; Corequisite: ACG2071.

Lab Hours: 32.000

Prerequisite: ACG2021, ACG2021L, Corequisite: ACG2071

Course User Fee: \$32.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

OCB1010 Introduction to Marine Biology 3.000 credits

An introduction to the biology of the seas. Emphasis is placed on the variety of marine organisms and their structural, physiological, and behavioral adaptations within specific marine environments. Special attention is directed to marine communities, e.g., coral reefs and shallow grass flats, and the factors limiting the distribution of organisms within those communities. Discussions will also be directed towards geological, chemical and physical characteristics of the world's oceans. (3 hr. lecture)

Lecture Hours: 48.000

PSC1121 General Education Physical Science 3.000 credits

A study of the major concepts and principles from each of the following areas: physics, chemistry, and astronomy.

Lecture Hours: 48.000

Pre/Corequisite: MGF 1130 or MGF 1131 or MAC 1105 or MAC 1114 or MAC 1140 or MAC 2223 or MAT 1033

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

Program Description

History

Associate in Arts | Code: 12202 | 60 credits

History is the study of the events, patterns and cycles that have shaped our present world. Depending on the area of specialization, history may examine political events, social evolution, cultural developments or a combination of these. The two-year program at MDC prepares students for transfer with courses in American, African-American and Latin American history, and surveys of American, English and world literature. Professional historians (e.g. museum curators and educators) tend to pursue the Doctoral degree, but the Bachelor's degree in history can prepare students for graduate work in law or political science, and apply to careers requiring good writing or analytical skills.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 12.0
ENC 1101	English Composition 1	3.0
MGF 1131	Mathematics in Context	3.0
AMH 2010	History of the US to 1877	3.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
SLS 1106	First Year Experience Seminar	1.0
Semester 2		Units: 12.0
ENC 1102	English Composition 2	3.0
STA 2023	Statistical Methods	3.0
AMH 2020	History of the US since 1877	3.0
SPC 2608	Introduction to Public Speaking	3.0
Semester 3		Units: 12.0
AST 1002	Descriptive Astronomy	3.0
LAH 2021	Colonial Latin America	3.0
PHI 2010	Introduction to Philosophy	3.0
<i>World History</i>		3.0
WOH 2012	History of World Civilization to 1789	3.0
OR		
WOH 2022	History of World Civilization From 1789	3.0
Semester 4		Units: 12.0
ESC 1000	General Education Earth Science	3.0
EUH 2032	History of The Holocaust	3.0
PHI 2600	Introduction to Ethics	3.0
<i>Pathway Elective</i>		3.0
AMH 2035	Recent American History Since 1945	3.0
OR		
AMH 2079	History of South Florida	3.0
Semester 5		Units: 12.0
AMH 2090	History of Women in the United States	3.0
AMH 2091	Afro-American History	3.0
LAH 2025	History of Cuba	3.0
WOH 2003	History of Genocide	3.0
		Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.

Lecture Hours: 48.000

Course User Fee: \$10.00

LAH2021 Colonial Latin America 3.000 credits

This course covers the history of Latin America, from the pre-Columbian civilizations of the region, to the Wars of Independence. Students will learn about the development of the political, social, economic and cultural structures of colonial Latin America to 1825.

Lecture Hours: 48.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

WOH2012 History of World Civilization to 1789 3.000 credits

This course covers the history of World Civilizations from the prehistoric period to the 18th century. Students will learn of the major political, social, economic, and cultural structures of civilizations and their development through 1789.

Lecture Hours: 48.000

WOH2022 History of World Civilization From 1789 3.000 credits

The student will examine the historical development of world civilizations since 1789. Students will learn of historical processes and developments in social, cultural, political, and economic contexts since the 18th century.

Lecture Hours: 48.000

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EUH2032 History of The Holocaust 3.000 credits

This is a foundation course in Holocaust Studies. Students will learn the historical origins, execution and consequences of the Holocaust. This course also examines the Holocaust's place in context of genocides past and present.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

AMH2035 Recent American History Since 1945 3.000 credits

This course covers the internal development of the United States and the role of the U.S. in world affairs since World War II.

Lecture Hours: 48.000

AMH2079 History of South Florida 3.000 credits

A study of the history of South Florida (Lake Okeechobee south to Key West) including geological foundations exploration, settlement and contemporary cultural trends.

Lecture Hours: 48.000

AMH2090 History of Women in the United States 3.000 credits

This course will explore the history of women from precolonial times to the present, by examining how gender roles, class, and ethnicity defined women's experiences in the social, political, and economic contexts. It will also analyze how women shaped and contributed to historical events and movements within the United States.
Lecture Hours: 48.000

AMH2091 Afro-American History 3.000 credits

A survey, including the African background, of the Afro-Americans in the United States history, with emphasis on their economic, political, and cultural development.
Lecture Hours: 48.000

LAH2025 History of Cuba 3.000 credits

Historical analysis of the development of Cuban society, its culture and institutions.
Lecture Hours: 48.000

WOH2003 History of Genocide 3.000 credits

This course includes works from the Western canon and is designed to explore the history, causes, and consequences of genocide by identifying patterns of intentional mass killings. Students will examine case studies to understand the characteristics of both historical and contemporary incidents classified as genocide. Through this analysis, learners will gain insight into the social and behavioral science concepts that inform understanding of tragic events and their implications for society today.
Lecture Hours: 48.000

Program Description

[Hospitality Administration/Travel & Tourism](#)

Associate in Arts | Code: 10506 | 60 credits

This field combines traditional business and management education with training specific to the tourism, travel and hospitality industries. Careers in the hospitality/travel and tourism industry include hotel and restaurant management, and managerial positions with cruise ships, airlines, land-based tourism companies, as well as travel agencies.

Program Modality: Both [In-Person (IP) and On-line]

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

HFT1000 Introduction to Hospitality 3.000 credits

In this introductory course, the student will learn a basic understanding of the lodging, travel, meeting planning, club management, food and beverage, gaming and cruise industry by tracing the industry's growth and development, reviewing the organization of hospitality operations, and by focusing on industry opportunities and future trends. Career opportunities, interview and resume writing skills are discussed.

Lecture Hours: 48.000

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.
Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.
Lecture Hours: 16.000
Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.
Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.
Lecture Hours: 48.000
Course User Fee: \$15.00

HFT1210 Human Resources 3.000 credits

Provides information relating to the recruitment and selection of new staff, the handling of difficult employees, motivating employees and conducting performance evaluations. (3 hr. lecture)
Lecture Hours: 48.000
Course User Fee: \$15.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.
Lecture Hours: 48.000

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

HFT2421 Managerial Accounting for Hospitality 3.000 credits

Presents managerial accounting concepts and explains how they apply to specific operations within the hospitality industry.

Lecture Hours: 48.000

HFT2449 E-Business For The Hospitality Industry 3.000 credits

Prepares student to manage information systems within their organizations. Emphasis is on selecting the right computer systems technology and maximizing available technology in order to promote and sell services. Introduces the use of automation in the broad hospitality sector and exams technological applications ranging from distribution systems (GDS, CRS and Web based), Property Management Systems, and EPOS systems to developments in telecommunications, and assesses their effect on the tourism sector. While a broad interpretation of both technology and tourism will be used, particular emphasis will be placed on the hospitality sector (i.e. hotels and catering) and on distribution technology. A combination of lecture, case studies, seminars, visiting lecture and lab sessions are used.

Lecture Hours: 48.000

Prerequisite: HFT1000

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

Program Description

Interior Design

Associate in Arts | Code: 10201 | 60 credits

Interior Design studies combine architecture, art and design courses, training the student to understand the relation of interior spaces to the total design of structures (including architecture, landscaping and lighting). An interior designer encounters a variety of challenging work, available in professional, institutional and private settings.

Program Modality: Both [In-Person (IP) and On-line]

PHY 2053L	Physics (Without Calculus) 1 Lab	1.0
		Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARC1115 Architectural Communications 1 2.000 credits

Exercises in freehand drawing, sketching and linear perspective are designed to increase the student's awareness of the architectural environment. This is accomplished through a series of form studies of nature, architectural forms, and abstract elements of composition.

Lecture Hours: 16.000, Lab Hours: 32.000

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ARC1126C Architectural Drawing 1 4.000 credits

This course exercises the visualization and drafting of architectural objects and construction conditions. Students will learn to draw orthographic projections, isometric and sectional drawings as an expression of architectural communication. Topics include drawing plans, elevations, details, schedules, and sections of wood frame and masonry structures.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

ARC2701 History of Architecture 1 3.000 credits

This course offers a survey of architecture from ancient times through the 18th century and includes works from the Western canon. Students will examine the integration of art forms, structural elements, and ornamental designs across world civilizations, analyzing their connections to broader aspects of human development. Through this exploration, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societies throughout historical periods.

Lecture Hours: 48.000

Course User Fee: \$10.00

ARC2702 History of Architecture 2 3.000 credits

This course provides a survey of architecture from the 19th century to the present and includes works from the Western canon and examining architectural developments. Students will analyze the integration of art forms, structural elements, and ornamental designs across civilizations, exploring their connections to human development, including art and history. Through this study, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societal changes and cultural expressions throughout modern and contemporary periods. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

IND1020 Interior Design 1 4.000 credits

Student's projects develop the ability to plan simple interior floor plans and elevations.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ARC1115

Course User Fee: \$25.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1140 Pre-Calculus Algebra 3.000 credits

This course will cover properties and graphs of algebraic, exponential, and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices, and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, and corresponding applications and modeling. Prerequisite: MAC 1105 with a grade of "C" or better or equivalent. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105

Course User Fee: \$18.00

ARC2171C Computer Aided Drafting 1 4.000 credits

Computer-aided drafting as it applies in the fields of architecture and interior design using office simulation. Emphasis is on the production of computer-aided drafting of working drawings involving different types of structure.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ARC1126C OR ARC2461

Course User Fee: \$50.00

IND1200 Interior Design 2 4.000 credits

Problems in room planning, correlation of color schemes and furnishings.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: IND1020

Course User Fee: \$25.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAC1105 OR MAC1106
Course User Fee: \$18.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)
Lecture Hours: 48.000
Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.
Lecture Hours: 48.000
Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."
Course User Fee: \$15.00

ARC2461 Architectural Materials and Construction 1 4.000 credits

An introduction to basic materials and methods of building construction. Emphasis is on wood, concrete, unit masonry, and light steel construction. Laboratory projects may include working drawings' interpretation, sketching construction details, or field trips to construction sites and fabricant plants. Designed primarily as the initial materials and methods course for architectural transfer students. Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: ARC1126C OR BCN1251
Course User Fee: \$25.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.
Lecture Hours: 48.000
Course User Fee: \$15.00

**EVR1001 Introduction to Environmental Science
3.000 credits**

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

**PHY2053 Physics (without Calculus) 1 3.000
credits**

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

**PHY2053L Physics (Without Calculus) 1 Lab 1.000
credits**

This laboratory course is designed to complement PHY2053. Students will engage in hands-on experiments that reinforce theoretical concepts related to kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Through practical applications of algebra and trigonometry, learners will develop analytical skills while conducting experiments that illustrate key physical principles. The course emphasizes critical thinking and problem-solving as students collect and analyze data, interpret results, and communicate their findings effectively. This lab experience aims to deepen students' understanding of the scientific concepts covered in the parent course and their relevance to real-world situations.

Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053

Course User Fee: \$20.00

Program Description

International Relations

Associate in Arts | Code: 12205 | 60 credits

Students can obtain the coursework necessary to transfer to four-year programs in international relations, a major which usually includes political science and economics courses. Employment opportunities are available at the baccalaureate level in business, government, journalism and political organizations. Many students, however, go on to pursue graduate work or law school.

Program Modality: Both [In-Person (IP) and On-line]

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

INR2002 International Relations 3.000 credits

The nature of international relations, the causes of leading international problems, foreign policies of world powers, international political organizations, and the origins of war and peace in the international arena.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

CPO2100 Comparative European Government 3.000 credits

This course discusses the structures and functioning of the systems of government in Western Europe. Students will analyze major policy issues and approaches to resolving them, and cultural differences and interdependence among the Western European countries in policy determination. Recommended prerequisite: a prior course in History or Social Science. Offered first semester. Given in English. Offered through overseas study program. Lecture Hours: 48.000

ISS2270 Multicultural Communications and Relations 3.000 credits

This course uses an interdisciplinary approach to examine the complex interactions among ethnicity, race, gender, age, and class, as well as other ways in which we differ as they pertain to shaping personal awareness, understanding, and skills that will allow them to interact more effectively with diverse populations, age, groups, and lifestyles and to think through and value human diversity. This course has an overriding principle based on the concept of human rights. (3 hr. lecture)

Lecture Hours: 48.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

CPO2408 Comparative Middle Eastern and North African Governments 3.000 credits

The Middle East & North Africa (MENA) has uninterruptedly been at the forefront of international geopolitics for almost a century. This enduring geopolitical visibility has important cultural, societal, economic, and security implications at national, regional, and international levels. This course is designed to tackle some of these issues by providing students with a historico-cultural, politico-economic, and geo-strategic survey of the Middle East.

Lecture Hours: 48.000

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

POS2112 State and Local Government In America 3.000 credits

The typical state and local government organization, together with political practices in America, with special emphasis on governmental organizations and the major contemporary political problems of the State of Florida and of Florida communities.

Lecture Hours: 48.000

POT2014 European Political Theory 1 3.000 credits

This course covers the more important trends in European political thought from Plato to the present. It examines those ideas which have contributed to the shaping of the political cultures of Western and Eastern Europe. It discusses the historical evolution of key concepts of politics such as freedom, order, political obligations, justice, consent, rights and duties, power and authority. A prior course in Government, History or Philosophy is desirable. Given in English. Level 1. Offered through Overseas Study Program.

Lecture Hours: 48.000

INR2440 International Law and Organization 3.000 credits

International law and problems in world politics; a review of man's attempt to control international politics through international law and organizations, including the League of Nations, the United Nations, NATO, and the European Union. A prior course in History or Social Science is desirable. Offered second semester. Given in English. Offered through Overseas Study Program.

Lecture Hours: 48.000

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CPO2441 Islam in the Modern World 3.000 credits

The survey course is designed to grant students a broad-based exposure across a variety of conceptual debates, historical events, and policy issues at the intersection of Islam and the modern world and the paths forward. The issues especially religiously-inspired and informed violence/conflict and debates surrounding them have assumed prominence in the 21st century with the resurgence of religion in politics and the subsequent struggle for Islam. These issues will be contextualized in normative, empirical and historical frameworks to equip students with a sophisticated and multi-dimensional conceptual toolbox to analyze them.

Lecture Hours: 48.000

INS2200 Introduction to Conflict Resolution and Peace Studies 3.000 credits

Introduction to Conflict Resolution and Peace Studies is an interdisciplinary course exploring foundational concepts, methodologies, and practical approaches to interstate and intra-state conflicts and how to tackle them. The course has no specific prerequisites and will appeal to a broad audience as it analyzes a broad spectrum of perspectives in the field of conflict and peace studies. By contextualizing the challenge and transmitting the knowledge of peace in normative, empirical and historical frameworks, the course will equip students with a multi-dimensional conceptual toolbox to analyze it while inspiring them to create a more equitable and harmonious world.

INS2300 Global Environmental Politics 3.000 credits

Global Environmental Politics is an interdisciplinary course exploring the evolving relationship between humanity and the environment from diverse conceptual, normative, and empirical perspectives. The course has no specific prerequisites and will appeal to a broad audience as it analyzes a broad spectrum of perspectives in the field. The course will explore the most pressing contemporary environmental challenges, including climate change, loss of biodiversity, desertification, trade in dangerous waste, and over-exploitation of natural resources as well as various political and policy responses to deal with them.

INS2310 Religion and Global Politics 3.000 credits

The interdisciplinary course introduces students to the increasingly visible role of religious identity in international and global politics. It offers a macro-level overview of the intersection of religion and politics in a historical context and sheds light on the intertwined histories and trajectories connecting them. It explores how this nexus has been shaped by belief and value systems as well as the historical socio-economic and political circumstances and conditions. Among the themes addressed in the course are religious diversity and human rights, interfaith dialogue and conflict resolution, and religion in the age of globalization.

Lecture Hours: 48.000

POS2293 Islam and America 3.000 credits

Islam and the United States offers a survey treatment of the historically charged relationship between America and the Muslim World and the path forward. The course analyzes the intersection of religion, identity politics, geopolitics and economics of Islam-US relations in a historical context. These issue areas will be contextualized in normative, empirical and historical frameworks to equip the student with a sophisticated and multi-dimensional conceptual toolbox to analyze them.

Lecture Hours: 48.000

Program Description

Landscape Architecture

Associate in Arts | Code: 10202 | 60 credits

The A.A. in Landscape Architecture prepares students for transfer by offering courses in architecture, horticulture and botany. Landscape architects plan the arrangement of outdoor areas for public use and enjoyment, making recommendations for the types and location of plantings, circulation, drainage and other harmonizing improvements with existing land features and architectural structures. The University of Florida offers the only in-state program in landscape architecture.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

ARC1115 Architectural Communications 1 2.000 credits

Exercises in freehand drawing, sketching and linear perspective are designed to increase the student's awareness of the architectural environment. This is accomplished through a series of form studies of nature, architectural forms, and abstract elements of composition.

Lecture Hours: 16.000, Lab Hours: 32.000

Course User Fee: \$25.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ARC1126C Architectural Drawing 1 4.000 credits

This course exercises the visualization and drafting of architectural objects and construction conditions.

Students will learn to draw orthographic projections, isometric and sectional drawings as an expression of architectural communication. Topics include drawing plans, elevations, details, schedules, and sections of wood frame and masonry structures.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

ARC1301 Architectural Design 1 4.000 credits

Introductory course to architectural design, its scope, methods and vocabulary interfacing graphics and design as a means towards an awareness and understanding of basic organizational principles. Design concepts analyzed through graphical representation and modeling. Pre/Corequisite: ARC1115.

Lecture Hours: 32.000, Lab Hours: 64.000

Course User Fee: \$25.00

ARC2701 History of Architecture 1 3.000 credits

This course offers a survey of architecture from ancient times through the 18th century and includes works from the Western canon. Students will examine the integration of art forms, structural elements, and ornamental designs across world civilizations, analyzing their connections to broader aspects of human development. Through this exploration, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societies throughout historical periods.

Lecture Hours: 48.000

Course User Fee: \$10.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAT1033
Course User Fee: \$18.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better. Lecture Hours: 48.000
Prerequisite: ENC1101
Course User Fee: \$15.00

BOT1010 Botany 3.000 credits

This course is a survey of the plant kingdom based on a detailed study of the morphology, anatomy and physiology of selected representative specimens. Corequisite: BOT1010L
Lecture Hours: 48.000
Corequisite: BOT1010L
Course User Fee: \$8.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

ARC1302 Architectural Design 2 4.000 credits

A continuation of ARC1301, emphasizing the application of ordering concepts, and aspects and determinants of form and space. An individual design process is developed by the student. Prerequisite: ARC1301; Pre/Corequisites: ARC1126, ARC2701. Lecture Hours: 32.000, Lab Hours: 64.000
Course User Fee: \$25.00

ARC2171C Computer Aided Drafting 1 4.000 credits

Computer-aided drafting as it applies in the fields of architecture and interior design using office simulation. Emphasis is on the production of computer-aided drafting of working drawings involving different types of structure. Lecture Hours: 32.000, Lab Hours: 64.000
Prerequisite: ARC1126C OR ARC2461
Course User Fee: \$50.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course. Lecture Hours: 48.000
Prerequisite: MAC1105 OR MAC1106
Course User Fee: \$18.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

ARC2461 Architectural Materials and Construction 1 4.000 credits

An introduction to basic materials and methods of building construction. Emphasis is on wood, concrete, unit masonry, and light steel construction. Laboratory projects may include working drawings' interpretation, sketching construction details, or field trips to construction sites and fabricant plants.

Designed primarily as the initial materials and methods course for architectural transfer students.

Lecture Hours: 32.000, Lab Hours: 64.000

Prerequisite: ARC1126C OR BCN1251

Course User Fee: \$25.00

ARC2702 History of Architecture 2 3.000 credits

This course provides a survey of architecture from the 19th century to the present and includes works from the Western canon and examining architectural developments. Students will analyze the integration of art forms, structural elements, and ornamental designs across civilizations, exploring their connections to human development, including art and history. Through this study, students will develop critical thinking skills and gain understanding of how architecture reflects and influences societal changes and cultural expressions throughout modern and contemporary periods. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$10.00

PHY2053 Physics (without Calculus) 1 3.000 credits

This course is the first in a two-part series intended for non-physics majors, offering an algebra and trigonometry approach to topics such as kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. The course fosters analytical and critical thinking skills to promote a scientific understanding of the real world. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion using algebra and trigonometry; students will apply Newton's laws, and conservation laws by using algebra and trigonometry to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 48.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053L

Course User Fee: \$10.00

PHY2053L Physics (Without Calculus) 1 Lab 1.000 credits

This laboratory course is designed to complement PHY2053. Students will engage in hands-on experiments that reinforce theoretical concepts related to kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Through practical applications of algebra and trigonometry, learners will develop analytical skills while conducting experiments that illustrate key physical principles. The course emphasizes critical thinking and problem-solving as students collect and analyze data, interpret results, and communicate their findings effectively. This lab experience aims to deepen students' understanding of the scientific concepts covered in the parent course and their relevance to real-world situations.

Lab Hours: 32.000

Prerequisite: MAC1114 OR MAC1147, Corequisite: PHY2053

Course User Fee: \$20.00

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

SYG2010 Social Problems 3.000 credits

An analysis of the major contemporary and recurring social problems, emphasizing scientific search for variables involved and exploring alternative solutions.

Lecture Hours: 48.000

Program Description

Mass Communications/Journalism

Associate in Arts | Code: 10600 | 60 credits

Mass Communication examines the role of media in society. Coursework includes media criticism and analysis, U.S. history and government, sociology, and a study of the broadcast, cable and Internet industries. Depending upon the student's area of interest, study may also include journalism, and television and radio production. A Bachelor's in mass communication equips one to work in journalism, corporate communication, or in certain business or managerial positions in television or radio.

Program Modality: Both [In-Person (IP) and On-line]

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

JOU1100 Basic Reporting 3.000 credits

Journalistic writing emphasizing the elements of reporting with an emphasis on the modern news story, analysis of the elements of news, style structure of news stories, news sources, and the mechanics of newspaper production.

Lecture Hours: 48.000

SLS1510 Preparing for Student Success 3.000 credits

This course provides an orientation to college life and helps develop academic, career, and personal goals. Students will learn college success strategies, goal-setting, learning style assessments, as well as general and discipline-specific study skills in the context of various theoretical, practical, and experiential perspectives.

Lecture Hours: 48.000

Course User Fee: \$15.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ENT1501 Fundamentals of Changemaking and Social Innovation 3.000 credits

This course introduces students to the work of changemaking and the field of social innovation. Students will explore principles of social innovation and social change, while developing the skills to analyze social issues, generate solutions to those issues, and become an effective social change agent.

Lecture Hours: 48.000

Course User Fee: \$43.00

MMC2000 Introduction to Mass Communications 3.000 credits

Development of a critical perception of the mass communications process and its results in both printed and electronic media. Applications of the ethics and codes of journalism to the changing roles and forms of journalistic media. MMC 2000 will transfer for mass communications majors to various universities within the Florida State System.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

JOU2200 Editing and Makeup 3.000 credits

The application of copy desk techniques, including evaluating and editing copy, correcting faulty news stories, handling wire copy, writing headlines, and designing page layouts.

Lecture Hours: 48.000

Prerequisite: JOU1100

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

CRW2001 Creative Writing 1 3.000 credits

Imaginative writing in selected genres.

Lecture Hours: 48.000

JOU1946 Journalism Internship 1.000 - 3.000 credits

Qualified students will receive practical experience working with local or college communications media under the supervision of professional media specialists and the journalism faculty.

Other Hours: 48.000 - 144.000

Prerequisite: JOU1100and Departmental Permission.

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

SYG2230 Multi-Ethnic America 3.000 credits

In this course, students will gain an understanding of the theory and problems of underrepresented populations in American society, with an emphasis on inequity, bias, and the evolving dynamics of bias and discrimination. Additionally, the course will critically examine the portrayal of underrepresented populations in the Western Canon, providing insight into the historical and cultural influences that have shaped societal perceptions and attitudes.

Program Description

Mathematics

Associate in Arts | Code: 11700 | 60 credits

The Mathematics A.A. emphasizes math and science training, and includes coursework in computer programming. Mathematics is both a science and a tool essential for many kinds of work in industry and business. As a result, employment opportunities for graduates trained in mathematics have expanded rapidly in industries such as aviation and communications, sciences such as oceanography and meteorology, and government agencies such as the U.S. Census Bureau.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 16.0

ENC 1101	English Composition 1	3.0
MAC 1106	Integrated College and Precalculus Algebra	5.0
POS 2041	American Federal Government	3.0
CGS 1060C	Introduction to Computer Technology and Applications	4.0
SLS 1106	First Year Experience Seminar	1.0

Semester 2

Units: 12.0

ENC 1102	English Composition 2	3.0
MAC 1114	Trigonometry	3.0
PHI 2010	Introduction to Philosophy	3.0
PSY 2012	Introduction to Psychology	3.0

Semester 3

Units: 8.0

MAC 2311	Calculus and Analytical Geometry 1	5.0
<i>Oral Communication</i>		3.0
SPC 1017	Introduction to Communication	3.0
OR		
SPC 2608	Introduction to Public Speaking	3.0

Semester 4

Units: 14.0

BSC 1005	General Education Biology	3.0
HUM 1020	Humanities	3.0
MAC 2312	Calculus and Analytical Geometry 2	4.0
<i>Pathway Elective</i>		4.0
COP 1047C	Introduction to Python Programming	4.0
OR		
COP 1334	Introduction to C++ Programming	4.0
OR		
COP 2800	Java Programming	4.0
OR		
MAS 2103	Elementary Linear Algebra	3.0
OR		
STA 2023	Statistical Methods	3.0

Semester 5

Units: 10.0

MAC 2313	Calculus and Analytic Geometry 3	4.0
MAP 2302	Introduction to Differential Equations	3.0
PHY 2048	Physics with Calculus 1	4.0
PHY 2048L	Physics with Calculus 1 Lab	1.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1106 Integrated College and Precalculus Algebra 5.000 credits

The student will learn to analyze linear, quadratic, polynomial, rational, radical, absolute value, composite, inverse, piecewise, exponential, and logarithmic functions, conic sections, systems of equations/inequalities, matrices and determinants, sequences & series, the Binomial Theorem, and applications of mathematical modeling including exponential growth and decay. Prerequisite: MAT1033 with a grade of "B" or better. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAT1033 or appropriate placement scores.

Course User Fee: \$10.00

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1114 Trigonometry 3.000 credits

This course will cover the analysis and graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, work with vectors, graph both polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC 1105 or MAC 1106 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC1105 OR MAC1106

Course User Fee: \$18.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

COP1047C Introduction to Python Programming 4.000 credits

This is a course in Python programming available for students at all levels. Students will learn the syntax and rules of the Python language, including how to code, compile, and execute programs. Students study program design, structured modular programming arrays, report generation, and file processing.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP1334 Introduction to C++ Programming 4.000 credits

This course is designed for students in technology majors who require a foundation in computer programming. Students will learn the syntax and rules of the C++ language, including how to code, compile, debug and execute programs. Students will learn program design, structured and modular programming, arrays, and file processing. No previous computer courses are required although CGS 1060C is recommended. (3 hr. lecture; 2 hr. lab)

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

COP2800 Java Programming 4.000 credits

This is an intermediate level programming course using the Java computer language. Students will learn to code, compile and execute programs, while learning advanced programming concepts and object-oriented programming and design principles.

Lecture Hours: 48.000, Lab Hours: 32.000

Corequisite: COP1047C OR COP1334 OR COP2270

Course User Fee: \$63.00

MAS2103 Elementary Linear Algebra 3.000 credits

This course introduces the student to linear algebra and its applications. The student will examine linear systems of equations, matrices, determinants, vectors spaces, inner product spaces, linear transformations, linear independence and basis, eigenvalues and eigenvectors, decomposition theorems, and elements of proof writing. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAC2311

Course User Fee: \$18.00

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression.

Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems. Prerequisite: MAC 2312 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

MAP2302 Introduction to Differential Equations 3.000 credits

The student will analyze ordinary differential equations, methods of solution of first order linear and nonlinear equations and applications, homogeneous and non-homogeneous linear equations with constant coefficients, differential operator methods, higher order linear equations; the Laplace transform and its properties, elementary existence theorems, series solutions, numerical solutions of first order equations, initial and boundary value problems, vibrations and waves, and an introduction to autonomous systems. Computational Course. Prerequisite: MAC 2312 with a "C" or better or equivalent.

Lecture Hours: 48.000

Prerequisite: MAC2312

Course User Fee: \$18.00

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

Program Description

Music or Music Education

Associate in Arts | Code: 11001 | 60 credits

Music or Music Education students must be proficient in music theory and music history as well as be a skilled performer. Careers in music include individual and group performance, conducting, composing and teaching. Music graduates may also have jobs working in ancillary professions such as retail, publishing and recording.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 15.0
ENC 1101	English Composition 1	3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

MVK1111 Class Piano 1 1.000 credits

The secondary area of piano with emphasis on sight-reading, melody harmonization, and ensemble playing. Required of all music students except piano majors. May be repeated for credit.

Lab Hours: 32.000

MUT1111 Theory 1 3.000 credits

The techniques of writing four-part chord progressions using root position and inversions of the primary and secondary triads and the dominant and supertonic seventh; also, non-harmonic tones, melodic writing, and an introduction modulation.

Lecture Hours: 48.000

Prerequisite: MUT1001 or passing score on departmental placement exam., Corequisite: MUT1241

Course User Fee: \$15.00

MUT1241 Sightsinging & Ear Training 1 Year 1.000 credits

The development of aural skill by means of rhythmic and melodic dictation and sightsinging.

Lab Hours: 32.000

Corequisite: MUT1111, MUT1112

Course User Fee: \$10.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

MUT1112 Theory 2 3.000 credits

The techniques of writing four-part chord progressions using root position and inversions of the primary and secondary triads and the dominant and supertonic seventh; also, non-harmonic tones, melodic writing, and an introduction modulation.

Lecture Hours: 48.000

Prerequisite: MUT1111, Corequisite: MUT1242

Course User Fee: \$15.00

MUT1242 Sightsinging & Ear Training 2 Year 1.000 - 2.000 credits

The development of aural skills by means of rhythmic and melodic dictation and sightsinging.

Lab Hours: 16.000 - 32.000

Prerequisite: MUT1241, Corequisite: MUT1112

Course User Fee: \$10.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

MUH2111 Survey of Music History 1 3.000 credits

This course introduces the history of musical styles from antiquity through the Baroque period and includes works from the Western canon. Students will examine the development of music in relation to cultural, historical, and philosophical contexts. Through analysis of musical works and their significance, students will develop critical thinking skills and gain understanding of how music reflects and influences people across time periods.

Lecture Hours: 48.000

Course User Fee: \$15.00

MUT2116 Theory 3 3.000 credits

The continuation of modulation and the presentation of diatonic sevenths, secondary dominants, altered chords, augmented and Neapolitan sixths; melodic and harmonic analysis of selected works; ninth, eleventh, and thirteenth chords, and instrumental part writing.

Lecture Hours: 48.000

Prerequisite: MUT1112, Corequisite: MUT2246

Course User Fee: \$15.00

MUT2246 Sightsinging and Ear Training 2 Yr. 1.000 - 2.000 credits

Develops aural and visual skills by means of rhythmic, melodic and harmonic dictation and sightsinging. Emphasis is on chromatic materials.

Lab Hours: 32.000 - 64.000

Prerequisite: MUT1242, Corequisite: MUT2117

Course User Fee: \$10.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

MUT2117 Theory 4 3.000 credits

The continuation of modulation and the presentation of diatonic sevenths, secondary dominants, altered chords, augmented and Neapolitan sixths; melodic and harmonic analysis of selected works; ninth, eleventh, and thirteenth chords, and instrumental part writing.

Lecture Hours: 48.000

Prerequisite: MUT2116, Corequisite: MUT2247

Course User Fee: \$15.00

MUT2247 Sight Singing and Ear Training 2 1.000 - 2.000 credits

Develops aural and visual skills by means of rhythmic, melodic and harmonic dictation and sight singing. Emphasis is on chromatic materials.

Lab Hours: 32.000 - 64.000

Prerequisite: MUT2246, Corequisite: MUT2117

Course User Fee: \$10.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

Program Description

Philosophy

Associate in Arts | Code: 11502 | 60 credits

Philosophy investigates the fundamental principles of being, knowledge or conduct. There are numerous systems of philosophical discourse and the two-year program introduces students to many of these. Unless a student wishes to earn a Doctorate and teach at the college level, a Bachelor's degree in philosophy is generally useful

only in indirect ways. It can prepare students for graduate work in other fields such as law or theology, and the study of philosophy usually sharpens a student's analytic skills.

Program Modality: Both [In-Person (IP) and On-line]

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

LIS2004 Digital Research Strategies 1.000 credits

LIS 2004, Digital Research Strategies, equips students with information literacy skills to locate, evaluate, and ethically use information in an evolving digital landscape. Students will apply critical thinking and research techniques to explore traditional and emerging research tools. (1 hr. lecture)

Lecture Hours: 16.000

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

REL2300 Survey of World Religions 3.000 credits

A survey of the origins, beliefs and contemporary practices of the world's religions: Hinduism, Islam, Taoism, Zen Buddhism, Judaism, Christianity and Confucianism. Attention is given to the interactions between specific religions and the cultures in which they are practiced.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

CGS1060C Introduction to Computer Technology and Applications 4.000 credits

This course provides the technology skills required for personal, academic and professional success. Students will learn essential computing concepts and skills including mobile productivity, cloud services, security, ethics, general programming concepts, email, web, operating systems, and the use of an office suite. The course satisfies the College's computer competency requirement.

Lecture Hours: 48.000, Lab Hours: 32.000

Course User Fee: \$63.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHI2680 Artificial Intelligence and Ethics 3.000 credits

This course acquaints students with ethics as relevant to the design, implementation, and administration of artificial intelligence and emerging technologies. It will explore issues such as the biases of algorithms, autonomous warfare, the risks of surveillance technologies, and the effects of technologies on employment. In addition, this course will also delve into the critical examination of the Western Canon's influence on the development and ethical implications of artificial intelligence and emerging technologies.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

PHI1100 Introduction to Logic 3.000 credits

This course serves as a solid foundation for the study of philosophy, focusing on both the fundamental principles of valid reasoning and the exploration of the Western Canon. Students will delve into the rich tradition of philosophical thought, honing their analytical skills through the application of various techniques.

Lecture Hours: 48.000

POT2014 European Political Theory 1 3.000 credits

This course covers the more important trends in European political thought from Plato to the present. It examines those ideas which have contributed to the shaping of the political cultures of Western and Eastern Europe. It discusses the historical evolution of key concepts of politics such as freedom, order, political obligations, justice, consent, rights and duties, power and authority. A prior course in Government, History or Philosophy is desirable. Given in English. Level 1. Offered through Overseas Study Program.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

WOH2012 History of World Civilization to 1789 3.000 credits

This course covers the history of World Civilizations from the prehistoric period to the 18th century. Students will learn of the major political, social, economic, and cultural structures of civilizations and their development through 1789.

Lecture Hours: 48.000

Program Description

Physics

Associate in Arts | Code: 11900 | 60 credits

Physics is the study of the motion and force of energy and matter. This science is applied to different kinds of energy and matter, as in thermodynamics, astrophysics, nuclear physics and wave motion analysis. The A.A. coursework provides a fundamental education in mathematics and science topics so that students may transfer to pursue their area of interest. Careers in research are available both in government agencies and private industries, as well as in educational institutions, though in most cases graduate degrees are required.

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics.

Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics. Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

MAC2311 Calculus and Analytical Geometry 1 5.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC1114 both with a minimum grade of C

Course User Fee: \$18.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

MAC2312 Calculus and Analytical Geometry 2 4.000 credits

This second semester calculus course, the student will examine techniques of integration, applications of integration in STEM subjects, sequences and series, representation of functions by Taylor series, parametric equations, calculus in polar coordinates, and improper integrals. Prerequisite: MAC 2311 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2311

Course User Fee: \$18.00

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

MAC2313 Calculus and Analytic Geometry 3 4.000 credits

The student will examine topics in analytic geometry in three dimensions, vectors and vector functions, curves and surfaces in three-space, partial differentiation and applications to optimization, multiple integrals and their applications, vector fields, line integrals and surface integrals, Green's Theorem, and the Divergence and Stokes' theorems. Prerequisite: MAC 2312 with a grade of "C" or better. Computational Course.

Lecture Hours: 64.000

Prerequisite: MAC2312

Course User Fee: \$18.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2049 Physics with Calculus 2 4.000 credits

Foundation course for physical science and engineering majors. PHY 2048 covers classical mechanics and thermodynamics. PHY 2049 includes electricity, magnetism, waves and optics.

Lecture Hours: 64.000

Prerequisite: PHY2048, PHY2048L, Corequisite: MAC2312, PHY2049L

Course User Fee: \$10.00

PHY2049L Physics with Calculus 2 Lab 1.000 credits

Laboratory for PHY 2049.

Lab Hours: 32.000

Prerequisite: PHY2048, PHY2048L, Corequisite: MAC2312, PHY2049

Course User Fee: \$20.00

Program Description

Political Science

Associate in Arts | Code: 12206 | 60 credits

Political science examines the role and effects of government actions on society. The A.A. program prepares students for transfer with coursework in history, literature, economics and government. Political scientists may work in various government jobs, or may work as lobbyists, researchers, political analysts or journalists. In addition to graduate work in the field, a Bachelor's degree in political science also prepares students for law school.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1		Units: 13.0
ENC 1101	English Composition 1	3.0
MGF 1131	Mathematics in Context	3.0
POS 2041	American Federal Government	3.0
SPC 1017	Introduction to Communication	3.0
SLS 1106	First Year Experience Seminar	1.0
Semester 2		Units: 12.0
ENC 1102	English Composition 2	3.0
INR 2002	International Relations	3.0
PHI 2600	Introduction to Ethics	3.0
STA 2023	Statistical Methods	3.0
Semester 3		Units: 12.0
CPO 2100	Comparative European Government	3.0
ISS 2270	Multicultural Communications and Relations	3.0
PHI 2010	Introduction to Philosophy	3.0
SYG 2000	Introduction to Sociology	3.0
Semester 4		Units: 12.0
CPO 2408	Comparative Middle Eastern and North African Governments	3.0
EVR 1001	Introduction to Environmental Science	3.0
POS 2112	State and Local Government In America	3.0
POT 2014	European Political Theory 1	3.0
Semester 5		Units: 12.0

INR 2440	International Law and Organization	3.0
PSC 1515	Energy in the Natural Environment	3.0
<i>Pathway Elective</i>		6.0
CPO 2441	Islam in the Modern World	3.0
INS 2200	Introduction to Conflict Resolution and Peace Studies	3.0
INS 2300	Global Environmental Politics	3.0
INS 2310	Religion and Global Politics	3.0
POS 2293	Islam and America	3.0
Computer Competency Test*		

*Computer Competency Test (CCT) ---OR--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Total: 61.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

INR2002 International Relations 3.000 credits

The nature of international relations, the causes of leading international problems, foreign policies of world powers, international political organizations, and the origins of war and peace in the international arena.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

CPO2100 Comparative European Government 3.000 credits

This course discusses the structures and functioning of the systems of government in Western Europe. Students will analyze major policy issues and approaches to resolving them, and cultural differences and interdependence among the Western European countries in policy determination.

Recommended prerequisite: a prior course in History or Social Science. Offered first semester. Given in English. Offered through overseas study program.

Lecture Hours: 48.000

ISS2270 Multicultural Communications and Relations 3.000 credits

This course uses an interdisciplinary approach to examine the complex interactions among ethnicity, race, gender, age, and class, as well as other ways in which we differ as they pertain to shaping personal awareness, understanding, and skills that will allow them to interact more effectively with diverse populations, age, groups, and lifestyles and to think through and value human diversity. This course has an overriding principle based on the concept of human rights. (3 hr. lecture)

Lecture Hours: 48.000

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

CPO2408 Comparative Middle Eastern and North African Governments 3.000 credits

The Middle East & North Africa (MENA) has uninterruptedly been at the forefront of international geopolitics for almost a century. This enduring geopolitical visibility has important cultural, societal, economic, and security implications at national, regional, and international levels. This course is designed to tackle some of these issues by providing students with a historico-cultural, politico-economic, and geo-strategic survey of the Middle East.

Lecture Hours: 48.000

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

POS2112 State and Local Government In America 3.000 credits

The typical state and local government organization, together with political practices in America, with special emphasis on governmental organizations and the major contemporary political problems of the State of Florida and of Florida communities.

Lecture Hours: 48.000

POT2014 European Political Theory 1 3.000 credits

This course covers the more important trends in European political thought from Plato to the present. It examines those ideas which have contributed to the shaping of the political cultures of Western and Eastern Europe. It discusses the historical evolution of key concepts of politics such as freedom, order, political obligations, justice, consent, rights and duties, power and authority. A prior course in Government, History or Philosophy is desirable. Given in English. Level 1. Offered through Overseas Study Program.

Lecture Hours: 48.000

INR2440 International Law and Organization 3.000 credits

International law and problems in world politics; a review of man's attempt to control international politics through international law and organizations, including the League of Nations, the United Nations, NATO, and the European Union. A prior course in History or Social Science is desirable. Offered second semester. Given in English. Offered through Overseas Study Program.

Lecture Hours: 48.000

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CPO2441 Islam in the Modern World 3.000 credits

The survey course is designed to grant students a broad-based exposure across a variety of conceptual debates, historical events, and policy issues at the intersection of Islam and the modern world and the paths forward. The issues especially religiously-inspired and informed violence/conflict and debates surrounding them have assumed prominence in the 21st century with the resurgence of religion in politics and the subsequent struggle for Islam. These issues will be contextualized in normative, empirical and historical frameworks to equip students with a sophisticated and multi-dimensional conceptual toolbox to analyze them.

Lecture Hours: 48.000

INS2200 Introduction to Conflict Resolution and Peace Studies 3.000 credits

Introduction to Conflict Resolution and Peace Studies is an interdisciplinary course exploring foundational concepts, methodologies, and practical approaches to interstate and intra-state conflicts and how to tackle them. The course has no specific prerequisites and will appeal to a broad audience as it analyzes a broad spectrum of perspectives in the field of conflict and peace studies. By contextualizing the challenge and transmitting the knowledge of peace in normative, empirical and historical frameworks, the course will equip students with a multi-dimensional conceptual toolbox to analyze it while inspiring them to create a more equitable and harmonious world.

INS2300 Global Environmental Politics 3.000 credits

Global Environmental Politics is an interdisciplinary course exploring the evolving relationship between humanity and the environment from diverse conceptual, normative, and empirical perspectives. The course has no specific prerequisites and will appeal to a broad audience as it analyzes a broad spectrum of perspectives in the field. The course will explore the most pressing contemporary environmental challenges, including climate change, loss of biodiversity, desertification, trade in dangerous waste, and over-exploitation of natural resources as well as various political and policy responses to deal with them.

INS2310 Religion and Global Politics 3.000 credits

The interdisciplinary course introduces students to the increasingly visible role of religious identity in international and global politics. It offers a macro-level overview of the intersection of religion and politics in a historical context and sheds light on the intertwined histories and trajectories connecting them. It explores how this nexus has been shaped by belief and value systems as well as the historical socio-economic and political circumstances and conditions. Among the themes addressed in the course are religious diversity and human rights, interfaith dialogue and conflict resolution, and religion in the age of globalization.

Lecture Hours: 48.000

POS2293 Islam and America 3.000 credits

Islam and the United States offers a survey treatment of the historically charged relationship between America and the Muslim World and the path forward. The course analyzes the intersection of religion, identity politics, geopolitics and economics of Islam-US relations in a historical context. These issue areas will be contextualized in normative, empirical and historical frameworks to equip the student with a sophisticated and multi-dimensional conceptual toolbox to analyze them.

Lecture Hours: 48.000

Program Description

Pre-Bachelor of Arts

Associate in Arts | Code: 14902 | 60 credits

The Pre-Bachelor of Arts program at MDC is designed for students seeking a broad-based degree program with greater freedom to explore intellectual fields that align with their interests. This program challenges students to take primary responsibility for directing their own education. It also provides a wider range of educational opportunities than more specialized

programs. At the upper-division level, students are typically required to complete a major theme or area of concentration.

Program Modality: Both [In-Person (IP) and On-line]

Semester 5	Units: 14.0
Pathway Elective	14.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

GEB1000 Business Career Strategies 3.000 credits

This course is designed to enable students to thrive in a competitive business environment. Students will learn business etiquette, alternative career pathways, personal financial management, and budgets. Additionally, students will learn interviewing, networking, and career development skills.

Lecture Hours: 48.000

Course User Fee: \$24.00

ENC2300 Advanced Composition and Communication 3.000 credits

This writing-based course addresses techniques of critical thinking, persuasion, and argumentation. Students will refine their composition skills and develop their oral communication skills by examining and discussing a range of issues. Prerequisites: ENC1101, 1102 or equivalent with a grade of "C" or better. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101 AND ENC1102

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MGF1131 Mathematics in Context 3.000 credits

Through this course, students will experience the practicality of mathematics in a global society. Students will engage in the applications of tools and techniques of mathematics in a variety of contextual situations from everyday life. This course is appropriate for students in a wide range of disciplines/programs. This course fulfills the Gordon Rule computational requirement and must be completed with a grade "C" or better.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

AST1002 Descriptive Astronomy 3.000 credits

This course provides a comprehensive look at modern astronomy, emphasizing the use of the scientific method and the application of physical laws to understand the universe including earth and its environment. Throughout this course, students will develop the ability to discern scientific knowledge from non-scientific information by using critical thinking. Student learning outcomes: students will define terms used to measure and describe the universe; students will explain the processes involved in the formation and evolution of celestial bodies over astronomical time according to different models and theories; students will describe how scientific theories evolve in response to new observations and critically evaluate their impact on society; students will formulate empirically testable hypotheses derived from the study of physical processes and phenomena; students will apply logical reasoning skills through scientific criticism and argument to separate science from non-science; and students will gather and analyze astronomical data and communicate results in graphic and written forms.

Lecture Hours: 48.000

Course User Fee: \$10.00

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

CHM1020 General Education Chemistry 3.000 credits

This course provides students with an introduction to chemical principles and applications for the non-science major. Students will engage in problem solving and critical thinking while applying chemical concepts. Topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. Student learning outcomes: students will be able to distinguish between physical and chemical properties and changes; students will recognize components of gaseous chemistry; students will recognize components of aqueous chemistry including properties of water, solutions, and acids and bases; students will correlate the design of the periodic table to periodic trends and physical and chemical properties elements; and students will write and interpret chemical formula and write balanced chemical equations.

Lecture Hours: 48.000

Course User Fee: \$15.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

ANT2000 Introduction to Anthropology 3.000 credits

In this course, students will learn the foundations of anthropology as the study of human variation in its biological, social, and cultural dimensions. Students will learn about anthropological concepts, principles, and methodologies to understand and explore past and present human behavior. They will apply the anthropological approach to analyze issues pertaining to past and contemporary cultures, and develop intellectual skills and habits to understand behavioral, social, and cultural issues from multiple disciplinary perspectives. Student learning outcomes: students will explain scientific approaches to the study of human variation and human origins, including primatology, extinct and extant human cultures, language, and ethnicity; students will explain the origins of anthropology as a foundation discipline in the social sciences that examines the nature and definition of culture; students will apply anthropological concepts, principles, and methods to the scientific study of past and present human behavior; students will explain how anthropology incorporates multidisciplinary knowledge and perspectives; students will describe contemporary anthropological contributions.

Lecture Hours: 48.000

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.

Lecture Hours: 48.000

SYG2000 Introduction to Sociology 3.000 credits

This course engages in a scientific study of society providing an overview of sociology as a social science. It includes its development as a discipline and methodology. It examines culture as a basis for human behavior, how it is acquired and its norms obeyed. It explores issues of social inequality, including social inequality, "race" and ethnicity, and gender. The class also examines issues of social change and social institutions along issues associated with demographic changes and urbanization.

Lecture Hours: 48.000

WOH2012 History of World Civilization to 1789 3.000 credits

This course covers the history of World Civilizations from the prehistoric period to the 18th century. Students will learn of the major political, social, economic, and cultural structures of civilizations and their development through 1789.

Lecture Hours: 48.000

WOH2022 History of World Civilization From 1789 3.000 credits

The student will examine the historical development of world civilizations since 1789. Students will learn of historical processes and developments in social, cultural, political, and economic contexts since the 18th century.

Lecture Hours: 48.000

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

OCB1010 Introduction to Marine Biology 3.000 credits

An introduction to the biology of the seas. Emphasis is placed on the variety of marine organisms and their structural, physiological, and behavioral adaptations within specific marine environments. Special attention is directed to marine communities, e.g., coral reefs and shallow grass flats, and the factors limiting the distribution of organisms within those communities. Discussions will also be directed towards geological, chemical and physical characteristics of the world's oceans. (3 hr. lecture)

Lecture Hours: 48.000

PSC1121 General Education Physical Science 3.000 credits

A study of the major concepts and principles from each of the following areas: physics, chemistry, and astronomy.

Lecture Hours: 48.000

Pre/Corequisite: MGF 1130 or MGF 1131 or MAC 1105 or MAC 1114 or MAC 1140 or MAC 2223 or MAT 1033

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

Program Description

Pre-Law

Associate in Arts | Code: 11400 | 60 credits

Although no specific area of study is mandatory for the Pre-Law major, the MDC program offers courses in criminal justice, government, history and business to best prepare a student for future coursework. Students should work with an advisor to determine the best four-year degree to pursue.

Program Modality: Both [In-Person (IP) and On-line]

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

BUL2241 Business Law 1 3.000 credits

Law in relation to the proper conduct of business, including a consideration of the nature and source of law, courts and courtroom procedure, contracts, sales of goods, negotiable instruments and secured transactions. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1401 Psychology of Career Adjustment 1.000 - 6.000 credits

For students who have not decided, are having difficulty deciding, or need clarification in making a career choice. A format for a systematic investigation for career and life planning is included. It is concerned with "who you are," "where are you going," "how to get there," and "what's out there that fits you."

Lecture Hours: 16.000 - 96.000

Course User Fee: \$15.00

SLS1510 Preparing for Student Success 3.000 credits

This course provides an orientation to college life and helps develop academic, career, and personal goals. Students will learn college success strategies, goal-setting, learning style assessments, as well as general and discipline-specific study skills in the context of various theoretical, practical, and experiential perspectives.

Lecture Hours: 48.000

Course User Fee: \$15.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

MGF1130 Mathematical Thinking 3.000 credits

In this course, students will utilize multiple means of problem solving through student-centered mathematical exploration. The course is designed to teach students to think more effectively and increase their problem-solving ability through practical application and divergent thinking. This course is appropriate for students in a wide range of disciplines/programs. Student learning outcomes: students will determine efficient means of solving a problem through investigation of multiple mathematical models; students will apply logic in contextual situations to formulate and determine the validity of logical statements using a variety of methods; students will apply mathematical concepts visually and contextually to represent, interpret and reason about geometric figures; students will recognize the characteristics of numbers and utilize numbers along with their operations appropriately in context; and students will analyze and interpret representations of data to draw reasonable conclusions.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education mathematics requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$19.10

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

BUL2241 Business Law 1 3.000 credits

Law in relation to the proper conduct of business, including a consideration of the nature and source of law, courts and courtroom procedure, contracts, sales of goods, negotiable instruments and secured transactions. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

PLA2890 Human Rights Law & Procedure 3.000 credits

This course will address theoretical and practical questions the evolution and development of the laws addressing international human rights issues.

Emphasis will be placed on the core issues, debates, struggles, failures, and successes of legal claims. (3 hr. lecture)

Lecture Hours: 48.000

CJL1100 Criminal Law 3.000 credits

Historical background and foundations of American criminal law, including United States Constitution al requirements, Federal and State court organization and jurisdiction, criminal law basics, Florida statutes, rules of evidence and procedure.

Lecture Hours: 48.000

BSC1005 General Education Biology 3.000 credits

This course applies the scientific method to critically examine and explain the natural world including but not limited to cells, organisms, genetics, evolution, ecology, and behavior. Student learning outcomes: students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will describe the natural world; and students will articulate and practice the scientific method.

Lecture Hours: 48.000

Course User Fee: \$8.00

ESC1000 General Education Earth Science 3.000 credits

Using the scientific method, critical thinking skills and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Student learning outcomes: students will use critical thinking to recognize the rigorous standards of scientific theories; students will analyze and synthesize earth science data to draw scientifically valid conclusions; students will recognize the different time scales associated with different earth processes; students will effectively describe interactions between humans and the earth's spheres; and students will apply their understanding of earth science principles to complex global and local issues.

Lecture Hours: 48.000

Course User Fee: \$10.00

EVR1001 Introduction to Environmental Science 3.000 credits

This course is a survey of basic chemical, biological, and physical principles of environmental science and their applications to environmental issues. This course is appropriate for students in a wide range of disciplines or programs. Student learning outcomes: students will apply critical thinking to analysis and interpretation of environmental information and model output; students will apply the scientific method to explain natural experiences and phenomena; students will explain the basic chemical, biological, and physical principles of environmental science; and students will use empirical evidence to describe the historical and modern context of environmental problems and their solutions. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$20.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

WOH2012 History of World Civilization to 1789 3.000 credits

This course covers the history of World Civilizations from the prehistoric period to the 18th century.

Students will learn of the major political, social, economic, and cultural structures of civilizations and their development through 1789.

Lecture Hours: 48.000

WOH2022 History of World Civilization From 1789 3.000 credits

The student will examine the historical development of world civilizations since 1789. Students will learn of historical processes and developments in social, cultural, political, and economic contexts since the 18th century.

Lecture Hours: 48.000

INR2002 International Relations 3.000 credits

The nature of international relations, the causes of leading international problems, foreign policies of world powers, international political organizations, and the origins of war and peace in the international arena.

Lecture Hours: 48.000

PLA2704 Professionalism & Civility in the Law 3.000 credits

This class will provide students guidance as they interact in a real-world setting as legal professionals while strengthening their communication skills. This course will cultivate the students' leadership capacities at the intra-personal, interpersonal, and industry levels. The coursework will proceed through experiential learning that is grounded in theory and includes reflection. The study material will develop students' knowledge in the context of the aspiration, relational, and practical aspects of professionalism and civility in the legal field (3 credits)

Lecture Hours: 48.000

Course User Fee: \$45.84

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe.

Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

QMB2100 Basic Business Statistics 3.000 credits

The application of basic statistical methods to business problems. Emphasis is on learning to select the appropriate statistical method of solving a given business problem, applying the chosen method, and interpreting the solution.

Lecture Hours: 48.000

Prerequisite: Acceptable score on the Algebra Placement test or equivalent.

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

ARH1000 Art Appreciation 3.000 credits

In this course, students will develop an appreciation of and the ability to think critically about culture and be provided with the tools to understand, analyze, and discuss works of visual art and material culture. Student learning outcomes: students will identify and describe terms, concepts, and methods used in the discipline of art history; students will apply terms, concepts, and methods used in the discipline of art history to works of visual art and material culture; students will identify and describe works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; students will analyze works of visual art and material culture in the works' cultural context, including works from or inspired by the western canon and other cultural traditions; and students will generate an analytical response to works of visual art and material culture in the works' cultural context.

Lecture Hours: 48.000

Course User Fee: \$10.00

LIT2000 Introduction to Literature 3.000 credits

In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include selections from the western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation. Student learning outcomes: students will identify a variety of literary movements, historical eras, and/or cultural contexts; and students will demonstrate critical thinking and analytical skills. Writing Intensive Course.

Lecture Hours: 48.000

Prerequisite: ENC1101

MUL1010 Music Appreciation 3.000 credits

In this course, students will survey the history of classical music from antiquity to the modern period, focusing on western music. The curriculum may also integrate a variety of popular and global styles where appropriate. Student learning outcomes: students will discuss and analyze music using terminology appropriate for the course; students will demonstrate fundamental knowledge of the works of significant composers; students will identify connections between music and the other arts; and students will identify historical styles and periods based on instruments and performance practices utilized.

Lecture Hours: 48.000

Course User Fee: \$15.00

THE2000 Theatre Appreciation 3.000 credits

In this course, students will explore dramatic structure, techniques, and various organizational elements. The course provides an introduction to theatre as a collaborative art form through the critical analysis of its historical context, production, theory, and connections to theatrical literature, including the Western Canon. Student learning outcomes: students will identify the basic principles of theatrical performance, design, technology, organization, and management; students will assess the significance of the human condition as expressed through the performing arts; students will explore and interpret works of art utilizing creative and critical thinking skills; students will demonstrate college-level writing; and students will define, compare and contrast theater as both an expressive art form and a commercial industry. Writing Intensive Course.

Lecture Hours: 48.000

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

PSC1515 Energy in the Natural Environment 3.000 credits

Investigation of the physical environment using energy as a theme to demonstrate the impact of science and technology on the environment and on the lives of people. Special fee.

Lecture Hours: 48.000

Course User Fee: \$10.00

CJL2062 Constitutional Law and Legal Procedure or Evidence 3.000 credits

An examination of the United States and Florida Constitutions, with emphasis on leading cases dealing with arrest, search and seizure, confessions and the rules of evidence.

Lecture Hours: 48.000

PLA2872 Artificial Intelligence (AI) and the Law 3.000 credits

Introduction to the intersection of artificial intelligence and the law, focusing on its challenges, opportunities, ethics, and impact on the law, the legal industry, and society. (3 credits)

Lecture Hours: 48.000

Recommended Preparation: Students are encouraged to enroll in ENC1101 prior to registering for PLA2872.

Program Description

Pre-Medical Science/Dentistry

Associate in Arts | Code: 11211 | 60 credits

This program is designed to meet the first two years of required courses for students planning careers in medicine and dentistry. Pre-medical education should include a foundation in chemistry, biology, mathematics, and physics, as well as a broad education in the humanities and social sciences. This program enables the student to transfer to colleges or universities that offer a Baccalaureate degree in physician assistant (PA), or other pre-medical degrees such as biology. Admission to a professional school is dependent upon academic coursework and scores on a national test. Applicants should have a minimum "B" average.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 10.0

ENC 1101

English Composition 1

3.0

MAT 1033	Intermediate Algebra	3.0
MAT 1033L	Intermediate Algebra Recitation Hall	0.0
<i>Social Science</i>		3.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications.

Lecture Hours: 48.000

Prerequisite: MAT0022C OR MAT0028 OR MAT0057 or by placement score, or eligible exemption.

Course User Fee: \$18.00

MAT1033L Intermediate Algebra Recitation Hall 0.000 credits

The student will receive individualized, small group or whole group instruction to deepen their conceptual understanding of mathematics. The student will reinforce and apply content knowledge with effective problem-solving techniques and non-cognitive activities to make mathematics meaningful and relevant to their fields of study while strengthening the concepts needed to achieve the objectives of MAT1033. This lab session is associated and funded by the First in the World Grant, CCAT Math Project.

Lab Hours: 1.000

Corequisite: MAT1033

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

CHM1025L Introductory Chemistry Lab 1.000 credits

This course is an optional beginning chemistry laboratory course, which has been designed for those students who have little or no background in chemistry and are enrolled in CHM1025. The students will reinforce what they learn in CHM1025. Students will learn about basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1025

Course User Fee: \$30.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan. Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds.

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting. Prerequisites: CHM1046, CHM1046L; Corequisite: CHM2210.

Lab Hours: 64.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

Program Description

Pre-Medical Technology

Associate in Arts | Code: 11209 | 60 credits

This program provides the science coursework necessary to transfer to a four-year baccalaureate program. Students must transfer to an upper-division institution for the third year. Generally, the fourth year is spent in a clinical setting, usually in a hospital where students learn laboratory techniques. Members of this profession work in clinical laboratories performing the wide variety of tests which aid physicians in the diagnosis and treatment of patients. Most medical technologists work in hospitals, physician's public health laboratories, universities, or in industry.

PHY 2048	Physics with Calculus 1	4.0
PHY 2048L	Physics with Calculus 1 Lab	1.0

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BSC1084 Functional Human Anatomy 3.000 credits

This course covers basic human anatomy for students in allied health and mortuary science programs. It includes the dynamics of gross and functional anatomy, terminology, body orientation, and systematic relationships.

Lecture Hours: 48.000

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

CHM1025L Introductory Chemistry Lab 1.000 credits

This course is an optional beginning chemistry laboratory course, which has been designed for those students who have little or no background in chemistry and are enrolled in CHM1025. The students will reinforce what they learn in CHM1025. Students will learn about basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1025

Course User Fee: \$30.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MAC1147 Pre-Calculus Algebra and Trigonometry 5.000 credits

The course will cover the properties and graphs of algebraic, exponential and logarithmic functions, piecewise-defined functions, the Fundamental Theorem of Algebra, solutions of polynomial equations, conic sections, systems of equations, matrices and determinants, arithmetic and geometric sequences and series, the Binomial Theorem, graph of trigonometric functions and inverse trigonometric functions, the fundamental trigonometric identities, solutions to conditional trigonometric equations, solutions for both right and oblique triangles, operations on complex numbers in trigonometric form, vectors, graphs of polar and parametric equations, and solutions of applications and modeling problems related to the above topics.

Prerequisite: MAC1105 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1105

Course User Fee: \$18.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

**MAC2311 Calculus and Analytical Geometry 1
5.000 credits**

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of limits, derivatives, and definite and indefinite integrals of functions of one variable, including algebraic, exponential, logarithmic, and trigonometric functions, and applications. Topics will include limits, continuity, differentiation and rates of change, optimization, curve sketching, and introduction to integration and area. Student learning outcomes: students will calculate a limit, derivative, or integral using appropriate techniques; students will determine the continuity and differentiability of a function; students will use limits and derivatives to analyze relationships between the equation of a function and its graph; students will apply differentiation techniques to model and solve real world problems; and students will use integrals and the fundamental Theorem of Calculus to analyze the relationship between the integral of a function and the related area. Prerequisites: MAC1106 and MAC1114, or MAC1114 and MAC1140, or MAC1147 with a grade of "C" or better or departmental permission. Computational Course.

Lecture Hours: 80.000

Prerequisite: MAC1147 or MAC1114 and MAC1140 both with a minimum grade of C, or MAC1106 and MAC114 both with a minimum grade of C

Course User Fee: \$18.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan. Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

PHY1025 Basic Physics 3.000 credits

This course will help students to facilitate the transition from high school to college/university physics. The course will emphasize problem-solving techniques. Topics may include units of measure, particle mechanics, conservation laws, and basic field concepts.

Lecture Hours: 48.000

Prerequisite: MAC1105

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

PHY2048 Physics with Calculus 1 4.000 credits

This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves.

Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications. Student learning outcomes: students will solve analytical problems describing different types of motion, including translational, rotational, and simple harmonic motion; students will apply Newton's Laws, and conservation laws to solve analytical problems of mechanics; students will identify and analyze relevant information presented in various formats such as graphs, tables, diagrams, and/or mathematical formulations; and students will solve real-world problems using critical thinking skills and knowledge developed from this course.

Lecture Hours: 64.000

Prerequisite: PHY 1025 or PHY 2053 and PHY 2053L, and (MAC 2311 or MAC 2312 or MAC 2313 or MAD 2104 or MAP 2302 or MAS 2103), Corequisite: PHY2048L

Course User Fee: \$10.00

PHY2048L Physics with Calculus 1 Lab 1.000 credits

This laboratory course complements PHY2048 by providing hands-on experience in the principles of kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Students will engage in practical experiments that reinforce theoretical concepts covered in the parent course, allowing them to apply analytical problem-solving techniques to real-world scenarios. Through a series of structured laboratory activities, students will develop critical thinking and analytical skills while collecting and analyzing data related to motion and forces. This course is designed for science and engineering majors, preparing them for advanced studies and professional applications in physics and related fields.

Lab Hours: 32.000

Prerequisite: MAC2311, PHY1025 OR PHY2053 AND PHY2053L, Corequisite: PHY2048

Course User Fee: \$20.00

Program Description

Associate in Arts | Code: 11203 | 60 credits

The A.A. degree does not prepare students to be eligible to take certification/licensure exams or to practice in the Nursing profession. This program includes the pre-professional courses necessary for admission to a Bachelor of Science degree program in nursing (BSN). The first two years at the community college level consist of general education and science courses. The professional nursing courses are taken in the last two years at the upper division. Upper-division programs are limited access, require an above average academic record, and have widely differing pre-professional course requirements. Therefore, students are advised to check with the Nursing Department of the senior institution they wish to attend. Most upper-division programs also offer a track for registered nurses (RNs) completing an Associate in Science degree to earn a BSN degree.

Pathway Elective *		3.0

*Note: Must take 3 credits. Check with advisor for any transferable Credit Type 1 or Credit Type 2 course.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

**BSC2085 Human Anatomy and Physiology 1
3.000 credits**

This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems. Student learning outcomes: students will identify cell structures and describe their functions; students will distinguish tissues by structure, location in the body, and contrast their normal physiology; students will demonstrate an understanding of anatomical structure, organization of the body, cavities, planes, and directional terms; students will identify and describe structures of integumentary, skeletal, muscular, and nervous systems; students will interpret the functions of the integumentary, skeletal, muscular, and nervous systems; students will explain how the components of the human body maintain homeostasis; and students will analyze and interpret physiological data. Corequisite: BSC2085L.

Lecture Hours: 48.000

Corequisite: BSC2085L

Course User Fee: \$8.00

**BSC2085L Human Anatomy and Physiology 1
Laboratory 1.000 credits**

In this laboratory course, students will learn to apply the concepts covered in BSC2085 as it pertains to structure and function of the human body from an experiential approach. This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.

Lab Hours: 32.000

Corequisite: BSC2085

Course User Fee: \$25.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

**AMH2020 History of the US since 1877 3.000
credits**

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "c" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

BSC2086 Human Anatomy & Physiology 2 3.000 credits

Building on concepts learned in BSC2085, students will learn the structure, function, and physiology of the human body, with an emphasis on the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems. Prerequisite: BSC2085; Corequisite: BSC2086L

Lecture Hours: 48.000

Prerequisite: BSC2085, Corequisite: BSC2086L

Course User Fee: \$10.00

BSC2086L Human Anatomy & Physiology 2 Lab 1.000 credits

In this laboratory course, students will learn to apply the concepts covered in BSC2086, which include the structure and function of the Endocrine, Cardiovascular, Lymphatic, Respiratory, Digestive, Urinary, and Reproductive Systems and development, from an experiential approach.

Lab Hours: 32.000

Prerequisite: BSC2085 AND BSC2085L, Corequisite: BSC2086

Course User Fee: \$25.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions. Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

CHM1033 Chemistry for Health Sciences 3.000 credits

This course emphasizes chemistry topics related to allied health. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry and their applications to physiological functions.

Prerequisite: MAT1033; Corequisite: CHM1033L.

Lecture Hours: 48.000

Prerequisite: MAT1033, Corequisite: CHM1033L

Course User Fee: \$15.00

CHM1033L Chemistry for Health Sciences Lab 1.000 credits

This course emphasizes chemistry topics related to the allied health sciences. Students will learn the essentials of inorganic chemistry, organic chemistry, biochemistry, and their application to physiological functions in a laboratory setting. Prerequisite:

MAT1033; Corequisite: CHM1033.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1033

Course User Fee: \$30.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan. Lecture Hours: 48.000

PHI2600 Introduction to Ethics 3.000 credits

This course provides students with an understanding of ethics and morality and includes works from the Western canon. Students will evaluate ethical theories and apply them to classical and contemporary issues, exploring the intersection of ethics with aspects of human development, including literature, history, and art. Through this process, students will develop critical thinking skills and gain understanding of how ethical reasoning shaped and influences human thought and behavior. This is a writing intensive course.

Lecture Hours: 48.000

HUN1201 Essentials of Human Nutrition 3.000 credits

The Essentials of Human Nutrition is a general education course designed to acquaint students with the specific role of carbohydrates, fats, proteins, vitamins, minerals, and water in daily life. Students will learn how the human body systems manage the breakdown, assimilation, and excretion of nutrients and their metabolic wastes. Students will also learn the relationships between food and optimal health including physical fitness and the relationships between nutritional imbalances and diseases. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$9.00

MCB2010 Microbiology 3.000 credits

This course introduces basic principles of morphology, physiology, biochemistry and genetics of microorganisms. The students will learn representative types of microorganisms including bacteria, algae, protozoa and viruses and the roles of various microorganisms in health and disease, modes of transmission and the effects of their activities in our biosphere. Students are strongly recommended to take the laboratory component MCB2010L.

Prerequisites: BSC2010/2010L or BSC2085/2085L, CHM1033/1033L or CHM1045/1045L

Lecture Hours: 48.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L

Course User Fee: \$9.00

MCB2010L Microbiology Laboratory 2.000 credits

This Laboratory course complements MCB2010 lecture topics. The student will learn and have direct experience with fundamental techniques for observation, isolation, cultivation, counting, identification, and control of microbes.

Lab Hours: 64.000

Prerequisite: BSC2010 AND BSC2010L OR BSC2085 AND BSC2085L, CHM1033 AND CHM1033L OR CHM1045 AND CHM1045L, Corequisite: MCB2010

Course User Fee: \$55.00

PSY2012 Introduction to Psychology 3.000 credits

In this course, students will gain an introduction to the scientific study of human behavior and mental processes. Topics may be drawn from historical and current perspectives in psychology. Student learning outcomes: Students will be able to identify basic psychological theories, terms, and principles from historical and current perspectives; Students will be able to recognize real-world applications of psychological theories, terms, and principles; students will be able to recognize basic strategies used in psychological research; Students will be able to draw logical conclusions about behavior and mental processes based on empirical evidence.
Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.
Lecture Hours: 48.000
Recommended Preparation: Completion of MGF1131 prior to registration.
Course User Fee: \$18.00

Program Description

Pre-Occupational Therapy

Associate in Arts | Code: 11204 | 60 credits

This program provides the fundamental science coursework necessary to transfer to a four-year institution, where students can obtain a degree in an appropriate field, such as biology. To be an optometrist, one must earn the Doctor of Optometry professional degree. A Bachelor's degree with a strong science background is required for admission. Graduates must pass a state licensure exam in order to practice. Optometrists prescribe glasses, contact lenses and visual therapy, and offer non-surgical treatment of eye diseases and the rehabilitation of patients with visual disabilities.

Total: 60.0

ENC1101 English Composition 1 3.000 credits

This course introduces students to rhetorical concepts and audience-centered approaches to writing including composing processes, language conventions and style, and critical analysis and engagement with written texts and other forms of communication. Learning outcomes: students will apply rhetorical knowledge to communicate for a range of audiences and purposes; students will employ critical thinking to analyze forms of communication; and students will engage in writing processes that involve drafting, revising, and reflecting. Students who complete this course will be awarded the Fundamentals of Written Communication Digital Badge.

Lecture Hours: 48.000

Prerequisite: Student must meet the Developmental Education reading and writing requirements in State Rule 6A-10.0315 (by course, placement score, or eligible exemption).

Course User Fee: \$15.00

AMH2010 History of the US to 1877 3.000 credits

In this course, students will examine United States History from before European contact to 1877. Topics will include but are not limited to indigenous peoples, the European background, the colonial period, the American Revolution, the Articles of Confederation, the Constitution, issues within the new republic, sectionalism, manifest destiny, slavery, the American Civil War, and Reconstruction. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history from before European contact to 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas; values, and perceptions that have shaped United States history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

AMH2020 History of the US since 1877 3.000 credits

In this course, students will trace the history of the United States from the end of the reconstruction era to the contemporary era. Topics will include but are not limited to the rise of industrialization, the United States' emergence as an actor on the world stage, constitutional amendments and their impact, the progressive era, World War I, the great depression and new deal, World War II, the civil rights era, the cold war, and the United States since 1989. Student Learning Outcomes: students will describe the factual details of the substantive historical episodes under study; students will identify and analyze foundational developments that shaped American history since 1877 using critical thinking skills; students will demonstrate an understanding of the primary ideas, values, and perceptions that have shaped American history; and students will demonstrate competency in civic literacy.

Lecture Hours: 48.000

POS2041 American Federal Government 3.000 credits

In this course, students will investigate how the national government is structured and how the American constitutional republic operates. It covers the philosophical and historical foundations of American government, including but not limited to the declaration of independence, the United States Constitution and all its amendments, and the federalist papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens. Student learning outcomes: students will demonstrate an understanding of the basic principles and practices of America's constitutional republic; students will demonstrate knowledge of the nation's founding documents, including the declaration of independence, the U.S. Constitution and its amendments, and the Federalist Papers; students will demonstrate knowledge of landmark U.S. Supreme court cases, landmark legislation, and landmark executive actions; students will demonstrate knowledge of the history and development of the American federal government and its impact on law and society; students will demonstrate an ability to apply course material to contemporary political issues and debates; and students will demonstrate the ability to engage in discussion and civil debate on American politics that are associated with multiple points of view.

Lecture Hours: 48.000

MAT1033 Intermediate Algebra 3.000 credits

The student will learn the concepts of linear equations, quadratic equations, rational equations, radical equations, rational expressions and equations, complex numbers, graphing linear equations and inequalities in one and two variables, and related applications.

Lecture Hours: 48.000

Prerequisite: MAT0022C OR MAT0028 OR MAT0057 or by placement score, or eligible exemption.

Course User Fee: \$18.00

MAT1033L Intermediate Algebra Recitation Hall 0.000 credits

The student will receive individualized, small group or whole group instruction to deepen their conceptual understanding of mathematics. The student will reinforce and apply content knowledge with effective problem-solving techniques and non-cognitive activities to make mathematics meaningful and relevant to their fields of study while strengthening the concepts needed to achieve the objectives of MAT1033. This lab session is associated and funded by the First in the World Grant, CCAT Math Project.

Lab Hours: 1.000

Corequisite: MAT1033

SLS1106 First Year Experience Seminar 1.000 credits

This course is designed to provide students a forum for transitioning into college. Students will learn to develop the skills required for success in college and beyond. This course is intended for first time in college students, who are seeking an Associate in Arts degree program.

Lecture Hours: 16.000

Course User Fee: \$10.00

CHM1025 Introductory Chemistry 3.000 credits

This course will provide beginning students with certain basic knowledge and skills, which will enable them to be successful in the first semester of General Chemistry I, CHM1045. The students will learn elementary principles of modern chemistry, including basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature. Prerequisite: MAT1033.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$15.00

CHM1025L Introductory Chemistry Lab 1.000 credits

This course is an optional beginning chemistry laboratory course, which has been designed for those students who have little or no background in chemistry and are enrolled in CHM1025. The students will reinforce what they learn in CHM1025. Students will learn about basic measurements, chemical bonding, chemical reactions, stoichiometry, concentration of solutions, and chemical nomenclature.

Lab Hours: 32.000

Prerequisite: MAT1033, Corequisite: CHM1025

Course User Fee: \$30.00

ENC1102 English Composition 2 3.000 credits

This is the second required general core course in college-level writing. Students will learn the conventions of standard edited American English. Students will compose informative and persuasive essays, write responses to a variety of literary genres and/or non-fiction, and produce a documented paper based on research. Writing Intensive Course and must be completed with a grade of "C" or better.

Lecture Hours: 48.000

Prerequisite: ENC1101

Course User Fee: \$15.00

HUM1020 Humanities 3.000 credits

In this course, students will learn about the creative ideas and accomplishments of various cultures in various fields of humanities that may include art, architecture, drama, history, music, literature, philosophy, and religion. The course will include cultural expressions from the western canon and may also include expressions from around the globe. Student learning outcomes: students will demonstrate knowledge of arts and ideas and synthesize information from various sources; students will analyze and interpret selected expressions of arts and ideas; students will compare and contrast selected expressions of arts and ideas; and students will identify contextual influences on the development of interdisciplinary arts and ideas.

Lecture Hours: 48.000

Course User Fee: \$5.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

MAC1105 College Algebra 3.000 credits

In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. Topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications. Student learning outcomes: students will solve an equation or an inequality using an appropriate technique; students will define and describe functions, their properties, and graphs; students will manipulate functions to simplify expressions and find new functions; students will use transformations to write an equation for a function and to graph a function; and students will model and solve real world problems using functions. Prerequisite: MAT1033 with a grade of "C" or better. Computational Course.

Lecture Hours: 48.000

Prerequisite: MAT1033

Course User Fee: \$18.00

BSC2010 Principles of Biology 3.000 credits

In this course students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication. Student learning outcomes: students will demonstrate scientific literacy by articulating and practicing the scientific method; students will evaluate data regarding validity; students will read and interpret a variety of scientific data; students will identify major macromolecules and state their importance to living organisms; students will explain metabolism; students will compare and contrast prokaryotic and eukaryotic structures and processes of cell division and replication; and students will explain gene expression; students will solve problems in transmission genetics. Pre/Corequisites: BSC2010L, CHM1045. Special Fee.

Lecture Hours: 48.000

Course User Fee: \$8.00

BSC2010L Principles of Biology 1 Laboratory 2.000 credits

This laboratory course is designed to complement BSC2010, Principles of Biology 1. It covers the nature of scientific investigation, the chemistry of life, microscopy, cell structure and function, metabolism, and the continuity of life. Corequisite: BSC2010, Special Fee.

Lab Hours: 64.000

Prerequisite: CHM1045 AND CHM1045L, Corequisite: BSC2010

Course User Fee: \$40.00

CHM1045 General Chemistry and Qualitative Analysis 3.000 credits

This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem-solving and critical thinking while applying chemical concepts. Topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases. Student learning outcomes: students will apply the law of conservation of matter and energy; students will implement rules of significant numbers to all measurements; students will explain the fundamental properties of matter, including but not limited to atomic and electronic structure, and periodicity; students will apply IUPAC rules of nomenclature; students will predict molecular geometry and properties from bonding theories; and students will predict and explain the products of chemical reactions (e.g., acid-base, oxidation-reduction, precipitation, dissociation). Prerequisite: CHM1025 or a passing score on the CART exam, MAC1105; Corequisite: CHM1045L.

Lecture Hours: 48.000

Prerequisite: CHM1025 or approved proficiency exam score., Corequisite: CHM1045L, Prerequisite: MAC1105

Course User Fee: \$15.00

CHM1045L General Chemistry Lab 2.000 credits

CHM 1045L is the first semester general chemistry laboratory course. Students will learn to introduce the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., stoichiometry, gas laws, atomic structure, and quantitative analysis). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science majors.

Lab Hours: 64.000

Prerequisite: CHM1025 or a passing score on the CART exam. OR MAC1105, Corequisite: CHM1045

Course User Fee: \$30.00

DEP2000 Human Growth and Development 3.000 credits

This course examines the physical, cognitive, social and emotional development of human beings from conception to death. Students will learn about theories of development and key issues in the field and apply research in developmental psychology throughout the prenatal, infancy, childhood, adolescence, and adulthood periods of the lifespan.

Lecture Hours: 48.000

ECO2013 Principles of Economics (Macro) 3.000 credits

In this course, students will learn the foundations of macroeconomics as the branch of economics concerned with how decision-making, in an environment of scarcity, maps onto the aggregate economy. Students will examine theories and evidence related the following core set of topics: national income determination, money, monetary and fiscal policy, macroeconomic conditions, international trade and the balance of payments, and economic growth and development. Student learning outcomes: students will recognize that all decisions happen in an environment of scarcity; students will examine theories and evidence regarding how changes in aggregate measurements are related to economic performance; students will recognize the relationships between the components of the national income accounts; students will analyze theory and evidence regarding fiscal and monetary policies and how they affect the economy; students will identify theories of long-term economic growth and examine evidence for those theories. This is a writing intensive course.

Lecture Hours: 48.000

Course User Fee: \$15.00

BSC2011 Principles of Biology 2 3.000 credits

This is the second in a sequence of two courses that deals with the principles of modern biology. It covers organic evolution, phylogeny, biological diversity, overviews of plant and animal form and function, behavior, as well as population, community, and ecosystem ecology.

Lecture Hours: 48.000

Prerequisite: BSC2010, BSC2010L, BSC2011L

Course User Fee: \$8.00

BSC2011L Principles of Biology 2 Laboratory 2.000 credits

This course is intended for students pursuing a major and complements the lecture course BSC2011. As such, it functions to provide them with hands-on experience with laboratory exercises designed to complement the presentation of the principles of biology as they relate to evolution, biological diversity, form and function in plants and animals, ethnology, ecology and conservation biology.

Lab Hours: 64.000

Prerequisite: BSC2010, BSC2010L, Corequisite: BSC2011

Course User Fee: \$40.00

CHM1046 General Chemistry and Qualitative Analysis 3.000 credits

CHM1046 is the second course in the CHM1045-1046 sequence. Students will learn major topics in modern chemistry, including but not limited to thermodynamics, kinetics, solutions equilibria including acids, bases, and other ionic equilibria, and electrochemistry.

Lecture Hours: 48.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046L

Course User Fee: \$15.00

CHM1046L General Chemistry and Qualitative Analysis Lab 2.000 credits

CHM 1046L is the second semester general chemistry laboratory course. Students will learn the basic laboratory techniques involved in general chemistry and to re-enforce and illustrate several of the important topics in general chemistry (e.g., qualitative and quantitative analysis, equilibrium, thermodynamics, and kinetics). The enrollment generally consists of pre-medical, pharmacy, medical technology, physical therapy, engineering, and science students. Prerequisites: CHM1045, CHM1045L; Corequisite: CHM1046.

Lab Hours: 64.000

Prerequisite: CHM1045, CHM1045L, Corequisite: CHM1046

Course User Fee: \$30.00

SPC1017 Introduction to Communication 3.000 credits

Students will develop conceptual knowledge and practical skills needed for effective verbal and nonverbal communication in interpersonal, intercultural, small-group, and public communication contexts enabling students to communicate successfully in personal, professional, educational, social, and civic settings. This course fulfills the Gordon Rule requirement. (3 hr. lecture)

Lecture Hours: 48.000

Course User Fee: \$7.00

SPC2608 Introduction to Public Speaking 3.000 credits

SPC2608 is a course in which students will practice speaking to audiences as well as listening to and critically analyzing oral communication. Through oral and written communication, students will learn communication theory as applied to a variety of communication situations and social interactions.

Gordon Rule assigned.

Lecture Hours: 48.000

Prerequisite: SPC2608 Placement by Scholastic Assessment Test (SAT) verbal subtest score; American College Testing (ACT) English subtest score; Computerized Placement Test (CPT) English subtest score; or ENC0025 with a grade of "S."

Course User Fee: \$15.00

CHM2210 Organic Chemistry 1 3.000 credits

In Organic Chemistry 1, students will learn about aliphatic hydrocarbons and their derivatives. Lectures are supplemented by laboratory preparation of representative compounds.

Lecture Hours: 48.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210L

Course User Fee: \$15.00

CHM2210L Organic Chemistry 1 Laboratory 2.000 credits

Students will learn to reinforce and illustrate topics learned in CHM2210. Topics such as nomenclature, preparations, reactions and electronic and structural features of alkanes, alkenes, alkynes, alkyl halides, aromatic hydrocarbons and other organic compounds will be performed in a laboratory setting. Prerequisites: CHM1046, CHM1046L; Corequisite: CHM2210.

Lab Hours: 64.000

Prerequisite: CHM1046, CHM1046L, Corequisite: CHM2210

Course User Fee: \$30.00

PHI2010 Introduction to Philosophy 3.000 credits

In this course, students will be introduced to the nature of philosophy, philosophical thinking, major intellectual movements in the history of philosophy, including topics from the western philosophical tradition, and various problems in philosophy. Students will strengthen their intellectual skills, become more effective learners, and develop broad foundational knowledge. Student learning outcomes: students will develop critical thinking skills; students will demonstrate an understanding of classical western philosophical views; and students will analyze, explain, and evaluate foundational concepts of epistemology, metaphysics, and ethics. Writing Intensive Course.

Lecture Hours: 48.000

STA2023 Statistical Methods 3.000 credits

In this course, students will utilize descriptive and inferential statistical methods in contextual situations, using technology as appropriate. The course is designed to increase problem-solving abilities and data interpretation through practical applications of statistical concepts. This course is appropriate for students in a wide range of disciplines and programs. Student learning outcomes: students will visualize and summarize data using descriptive statistics; students will apply basic probability concepts to draw reasonable conclusions; students will employ concepts of random variables, sampling distributions, and central limit theorem to analyze and interpret representations of data; students will choose an appropriate method of inferential statistics, including confidence intervals and hypothesis testing, to make broader decisions based on sample data; and students will model linear relationships between quantitative variables using correlation and linear regression. Prerequisite: Satisfactory score/grade on an approved placement method.

Lecture Hours: 48.000

Recommended Preparation: Completion of MGF1131 prior to registration.

Course User Fee: \$18.00

Program Description

Pre-Optometry

Associate in Arts | Code: 11205 | 60 credits

This program provides the fundamental science coursework necessary to transfer to a four-year institution, where students can obtain a degree in an appropriate field, such as biology. To be an optometrist, one must earn the Doctor of Optometry professional degree. A Bachelor's degree with a strong science background is required for admission. Graduates must pass a state licensure exam in order to practice. Optometrists prescribe glasses, contact lenses and visual therapy, and offer non-surgical treatment of eye diseases and the rehabilitation of patients with visual disabilities.

Program Modality: Both [In-Person (IP) and On-line]

Contracted: No

Semester 1

Units: 10.0

ENC 1101	English Composition 1	3.0
<i>Social Science</i>		3.0
AMH 2010	History of the US to 1877	3.0
OR		
AMH 2020	History of the US since 1877	3.0
OR		
POS 2041	American Federal Government	3.0
MAT 1033	Intermediate Algebra	3.0
MAT 1033L	Intermediate Algebra Recitation Hall	0.0

SLS 1106	First Year Experience Seminar	1.0
Computer Competency Test *		

*Computer Competency Test (CCT) ---or--- CGS 1060C. Departmental Recommendation: Computer Competency Test (CCT)

Semester 2		Units: 13.0
CHM 1025	Introductory Chemistry	3.0
CHM 1025L	Introductory Chemistry Lab	1.0
ENC 1102	English Composition 2	3.0
<i>Humanities</i>		3.0
HUM 1020	Humanities	3.0
OR		
PHI 2010	Introduction to Philosophy	3.0
MAC 1105	College Algebra	3.0
Semester 3		Units: 13.0
BSC 2010	Principles of Biology	3.0
BSC 2010L	Principles of Biology 1 Laboratory	2.0
CHM 1045	General Chemistry and Qualitative Analysis	3.0
CHM 1045L	General Chemistry Lab	2.0
<i>Social Science</i>		3.0
DEP 2000	Human Growth and Development	3.0
OR		
ECO 2013	Principles of Economics (Macro)	3.0
Semester 4		Units: 13.0
BSC 2011	Principles of Biology 2	3.0
BSC 2011L	Principles of Biology 2 Laboratory	2.0
CHM 1046	General Chemistry and Qualitative Analysis	3.0
